The Agricultural Organisation Society have long recognised the need for improvement in rural transport, if producers in country districts are to be linked up more closely with consumers in the towns. In 1912 they placed before the Development Commissioners a number of instances in which motor tranport services were desirable in the interests of agriculture, with the object of ascertaining the extent to which assistance from the Development Fund might be anticipated. At the request of the Commissioners the society set themselves to obtain further particulars with regard to the cost of running, the best system of collection and distribution, the effect of local bye-laws, and other matters, more detailed information upon all of which seemed necessary before a definite policy could be approved. As a result a considerable amount of information was collected, and motor services were recommended in a number of districts.

The matter, however, was allowed to stand over, as the Development Commission had in the meantime appointed an expert to report on the question of motor and light railway transport. It was subsequently decided that consideration of the question in the abstract, with a view to a pronouncement applicable to all cases that might arise, would necessarily be accompanied by so many qualifications as to be valueless. It was therefore decided to take a number of concrete cases and to examine in some detail the conditions affecting the problem in each.

Only one of these inquiries has been completed, that by Mr. G. A. Burls, M.Inst.C.E., upon "The Relative Costs and Advantages as between a Light Railway and a Road Motor Service from Headcorn (Kent) to Robertsbridge (East Sussex)." As a result of an exhaustive inquiry this gentlemen arrived at the conclusion "that the existing Kent and East Sussex Light Railway deals with the goods and passenger traffic of the district at roundly 60 per cent. of the cost that would be incurred by a road motor vehicle undertaking doing the same work, though it is probable that the convenience both to the travelling and trading members of the community would on the whole be greater with the more expensive system."

### Motors Stimulate Need for Railways.

Mr. Burls, in his report, pointed out that the farm buildings in the district under consideration were not as a rule accessible to motor vehicles, that the tracks to the farm buildings being usually unmade, often steeply inclined and generally in bad condition, it would be impossible to take heavy motors over them. In such circumstances one of the great advantages of a motor service, that of relieving farmers from having to employ horses and carts in delivering produce to the carrying undertaking, would to a great extent be lost ; but proper accommodation roads could be made, and in any case such conditions would not necessarily preclude individual farmers from co-operating to provide lighter motors for collecting produce from farms and delivering it to the undertaking.

Cases may doubtless occur where the amount of merchandise to be carried would not justify the cost of constructing a light railway, although sufficient to warrant the establishment of a motor service ; but as a rule it would seem likely that when the markets to which the produce is dispatched are distant, motor services would best act in combination with ordinary or light railways rather than in substitution for them. In this connection the following extract from the report of the Light Railway Commissioners for 1911 is of interest :—

"With regard to the great development in recent years of motor traction, it is of interest to note that in our experience, confirmed by the two cases of proposed light railways which we have most recently had under consideration, the establishment of a service of motors (in each case combined with the organised co-operation of agricultural and other local industries) had tended to stimulate the desire, and to emphasise the need, for better railway facilities, rather than (as it is sometimes supposed would be the case) to take their place. In these cases evidence was brought to show the considerable extent of saving to the road authorities in the annual cost of maintenance, which would follow from a transference to a railway of the traffic carried on roads ; this point was also in accord with our experience as bearing on the economy of transport by railway.

"In making these observations, we appreciate that, in districts where it is not practicable to construct a railway, and where the traffic is not sufficient to support one, a motor service (especially when combined with some "co-operative" system) may be of much use, and in many cases would develop traffic to a point at which railway facilities would become requisite and feasible."

It has been stated that the cost of constructing light railways in this country, which averages about £7,000 per mile, is too heavy and has militated against their more general adoption, and that this might be remedied were lighter railways of narrower gauge laid down in place of the standard gauge now usually authorised. If, however, the view is accepted that motors should as a rule act at carriers from farms to light railways, which in their turn should act as feeders to ordinary railways, there is much to be said in favour of a uniform gauge in order that transhipment may be avoided, and the same rolling stock be used throughout.

### Questions of Road Wear and Bridges.

Such a combination would have the further advantage that the roads would be relieved from heavier forms of transport. We are informed by the Agricultural Organisation Society that local authorities have already shown a disposition to place restriction on the use of motor vehicles owing to the heavy wear and tear of the roads, and that in the case of the Agricultural Co-operative Trading Society at Brandsby they were only restrained from claiming against the society by a relaxation of the Board of Trade restrictions brought about by the intervention of the A.O.S.; further, that a scheme for introducing a system of motor transport in Anglesey was brought

Digitized by Google

to a standstill by a report of the county surveyor that the roads and bridges were incapable of bearing the strain. Some adjustment will have to be arrived at by the general improvement of the roads and by the strengthening of the bridges and culverts, but the cost in this respect will be lessened if the systems of transport adopted permit the use of lighter forms of motors calculated to cause the minimum of wear and tear. In comparing the cost of running a motor service with that of a light railway the additional expense thrown upon local authorities in the necessary upkeep of roads is a material factor.

### Army Motors After the War.

It has been pointed out that after the war large numbers of motors no longer needed by the army will be placed upon the market, and that many of these will be suitable, when repaired and adapted, for various classes of co-operative societies; thus large lorries capable of carrying three tons would be suitable for trading societies and milk depots covering a large area where no railway facilities exist; small lorries, with a capacity of 1½ to 2 tons, might be usefully employed by smaller trading societies or depots and by the larger small-holding societies with a quantity of fruit or market garden produce for sale; while ambulances carrying ¼ to ½ ton might be adapted for lighter requirements, such as egg collecting, etc. We are of opinion that a scheme should at once be prepared by a competent authority to enable a proportion at least of these discarded motors to be made use of in the organisation of transport services and for other farm purposes.

The establishment of any co-operative system of motor transport must depend in the first instance upon a guarantee of adequate support from the farmers in the district which it is proposed to cover, and for whose benefit the service will be organised. This condition could best be fulfilled by the producers combining to form a Co-operative Trading Society, which would make them jointly and severally interested in the success of the undertaking.

### Shortcomings of the Development Act.

Unfortunately such a method of procedure might give rise to difficulty were the Development Commissioners asked to co-operate in establishing the service, as the Development Act gives no authority to make grants or loans either to individuals or to companies or associations of persons trading for profit. The effect of this restriction is that sometimes the most direct way and simple method of giving effect to the purposes named in the Act is closed to the Commissioners. The extension of light railways, the Commissioners had stated, would in all probability be facilitated if loans could be made to existing companies, or to companies formed for the purpose of constructing and working lines, and possessing the right to receive for their shareholders a proportion of the net profits. The Commissioners, however, "think that the intentions of Parliament are not contravened if in these cases advances made by the authorities to individuals are either fair payments for experimental or other work, or are loans which are touched with no suspicion of charity."

Possibly some *modus vivendi* might be formulated in the direction indicated. County Councils already have power to promote agricultural co-operation, and it is probable that in some cases they would consider that the opening out of an isolated district, or the needs of a considerable section of the ratepayers, would justify them in helping to establish motor services.

### A Detailed Inquiry Advocated.

In our opinion the need for better transport of every description in rural districts is urgent and immediate if agriculturists are to be placed in a position to take full advantages of the recommendations we have made for the development of their industry, and are to be enabled to devote themselves to the cultivation of their holdings in the fullest degree. But the matter is not one for the agriculturist alone; the industrial penetration of the countryside, which in some parts has been a feature of recent years, and which, with the improvement of telephonic and other means of communication and the growth of local rates in urban districts, seems likely to develop further in the future, makes it of wider national importance. The necessity for a prompt and ready delivery of milk, vegetables, and other agricultural produce in such districts, as well as for the transport of goods manufactured or required by such communities, adds to the importance of the subject, and we recommend that the whole question should be made the subject of detailed inquiry and report by a Special Sub-Committee of the Reconstruction Committee.

Turning now to cost of transport, we have already stated that Mr. Burls, in the report on a special case made by him to the Development Commissioners, found that the cost of a motor service would be about 40 per cent. in excess of similar facilities provided by a light railway; but we are of opinion that any attempt to make a general comparison between the cost of the two systems, or to arrive at any general estimate as to the cost of motor transport, would be misleading. In the first place a motor service would not usually be organised in substitution for similar facilities provided by a light railway, but as complementary thereto, and in the second, the cost would depend so largely on the class of service required and the description of motors used, that a generalisation as to the expenses would be of little value. At the same time we are of opinion that an inquiry would elicit valuable information.

## COAL CONSERVATION.

The final report of the Coal Conservation Committee of the Ministry of Reconstruction was issued in the latter part of August. It states that at the first meeting of the Committee on July 16, 1916, they decided to appoint sub-committees to investigate and report on the several parts of the extensive subject. For the purpose of carrying out further investigations the Government have since established the Fuel Research Board. The Committee present reports (some of which have already been published) from the various sub-committees, which reports have been approved by the Committee. The first of them is the report on electric power supply, an abstract of which appeared in The Tramway and Railway World of January 17, 1918. Then came reports by the Geological Sub-committee and the Mining Sub-committee.

### Proposed Ministry of Mines.

The latter report states that the Sub-committee have carefully considered the whole question of the establishment of a separate Department of Mines and Minerals. Under peace conditions the Government departments primarily concerned with mines and minerals are the Home Office, the Board of Trade, the Board of Education, the Woods, Forests and Land Revenues Department, the Admiralty, the Duchy of Lancaster, and the Duchy of Cornwall. Under war conditions the number and diversity of the functions of the State in the matter of mines and minerals show a great increase, and the report refers to the various committees on the subject which have been appointed.

Whether any of the powers of the Controller of Coal Mines will survive the war and the ensuing period of reconstruction, cannot now be determined, but, however this may be, the argument for unifying the functions of the State in respect of the coal mining industry will still demand consideration.

It is now proposed, the Sub-committee say, that all the functions vested in various Government Departments before the war in the matter of the coal mining industry should be transferred to and administered by a separate Ministry of Mines and Minerals presided over by a Minister with a seat in Parliament. Any developments of these functions should also be administered by this Ministry. The principal exception to the transfer we recommend is the Geological Survey, which we think should be transferred from the Board of Education to the Committee of the Privy Council for Scientific and Industrial Research. The powers of the Admiralty with regard to coal would no doubt remain unaffected.

The Minister of Mines and Minerals should, in the opinion of the Committee, be assisted by an Advisory Board consisting of representatives of the mining industry (including the workmen), together with men eminent in branches of science connected with the industry, and the claims of the principal classes of consumers to representation will require careful consideration.

Among other functions it is proposed that the new Ministry should undertake the following work:—

(*a*) *Mining Education.*—Having regard to the increasing complexity of mining operations, and the increasing need for scientific knowledge, it seems desirable that there should be co-operation between the Ministry of Mines and Minerals and the Board of Education with a view to making provision in the schools for some elementary training of a scientific nature. Moreover, it is recommended that the State should establish some system in the mining industry of scholarships and bursaries.

(*b*) *Research.*—The new Ministry and its Advisory Board would have important relations with the Department of Scientific and Industrial Research. It is understood that the plans of that department, so far as they are concerned with coal, fall into two main divisions, one of which is more closely connected with the sphere of work of a Ministry of Mines and Minerals than the other. On the one hand, the department is dealing with the whole question of fuel—its most effective preparation and most economical use—through the recently established Fuel Research Board. On the other hand, the department hopes to deal with problems connected with the mining of coal by delegating them to a Research Association established by the coal mining industry. It is contemplated that the Research Association will carry out investigations not only into the problems connected with coal mining and the more effective winning of coal, but also into problems affecting the general health and welfare of the workers. In the event of a new Ministry being set up, its Advisory Board would doubtless be in close touch with the Department of Scientific and Industrial Research, and would have ample opportunity of calling the attention of the department to problems, whether of production or of welfare, which seemed to require investigation.

(*c*) *Regulations as to Safety and Health.*—The new Ministry would naturally undertake the duty at present performed by the Home Office of framing regulations for safety and health at the mines.

(*d*) *Local Mining Problems.*—It would also be the duty of the new Ministry to set up and supervise the local or other machinery required for the purpose of dealing with the working of barriers, the drainage of water-logged areas, and various other mining problems which specially require local knowledge.

Digitized by Google

(e) *Mineral Resources of the Empire.*—The Committee are aware that it is proposed to set up an Imperial Mineral Resources Bureau for collecting information regarding the mineral resources and metal requirements of the Empire. They think it will be necessary to consider carefully the relations which ought to be established between such an Imperial Bureau, the Ministry of Mines and Minerals, the Committee of the Privy Council for Scientific and Industrial Research and other Government Departments in order to ensure full communication and interchange of information with the self-governing Dominions, India, and the Colonies, and to promote co-operation with them in the extension and development of knowledge with regard to the mineral resources and metal requirements of the Empire. At the same time they are convinced that the Minister of Mines and Minerals must retain in his own hands the full administrative control of his department and be directly responsible to Parliament.

In a final report the Sub-committee deal at length with loss and waste of coal and cost of production. Among the recommendations they make are the following :—

The Ministry of Mines and Minerals should have statutory power to take all necessary steps for the conservation of coal, and should be charged with the duty of providing, with the assistance of its Advisory Board, the necessary local or special machinery for preventing waste in working.

For the purpose of obtaining local information and advice, the proposed Ministry should appoint District Committees, consisting largely of practical men with mining experience of the district, and including representatives of both mineral lessors and lessees in the district.

The question of the consumption of coal at the collieries forms part of the larger question of economy in the use of coal for power, and should be dealt with accordingly.

The attention of colliery managers should be directed to the most efficient methods of saving coal in the process of cleaning.

A greater demand for small coal should be found, as, for example, by extending the market for patent fuel both for steam raising and for domestic purposes, and by developing the use of coal near the sources of supply in connection with power generation and carbonisation, and by the provision of adequate means for improving the quality of small coal by grading and washing.

An investigation should be made by the proposed Ministry into the methods of working seams of abnormal thickness.

More consideration should be given at many collieries working upon the bord and pillar system to making the size of the pillars left in the first working proportionate to the depth of the working, and to other circumstances of the mine.

The proposed Ministry of Mines and Minerals should have plans made showing the barriers in each colliery district, and be in a position to sanction the removal of all unnecessary barriers, and should have statutory authority to do so notwithstanding covenants in leases.

In cases where coal is drowned out more or less temporarily owing to the cost of pumping being too heavy, co-operation between collieries in the district for the concentration of pumping plant should be encouraged, but if this cannot be brought about the proposed Ministry should prepare a scheme, with the assistance of the District Committee, for draining the area by means of central pumping stations, and should have power to require the collieries in the district which are benefited by the scheme to contribute ratably to the cost.

The attention of colliery managers ought to be directed to cases of loss from top and bottom coal being left underground in mines under their management, and encouragement should be given to the colliery managers in a district to see for themselves the different methods practised in working the same seams in the district.

The proposed Ministry should have power to decide that any other order of working which is economically practicable shall be adopted when it is satisfied that the existing order of working is likely to result in the permanent loss of coal.

The Committee agree with a recommendation of the Royal Commission on Mining Royalties, 1893, and recommend that immediate steps should be taken to give effect to it. The recommendation is to the effect that when the surface belongs to one person and the subjacent minerals to another, and the surface owner having the right of support claims an injunction on the ground of threatened injury to his property, the Court ought to be empowered to exercise a discretion somewhat larger than that which it appears to possess at present. Where the Court may be of opinion that the interests of the surface owner may be adequately protected without enforcing his extreme rights, the Court should be authorised to permit the mine-owner to go on with his mining operations upon terms which would ensure to the surface owner ready information as to the progress of the workings, and ample security for the payment of compensation.

The Railway Clauses Acts, and other Acts containing similar provisions with regard to the terms upon which coal may be required to be left unworked for the support of the surface should be so amended so as to provide that the "prescribed distance" within which the provisions referred to apply shall be a distance from the railway (or other undertaking to which the Act applies), or any of the works connected therewith, equal to one-half the depth of the workings below the surface level of the land at the place.

The Committee agree with the conclusion of the Royal Commission on Mining Royalties (1893) regarding wayleaves, that owners of mineral property unreasonably debarred from obtaining access to the nearest or most convenient public railway, canal, or port on fair terms, or from obtaining underground easements on fair terms, ought not to be left without a remedy.

In cases where coal will be permanently lost unless it is worked by the lessee of the adjoining workings, and for any reason a legal title to work it cannot be got, the person who is able to work the coal should have the right to apply to the proposed Ministry for a certificate that the coal is in danger of being permanently lost, and when, after inquiry, such a certificate is granted, the Ministry should have power to settle the terms upon which the coal may be worked.

It is of great importance to stop the decline in the output of coal per head of the persons employed, and to increase this output if possible, and the Committee recommend that in so far as any restriction of the output is due to a feeling of insecurity on the part of the workmen and a belief that if they put forth a special effort to increase production they will suffer a reduction in their wages rates, a strong effort should be made to remove any justification which may exist for such a belief. It is only by increased production per head of the persons employed that our trade position can be maintained and improved conditions of employment can be secured, and this ought to be recognised by workmen as well as by employers.

Labour-saving appliances such as coal-cutting machinery and face conveyors should be more largely used than at present, and there is room for considerable improvement in underground haulages both as regards their extent and efficient application. In this case much depends upon the existence of a well-defined and systematic policy in the working of the mines.

The qualifications of mining officials of all grades ought to be improved, and in order to raise the standard the Committee recommend that greater facilities should be provided for obtaining mining and technical education, and should be brought within the reach particularly of the younger workmen who show special aptitude and ability. Among other means to this end mining scholarships should be provided.

### Power Production and Fuel Economy.

The concluding document is a report by the Carbonisation Sub-committee which deals with the gas and coke industries, fuel economy in iron and steel manufacture, and power production and fuel economy. On the latter subject the report says that in the report of the Sub-committee on Power Generation and Transmission, the question of fuel economy is dealt with mainly from the point of view of the generation of steam in large modern power house units in which coal is burned directly under the boilers.

In conferences between the vice-chairman of the Power Sub-committee and the vice-chairman of this Committee it was agreed that the introduction of carbonisation and gasification processes for the preparation of the raw coal as a preliminary to its use for steam raising, was still an open question and that pending fuller research on all the issues involved, the only practical course to follow in the planning of "super-power stations" was to leave room in the original lay out for the introduction of carbonisation or gasification plant should it be subsequently proved that it would be feasible technically and economically to do so.

In the report of the Fuel Research Board on their scheme of research and the establishment of a fuel research station considerable prominence was given to this subject and the steps which it is proposed to take are clearly outlined.

While electric power engineers are practically agreed that the only feasible method of power production in large central stations is by the use of large turbo-generator units, the Sub-committee consider that there is a definite field for the use of gas engines in special circumstances and in cases where the most suitable units are of relatively small size, say under 3,000 to 4,000 KW. They hope and believe that the design and production of internal combustion engines will be greatly forwarded by researches which are already in progress; and that later, under the stimulus of reconstruction demands, important developments will take place both in the design and use of these engines.

The report of the Fuel Research Board above referred to contains the following :—

There is a very general belief among electrical experts that the future of British industry will be greatly affected by the cost at which power in bulk can be supplied in the form of electricity. It has been suggested that the cost of producing power from coal in this country would be substantially reduced if, instead of burning the coal directly under the steam boilers, it were first subjected to carbonisation and gasification processes which in addition to fuel gas would yield valuable by-products. Plausible statements have been issued showing the enormous savings or profits which would accrue if schemes of this sort were adopted. Unfortunately, these estimates have generally been made on a very slender foundation of knowledge and experience. On the other hand, those who by

Digitized by Google

experience and practice are best qualified to judge, hesitate to prophesy as to what the economic result of a combined carbonisation and power-generating scheme would be, but they agree that the interests at stake are so great that the question ought to be authoritatively answered once for all. But no answer can be accepted which is not founded on the complete working out of the scheme, no important step in the series of operations being omitted or slurred over. This series of operations will start from the mechanical preparation of the coal and its conversion into solid, liquid and gaseous products by carbonisation. It will end with the delivery of a known weight of high-pressure steam under the conditions most favourable for power production by turbo-generators. In the proposed scheme of research the investigation of each of the steps involved in the above enquiry is provided for. Three, at least, of these steps involve pioneering work on an industrial scale and the work may occupy a considerable time. The Board realise that it is possible that the net result of this particular enquiry may be to show that, purely as a means of cheapening the cost of electric power, the use of carbonisation methods has not much to commend it, but that certain incidental advantages will justify its use in particular cases.

## BRITISH SCIENTIFIC PRODUCTS EXHIBITION.

The British Scientific Products Exhibition at King's College, London, which was open from August 12 to September 7, contained a great deal that was of interest and value from a scientific and industrial point of view. In the words of Professor R. A. Gregory, chairman of the organising committee, "The aim of the exhibition was to stimulate public interest and confidence in the capacity of British science, combined with industrial enterprise, to secure and maintain a leading place among progressive nations; and the object is the full development of our mental and material resources." Among the exhibits of direct interest from the point of view of traction were those of electrical appliances, chemical products and processes, and gas vehicular equipment.

Abbott, Anderson and Abbott, Limited, 4, Dod Street, Limehouse, E.14, showed their brand of all-British varnished insulating cambrics and silks.

Exhibits designed to render apparatus immune from shorts were a feature of the entry of the British Central Electrical Company, Limited, 6-8, Rosebery Avenue, E.C.1.

The British Ignition Apparatus Association (among the members of which are the British Thomson-Houston Company, Limited, the British Westinghouse Electric and Manufacturing Company, Limited, and C. A. Vandervell and Company, Limited) showed magnetos for car, lorry, cycle, and other types of internal-combustion engines. The exhibit included a selection of magnetos, of the materials used, and of dissociated parts of magnetos.

The Concordia Electric Wire Company, Limited, New Sawley, Derbyshire, showed silk-covered instrument wires.

Among the exhibits of Crompton and Company, Limited, Chelmsford, was a combined ammeter and voltmeter for electric battery and petrol-electric vehicles.

A hand-automatic electric welding machine was shown by the Electric Welding Company, Limited, 28, Basinghall Street, E.C.2.

Samples of ammeters, voltmeters, and photometers were contributed by Everett, Edgcumbe and Company, Limited, Hendon, N.W.9.

Electrical measuring instruments of the indicating and recording pattern, for current pressure and power, were a feature of the exhibit of Evershed and Vignoles, Chiswick, W.4.

Fuller and Son, Limited, Chadwell Heath, Essex, and their associated companies showed a variety of accumulators, ignition coils, dynamos, switchboards, insulated wires, and cables, and other electrical requisites.

Hadfields, Limited, Sheffield, had placed on view samples of "Hadura" hardened steel rolls for cold-rolling steel and other hard metals. "Era" manganese steel was also shown. The firm's research department contributed slide-rules for facilitating calculations met with in metallurgical work. A specially noteworthy exhibit was the firm's large metallurgical temperature chart.

Thermit, Limited, 675, Commercial Road, E.14 (the proprietors of which are Nobel's Explosives Company, Limited) had an exhibit of special interest, as providing an example of the production by British chemists of a series of compounds and metallurgical products, which were previously made in Germany. These comprise carbon-free metals and alloys of all kinds. Samples of Thermit welds were also on view.

The London General Omnibus Company, Limited, exhibited a standard London omnibus (body removed), with design of gas-fuel system under compression, representing the equipment approved by the Gas Traction Committee and the Commissioner of Police for a London motor omnibus service. A detailed illustrated account of this equipment appeared in the issue of the TRAMWAY AND RAILWAY WORLD for August 15.

Other interesting exhibits in the gas traction section included the Murphy "Safe" cylinders shown by Lyon, Limited, of New Bond Street. This is wrapped with three layers of high tension steel tape, and is similar to the cylinders designed by the engineers of the London General Omnibus Company. It has been demonstrated before the members of the Gas Traction Committee to be capable of withstanding a pressure of 3,500 lb. to the square inch, and is extremely light in weight (132 lb.). The capacity of the cylinders is 250 cubic feet. Another novelty in high-pressure gas containers was shown by Mr. A. W. Torkington, of Stelastic Tyres, Limited, York Street, London, S.W. This container is composed of close, strong, interwoven steel wire, so constructed that there are no joints, and consequently no weak places. Inside this armoured jacket is a strong rubber tube, so shaped as to give an even pressure against the outer cover. The size of the container shown was 45 inches long by 8 inches in diameter, but larger sizes can be made if desired. No particulars of the capacity were given, but inquiries were invited. A number of model containers of the flexible variety were shown, together with specimens of proofed fabric used in the construction of the containers. The British Automobile Traction Company exhibited a model of the composite container as constructed in the works of the East Kent Road Car Company, at Canterbury. The British Rubber Manufacturers, Limited, Lyon, Limited, and Messrs. Barton Brothers, of Nottingham, the pioneers of the flexible container—each exhibited a model of the particular type manufactured by them. An exhibit that attracted considerable attention was the Flugel gas carburetter, This has been specially designed for gas-driven cars, the special nature in its construction being the fact that both the gas and air valves are actually operated by the pedal acceleration. Economy in consumption is thus ensured.

## OMNIBUS QUEUES FOR LONDON.

POLICE AT LAST STIRRED TO ACTION.

The persistence of numerous Borough Councils of London in urging upon the Commissioner of Police the desirability of co-operating with the London General Omnibus Company in instituting the queue system for passengers has made an impression in the desired quarter. Early in August the Commissioner sent to the Kensington Council the proposals submitted by the company, and invited the Council's observations thereon.

The Commissioner pointed out, however, that while the present scrimmages are undesirable, it is not easy to regulate passengers into queues without serious inconvenience and danger to other persons passing along the foot pavements, and obstruction to frontagers opposite whose premises queues are formed. The Commissioner is anxious to give the queue system a trial in connection with omnibuses wherever it appears probable that good results may ensue, but it would not be practicable to detail police especially to regulate queues if such a system were carried out to any considerable extent, except by an augmentation of the police force, which would throw an additional burden on the ratepayers.

In commenting upon the Commissioner's letter, the General Purposes Committee of the Council reiterate their opinion that the proposals submitted by the company should be given a trial. Further, they report that the police have informed the company that they must obtain and retain the consent of frontagers affected before their proposals are put into operation. The police consider it to be undesirable that the footways should be encroached upon by the erection of indicating posts, and have asked that the queue signs should as far as possible be suspended by brackets from buildings or structures.

The Council have informed the company that they will not raise objection to the indicating posts being placed in the public footway at the several places in Kensington where it is proposed to form queues, subject to the work being carried out to the approval of the Council, and to their approval of the description of posts.

The Home Secretary recently stated in the House of Commons that omnibus queues had been established at certain points, and the police were anxious to extend the system wherever it could be done without unduly interfering with the rights of frontagers.

## EDINBURGH GAS OMNIBUS COSTS.

Addressing the Waverley Association of Gas Managers at Edinburgh at their annual meeting, Mr. J. Richmond, the president, quoted statistics of the running costs of gas motor omnibuses, which he had received from the general manager of the Scottish Motor Traction Company. The flexible containers cost approximately £50 each. The containers were subjected to considerable wear, the cost of upkeep being 1¼d. per mile. The cost of gas was equal to 2·17d. per mile, and with wages of the attendant at the filling station the total cost per mile was 3½d. Although this amount was double the cost of running with petrol before the war, it effected a considerable saving compared with petrol at its present price. Two hundred and fifty feet of gas was found to be equivalent to one gallon of petrol.

## TESTING DEPARTMENTS FOR ELECTRIC RAILWAYS.

Mr. H. Le Smith, in an interesting article in the *New York Electric Railway Journal*, shows in how many directions a testing department can effect economies in electric railways. The work of such a department falls into three main sections so far as concerns new material, viz., continuous supplies, apparatus for extensions or improvements tested for acceptance, materials and apparatus on trial. Inspection during manufacture and testing for deterioration are important branches. Deterioration tests aid in maintaining efficiency, and avoiding breakdowns. Tests designed to show the most economical method of operation and maintenance offer possibilities of enormous savings. The best control of the heat balance of a power-station can be obtained only by reference to the results of tests.

The use of condensate as feed-water generally involves daily laboratory tests, if satisfactory results are to be obtained. A standard of "allowable leakage" from condenser tubes must be established, beyond which it is preferable temporarily to throw away the hot water and use fresh water supply. Scale prevention cannot be ensured save by aid of control tests; and the same applies to eliminating priming difficulties. Any test which aids in maintaining the highest possible vacuum in turbine plant is well worth while. Adequacy of circulating water flow, air leakage, and efficiency of air removal can only be controlled by tests. A simple gasometer device is described which facilitates control of air leakage. Factors influencing the maintenance of vacuum are discussed in some detail.

There is room for daily tests in one phase or other of boiler operation. Calibration of the station watt-hour meters ensures accuracy at the very heart of all measurements of energy delivered and cost thereof. The accuracy of other switchboard instruments is hardly less important, and the same applies to gauges on the boilers and steam and air lines, etc. The adjustment of relays and the checking of instrument transformers is important work. The author makes a number of practical suggestions in all these branches of the subject, and concludes with notes on the organisation of a testing department.

## WOMEN CONDUCTORS.

ADVERSE REPORT FROM NEW YORK.

Reporting on the employment of women conductors on the street cars of New York, the Department of Labour says :—" It is practically impossible to make the conditions of street railway employment even tolerably endurable to women, and the operation of cars is one of the last occupations into which women should be lured or forced. Those who advocate the employment of women as street car conductors have given scanty consideration to irregularities of hours. The principle has been clearly established that a woman cannot work at employment requiring constant standing without seriously endangering her health. Moreover, the conductor is exposed to cold, damp, and draughts even in the best type of enclosed vestibule cars and centre door cars. The point has been made repeatedly by the companies in the investigation that even when women have a choice they frequently select night runs. At this time the cars are less crowded and the work less strenuous. Some of the women have remarked that they preferred the night runs because it left them the day free to do other things. Others with families have said that night runs enabled them to look after the children and prepare meals during the day. The disastrous consequences of employing women on night work to enable them to work all day for their families have been so thoroughly demonstrated in other industries that it needs no further demonstration in street car operation."

The employment of women has not lowered the wage scale, the women being paid as much as the men formerly employed, but has probably, the report states, prevented wages from rising.

**Hydro-Electric Power Scheme.**—A remarkable scheme for the development of hydro-electric power to be derived from the waters of the Liffey is now under consideration. The promoters are the Dublin and Lucan Electric Railway Company, whose secretary, engineer, and manager, Mr. D. McDowell Grosart, J.P., suggested the idea, when he was appointed to his present position a few years ago. The probable cost of the scheme is put at £50,000. The saving of coal which would be effected by the scheme is estimated at over 16,000 tons per annum.

**High Price for Second-hand "Halley" Vehicles.**—At a public sale at Barrhead recently, exceptionally high prices were obtained for two motor lorries, both built by Halley's Industrial Motors, Limited, of Yoker, Glasgow. A 2-ton 25-H.P. lorry built in 1911, and a 3-ton 35-H.P. lorry built in 1915 together sold for £1,900 after keen competition.

## A CANADIAN TRAMWAY ADVERTISING CAMPAIGN.

A noteworthy advertising campaign undertaken by the Montreal Tramways Company is described in the *Electrical News* of Toronto. It appears that the Montreal Tramways Commission has conceded the company the right to increase the fares, but an effort is being made to prevent the carrying out of the project. With a view to bringing home the justice of their case to the public, the company has been advertising in the newspapers. It is pointed out how the unprecedented increase in the cost of materials eats up earnings rapidly. It takes nearly twice as many fares to pay for the Montreal Tramways Company's supplies as it did five years ago. A detailed list of increased prices, as compared with the prices current in 1913, is given. Another advertisement contains a list of fares recently allowed to be charged on street railways in the United States. Advertising on similar lines has also been done by the Cape Breton Electric Company, which operates a tramway at Sydney, Nova Scotia. In one of a series of "one minute tram talks," it is urged that "Your prosperity and ours go hand in hand," and "if we are not prosperous we cannot furnish good service."

## SLACK HOUR SHOPPING AND FUEL.

A recent issue of the news sheet of the San Diego Electric Railway, California, states that the women of the city have proved the worth of the company's suggestion that greater comfort in travel could be secured by doing their shopping during the slack hours of the morning and afternoon. In addition the assistants in the shops are able to give customers better attention than during the busy hours. The writer of the note adds :—" Besides this there is an item of fuel conservation that should be considered by everybody. When more cars are put on to take care of the rush of travel during any period just that much more fuel is of a necessity used which would not be if patronage were more equally distributed throughout all hours of the day. Will you try to aid us to the extent suggested in doing what the Government demands that we shall do, conserve fuel in every possible way ? "

## AGE LIMIT FOR DRIVERS REDUCED.

For some time past the increasing shortage of drivers of commercial motor vehicles has induced the Commercial Motor Users' Association to suggest to the Local Government Board that the age limit at which licences can be issued should be temporarily reduced. It has now been notified that a new Defence of the Realm Regulation has been issued providing that in future a licence under the Motor Car Act, 1903, limited to the driving of a motor car other than a heavy motor car or a public service vehicle, may be granted to a male person who has attained the age of 16 years if the authority granting the licence is satisfied that he is competent to drive such a car. A heavy motor car is defined as a "motor car exceeding two tons in weight unladen," and "public service vehicle" as a "motor car icensed to ply for hire as a hackney carriage or a stage carriage."

**London School of Economics.**—The calendar for 1918-19 of the London School of Economics and Political Science (University of London) shows courses of study which seem to be more numerous and complete than ever before. The subjects dealt with include a number of special interest to tramway and railway men, as, for example, general economics with special reference to transport, accounting, scientific management in factories, railway operating, law of carriage, the railway system as a wealth-creating machine, cost accounts and efficiency methods and railway rates and charges. It is noted that in view of the large number of railway students of the school who are now serving with the colours the activities of the Railway Students' Association are at present in abeyance.

**Tramways and Light Railways Association.**—The journal for August contains a report of the tenth annual congress held on July 12. The names of the members of the Council given in the journal show that Mr. G. M. Harriss, general manager of the Dublin United Tramways Company, and Mr. G. W. Holford, general manager of Salford Corporation Tramways, have retired, and that Mr. A. L. Barber, secretary of the Metropolitan Electric Tramways, and Mr. H. L. White, manager and engineer of Great Grimsby Street Tramway Company, have been elected by the Council to fill the vacancies thus created.

**Railwaymen's Wages.**—The Railway Executive Committee is stated to be giving favourable consideration to the railwaymen's further claim for an increase in wages. Another meeting with the men's representatives is being arranged.

**Edinburgh to Queensferry Tramway.**—A public inquiry will be held on October 1 into the application of the Edinburgh Corporation for power to construct an electric tramway to Queensferry.

# FINANCIAL REPORTS AND MEETINGS.

## DIVIDENDS.

HONG-KONG TRAMWAY COMPANY, LIMITED.—An interim dividend of 7d. per share has been declared.

LANARKSHIRE TRAMWAYS COMPANY.—A dividend of 7 per cent. per annum (7s. per share) for the half-year has been declared.

BLACKPOOL AND FLEETWOOD TRAMROAD COMPANY, LIMITED.—An interim dividend of 4s. per share, free of income-tax, has been declared.

WALTER SCOTT, LIMITED.—A final dividend of 10 per cent. on the ordinary shares, making 15 per cent. for the year ended June 30, has been paid.

BRISTOL TRAMWAYS AND CARRIAGE COMPANY, LIMITED.—An interim dividend at the rate of 6 per cent. per annum on the ordinary shares has been declared.

OLDHAM, ASHTON AND HYDE TRAMWAYS COMPANY, LIMITED.—An interim dividend has been announced at the rate of 5 per cent. per annum on the ordinary shares.

CHATHAM AND DISTRICT LIGHT RAILWAY COMPANY.—An interim dividend at the rate of 8 per cent. per annum (8s.) has been declared on the ordinary shares for the half-year.

W. T. HENLEY'S TELEGRAPH WORKS, LIMITED.—A dividend on the preference shares at the rate of 4½ per cent. per annum for the half-year ended June 30, and an interim dividend on the ordinary shares of 2½ per cent. has been declared.

GUEST, KEEN AND NETTLEFOLDS, LIMITED.—Final dividends on the preference shares at the rate of 5 per cent. per annum, and on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended June 30, together with a bonus of 1s. per share on the ordinary shares. all free of tax, have been paid.

GLASGOW SUBWAY.—An interim dividend of 1¼ per cent. is announced on preference shares, against 1 per cent. last year. The increase in dividend, it is stated, is made in order to equalise more nearly the two half-yearly payments, and must not be taken as an indication of an increase in the dividend for the full year.

NORTH EASTERN STEEL COMPANY, LIMITED.—The net earnings for the year, after providing for estimated liabilities to the Government, amount to £88,500, as compared with £85,300 for the previous twelve months. The dividend is maintained at 10 per cent., free of income-tax, and £20,000 is added to the reserve, the balance carried forward being increased from £4,600 to £8,200.

---

**Glasgow Corporation Tramways.**—The accounts for the past financial year showed a surplus on the tramways undertaking of £177,552, an increase of £16,568 on the previous year, which surplus had met to the extent of £25,584, what would have been a deficiency on the accounts.

**Oldham Corporation Tramways.**—The receipts from traffic for the year ended March 25 were £148,582 5s. 3d., compared with £124,957 10s. 5d. in the previous year. Working expenses were £106,937 15s. 9d., compared with £85,443 4s. The number of car-miles run was 2,121,092, against 2,010,604, and the number of passengers carried 28,703,371, against 24,670,848. The total revenue from the motor omnibuses was £599 8s., and the working expenses £1,507 19s. 11d.

**West Bromwich Corporation Tramways.**—The report of the year ended March 31 states that after charging interest on loans and sinking fund instalments the deficit for the year amounted to £545 7s. 3d. After deducting the credit balance at March 31, 1917, there remained a net deficit on the revenue appropriation account of £281 13s. 9d. The deficit in the working account on the motor omnibuses amounted to £464 4s. 5d., and after charging interest on loans and sinking fund instalments there is a deficiency of £1,767 18s. 1d.

**Croydon Corporation Tramways.**—Reports on the last financial year's working show that the surplus of £11,220 compares with a deficiency of £1,633 14s. 5d. for the previous year. The net increase of income was £20,963, and the net increased expenditure was £8,890. On the expenditure side the principal increases were as follows:—Wages of motormen and conductors, £2,077; power expenses, £2,080; war bonus, £3,312. The expenditure charged to the reserve and renewals fund for the year amounted to £1,450 11s., and the balance of the fund at March 31 was £43,528 15s. 10d. There had been no capital expenditure during the year.

**Brazilian Traction, Light, and Power Company, Limited.**—The report for the year ended December 31, 1917, has been issued. The tramway receipts exceeded those of 1916 by 4·27 per cent., and the increase in net earnings—1,108,835 milreis—exceeds the increase in the gross earnings for the same period, and is also greater than the increase in net earnings in any year since 1913. The net revenue for the year was 5,266,518 dollars. The aggregate reduction in the net revenue of 9,800,000 dollars for the last three years is attributable to the decline in exchange from the rate prevailing in the five years preceding the war. The earnings in Brazilian currency each year have shown substantial gains.

**Birmingham Corporation Tramways.**—The statement of accounts for the year ended March 31 shows a total revenue of £990,424, as compared with £838,725 for the previous year. Passengers numbered 198,402,908, as compared with 171,445,020. The total expenditure was £755,980, as compared with £632,165. The gross profits were on tramways £234,444, and on motor omnibuses £13,212, as compared with £206,560 and £10,085. The net profits, after deducting interest and sinking fund charges, amounted to £101,700, as compared with £76,291 for the previous year. The net profit was disposed of as follows:—Transferred to reserve fund, £63,889; transferred to suspense account, £12,801; contributed in relief of rates, £25,000.

**West Ham Corporation Tramways.**—The report for the year ended March 31 states that the expenditure amounted to £168,826, an increase of £18,837. The income was £188,851, as compared with £166,142, an increase of £22,708. If the sum paid as allowance to men on active service were excluded, there would have been a gross profit on working of £20,024. Including these allowances there is a surplus of £3,263 to be carried to net revenue account. Repayment of mortgage loans, contributions to sinking funds, and interest required £31,635, thus leaving a deficit of £28,177. Excluding the amount of £16,761 allowances to men on active service, the deficit would have been £11,415. The reserve and renewals fund being exhausted, all future expenditure for renewals will become a charge upon the revenue account.

**Wolverhampton Corporation Tramways.**—The accounts for the year ended March 31 show that the gross profit on electric traction account was £29,849 15s. 2d. To this sum is added the balance of £2,189 4s. 6d. on motor chars-a-banc account, making a total of £32,038 19s. 8d. This has been allocated as follows:—Interest on capital, £5,616 4s. 8d. (less interest received); income tax on profits, £307 10s. 7d.; repayment of loans, £6,218 13s. 5d.—£12,151 8s. 8d. Amounts appropriated to additions and improvement, £198 5s. 6d.; reserve and renewals fund, £4,351 9s. 9d.; maintenance and repairs suspense account, £8,766 15s. 9d.; in aid of borough rate, 1918-19, £6,580—£19,896 11s.—£32,038 19s. 8d. The sum of £56,683 now stands to the credit of the reserve and renewals fund, and £19,427 7s. 10d. to the credit of the maintenance and repairs suspense account.

**Western Wagon and Property Company, Limited.**—An interim dividend for the half-year ended June 30, at the rate of 10 per cent. per annum, has been declared. Receipts amounted to £110,548, working expenses to £78,626, and war allowances to £5,801. The gross balance was £28,369, from which £17,149, interest on capital, contribution to sinking fund, and income tax had to be deducted. The gross balance was equal to 9·89 per cent. on the capital outlay, and the net balance of £11,220 was equal to 3·91 per cent. Traffic receipts had increased by £20,947, or 23·64 per cent., which was attributable to the increased number of passengers carried, namely, 3,696,833, and to the fact that the previous year contained nine months of revised fare charges. The figure of £100,000 had been reached for the first time in the history of the undertaking, and the receipts were £16,000 higher than the previous best (1915-16).

**Aberdeen Corporation Tramways.**—At a meeting of the Aberdeen Town Council, the Tramways Committee recommended that the third of the free surplus revenue of the tramway undertaking for the year, amounting to £4,070 13s. 8d., should be applied as follows: To the common good of the city, £2,000; in carrying out city improvements, £2,070 13s. 8d. Councillor Robertson, in presenting the recommendation, said the difficulty with the department was not the question of how to increase the receipts, but rather how to carry the passengers. They had one new car almost ready, and two others were being built, also spare parts and material. Mr. Pilcher, in his twelve years' service, had shown marked ability and skill, not only as manager, but as engineer, and they wished him all success in his promotion. The success of the service was due to splendid organisation. The Lord Provost seconded, endorsing the appreciation of the manager's excellent work. The recommendation was adopted.

**Portsmouth Corporation Tramways.**—The financial statement for the year ended March has been presented by the chairman of the Tramways Committee, Councillor J. Timpson. The statement showed that the revenue amounted to £153,087, comprising traffic receipts, £123,494; special cars and fares, £280; cheap tickets, £27,471; and advertising on cars, etc., £1,842. The expenditure amounted to £127,165, as follows:—Working expenses, £70,841; grants to dependants, £4,001; war bonus to employees, £5,447; principal and interest charges, £39,860; and income tax, £7,016. This gave an excess of revenue of £25,922, which, with £1,350 as interest on credit balances, left for appropriation the sum of £27,272. The balance for appropriation the previous year was £18,580, of which £14,000 was devoted to the relief of the rates. The balance was £8,692 larger this year, and it was proposed to dispose of the £27,272 as follows:—£6,078 to be placed to the renewals fund; £2,000 to the reserve and insurance fund; £15,000 in aid of the rates; and £4,194 to be carried forward for the current year. £15,000 represented nearly a rate of 4d. in the £. The total handed over to the relief of the rates since the tramways had belonged to the Corporation was £130,500.

### LEEDS CITY TRAMWAYS.

The report of Mr. J. B. Hamilton, general manager of the Leeds City Tramways, for the year ended March 31, states that the receipts amounted to £586,631, an increase of £70,824. The working expenses, on the other hand, at £314,042, show an increase of £53,157, leaving a gross profit of £272,588, an increase of £17,668. The increased costs are attributed mainly to increases in wages, which amount approximately to £43,000 more, while the annual cost of war bonuses to employees amounts to £90,000. Material has, of course, greatly increased in value, and among the items is an increase of £3,543 under the head of ticket check, largely due to the increased cost of paper. An advance in the price of coal of 2s. 6d. per ton authorised by the Coal Controller in 1917 has added £1,200 to the fuel bill. Owing to the 50 per cent. advance in railway fares, there was an increase of 57 per cent. in the number of through tickets issued between Leeds and Bradford. A summary of the income and expenditure account and of the application of the gross profit for the past four years is appended :—

| Year ended March 31. | 1918. | 1917. | 1916. | 1915. |
|---|---|---|---|---|
| INCOME— | £ | £ | £ | £ |
| Traffic revenue ... ... ... | 577,168 | 507,755 | 467,197 | 429,903 |

| Net surplus to relief of rates ... | 58,000 | 79,431 | 71,822 | 81,567 |

## THE WOODS-GILBERT SYSTEM.

In the latter part of August subscriptions were invited for £10,000 10 per cent. non-cumulative preference shares of £1 each in the Woods-Gilbert Rail Remodelling Company, Limited, the capital of which is £30,000, divided into 7,500 10 per cent. cumulative participating preference shares, 10,000 10 per cent. non-cumulative participating preference shares, and 12,500 ordinary shares, all of £1 each. The prospectus stated that the company had been formed to acquire from the Woods-Gilbert (British) Rail Grinding and Milling Company, Limited, its whole business of tramway rail remodelling, for which it holds the exclusive patent rights in Great Britain. The company's chief business will be to renovate *in situ* tramway rails which are considered by the owners to be worn out. The work is done by special machines (such as have been described in our pages). The work undertaken by these machines consists of four separate operations to remedy the defects of worn rails, viz., deepening the groove and reducing high checks by means of a milling tool, and removing corrugations and dressing joints by means of a rapidly revolving grinding wheel. In most instances the rails have sufficient metal beneath the groove to enable additional life to be given of from five to eight years if milled out. The maximum cost of applying the Woods-Gilbert system should not exceed £1,000 per mile, and for this about 50 per cent. of additional life is obtained.

The 5,329 miles of tramway track in Great Britain are in many cases in a defective condition, and there is a great demand for the Woods-Gilbert system of remodelling. To meet this demand the Ministry of Munitions have granted authority for the construction of five machines, in addition to the three at present at work. The cost of these new machines will be between £2,200 and £2,500 each, and three such machines have already been put in hand and will be ready for delivery within the next three months. These machines are already booked up on contracts which will keep them employed for fully twelve months. Negotiations are also pending with other tramway owners, which are fully expected to mature into contracts as soon as an approximate date can be given for the commencement of the work.

This system of rail remodelling was first introduced in Australia, where a considerable mileage was completed for the Melbourne, Brisbane, Adelaide, and Sydney tramways. Work has also been completed in this country on the Oldham, Ashton and Hyde, Cardiff, Isle of Thanet, Bexley, Wigan, and Bolton tramways, and work will shortly be commenced for the Huddersfield, Middleton, and London United tramways. Since the inception of the vendor company in 1916, its operations have been conducted at a profit, and regular dividends have been paid. When the three new machines are put to work, the profits will be still further increased

## PERSONAL.

**Mr. B. Li. Morgan,** borough engineer of Bolton, has been granted an increase in salary from £1,000 to £1,200 a year.

**Mr. J. A. Davidson,** mechanical engineer at Belfast Corporation electricity station, has resigned owing to ill-health.

**Mr. Ernest Hatton** has been acting as district engineer in the coal economy campaign for the important Tyneside area for some time.

**Mr. T. J. Kendrew,** general manager of the Southport Corporation Tramways, has been granted an increase in salary from £300 to £400 per annum.

**Mr. T. P. Smith,** electrical engineer of Leicester Corporation, has been appointed district engineer to the local department of the Coal Controller.

**Mr. Frank Ayton,** engineer and manager of Ipswich electric supply and tramways departments, has been granted an increase in salary from £700 to £850.

**Mr. R. L. Acland,** electrical engineer and tramways manager of Chesterfield, has been appointed by the Controller of Coal Mines to be district engineer for assisting in the coal economy campaign.

**Mr. C. Hornby,** who until recently represented the Shrewsbury and Challiner Tyre Company, Limited, in Liverpool, has been appointed manager of the Company's Scottish business, with offices at 86, Gordon Street, Glasgow.

**Mr. J. B. Hamilton,** general manager of the Leeds City Tramways, has been engaged to give the Stockton Town Council expert advice in connection with the question of exercising the rights of purchase of the tramway undertaking in the borough.

**Mr. B. Hall,** of the Chatham and District Light Railways, has been presented by his colleagues with a case of instruments and pipe on his leaving to take up the position of assistant engineer and manager of the Keighley Corporation Tramways.

**Lieut. (Acting Captain) R. B. Wilmshurst,** Lincs. Regiment, who has been awarded the Military Cross for gallantry and devotion to duty by subduing a fire amongst ammunition, is the youngest son of Mr. T. B. Wilmshurst, electrical engineer for the borough of Derby.

**Mr. H. P. Stokes,** M.I.E.E., A.M.I.Mech.E., general manager and electrical engineer to the Bexley Urban Council electricity and tramways department, and Dartford light railways, has been appointed district engineer in connection with the coal economy campaign.

**Second Lieut. Wm. C. McCallum,** R.E., before the war a member of the engineering staff of Messrs. Dick, Kerr and Company, we noted some time ago had been awarded the Military Cross. The award has now been notified officially in the *London Gazette*, with the following paragraph describing the action for which the honour was conferred :—"For conspicuous gallantry and devotion during a hostile attack. It became evident when the bombardment commenced that the horses and vehicles would have to be withdrawn. In spite of a heavy and continuous bombardment he personally superintended the packing and dispatch of all the vehicles and succeeded in saving the entire equipment and horses of this section. Throughout the day he set a splendid example to all ranks."

**The Late Major Bertram Hopkinson.**—It is with regret that we record the death of Major Bertram Hopkinson, which was caused by an accident on duty in the north-east of London. Since 1916 Major Hopkinson was Deputy Assistant Director to the Air Ministry, and from 1903 onwards he held the position of Professor of Mechanism and Applied Mechanics in the University of Cambridge. Major Hopkinson was a member of the famous family of that name, who have done so much for applied science, and particularly for electric traction, his father being the late Dr. John Hopkinson, F.R.S. For some time he was a consulting engineer, and in partnership with Mr. Charles Hopkinson and Mr. Ernest Talbot he carried out the design of the electric tramway systems of Leeds and Newcastle. He was a Fellow of the Royal Society, and was last year made a Companion of the Order of St. Michael and St. George.

## CONTRACTS AND ORDERS.

**Lancaster Corporation** have ordered two sets of machine stokers from Bennis and Company, Limited.

**Manchester Tramways Committee** have accepted the tender of Fred. Smith and Company, of Salford, for trolley wire.

**Bradford Tramways Committee** have ordered gear wheel castings from Edgar Allen and Company, Limited, and Cammell Laird and Company, Limited.

# TRAMWAY AND LIGHT RAILWAY NOTES.

## BEXLEY.

PURCHASE OF CARS.

Bexley Urban Council have bought twelve cars from the London County Council at £550 each, subject to 5½ per cent. for each car until receipt of the purchase money.

## BURTON-ON-TRENT.

HIRE OF CARS.

It has been proposed to hire cars from Yarmouth for use in Burton-on-Trent.

## COLCHESTER.

A WEEKLY REST DAY.

The Colchester Town Council is arranging for drivers and conductors to have one day's rest a week without reduction of wages.

## CROYDON.

TRAMWAYS UNDER THE MUNITIONS ACT.

The Croydon Corporation Tramways have been certified under the Munitions of War Act of 1917, on the ground of the importance of the undertaking as contributing to the carrying on of munition work, presumably with a view to the issue of an order directing the Corporation to pay the employees the bonus under the recent award of the Committee of Production.

## DEWSBURY.

THE CALL-UP.

Mr. W. MacGibbon, local manager of the Dewsbury and Ossett Tramways, has informed the Dewsbury Town Council that his men have been called up to such an extent that, unless time is allowed to train others, the services between Dewsbury and Ossett and Earlsheaton will have to be suspended.

## EDINBURGH.

QUEENSFERRY TRAMWAY SCHEME.

The Edinburgh City Council has asked the Admiralty for a statement of their position with regard to the proposed Edinburgh-Queensferry tramway, and the Admiralty has undertaken to reply at an early date. Considerable importance attaches to the traffic which will be contingent on the Admiralty developments on the Forth, and the statement of the Admiralty is awaited with much interest. The Council received a deputation from the Edinburgh Trades Council in support of the scheme. Several members of the deputation referred to the connection between tramway extension and increased housing accommodation.

## HULL.

CONSCIENTIOUS OBJECTORS NOT ENGAGED.

The Hull Corporation Tramways Committee, having been asked by the local branch of the National Federation of Discharged and Demobilised Soldiers and Sailors to place the claims of ex-service men before those of conscientious objectors, have decided not to entertain applications of two conscientious objectors to be employed as drivers.

## KEIGHLEY.

ACTION AGAINST CORPORATION.

The Keighley Corporation were sued in the Keighley County Court for damages in respect of a collision through a Corporation car striking a cart as it was being driven across the road. It was urged for the plaintiff that a vehicle limited, as was a tramway car, to a defined track should be driven with more than ordinary care, and that this had been wanting. For the defence it was submitted that the car was only travelling at six to eight miles per hour, and the driver did all in his power to avoid the accident. The judge found for the defendants, with costs.

## LEEDS.

PLANS FOR THE FUTURE.

Leeds Tramway Committee favour the construction of wide roads in the suburbs with tramway tracks in the centre, separate from the rest of the road, upon which a fast service of cars could be maintained. They have decided to confer with the Improvements Committee on the details of housing and town planning schemes which are now engaging attention. Members of the Tramways Committee visited Liverpool recently, and inspected the wide roads laid out in the suburbs of that city prior to building developments. Some of these roads, as described in the TRAMWAY AND RAILWAY WORLD, are sufficiently wide to have a line of trees on either side, broad footpaths, and a special tramway track in the centre.

## LIVERPOOL.

KILLED BY A FALLING TROLLEY.

At an inquest at Liverpool the jury found that death had been caused by a blow from a trolley which fell from a tramway car, adding that there was not sufficient evidence to show what caused the trolley to fall. It was stated that the car had been passed as in perfect running order before leaving the depot. The mishap was attributed to the lock-stud at the base of the trolley becoming detached.

## LLANDUDNO.

TEMPORARY INCREASE IN FARES.

Owing to the pressure of traffic on Llandudno electric tramways, the penny fares are suspended for two months in order to reserve the accommodation for passengers using the cars for longer journeys.

## LONDON.

THROUGH SERVICE—USE OF COKE—CARS FOR GOODS.

The London County Council and the Metropolitan Electric Tramways have arranged for an additional through service via Stamford Hill. At one of the power-stations of the Council coke is being extensively used, and arrangements have been made for the supply of from 100 to 1,000 tons of coke per week for twelve months. The Council is converting two cars for the carriage of goods for experimental purposes at an estimated cost of £100.

## NEWPORT.

PROPOSED TRAMWAY EXTENSIONS.

The Newport Town Council have been asked by the Admiralty to estimate for the cost of extending the tramways from certain works to the docks with a view to conveying workmen to and from. It has been reported that a double track would cost £34,317, and a single track with loops £28,517. It is proposed to contribute the pre-war cost of the line and the cars, and to bear 50 per cent. of the working costs provided the track, equipment, and cars become the property of the Corporation.

## PLYMOUTH.

WOMEN AS INSPECTORS.

In answer to a suggestion for the appointment of discharged disabled men to the post of inspectors, instead of women, Plymouth Tramways Committee replied that they had always considered the claims of discharged service men in making appointments, and that they had given employment to over 70 such men. In the present instance, acting under the instructions of the National Service Department, and having regard to the nature of the duties, they were of opinion that women could best fill the position of inspectors.

## RHONDDA.

INJUNCTION TO PROTECT TRAMWAYS.

In the Court of Chancery an injunction has been granted to restrain a colliery company from tipping debris on the side of a mountain so as to endanger or threaten, obstruct or injure tramways vested in the plaintiffs, the Rhondda Urban Council, the defendants being declared liable as to any damage.

## SCARBOROUGH.

CLAIM AGAINST WAR OFFICE.

The Defence of the Realm Losses Commission is considering a claim by the Scarborough Tramways Company against the War Office. It was alleged that the military authorities by the erection of certain barriers in 1915 cut off a portion of the main route for passengers, and that a loss of £350 in traffic receipts was caused.

## SWANSEA.

A ONE-DAY STRIKE.

A strike on the tramways at Swansea on August 22 was terminated the following day by the employees returning to work on the instruction of the national executive of their trade union organisation, pending the arbitration of the Committee on Production on the points in dispute.

## WOLVERHAMPTON.

CAREFULLY TRAINED DRIVERS.

Sir Charles Mander, Bart., chairman of the Wolverhampton Tramways Committee, stated recently that in spite of the fact that it had been necessary to train a great number of new drivers the undertaking had been free from any serious accident. He attributed this to the committee's policy of making it imperative for learners to go through the whole of the course necessary for the training of tramway drivers.

## YARMOUTH.

STRIKE QUICKLY SETTLED.

On August 17 the employees of the Yarmouth Corporation Tramways ceased work as a protest against their rate of pay. The next day an undertaking was given that the Tramways Committee would at once give sympathetic consideration to the position, provided the employees returned to work. Accordingly the men resumed their duties on August 19. The Tramways Committee then offered an immediate advance of 7s. per week, which was accepted by the employees.

---

**Regulation of Street Railways in U.S.**—The United States War Labour Board has asked President Wilson to assume jurisdiction over street railways to the extent of regulating fares. It is stated that the powers of the Executive are sufficiently broad to enable the President to do this. The Labour Board has recommended that wages be increased on all street railways, and if the President approves, the recommendation will become effective.

# PATENT LIST.

## Abstracted for "The Tramway and Railway World" from the Official Journal of Patents.

*** If the inventions have been communicated the names of the communicators are given in italics.

### APPLICATIONS FOR LETTERS PATENT.

Direction indicators, etc., for motor cars, etc. (12,597)—R. Bowen.
Electro-pneumatic braking systems (12,322)—British Thomson-Houston Company (*General Electric Company*).
Centre rail electric traction (12,670)—G. N. Fell.
Power transmission gear (12,294)—G. R. Inshaw.
Supporting and steering device for front wheels of motor vehicles (12,673)—P. A. C. Larsen.
Means for lubricating shafts or axle journals (12,612)—F. W. Marillier.
Electro-magnetic changing gear (12,315)—Menco-Elma Syndicate.
Variable speed mechanism for motor cars (12,381)—H. W. Pearn.
Apparatus for propulsion of vehicles and prevention of skidding (12,472)—E. Bullock-Webster.
Mechanical feed lubricators (12,856)—Albion Motor Car Company and T. B. Murray.
Variable speed gears and disengaging couplings (12,742)—W. J. Gee.
Motor vehicles (12,902)—F. J. Osborn.
Secondary electric batteries or accumulators (12,653)—W. E. Spencer and Tudor Accumulator Company.
Electrical signalling apparatus (13,050)—Armstrong, Whitworth and Company, C. B. Chicken and J. H. Shain.
Gear boxes of self-propelled vehicles (13,140)—Caterpillar Tractors, Limited (*Holt Manufacturing Company*).
Cable trackways for railways, tramways, etc. (13,065)—H. H. G. Etcheverry.
Mechanically operated signalling devices (13,033)—A. H. Ford.
Road vehicles (13,152)—J. Liversidge and Son and E. H. Shearing.
Resilient vehicle wheels (13,220)—London General Omnibus Company and G. Rushton.
Method of securing joints of rails (13,320)—W. H. Meek & A. E. Sealy.
Safety guard for front wheels of motor vehicles (13,290)—W. H. Puttergill.
Apparatus for change speed of a motor car (13,297)—S. Tamura and M. Watanabe.
Supporting apparatus for rear axle of motor car (13,299)—S. Tamura and M. Watanabe.
Variable speed gear for motor vehicles (13,362)—H. Taylor.
Current collectors for electrically propelled vehicles (13,105)—R. H. Wilkinson.
Coal gas carburetter for gas-driven motor cars and omnibuses (13,337)—E. J. Buckingham.
Rigid coal-gas container for compressed gas for motor vehicles (13,338)—E. J. Buckingham.
Power transmission gearing (13,237)—J. W. Cann.
Rail fastening (13,447)—R. Askew.
Key and locking device of metal for permanent way of railways, etc. (13,688 and 13,689)—C. J. Budge.
Variable speed gear (13,725)—N. Isherwood.
Variable change speed gear for road and rail vehicles (13,703)—J. Thomas.
Understructure for supporting railway tracks (13,685)—E. Vagneux.

### SPECIFICATIONS PUBLISHED.

1917.

Apparatus for warming tramway and railway vehicles (4,794—*117,094*)—J. H. Robinson.
Spring suspension of road vehicles (9,507—*117,115*)—E. W. Bowen.
Electrical systems of power transmission and regenerative braking (13,725—*117,181*)—British Thomson-Houston Company (*General Electric Company*).
Variable speed gearing (15,409—*110,755*)—H. G. C. Fairweather (*A. Leffler*).
Attachment of railway rails to chairs and to tie bars therefor (9,648—*117,288*)—H. Birkbeck and L. Green.
Internal combustion engines for use with automobiles (9,955—*117,295*)—K. J. Smidt.
Gas containers for motor-driven vehicles (13,229—*117,343*)—R. C. Jagger and F. Jagger.
Heavy mechanically propelled road vehicles (13,612—*117,349*)—W. G. Wilson.
Engines for traction on centre rail railways and means of working the same (14,137—*117,354*)—G. N. Fell.
Spring adjuster for motor cars (15,277—*117,367*)—C. E. Cary, A. Dixon, and B. Brayshaw.
Speed indicators (15,451—*117,370*)—F. H. Nalder, Nalder Brothers and Thompson.
Method and apparatus for producing motor fuel oil by distilling petroleum (15,654—*117,372*)—C. B. Forward.
Lighting devices for motor vehicles (17,080—*111,669*)—Benjamin Electric, Limited.
Variable speed gears (685—*117,465*)—H. Biggleston.
Device for guiding the trolley pulley of an electric car into contact with its overhead wire (10,443—*117,498*)—E. B. Moyse.
Rail fastenings (10,762—*117,508*)—Steele Rail Anchor Company and J. R. Steele.
Vacuum brakes for railway vehicles (13,729—*109,973*)—Geb. Hardy.
Motor-driven vehicles (14,259—*117,540*)—F. J. Brougham (*H. C. H. Mustad*).
Regulating systems for motor vehicles (8,516—*107,377*)—T. Douglas.
Braking systems for electrically driven vehicles (9,061—*117,647*)—British Thomson-Houston Company (*General Electric Company*).
Means for actuating signals on and communicating with trains (10,659—*117,669*)—H. A. Thompson.
Electrical point detectors for railways (12,104—*117,712*)—A. E. Hudd and G. H. Wion.
Automobile vehicles (17,384—*117,765*)—E. M. Knolles and J. Cleary.

1918.

Automatically lubricating the rails or the flanges of railway wheels while passing around curves (8,021—*117,246*)—R. H. Nielsen.
Alarm for use in connection with the lubrication of the engines of motor vehicles (2,553—*117,408*)—H. P. C. Lenormand.
Electro-magnetically controlled signal reverser for use on railways (8,290—*117,435*)—Sykes Interlocking Signal Company and R. W. Tarrant.
Axles for motor-driven road vehicles (1,678—*117,777*)—H. M. Butler and C. W. Davis.

STEAM AND HYDRAULIC
ENGINE PACKING
MANUFACTURERS
(Flax, Asbestos and Cotton)
And all Engine Room Stores
ATTWATER & SONS
Hopwood Street Mills, PRESTON
*Telegraphic Address: "Attwaters, Preston."*

STEAM CONDENSING PLANT.
VACUUM PUMPS AND EVAPORATORS.
MIRRLEES WATSON
THE MIRRLEES WATSON CO. LTD., GLASGOW

PROTECTION!
from danger to life and limb is fully secured by the use of "Triplex" Safety Glass. Cannot possibly splinter. A vital necessity for every purpose—Aeroplanes, Automobiles, Ships, Trams, Trains &c.
*Catalogue mailed on request.*
The Triplex Safety Glass Co. Ltd.
(REGINALD DELPECH, Managing Director)
1 Albemarle St., London W.1.
Contractors to H.M. Government.

TRIPLEX SAFETY GLASS

TROLLEY HEAD SLINGS
Trolley Head Slings 18" long by 3/16" diameter. Best Flexible Steel Wire Rope Galvanised, Loop-spliced in each end to take ½" bolt, and served with Galvanised Wire. Price 12/- per dozen nett (in Gross Lots). Sample on Application.

# Commercial Reconstruction

## A KEY INDUSTRY

IF YOUR BUSINESS embodies transport service the motor lorry is the key to a successful development of your position in the after-war Commercial world. The future position of rail and horsed transport can already be regarded as hopeless for speedy delivery.

The progressive manufacturer and merchant is planning his independent and self-controlled service of motor vehicles, and the performances of present-day vehicles are going to decide his choice.

**THE VEHICLE AND THE ROAD.**

We have more than once in this column emphasised that the vehicle and the road are complementary to one another, but that, while there must be some give and take on both sides, it is rather for the road to be fitted to the vehicle than for the vehicle to be fitted to the road. Evidently, provided that we make our roads really suitable for all desirable forms of traffic likely to be of any real utility, it would be unreasonable to allow monstrosities in the way of vehicles to be employed, as likely to result in great damage to the road surfaces or foundations. We ought not, however, to go further in the way of restricting the design of vehicles. We should rather encourage free progress and, when that progress takes place, recognise the fact and improve our roads so as to bring them into line with it. There is an unfortunate tendency in many quarters to consider that the only duty of a road is to be cheap in maintenance and that this object can be best achieved by restricting the traffic that is allowed to use it. If we carry this contention to its logical conclusion, we come to a very simple agreement to the effect that if we allow no traffic on the road at all, the cost of road maintenance will be reduced to a minimum. The trouble is that in that case the road would not be performing the function for which it is created.

* * * * * *

The point of this argument is that it is extremely easy to go too far in the way of dictating the design and load capacity of vehicles simply with the one object of seeing that the types employed do no harm to the roads. It is a pity that we cannot look at the whole question of road transport from a broader point of view. The road and the vehicle taken together are intended to enable us to move goods and passengers from point to point with speed and economy. If we could prepare a full financial statement it would include amongst other things:—

(1) The cost of road construction and maintenance.
(2) The cost of road widenings due to traffic congestion and other causes.
(3) The first cost of the vehicles employed.
(4) The operating costs of the vehicles.

In the result we should be able to assess the total cost of carrying a given load over a given distance. Now it stands to reason that, if we concentrate on only one of these factors, we are liable to be entirely misled. We may, for instance, save the country two million pounds in road maintenance and increase expenditure on the operation of vehicles by five million pounds in consequence. This would be thoroughly unsound, but it is the sort of thing that happens if the regulations as to the use of vehicles are framed only or mainly by those who are simply concerned with the maintenance of roads and the provision of money therefor.

* * * * * *

The directions in which those who are particularly interested in roads and their cost are liable to interfere unduly with the development of road vehicles are mainly in respect of their useful load capacity and such features of design as wheel-base. It is considered that vehicles of very short wheel-base are injurious to the road surface. Consequently, we find regulations proposed which would have the effect either of reducing the useful load carried by a vehicle of given dimensions, or alternatively of necessitating an enormously long wheel-base, making the vehicle far from handy in traffic or upon sharp bends. Excessive wheel-base would be absolutely fatal to the success of a vehicle under most conditions in the Empire overseas. Consequently, if this feature is necessitated at home, it would be necessary for manufacturers to divide up their output, producing special models for export. This is the direct opposite to the system of quantity production of a single type which we know makes for economy in works. Moreover, the very long wheel-base makes a vehicle extremely difficult to manœuvre in confined spaces and somewhat dangerous in traffic owing to its inability to turn sharply enough to keep on its proper side of the road. It may, of course, be argued that no one is compelled to adopt a specially long wheel-base, but as a matter of fact the only alternative opened by those who are simply considering the interests of the roads, entails a material reduction in the useful load carried. This in turn obviously means a considerable increase in the cost of operation per ton-mile. Motor users generally cannot afford to allow restrictions to be introduced which will either put up the cost of transport or make motor vehicles materially less efficient and handy than they have been in the past. We must, even at the cost of increasing road maintenance charges, secure the best all-round efficiency of our transport system, and this certainly cannot be done by introducing arbitrary restrictions which will interfere with the natural developments in design.

### THE GOVERNMENT MOTOR REPAIR DEPOT.

The scheme for the erection and equipment of a Government motor repair depot at Slough has now received approval, subject to the qualification that the work should be proceeded with in sections and the scheme kept down to the lowest possible dimensions. It is only under such conditions that the scheme can be justified at all, and we hope that the fact of a general approval having been given to its main principles will not operate so as to permit enthusiasts to extend it beyond its legitimate scope for purposes which would never have been regarded as sufficiently important to justify its acceptance in the first instance. The depot is required only for repairs and not for manufacture. There is certainly no intention of using it for the latter purpose for the present, but the day may come when some such proposal may be put forward. We certainly do not want a national motor factory designed to fill the needs or part of the needs of our armies after the war. Anything of the kind would be very undesirable for many good reasons. The first of these is that our organisation for the provision of military lorries and other war vehicles needs to be extremely flexible. The normal peace establishment is trifling as compared with the fleets required during a great war. The increase in supplies must be able to keep pace with the most rapid mobilisation imaginable. This requirement can only be fulfilled if the military types are in peace time produced in comparatively small numbers from a quantity of factories, representing in each case only a trifling fraction of the whole output. In the event of war breaking out, the works can then be turned over rapidly to an increased output of military types. If, on the other hand, the War Office depended in peace time upon its own factory, then no other manufacturing concerns would be equipped for the production of military models, or would have been encouraged to standardise types of vehicle suitable for military use. For this reason, manufacture must be left in the hands of the home industry and it would be most detrimental if the Government interfered with it.

* * * * * *

The above argument applies only to a possible contingency in connection with the Slough scheme. Considering its more immediate purpose, we are informed that to equip the depot for repair work upon an adequate scale will involve a total expenditure of something over a million pounds. The Committee charged with the duty of considering whether such an expenditure can be justified, advise, as already stated, that the depot should be constructed in sections and that meanwhile everything possible should be done to secure the repair of an increased number of vehicles by their own manufacturers. So far as the British vehicles are concerned, we see no particular reason why this latter method should not be generally adopted to fill all the needs. The expenditure necessary to put manufacturers into a position to repair their own vehicles at the required rate would be infinitely less than that involved in the construction of a brand new depot on a huge scale. It would, moreover, have the advantage of bringing results with much less loss of time. Furthermore, it would bring about a state of affairs under which, at the conclusion of the war, every manufacturer would be able to take over the returned vehicles of his own make and deal with them quickly and well. It may be argued that this same work could be done also in a Government depot, but the work of overhauling is not all that is required. The returned vehicles must first be put into condition and afterwards sold. The manufacturer has his selling organisation, but the Government depot will have none. Furthermore, the manufacturer, if he repaired his vehicles, would give them his own guarantee of condition and would obtain thereby better prices than would otherwise be got. The fact of the matter appears to be that the Slough depot is really necessary only for the repair of foreign vehicles owned by the British Government and it ought to be kept down strictly to the size required for that purpose.

* * * * * *

Some people regard the Slough scheme as being really at bottom an attempt to provide a permanent home for the A.S.C., M.T. If that be its direct object, one may admit at once that it is a desirable one, but at the same time one cannot fail to notice that it represents an unduly expensive way of attaining the desired end. When the war is ended there will be large numbers of big national munition factories standing idle. One or more of these situated in suitable centres, could be taken over. It is quite possible that it would be better to have a number of depots in various centres than to concentrate upon one central depot. One reason for this would be that, if any form of subvention scheme is continued, it would be a good thing for each locality to have its own depot from which inspections would be carried out and at which machines could be collected and mobilised in emergency. Altogether the Slough proposition, though unfortunately necessary as a war measure, provided that its scale is kept down to the minimum, is one which, unless strict moderation is observed, may have a very serious detrimental effect on the future of the motor industry and consequently upon the supply of vehicles required by motor users.

## SAFETY HINTS FOR GAS MOTOR DRIVERS.

The London Safety First Council have issued an illustrated poster giving hints to drivers of gas-propelled vehicles with a view to the prevention of accidents. The importance of this action will be appreciated when it is considered that in the United Kingdom there are 8,000 of these vehicles, of which number 4,000 are running in the metropolitan district. The wording of the poster is as subjoined :—

Stop the engine and apply brakes before attempting to charge container.

Turn off petrol supply cock securely before turning on gas supply, or excessive " back-firing " may result, thus frightening horses and alarming pedestrians.

See that flexible pipes are not twisted or kinked, or unnecessary wear and leakage may be caused. The supply pipe to engine should not protrude beyond the body line or rub against wind screen.

Don't enter any building without first observing the head room ; the container may get torn and cause leakage of gas and explosion in the building.

The container should never sag over the side of the vehicle. Empty tins or packages carried on the container are liable to cause injury and leakage.

Above all, avoid bringing any kind of naked light close to a gas-propelled vehicle or inside a garage. Keep garage ventilators open—always !

Rubber or composition pipes ought not to be close to heated surfaces. Metal connections are safer and better.

The anchoring of the container to the vehicle should be well designed and kept secure.

When approaching overhanging trees, low bridges, projecting signs, shop awnings, telegraph poles, lamp standards, aerial wires, etc., take care !

## THE GREAT MOTOR DEPOT AT SLOUGH.

War Office Scheme Approved.

The eighth report of the Select Committee of the House of Commons on National Expenditure, which was issued last month, contains among other things the following in reference to the proposed military motor transport depot at Slough.

Our Sub-Committee have made close inquiry into the necessity for the depot which it is proposed to establish at Slough as a motor transport warehouse and repair workshop, at a cost of somewhat over a million pounds. This depot is intended for the use of the War Office and of the Air Force, and to meet the needs of the present time, of the period of demobilisation, and of after-war conditions.

The case for the establishment of a great central depot is as follows:—There is now in England an accumulation of several thousand motor vehicles awaiting repair, three times as many as a year ago. In France there are almost an equal number. They represent some millions of pounds' worth of plant lying idle. As the average age of the vehicles in use increases the proportion needing repair increases. The lorries and cars now in use should be overhauled periodically; the absence of facilities for doing this involves wasteful running, especially an excessive consumption of petrol, and it shortens the life of the vehicles. The spare parts now in Government stores are valued at £5,250,000, in addition to £1,500,000 at the makers; they number 200,000 different items. The existing scattered workshops and warehouses, often in unsuitable premises, are quite inadequate for present needs, and involve a waste of money, of labour, of transport, and of time. On the termination of the war there will be a mass of lorries, cars, cycles, spare parts, and machinery to be brought back from France, representing a value of many millions. It will take two or three years to put the vehicles into good order and to dispose of them. If they are not properly dealt with there will be heavy loss through deterioration. After the transitional period a central motor transport depot will be needed by the post-war Army and Air Force.

Our Sub-Committee have considered possible alternatives to this costly scheme. They have inquired into the practicability of less expensive arrangements being made in France, or in England, or both, to meet the present needs, with the expectation that when the war is over the Ministry of Munitions may have national factories idle, one or more of which might be devoted to this purpose. They have considered also whether adequate arrangements might not be made with the manufacturers to repair the vehicles of their own make. But for various reasons, into which it is not necessary to enter in detail, they are convinced that there is no satisfactory alternative to the establishment of a central depot. They have ascertained that the opinions of a number of experts, unconnected with the War Office or with the army, were invited before the scheme was adopted, and that they were unanimous as to its necessity. The Surveyor-General of Supply, Mr. Andrew Weir, fully endorses it.

It appears therefore that the case for the depot has been fully made out. Indeed, the criticism that may properly be made is that much waste would have been avoided had the repair workshop been established long ago. Owing to the absence of facilities for repairs, both in the manufacturers' and in Government workshops, the consequence has ensued, involving great extravagance both in money, in labour, and in material, of new lorries and cars being manufactured and brought into use, while serviceable vehicles, needing only a fraction of the labour to be put into order, are standing idle in thousands. Major-General Crofton-Atkins, the Director of Supplies and Transport at the War Office, is to be commended for the foresight and persistency with which, during a considerable period, he has endeavoured to press forward this proposal.

It is not within our province to consider how far objection was properly raised to the site selected on the ground of the injury done to food production. The evidence received by our Sub-Committee indicates that the site is not unsuitable for a depot such as is proposed.

There remains the question of the scale on which the depot is to be built. As to this we think it advisable that the War Office should proceed with caution. It will be some months before any important section can be brought into use. If the end of the war appeared to be in sight, the situation would be completely altered; for although the depot, once in being, could be put to excellent use during the period of demobilisation, and possibly afterwards, we should not have endorsed the proposal on account of post-war considerations alone. It would no doubt be possible after the war to find, if necessary, some national establishment, thrown out of use by the ending of hostilities, which could be devoted to the purposes in view during the period of demobilisation, and no one can now foresee what will be the scale of the army and of its motor transport under peace conditions.

It may be practicable also to make greater use than is now the case of the manufacturers' establishments for the repair of the vehicles which are of British make and of recent type. Although it is clear that private firms are far from being able to cope with the whole situation, an endeavour should be made to secure that a larger proportion of their resources should at once be devoted to repairs and a somewhat less proportion to manufacturing. Their establishments being controlled, the Ministry of Munitions should be in a position to effect this.

It is desirable, and our Sub-Committee understand it is now contemplated, to build the depot in sections, concentrating the available labour and material on the completion of each in turn. The Army Council should, in our opinion, keep a careful watch upon this important undertaking, with a view to restricting its scale to more modest dimensions if any change of circumstances renders a smaller establishment sufficient for the immediate necessities of the case. It ought not to be completed, in our opinion, in accordance with the present very extensive plans for the sake of post-war conditions alone.

## A ROAD-WASHING VEHICLE.

The accompanying illustration depicts the latest development representing the collective experience of several years' work in the endeavour to do away with dust-raising revolving road brushes, and substituting the cheaper and more efficient method of washing and cleaning by water.

One of the main points of this machine is that it covers a wide spread of road both by water and squeegee, and this has been carried out by arranging three power-spray water nozzles instead of two as in earlier patterns This makes it possible to cover 40 miles

**Straker-Squire Road Washing Vehicle.**

of roadway during a night's washing, and a similar or even larger mileage during the day on flushing work.

With all three nozzles going, two miles of washing are accomplished on a 1,100 gallon filling of the water tank. Needless to say that in changeable weather, such as is the average in England, there is no necessity for using the whole of the three nozzles, and in wet weather they can be partially closed, thus halving the quantity of water used. On macadam roads, where the power-spray is impossible, and only gravity sprinkling admissible, the filling of the tank would practically last double the time.

These few indications will make it possible for anyone to compare the large saving this last product of the Straker-Squire works represents as against the old methods of road brushing with everlasting refills of brooms.

Motor Cab Mileage per Gallon.—In the London Sheriff's Court, a motor cab owner said his cab earned £1 a day net, and he was proud to say that it traversed 25 miles to the gallon in London traffic.

# MOTOR TRAFFIC.

## A SOUTH AMERICAN MOTOR MARKET.

AFTER-WAR PROSPECTS FOR BRITISH MANUFACTURERS IN ARGENTINA.

"Argentina: A Market for Motors," is the subject of an interesting and informing article in "Argentina Commercially Considered,"* in the course of which the writer expresses the belief that after the war Argentina will develop into the largest market for motor vehicles in South America, and one of the largest in the world. The demand for motor vehicles will, it is anticipated, increase far above the present level, and above that of pre-war days.

The market in cars proper may be divided into three classes: the car *de luxe*, the touring car, and the small car. The first is now well known in the big cities, and its uses are for promenades and functions. The touring car is wanted by those who have to journey between town and country, or from railhead or station to the more remote districts. The small car or runabout is wanted both in town by professional men and on the estancias, for speedily getting from point to point. The requirements of the car *de luxe* in no way differ from the requirements for similar cars in Europe. The touring cars which will be a success are those which can stand hard wear and tear, and in the machinery of which the fewest complications can arise. It is pointed out that the roads outside the towns are not good, a fact which has militated against automobiling in the past. They are narrow; in dry weather very dusty, and in wet weather very muddy. They are, especially off the main routes, badly mauled by wagon tracks. It will be obvious that cars should therefore be strongly built, well springed, and with good clearance—with extra good clearance in fact. The colonial model is therefore well suited to the country. As regards upholstery, particular attention should be paid to dustproof and waterproof requirements.

The light car that will stand service on the estancia is wanted literally for "knocking about." As often as not it will have no garage, and it will be one of the lucky ones if it gets a shed to cover it. It will stand in pouring rain and broiling sun for weeks and months. If it gets washed, it will be a rarity indeed. If damaged, it will be repaired on the kill or cure system, and the odds will be even as to which will supervene. It will be driven across fields and ditches for more miles than ever it will travel on roads. It may, and probably will, be used as an auxiliary to round up cattle, and possibly, on emergency, even to drive a dynamo. The car must therefore be very hardy, very simple, and on account of its comparatively short life, cheap, with high clearance and moderate turning radius. Speedometers should register kilometres, and the tread 4 ft. 8 in. Tires in metric sizes, enclosed valves, and leather clutch are advisable features. Hitherto the market whence cars *de luxe* have been imported has been Europe, and indeed, until a few years ago, practically all the cars in the Argentine were European. About 1912, American cars put in an appearance, and at the present time all imports are from the United States.

The British manufacturer has now to show that he can produce and lay down at the estancia a car as practical, as lasting, and as cheap as the American. He can do it, but he has now, or as soon as circumstances permit, to get out in Argentina and demonstrate it. A beautiful salesroom in Buenos Aires and a trial run round Palermo are sufficient for showing off a landaulette or other car *de luxe*, but not for proving that a car is *the* one to take the client from, say, Buenos Aires to Rosario, or in which to race about an estancia of 50,000 acres in Santa Fé, or to travel 150 miles over the undulating tracks of Pampa Central.

The use of the motor truck is, it is stated, quite inconsiderable, though with proper demonstration of the right vehicle there is an extensive field to be opened. The objections to the motor truck in the cities are mainly due to the narrowness of the streets. A motor truck is not a great advantage where traffic all moves in one direction, and its speed may be dominated by the celerity of a vegetable cart with an aged moke between the shafts. Still, in such places as Buenos Aires, Rosario, La Plata, and Bahia Blanca, there is a certain demand to be met.

One has only to remember the character of Argentine exports—grain, wool, hides, timber, dairy produce—to realise the enormous possibilities of motor lorries amongst the estancieros. Everything exported from Argentina has to be brought many miles across country to the railway or the river, and this is done principally by horse traction. The use of the lorry means larger loads, quicker journeys, and fewer hands. Its advantages are already beginning to be recognised, but the lack of trained mechanics and the high cost of fuel have hitherto militated against their success. The opening up of the oil fields at Comodoro Rivadavia and elsewhere are solving the latter difficulty. The former will be solved when the demand for trained labour justifies the organisation of supply. (The remarks with regard to motor trucks are equally applicable to steam transport.) As in the case of cars, trucks will have to be of strong and simple make, able to carry out a lot of hard work under difficult circumstances and without protest. The record of the motor transport in the war shows what can be done. In Argentina there is the field; with proper salesmanship there is the demand, and the M.T.C. is proof sufficient that British manufacturers can effectively supply it.

With regard to motor farm tractors, the writer in "Argentina Commercially Considered," quotes Mr. David Beecroft, the special agent of the Bureau of Commerce, Washington, B.C., who was sent to Argentina to investigate the opportunities, as saying:—"No country is better adapted to the use of the motor farm tractor than Argentina, with its long level stretches, its entire freedom from stones, and its sparse farm population. The farm tractor was introduced by American manufacturers on the pampas several years ago, but unfortunately its application was not the greatest success. Seven or eight years ago mechanical farm help competent to care for the farm tractor was not to be had, and the machines proved a failure, not owing to a faulty design, manufacture, or materials, but owing to lack of competent operators. Those tractors were largely of the heavy type, capable of pulling 8 to 12 ploughs. They are still to be seen, but are not in use because of the high cost of fuel and the problem of operators. Unfortunately they are not a good advertisement for the American tractor industry of to-day. To-day the estanciero is not favourably disposed to the farm tractor, partly because of past experiences, but largely owing to the high price of gasoline, the cheapness of horses, and the poor crops of the last two years. The small American gasoline tractor, capable of pulling three or four ploughs, is on the Argentine market, but is not selling. In spite of the handicaps the estanciero is looking more favourably on the small tractor. He sees in it a cultivating capacity that will make up to some extent for the shortage of labour due to the cutting off of immigration since the war and the emigration of many Italian farm labourers who have left to join the colours of their native land."

The imports of cars into Argentina of recent years are stated to have been:—

| Year. | No. | Customs Value. £ | Average Value. £ |
|---|---|---|---|
| 1911 | 2,461 | 469,317 | 190 |
| 1912 | 4,281 | 1,031,806 | 247 |
| 1913 | 5,115 | 1,038,843 | 205 |
| 1914 | 2,185 | 221,133 | 101 |
| 1915 | 1,847 | 121,991 | 67 |
| 1916 | 5,929 | 439,117 | 74 |

Exporters are reminded that advertising and all literature and correspondence should be in Spanish, and prices should be quoted f.o.b. But the best method of doing business is by means of competent demonstrations worked in conjunction with responsible agents, a concessionaire house in Buenos Aires or Rosario, which will have its own branches or sub-agents in other places.

* "Syren and Shipping" Offices, 91, Leadenhall Street, London, E.C.

## TRIPLEX SAFETY GLASS.

The appended photograph strikingly illustrates the invaluable service often rendered by Triplex safety glass. This pair of goggles

without doubt saved the sight of an airman who crashed when wearing them. As will be seen, the glass completely withstood the very severe test. The wearer states that his experience enabled him to realise the indispensability of Triplex safety glass.

# MOTOR TRAFFIC.

## GOVERNMENT ROAD CONTROL.

In reply to a resolution passed by the Executive Committee of the County Councils Association, requesting an assurance that all highways taken over under Regulation 5 of the Defence of the Realm Regulations will be handed back to the highway authorities in a proper state of repair, or that they will be paid the full cost of all necessary reinstatement, the War Office Controller of Roads and Bridges has written :—

"The whole question of the state of repair or necessity for reinstatement of any roads which may have been taken over under the authority of Regulation 5A of the Defence of the Realm Regulations will be dealt with at the time such roads are returned to the local authority responsible for them. Your association can rest assured that all equitable adjustments on the lines indicated will be made." The Controller of Munitions Finance, Ministry of Munitions, wrote :—

"The Minister will see that when roads are returned to them the local authorities are equitably treated."

### Army Controller of Roads and Bridges.

At a meeting of the County Surveyors' Society a resolution was passed expressing a hope that the Army Council Order of March 15, 1918, appointing a Controller of Roads and Bridges, will be modified so as to provide that the suggested control shall relate to traffic only, and that the title of the officers appointed to control such traffic be amended accordingly. The meeting also hoped that the Army Council will not authorise any modifications of the statutory duties, powers, and obligations of highway authorities (other than in cases of neglect to maintain highways such as those contemplated by the Order in Council of February 5, 1918) ; that the form of procedure with respect to the execution of road works in connection with requisitions by the Board of Trade (Timber Supply) and the Ministry of Munitions and other Government departments, be adhered to ; and that the work be carried out through the Road Board as heretofore.

### Protest by the Municipal Engineers.

At the August meeting of the Council of the Institution of Municipal Engineers the following resolutions were adopted :—

"That the secretary send the following protest to the Road Board or other proper authority :—This institution views with alarm the growth of a military control of the highways of the country, as such a control is not, in their opinion, to the best interests of the ratepayers or municipal engineers, who have had the control of the highways hitherto, and the institution strongly protests against such a control being set up ; " and

"That the secretary communicate with the Transport Board and ask for this institution—as representing municipal engineers—to be represented on the Transport Boards now being formed all over the country, so that its members may be kept in touch with all questions of transport affecting roads and traffic thereon."

### A Representative Roads Committee to be Formed.

Replying to a question in the House of Lords by Lord Montagu, Earl Stanhope remarked that there had been a good deal of misunderstanding on the subject of military control of roads. Many Government establishments had sprung up all over the country ; some near main roads and others near roads that were not fit for traffic. It was obvious that the damage would be very considerable, and that the cost of repairs was not a fair charge on the local ratepayers. A directorate of the War Office was made responsible, and the Road Board was asked to become its agent in settling these questions with the local authorities. Subsequently the Ministry of Munitions and the Air Force made use of this department to deal with roads with which they were concerned. Apart from actual damage there were side roads that needed widening to connect them up with the main roads. With regard to damage the Government took responsibility under certain conditions. He hoped that eventually the control would go back to the local authorities. It was hoped that there was now a scheme which would do away with friction. The idea was that there should be set up a Joint Roads Committee on which the Road Board, local authorities, and Government departments concerned would be represented.

Motor Omnibuses for Todmorden.—Application has been made by Todmorden Corporation to the Ministry of Munitions for a priority certificate to enable the engineer to purchase three new motor omnibuses. In view of the fact that a number of vehicles have been commandeered only a restricted service has been possible. This has been quite inadequate for the needs of the town, and as a result of strong local feeling a deputation will wait upon the officials of the Ministry to urge the importance of the matter, should this prove necessary.

## EUROPEAN MOTOR CAR CENSUS.

The Press Bureau of the Fiat Motor Works, Italy, has issued the following statistics showing number of motor cars in use in Europe—

| | No. of Cars. | Year. | Population. | No. of Inhabitants per Car. |
|---|---|---|---|---|
| Great Britain | 171,607 | 1917 | 46,087,000 | 268 |
| Germany | 95,000 | 1914 | 65,000,000 | 684 |
| France | 98,400 | 1916 | 39,600,000 | 402 |
| Italy | 35,500 | 1918 | 35,587,784 | 1,002 |
| Russia | 27,900 | 1916 | 148,289,000 | 531 |
| Austria-Hungary | 19,360 | 1916 | 52,608,000 | 2,671 |
| Belgium | 14,700 | 1916 | 7,580,000 | 515 |
| Spain | 10,253 | 1918 | 20,400,000 | 1,989 |
| Holland | 10,000 | 1917 | 6,583,226 | 658 |
| Sweden | 9,000 | 1916 | 5,638,500 | 626 |
| Denmark | 8,500 | 1917 | 2,919,000 | 343 |
| Switzerland | 6,157 | 1914 | 3,765,000 | 611 |
| Portugal | 3,211 | 1917 | 5,433,000 | 1,692 |
| Norway | 3,067 | 1918 | 2,240,000 | 730 |
| Bulgaria | 3,050 | 1916 | 4,330,000 | 1,419 |
| Roumania | 2,500 | 1913 | 7,248,061 | 2,899 |
| Finland | 2,000 | 1917 | 3,600,000 | 1,800 |
| Greece | 800 | 1917 | 3,912,000 | 4,890 |
| Turkey | 500 | 1913 | — | — |
| Monaco | 230 | 1916 | 22,000 | 95 |
| Serbia | 200 | 1914 | 4,490,000 | 22,450 |
| Malta | 100 | 1917 | 224,000 | 2,240 |
| Gibraltar | 45 | 1917 | 18,500 | 411 |
| Cyprus | 15 | 1917 | 273,867 | 18,257 |
| Rhodes Islands | 14 | 1917 | 30,000 | 2,142 |
| Crete | 3 | 1917 | 365,000 | 121,665 |

In most instances the figures do not include lorries and motor cycles. This is also the case with Great Britain, where many thousands of lorries, cars, and cycles have been added for the purpose of the war. The 1917 returns for Great Britain are lower in respect of cars than was the case in 1914, the reason being that many private cars have been withdrawn from use. In the case of Malta the number of cars has increased from barely half a dozen in 1914 to 100. This is due to the island having been made a base for hospital and other purposes during the Gallipoli campaign, when more than 90,000 wounded and sick soldiers and sailors were received in hospital.

## A NAPIER LORRY IN RAILWAY SERVICE.

The Napier lorry shown in the accompanying illustration was converted into a staff rail car by one of the A.S.C. workshop companies in German East Africa. The body, hood, wind screen, and luggage carrier are made of parts salved from the scrap-heap. The

vehicle is fitted with German railway wheels adapted to the Napier chassis, the body is made from a car which had been damaged by shell fire, and the luggage box at the rear is made of native wood fitted together on the spot. The chassis is of the 30-45 cwt. type, and since it has been fitted and used by the staff it has proved its reliability by freedom from breakdown.

Annual Meeting of the Municipal Tramways Association.—As previously announced, the annual meeting of the Municipal Tramways Association will be held at Leicester on September 26 and 27. The programme of the meeting was not completed when these pages went to press.

# MOTOR TRAFFIC.

## THE ECONOMY OF ELECTRIC VEHICLES.

CHESTER'S ELECTRIC WAGONS.

Since June and September, 1916, two battery tipping wagons supplied by Edison Accumulators, Limited, have been engaged in collecting house refuse at Chester. Mr. S. E. Britton, the city electrical engineer, has reported that at the end of December, 1917, the wagons had travelled 13,688 miles, collected and carried 5,974 tons of house refuse, delivered 217 tons of fuel to the electricity works, and conveyed 167 tons of shell and 256 tons of scrap steel to the railway station. The working expenses were :—

| | Per mile. d. | Total. £ s. d. |
|---|---|---|
| Drivers' wages ... ... ... ... | 4·50 | 256 13 0 |
| Repairs ... ... ... ... ... | 0·24 | 13 13 9 |
| Materials ... ... ... ... | 0·60 | 34 4 0 |
| Insurance ... ... ... ... | 0·20 | 11 8 1 |
| Electrical energy ... ... ... | 2·65 | 151 3 2 |
| Maintenance of tyres ... ... ... | 1·00 | 57 0 8 |
| | 9·19 | 524 2 8 |

A sum of £48 2s. was received for the cartage of fuel, shell, and scrap steel, making the net cost of carting refuse, excluding interest and depreciation, £476 0s. 8d.

The two vehicles do the work of six horses, carts, and men. These, if obtainable, would have cost for hiring, £1,516 14s. The drivers employed with the horses and carts also assist in filling the latter, so that in order to get a fair comparison their wages should be deducted from the cost of hiring. Each man devotes approximately two-thirds of the day to driving from house to house and collecting, and one-third driving to and from the tip. For the purpose of comparison the drivers' wages are allocated in equal amounts to collecting and driving, which reduces the hiring figure by £256 16s., making the figures for comparison :—

| | £ s. d. |
|---|---|
| Six horses and carts ... ... ... ... | 1,259 18 0 |
| Two electric vehicles ... ... ... ... | 471 3 0 |
| Leaving a balance in favour of the "electrics" of ... ... ... ... ... ... | 788 15 0 |

For repayment of loan and of interest, £733 was allocated in the period stated.

ELECTRIC VEHICLES AT GLASGOW.

In the report of Mr. W. Greig, the cleansing superintendent to Glasgow Corporation, for the year ended May 31, 1918, it is stated that the two Edison accumulator 2-ton vehicles which were put into service in December, 1916, and May, 1917, respectively, have proved very satisfactory, being efficient, dependable, economical, and easily driven. An order for two additional machines of a similar type was placed some time ago, and it is hoped that delivery may be obtained in the near future. Compared with horse haulage, the figures for the past year are as under :—

For electric vehicles ... ... ... 3s. 5½d. per ton.
For horse traction ... ... ... 4s. 1½d. per ton.

On August 9, 1918, the Cleansing Committee agreed to recommend the Corporation to purchase two 2-ton battery wagons at £1,168 each, and two 3½-ton battery wagons at £1,432 each.

Twelve petrol-driven street sweeping machines were at work during the year, the cost being 5½d. per 1,000 sq. yds. swept, as against 5¾d. for horse-drawn sweepers. Great difficulty was experienced in securing the material required to keep the machines in repair, and drivers and mechanics were difficult to obtain.

Owing to the afore-mentioned difficulties the cost of working of two petrol-driven wagons, each of 3-ton capacity, was unduly high during the year. Another cause which helped to inflate the cost was the numerous stoppages during the process of collecting domestic refuse. Mr. Greig again mentions, however, that the wagons have a great advantage in the rapidity with which they convey the refuse to the destructor works. The cost per ton came out at 4s. 6½d., as against 4s. 1½d. per ton for horse traction.

NUMBER OF MOTOR HIRERS IN THE UNITED KINGDOM.—The motor hirers' section of the Motor Trade Association reports that there are 7,475 motor hirers in the country, of whom 2,623 are members of the section. In view of the excellent services which the section has rendered to its members, the committee consider that it should be a comparatively easy task to induce the remaining 4,852 hirers to become members.

## TILLING-STEVENS VEHICLES.

The four-ton flour van illustrated below has recently been delivered to Messrs. J. Draper and Sons, of St. Leonards-on-Sea, by Messrs. Tilling-Stevens, Limited, of Maidstone. The makers

were successful in obtaining the necessary priority and permit specification to enable delivery to be made.

A 4-ton lorry supplied to Messrs. A. E. Reed and Company, who are paper manufacturers, is shown below. This vehicle is also operated on the Tilling-Stevens petrol-electric system, with their indirect electric drive, driven by an electric generating plant consisting of a 40-H.P. engine coupled to a dynamo supplying electrical

energy to a motor, which in turn drives the back axle. Similar vehicles have been supplied, as is well known, to all the leading Corporations and omnibus companies, and to a great many of the haulage companies, as well as to several private users.

A NEW CHANGE-SPEED GEAR.—A new type of change-speed gear has recently been patented by Leyland Motors, Ltd., and Mr. J. G. P. Thomas. It is a novel departure from the usual practice, and is similar in principle to a differential gear. Five forward speeds and a reverse are provided, and the whole arrangement is of a most simple character.

# MOTOR TRAFFIC.

## MOTOR VAN WITH SLEEPING BERTH.

The development of long-distance goods traffic by motor vans in the United States, in order to relieve the congestion of the railways entailed by the war, has led to the introduction of bodies with

**Motor Van with Sleeping Berth.**

closed fronts. Another useful feature is the addition of a sleeping berth for the use of the men in charge, as shown in the illustration.

## HIGH PRICES OF SECOND-HAND MOTORS.

NEW ELECTRIC VEHICLE AS AN ALTERNATIVE.

In an endeavour to obtain a vehicle suitable for conveyance of coal to the electricity works, the electrical engineer to Ilford Council has inspected a number of second-hand steam and petrol machines. The prices were as follow : –

Second-hand steam wagons—"Clayton," 5-ton, 1913, rubber tires, flat platform body, £950 ; "Sentinel," 3-ton, new rubber tires, flat platform body, £650.

Second-hand petrol lorries—"Straker," 3-ton, 30 H.P., £325 ; "Commer," 2-ton, 22 H.P., £400 ; "Commer," 4-ton, 22 H.P., £450.

As no second-hand electric wagons were obtainable, the engineer had obtained prices for new vehicles, as appended :—

General Vehicle Company, Limited—3½-ton chassis, £1,085 ; hand-tipped body, £195-£1,280 ; electric tipped body, plus £57-£1,337. If fitted with Wilkins' unloading gear the price will be rather less than electric.

Mossay and Company, Limited—3½-ton "Orwell," chassis, £987 ; hand-tipped body, £135-£1,122 ; electric tipped body, plus £50-£1,172. Two-ton "Orwell," chassis £842 ; hand-tipped body, £120-962 ; electric tipped body, plus £45-£1,007.

Electromobile (Leeds), Limited—3½-ton, 4 motor drive, hand-tipped or Wilkins unloading gear, £1,200.

Edison Accumulators, Limited—2-ton chassis, £1,068. Unable to quote for body.

Delivery was promised by the General Vehicle Company in 8-10 weeks after receipt of permit ; the other electric vehicle offers being three to four months.

Owing to the high prices asked for second-hand vehicles, the engineer advised the purchase of another electric wagon, as the slightly increased cost would be compensated for by the decreased running cost. He advised the acceptance of the offer of the 3½-ton "Orwell," but substituting the Wilkins unloading gear for the electric tipping body on the ground that it has several advantages over the ordinary tipping gear.

## MOTOR VEHICLES FOR MUNICIPALITIES.

ERITH URBAN COUNCIL are obtaining estimates for a motor ambulance.

BURY ST. EDMUNDS GUARDIANS have under consideration the purchase of a motor fire engine.

BIRMINGHAM CITY COUNCIL have been recommended to purchase two motor vehicles at a cost of £350.

KNARESBOROUGH RURAL COUNCIL are considering the purchase of a traction engine and three wagons.

CUPAR CORPORATION have decided to purchase a motor tractor suitable for the haulage of the fire engine.

MAIDSTONE TOWN COUNCIL propose to borrow £1,200 for the purchase of a 3½-ton electric tipping wagon.

OSSETT URBAN DISTRICT COUNCIL contemplate the purchase of a steam wagon for the Highways Department.

PONTYPOOL URBAN COUNCIL are contemplating the purchase of a motor lorry for the collection of house refuse.

STIRLINGSHIRE COUNTY COUNCIL have decided to purchase a steam tractor for use in the highways department.

SOUTHGATE URBAN COUNCIL have accepted the tender of Messrs. Aveling and Porter for a steam wagon to cost £1,163.

BURNLEY CORPORATION have under consideration the purchase of an electric vehicle for use in the electricity department.

GLOUCESTER TOWN COUNCIL have been recommended to purchase an electrically-propelled hauling lorry at an estimated cost of £1,200.

SHEFFIELD CORPORATION have authorised the tramways department to purchase an electric vehicle chassis for use as a tower wagon.

KING'S LYNN CORPORATION have given instructions to the Borough Surveyor to report upon the advisability of purchasing a motor tractor.

MANCHESTER CORPORATION have accepted the tender of Lookers, Limited, for the supply of two motor vehicles for the use of the Watch Committee.

ILFORD URBAN COUNCIL have accepted the tender of Mossay and Company, Limited, for the supply of a 3½-ton "Orwell" electric vehicle at a cost of £1,122.

TOTTENHAM URBAN COUNCIL have instructed the fire brigade superintendent to report as to the cost of installing a motor fire engine at the Central Depot.

HULL CITY COUNCIL have asked the Local Government Board for their sanction to the purchase of an electric tipping wagon at an estimated cost of £1,165.

TILBURY URBAN COUNCIL have accepted the tender of Messrs. Merryweather and Sons for the supply of a fire engine of the "Hatfield" type at a cost of £1,168.

GLASGOW CITY COUNCIL have been recommended to purchase four additional electric vehicles, two of 2 tons at a cost of approximately £1,168, and two of 3½ tons at £1,432 each.

THORNABY TOWN COUNCIL have been unable to obtain the sanction of the Local Government Board for the purchase of a new motor fire engine. It has therefore been decided to purchase a motor tractor to haul the old fire engine.

ROAD TRANSPORT BOARD.—The representatives of the road transport trade on the Divisional Boards of the Road Transport Board are as appended :—London, Mr. G. A. Dutfield ; Northern, Mr. H. P. Currie ; North-Eastern, Mr. G. T. Tuke ; North-Western, Mr. E. S. Hodgson ; North-Midland, Mr. G. Bentley ; South-Western, Mr. J. G. Corfield ; Wales, Mr. Evan Jones ; Edinburgh, Mr. W. T. Thomson ; Glasgow, Mr. R. Gilmour ; South-Midland, Mr. F. P. Ward ; Midland, Mr. J. A. Lycett ; Eastern, Mr. J. C. Sturton. Mr. R. L. Fergusson, the chairman of the London Divisional Road Transport Board, has moved with his staff to 5, Carlos Place, Grosvenor Square, W.1.

WELSH ROAD TRANSPORT BOARD.—Lieut. E. G. Evans has been appointed chairman and executive officer of the Divisional Road Transport Board for Wales and Monmouthshire. The members comprise two representatives of the Ministry of Food, one of the Ministry of Munitions, one representing Associated Chambers of Commerce, one representative of South Wales transport interests (Mr. Evan Jones, of Cardiff), and one co-opted (Mr. F. Wilks, of Llandudno), to represent transport interests in North Wales. This Board, similarly with others established, will be assisted by an advisory committee and by area committees at Cardiff, Bridgend, Swansea, Carmarthen, Lampeter, Haverfordwest, Newport, and Llandrindod Wells.

Digitized by Google

# MOTOR TRAFFIC.

## MOTOR TRAFFIC NOTES.

First Aid Instruction for Women Conductors.—Hitherto the women conductors employed by the London General Omnibus Company have received only a partial training in the rendering of first aid to the injured. As the women have been found to be reliable in most emergencies, they are now to be given a full course of instruction.

The Use of Gas at Manchester.—According to the annual report of the Gas Committee of Manchester Corporation, there are over 300 vehicles in the city running on coal gas. The gas department, the report states, has taken a leading part in the experimental work with gas for motor traction, and the system adopted by the committee has been taken as the standard in different parts of the country.

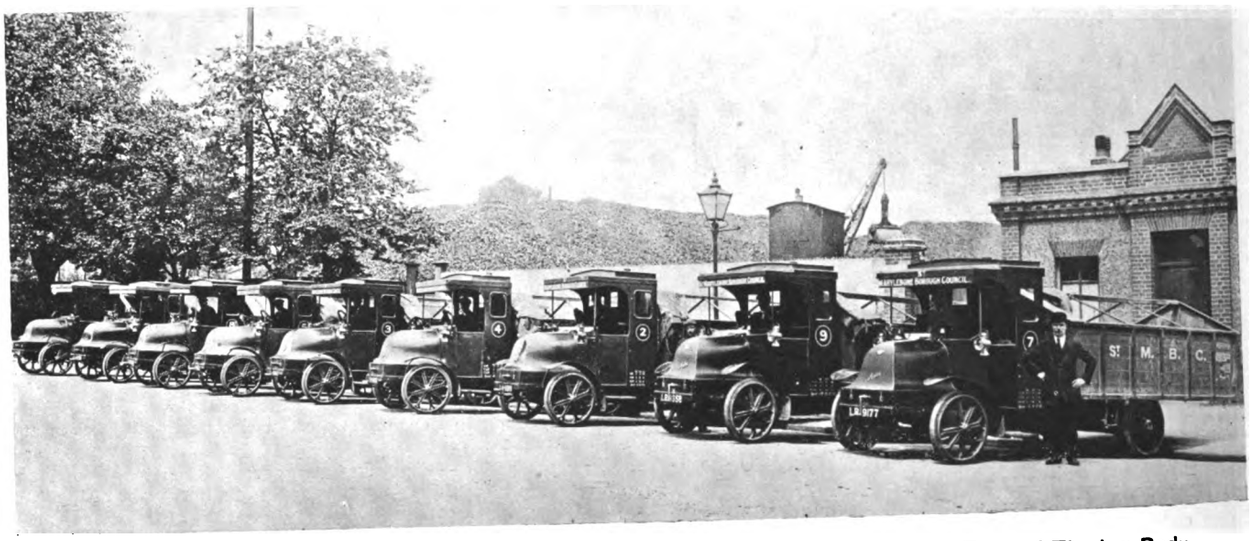
Car Owners' Changes of Residence.—In accordance with a suggestion by the Local Government Board, the London County Council have resolved not to require the taking out of a carriage licence and the payment of licence duty in respect of motor cars in cases in which, owing to petrol restrictions, the car is run on a single occasion from one place to another owing to a change of residence on the part of the owner.

Wales now possesses a centre, with headquarters at Cardiff. Mr. Butt Ekins is the local secretary.

Electric Omnibuses Unobtainable.—It was stated at a meeting of Morecambe Corporation that although the Council had last session obtained an Act of Parliament enabling them to run electric omnibuses, the Tramways Committee had not been able to induce the Ministry of Munitions to issue a priority certificate for the purchase of the vehicles. Councillor J. Birkett, the deputy mayor, complained that two years had passed without any improvement having been made in the means of communication on the sea front.

An East London Omnibus Service Withdrawn.—Replying to a resolution received from Walthamstow Council respecting the running of motor omnibuses as alleged pleasure services to Chingford on Sundays, while the tramway service has been curtailed, the Local Government Board have stated that they have no authority in the matter, but have forwarded the Council's letter to the Petrol Control Department and to the Commissioner of Police. Mr. W. Murray, the general manager of the Council's tramways, has since reported that the service has been withdrawn.

Speed of Service Motor Wagons.—Communications have been forwarded by the County Councils Association to the Admiralty and War Office with reference to the excessive speed of service motor wagons and heavy motor cars. The Admiralty, in reply,



**Marylebone Borough Council's Fleet of Austin 2-3-Ton Lorries Fitted with a Special Type of Tipping Body.**

Damage by Heavy Loads at Glasgow.—The Corporation have been recommended by the Labour Committee to take action in the Court of Session for the recovery of the amount of damage done to various streets by the haulage of boilers and machinery of exceptional weight. Counsel had recommended that proceedings be taken under the Roads and Bridges Act, 1878, as regards highways, and under common law for streets that do not fall within the definition of highway.

Motor Vehicle Subsidy for Japan.—As the result of the recent granting by the Japanese Government of a subsidy to owners of motor vehicles, the Japan Car Works, at Nagoya, are assembling cars from main component parts imported from America. The South Manchurian Railway Company have constructed four experimental vehicles at Dairen, while the Mitsubishi Dock Company, of Nagasaki, and the Kawasaki Dock Company, of Kobe, are preparing to enter the motor industry.

Registration of Road Transport Vehicles.—The Road Transport Order, 1916, made by the Board of Trade, came into operation on July 31. Under this Order all owners of goods-carrying vehicles were required to furnish particulars of their vehicles on the prescribed forms before July 31, 1918. The order applies to all vehicles driven by motor spirit, gas, electricity, or steam, and to horse-drawn vehicles with a capacity of not less than 15 cwt., with the exception of those vehicles used wholly or mainly in agriculture.

South Wales Centre of Commercial Motor Users.—The Commercial Motor Users' Association is actively engaged on a task that ought to have been taken up years ago. We refer to the establishment of local centres of the association. The new policy is the outcome of the success that has attended the Manchester, Liverpool, and Lancashire Centre during the past two years. South

suggest that conferences should be held to obtain some agreement as to what constitutes excessive speed, and that first-class roads can stand higher speed than those where the sub-soil is soft. From the War Office the reply was to the effect that the Army Council have issued instructions as to the necessity of proper control over the speed of military traffic.

"Safety First" in London Schools.—The excellent work accomplished during the past year by the Schools Propaganda Committee of the London "Safety First" Council, in conjunction with the teachers, is shown by the fact that 40,710 essays were written by the scholars in competition for prizes. The awards were distributed by Sir Cyril Cobb, chairman of the Education Committee of the London County Council, at an inspiring gathering held at Caxton Hall. Lord Sydenham, in the course of an address, mentioned that nearly 6,000 children under the age of 15 years were annually injured in street accidents in the metropolitan area.

Regulation of Omnibus Passengers.—In consequence of complaints that passengers frequently remained in the Sheffield Corporation omnibuses at the termini for the return journey, thus crowding out other persons, the Tramways Committee have ordered a notice to be exhibited stating that all passengers must, as a war measure, leave the vehicles at the termini. At the August meeting of the committee, the general manager reported that it would shortly be necessary to discontinue another of the omnibus services on account of the shortage of labour and petrol, and the difficulty in obtaining materials. Penicuik Council have decided to take no action upon a suggestion from one of their members that the Scottish Motor Traction Company should give preference to long distance passengers. The company, it was stated, had already decided against the proposal.

# TILLING-STEVENS
## Smooth Drive Tower-Wagon

## EVIDENCE

"THE Petrol-electric Type of Tower Wagon possesses a decided advantage over those gear-driven or horse-drawn" — thus a foremost English Corporation with a fleet of Tilling-Stevens petrol-electric vehicles.

Smooth-starting, jerkless, the Tilling-Stevens P.E. Tower Wagon is safer for the workman and more efficient at the work.

All tramway-owning Corporations are invited to ask for full particulars.

# The Memoranda of MACINTOSH

In no other branch of manufacture is experience more vitally essential than in the manipulation of rubber.

And what is ours?—

The house of MACINTOSH was established in 1824 and ever since has been actively engaged in handling rubber in all the various forms to which it has been adapted for commercial uses.

And in the light of that experience—with the knowledge founded thereon—we offer you the "*most miles*" tyre (the Tyre that will cover the most miles at least cost per mile) and are, ourselves, convinced that our claim will be in every way substantiated by the MACINTOSH

**EXTRACTS FROM THE LETTERS OF A SOLID TYRE USER TO HIS SON.**

"You're right! I know you're not one of the too proud to learn sort and you'll learn something about solid rubber tyres by the time you've got that haulage business where you want it. You're shorthanded, of course—who isn't? and these lorries of yours are kept busy.—You're overloading them, my boy: you can't humbug solid tyres—they'll prove to you pretty soon that it doesn't pay. You bought Dunlop solid rubber tyres on my recommendation and I don't budge an inch! They're like everything else—Dunlop solid rubber tyres, they've got their breaking strain. You couldn't work 20 hours a day indefinitely yourself and not break up. Why not follow the schedule of maximum axle loads the Dunlop Rubber Company have prepared? It's their job to see that the tyres give you satisfaction. I learnt a long time ago that the camel whose back was broken by the last straw had been overloaded *regularly!*"

*"Breaking the camel's back."*

# ALLEN PISTON RINGS

## Best for All Types of Internal Combustion Engines

An exclusive and valuable feature of the Allen ring is the scientific method of stressing.

The whole ring is "stressed" in one simple and complete operation by a specially-designed machine tool.

This means a ring of perfect accuracy and absolutely correct fit.

Judge for yourself of its superior qualities by sending for a sample ring.

Enquiries specially invited from engine manufacturers and automobile engineers.

COVENTRY NOISELESS CHAINS

The Shortage of Skilled Drivers

If you engage an inexperienced driver to run your lorry it is not improbable that he will one day throw in his clutch with all the vigour his inexperience prompts—strain the whole of your chassis—and do damage in your gear box that will take days to repair.

Make it impossible for him to do this by having the clutch lined with Ferodo fabric. It will then engage sweetly however violently applied—transmit maximum power from engine to back axle—never slip or seize. Ferodo fabric lasts much longer than leather or any imitations of Ferodo fabric, and will not burn out. It gives infinitely superior service at less cost.

# No Barrage

Our policy is not to set up a barrage of exaggerated assertions or hypothetical statements with a view to capturing business. Our way is the straightforward attack delivered with all confidence which a sound business proposition can mobilise. In business that is the plan that secures your objective every time. And your objective means more than getting there. It means consolidation, which consists of fortifying your salients of Prestige and Popularity with stout breastworks of "satisfaction to your customers." This is no idle theorising, but a brief though sound analysis of "Commercial Strategy," compiled by a veteran exponent, "General Experience."

## WOOD-MILNE
## SOLID BAND TYRES

are put forward as a sound business proposition and seek no favour beyond a fair trial which will mean continual use. They are a sturdy British product that spell for the user economy and satisfaction, the sum total of which is efficient service.

## A New Portable Cleaner for Railway Stores, Offices, &c.

So simple to operate that a boy or girl can quickly and efficiently rid your offices, stores, and machinery of dust and dirt. THE PREMIER PORTABLE ELECTRIC SUCTION CLEANER can be strapped round the waist or carried in the hand. Weighs only 7½ lb. Simply connect to electric lamp socket, turn switch, and the cleanliness campaign proceeds.

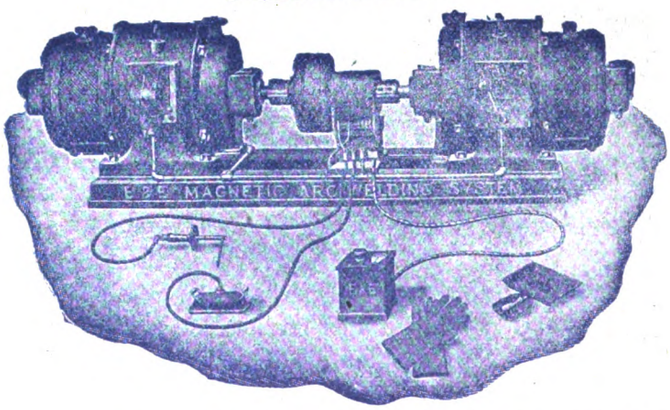
*Write to-day for Illustrated Booklet No. 18.*

ELECTRIC SUCTION CLEANER CO., 56, VICTORIA ST., S.W.

# ELECTRIC MAGNETIC ARC WELDING SYSTEM

PORTABLE.

No Oxygen.
No Acetylene.
No Switchboards.
No Wasted Current.
No Failures.



As supplied to H.M. Dockyards, Tramways, Railways, Munition Factories, Etc., Etc., Etc.

NO WASTEFUL LINE RESISTANCE NECESSARY WITH THIS SYSTEM.
THE ONLY EFFICIENT SYSTEM OF ELECTRIC WELDING.

Write for descriptive booklet and full particulars.

## WEEKLY LIST OF TENDERS INVITED.

### PORTSMOUTH CORPORATION TRAMWAYS COMMITTEE.

#### Tenders for Supplies.

The Tramways Committee of the above Corporation invite Tenders for the supply of the undermentioned goods from October 1, 1918, to March 31, 1919:—

Section A.—Ballast, Sand and Grit.
Section B.—Portland Cement (British manufacture preferred).
Section C.—Brooms and Brushes.
Section D.—Oils (not lubricating), Chemicals, Sheet Glass, etc.
Section E.—Smiths' Coal and Coke.
Section F.—Timber.
Section H.—Brake Blocks.
Section I.—Engine Packings, Asbestos Goods, etc.
Section J.—General Ironmongery.
Section M.—Steel Tramway Tyres.
Section P.—Car Repair Stores.
Section Q.—Insulating Materials, Lamps, and Motor Windings.
Section R.—Overhead Line Materials.
Section S.—Lubricating Oils, Greases, etc.
Section T.—Chandlery, etc.
Section U.—Castings and Machined Parts.

The Specification and form of Tender may be obtained upon application to the Engineer, Mr. V. G. Lironi, M.I.M.E., A.M.I.E.E., Engineer's Office, Vivash Road, Fratton, Portsmouth.

Tenders marked "Tender for ————" to be delivered to the Town Clerk, Town Hall, Portsmouth, not later than 10 a.m. on Tuesday, October 15, 1918.

The form of Tender must include a declaration that the person making the Tender pays the rate of wages and observes the hours of labour and conditions contained in the Corporation Fair Wages Clause.

The Committee do not bind themselves to accept the lowest or any Tender.

W. R. SPAVEN,
General Manager.

Town Hall, Portsmouth,
September 20, 1918.

## POSITIONS VACANT.

### BOROUGH OF DARWEN.

#### Electrical Engineer.

The Council invite applications for the position of Electrical Engineer and Manager of their Electrical undertaking. The person appointed will have the management of the refuse destructor. Salary £300 per annum.

Applications, endorsed "Electrical Engineer," together with three testimonials, to be forwarded to me the undersigned not later than Saturday, the 12th day of October, 1918. Canvassing will disqualify a candidate.

WILLIAM P. HALLIWELL,
Town Clerk.

Town Clerk's Office, Darwen.
25th September, 1918.

### WAKEFIELD CORPORATION ELECTRICITY DEPARTMENT.

#### Charge Engineer.

Charge Engineer wanted immediately to take charge of eight-hour shift in a high-tension, A.C. power station, plant capacity 4000 K.W.; present wage £3 13s. 8d. per week, including all bonuses. Only applications from men having had experience in a similar post will be considered.

Applications, giving full details of experience and age, to be sent to H. A. NEVILL, City Electrical Engineer.

#### Fitter.

Fitter required, accustomed to the repair, overhaul and running of Belliss engines and generating station plant generally. Wages 42s. per week of 54 hours, 25s. weekly war bonus.—Apply, giving full particulars, experience, age, etc., to I. BULFIN, General Manager, Corporation Tramways, Bournemouth.

#### Platelayer.

Assistant Foreman Platelayer wanted; first-class man with experience of repairs and renewals of tramway permanent way. Wage £4 per week and overtime.—Apply, stating age, and experience with copies of testimonials, to GENERAL MANAGER, Corporation Tramways, Coventry.

#### Permanent Way Foreman.

Pavior or Working Permanent Way Foreman required for tramway track, regular work.—Apply, stating age, experience, present position, references and wages required, to BURTON AND ASHBY LIGHT RAILWAY, Swadlincote, near Burton-on-Trent.

#### Armature Winder.

Armature Winder. Repair work in tramway depot. State experience and wages. Permanent job for right man.—SOUTH METROPOLITAN TRAMWAYS, 30, High Street, Sutton.

## FUTURE OF ELECTRIC POWER SUPPLY.

THE paper which Mr. Ernest Hatton, engineer and general manager of Newcastle Tramways, read on Thursday before the Municipal Tramways Association was a valuable contribution to the subject of the post-war position of electric power supply. In some quarters Mr. Hatton has been criticised for the attitude which he took up in reference to the reports of Government Committees on the subject, and the idea seemed to be entertained by some people that he was opposed to the whole scheme of a national electric power supply. This, however, was quite a delusion, and if any proof is wanted of that statement reference need only be made to his paper before the Municipal Tramways Association. Mr. Hatton's views on the subject are of importance, first, because he is a leadi g engineer in municipal service, and second, because, as he carries on his work in Newcastle, he has ample opportunities of informing himself of the conditions of operation and the success of the power supply companies on the north-east coast of England. These are the most successful power companies in the country. As one connected with municipal enterprise it was to be expected that Mr. Hatton should object to some of the criticisms in the reports already mentioned in regard to the work of local authorities as electric power producers. He also did good service by pointing out in his paper that expectations of much too rosy a kind are apt to be stirred up in the non-technical mind by some of the anticipations of an exceedingly cheap power supply which were put forward in the reports. Some countervailing considerations, mostly however of a temporary nature, were advanced, but in the long-run Mr. Hatton believes that the schemes which have been adumbrated will be of much value to the community. To ensure that, however, careful reckoning must be made of capital expenditure and all possible use should be made in the first instance of existing plant. The latter point may often be attained by removing plant, when it is superseded in one place, to another locality where it may be eminently suitable. The care necessary in regard to new expenditure is obvious when it is remembered that the undertakings will also have to bear the capital charges on plant which has become obsolete. These considerations apply to power developments which do not include the electrification of the railways of the country. If, however, the railways are to be electrified, the whole problem assumes a wider and thoroughly national aspect. Existing power stations would not be suitable for the larger purposes. The whole field of operations would be so enlarged and the schemes would have to be so comprehensive that local interests of municipalities in the matter would to a large extent disappear. Mr. Hatton urges the necessity of an early declaration of Government policy regarding railway electrification. Then, he says in effect, we shall know where we are. There can, of course, be no doubt that a general adoption, or even a large adoption, of electric traction for railways would facilitate the national power supply scheme, and the scale of production would be so vast that great economies would result. Cheap electric power would be available in almost every corner of the land. It should be noted that Mr. Hatton recommended that an experimental supply area on a large scale should be formed out of Northumberland, Durham, and North Yorkshire. The lessons obtainable from that would be applicable to other districts of the country. It may be added that the highly organised scheme of the north-east coast companies might well form a nucleus for the proposed supply area.

## MUNICIPAL TRAMWAYS ASSOCIATION.

ANNUAL MEETINGS AT LEICESTER.

For the first time in its history the Municipal Tramways Association held its annual conference and meetings associated therewith in the ancient borough of Leicester. The gathering began on Thursday and concluded yesterday. The President for the year is Alderman S. Flint, chairman of Leicester Corporation Tramways Committee, and when he took the chair it was plain that, despite war conditions and heavy strain on the members of the Association, a very large number of them had been able to find time to take part in the highly interesting proceedings.

After a meeting of the Executive Council on Thursday morning, a reception of the members of the Association was given in the Council Chamber by the Mayor of Leicester (Alderman North), and by the chairman and members of the Leicester Tramways Committee. This was followed by the general meeting of the Association, which was also held in the Council Chamber. What was described as the general meeting was really the annual conference of peace time in an abbreviated form.

PRESIDENTIAL ADDRESS.

The President (Alderman S. Flint, chairman of Leicester Tramways Committee) began his address by welcoming the members of the Association to Leicester. Noting that this was the first time that the annual conference had been held in Leicester, he referred to some of the historic associations of the ancient borough, and coming to present times he mentioned that the gas, electricity, markets and tramway undertakings were all owned and carried on by the Corporation. A point was that the two electricity stations were controlled by the Tramways Committee.

Proceeding to subjects of a more general character, he emphasised the enormous amount of work done by the Executive Council of the Association during the past year. The work and the strain had been much greater than during any previous period. New problems had sprung up nearly every month. In this connection he referred to the burden placed on the secretaries, first Mr. Fearnley, and then Mr. Spencer, and the necessity for further assistance in the secretarial duties. Among the important subjects which had to be considered since the last annual meeting were the questions of coal conservation and electric power supply and the Parliamentary reports thereon. He had suggested that Mr. Hatton, of Newcastle, should read a paper on the subject, and that gentleman had consented to do so. Another matter of importance was the erection of Joint Industrial Councils. The outlines of a scheme of this kind would be submitted to the members of the Association at an early date.

The continued advances in wages and in the cost of materials had placed heavy burdens on many of the tramway undertakings, necessitating further increases in fares. It was disagreeable and unpopular to increase charges to the public, but in the interests of

Digitized by Google

sound finance it should be done where possible. In many cases it had been found that this could not be done unless the statutory limits were raised or abolished. As the result of negotiations Parliament had given authority to the Board of Trade to raise the statutory limits under certain conditions.

In regard to the award by the Committee on Production of a 5s. a week increase of bonus to male tramway employees, the President said it was to the surprise and regret of the Executive Council that an appeal was made against this award with the object of obtaining the same advance for female employees. The Committee on Production granted the advance to women, thus reversing their former decision, in spite of the fact that it was clearly proved that it cost much more to run the cars by women than by men. This raised a very serious question. If one side to an arbitration was allowed to appeal against an award, then the other side might claim the same right, and that might lead to serious results.

Another matter of considerable interest was the appointment of the Tramways (Board of Trade) Committee. He had not been favourably impressed with this proposal from the first. Perhaps he was over-jealous for the freedom of municipalities from red tape and central control. The success of municipal tramways had been obtained not so much by Government assistance as by local enterprise and effort, and he was rather alarmed when it was proposed to set up other authorities to exercise control over them.

As to the future, all the indications were that they would have to carry on under greater difficulties than any they had yet had to face. While they earnestly prayed that peace on a sound and permanent basis might soon be restored, let them meanwhile do all they could to assist the Government in carrying on the war to a successful issue.

### POST-WAR ELECTRIC POWER SUPPLY.

Mr. Ernest Hatton, engineer and general manager of Newcastle-on-Tyne Tramways, presented "Some notes and considerations on the post-war position of electric power supply." Referring to the two recent Government Committees' Reports, he said that it would have shown a better spirit if some of the insinuations in them regarding the past efforts of municipalities had been omitted. Another objection to the Reports was that implied benefits from their adoption appeared too rosy and induced many people to believe that they were about to get something for nothing. The cost of electricity was largely influenced by the charges on capital outlay in bringing the supply to the user. In large cities the cost of taking up and relaying street works was a very heavy item. In the future laying-out of trunk roadways, space should be left at the sides to accommodate electric cables.

Criticism in the Reports on the past conduct of municipalities did not get rid of the annual charges on existing undertakings, and these charges, coupled with the new annual charges on capital of the proposals in the Reports, would be the measure of future success and charges for electric power, reduced by the influence of increased output. It must also be borne in mind that wages and other costs must be a determining factor, so that it might be some time before they again got inclusive prices per unit which would compare with the charges made in 1914. The schemes, however, must ultimately lead to a general reduction in charges.

Much of the plant that would be superseded could be transferred to areas with less immediate demands, leading to great capital saving. The subject, therefore, required an impartial survey of the proposed areas. A programme for each area should be settled with a clearing house for making the best use of plant superseded. With care and foresight the establishment of a general electric power supply would have the same beneficial results as arose when it was shown that electric tramways could carry the existing capital charges of the obsolete horse traction.

If, however, the controlling authorities decided on the electrification of the railways of the country, the whole policy with regard to electric supply would require to be treated from a wider standpoint. Existing power stations would not be suitable for the larger purposes. Some declaration should be made by the authorities, so as to bring about a concentration of thought on the problem from a national point of view and to allay local jealousies. If the railways were electrified that would bring power supply into almost every area in the country. In this connection, he pointed out that some areas would, owing to local circumstances, be able to produce power more cheaply than others, but he was opposed to differential charges in different areas, as that would produce intense development in the favourable localities. General development all over the country should be encouraged. Less would thus be spent on railway transit of goods.

He was of opinion that an area embracing the North Riding of Yorkshire and the Counties of Northumberland and Durham should be chosen in the first instance for a practical demonstration of the policy of general power supply. The constitution of the power boards should have a majority control of public representatives elected by each area, together with representatives of large consumers. Generating stations and main transmission systems should be under the control of the power boards. The schemes must take time to accomplish, but their adoption would ultimately lead to the greatest good of the community, and no time should be lost by the controlling authorities in deciding a policy so that an embracing programme might be carried out as soon as possible.

The paper was very well received, among those taking part in the discussion being Messrs. McElroy, Stokes, Murray, Wilkinson, Rayner, Stewart, Furness, and Bailie Montgomerie. A hearty vote of thanks was accorded to the author.

Mr. Goodyer proposed a vote of thanks to the Mayor for his kind reception, and this was carried with acclamation.

Councillor Raine proposed, and Bailie Montgomerie seconded, a vote of thanks to the President for his address, and this was carried with cheers and acknowledged.

At the afternoon session, the President again in the chair, a telegram was read from Sir Albert Stanley, President of the Board of Trade, regretting his presence in London was demanded by the railway situation. Had he been able to be present he had intended to refer to the coal situation. The necessity for coal economy was at present one of the most vital considerations and he urged the members to make every saving. The tramway industry was not being singled out for special treatment, but even munition works were short, as also the domestic supply. Obligations to Allied countries must be met. When rationing coal for industrial purposes came into force there were many industries which would have to put up with a much greater reduction than 15 per cent. If the tramway undertakings made reductions asked for, he could say they would not be starved, but allowed the coal to run reduced services. No effort would be spared to secure this.

The Conference then discussed the Whitley Industrial Council scheme. Mr. McElroy outlined the general proposal for a joint National and District Councils for the tramway industry. The proposals of the Executive were received with great approbation, and were formally submitted at Friday's meeting for provisional acceptance and approval.

The following officers were elected :—President, Mr. T. G. Goodyer (manager, Croydon Corporation Tramways) ; vice-presidents, Sir John Courtis (chairman, Cardiff Corporation Tramways Committee) ; secretary, Mr. W. Clough (manager, Bury Corporation Tramways) ; solicitors, Mr. E. R. Pickmere (town clerk, Liverpool) and Mr. S. F. James (town clerk, Ilkeston); treasurer, Mr. A. R. Fearnley (manager, Sheffield Corporation Tramways) ; executive committee, Councillor J. Timpson (chairman, Portsmouth Tramways Committee), Mr. A. L. C. Fell (manager, London County Council Tramways), Mr. J. B. Hamilton (manager, Leeds City Tramways), Mr. G. W. Holford (manager Salford Corporation Tramways), Mr. R. L. Horsfield (manager, Walsall Corporation Tramways).

The Mayor entertained the delegates to lunch in the Museum buildings, and proposed the health of the Board of Trade. Mr. James Devonshire, Chairman of the Board of Trade (Tramways) Committee, replied in the absence of Sir Albert Stanley, and briefly referred to the coal difficulty, on which they would have a message from the President. This is set out above. He asked tramway undertakings for the present to be content with things as they stood, and to do their best to economise in view of further stringent orders which might be issued in the future.

The toast of the Association was proposed by Mr. J. Frears, J.P., the Deputy Mayor, and acknowledged by the President.

## MISCELLANEOUS NEWS AND NOTES.

**Melbourne Tramways Control.**—It is proposed to set up a trust of 17 members, 15 to be elected by the ratepapers and one to be nominated by the Government, to control Melbourne tramways. There will be a permanent chairman.

**Italian Tramway Project.**—A tramway to connect Rome and the Port of Ostia has been projected and the *Pall Mall Gazette* states that a group of English steel manufacturers have offered to provide the rolling stock and material.

**Cars Required for Liverpool.**—At a meeting of the Tramways Committee, it was stated that, if materials and labour could be obtained, one hundred cars at present unused, which were required to prevent over-crowding, could be put into service.

**Purchase of Middlesbrough Tramways.**—At a special meeting on Monday, the Middlesbrough Town Council decided to exercise its right to purchase that part of the Middlesbrough, Stockton and Thornaby tramways in the town. The undertaking is owned by the Imperial Tramways Company.

**Tynemouth's Tramway Proposals.**—Tynemouth Town Council propose to promote a Bill in the next Session of Parliament for taking over the tramway system of the Tynemouth and District Electric Traction Company, and to obtain powers for running railless cars along routes to be agreed upon.

**Edinburgh Tramway Scheme Stopped.**—Edinburgh Town Council have decided not to proceed further at the present time with their application for a provisional order in regard to the proposed extension of the Edinburgh tramways to South Queensferry. The decision follows upon differences which have arisen between the Town Council and the Admiralty. It appears that the Admiralty had recently made it a condition of their support being given that the fares to Navy men should be lower by 50 per cent. than the fares to ordinary passengers, and that a similar reduction should apply to the rates charged for Government parcels. The decision of the Town Council was carried by 21 votes as against 13 given for an amendment to proceed, subject to such restrictions as might seem fit. The Council also recorded its opinion that provision of further transit facilities from the city to South Queensferry was required in the public interest, and the only satisfactory method of providing such facilities was by means of the construction of a tramway, and such tramway should be provided by the Corporation as an extension of the city tramway system.

Digitized by Google

**The Industrial League.**—The annual meeting of the Industrial League will be held at the Connaught Rooms, Great Queen Street, Kingsway, London, W.C., on October 17, at 6 p.m. The agenda includes the reception of the annual report and the election of the general committee and officers. The meeting will be followed by a dinner.

**End of Summer Time.**—The Home Secretary has given notice that "summer time" will cease and normal time will be restored at 3 a.m. on the morning of Monday, September 30. The clock will then be put back to 2 a.m. The Government requests the public to put back all clocks and watches by one hour during the night of Sunday, September 29-30.

**Light Railway Act.**—The Board of Trade recently confirmed the following orders made by the Light Railway Commissioners: Lancashire and Yorkshire Railway (Formby Light Railways) authorising the construction of light railways at and near Formby in the County Palatine of Lancaster; Swansea Corporation Light Railways Extensions, reviving the powers granted and extending the period limit of the Swansea Light Railways Extension Order, 1914, for the compulsory purchase of lands required for these railways.

**Trailers Suggested for Glasgow.**—At a meeting of the Glasgow Corporation, it was suggested that the Tramways Committee should consider the desirability of having trailers on certain cars which could be utilised for the purpose of conveying passengers' luggage at a nominal charge. Councillor Kelly, the vice-chairman, replying, in the absence of Councillor Montgomery, the chairman, said the tramways by-laws provided that passengers' luggage not exceeding 28 lb. weight might be carried. There was no power under the by-laws to run trailers in Glasgow, and there was not room for trailers at the congested crossings in the centre of the city.

**Wind Screens for Worcester Cars.**—The Worcester City Watch Committee has received letters from the Worcester Electric Traction Company in regard to the provision of wind screens at both ends of the cars. The company intimated that the directors only agreed to provide screens in view of the strong pressure put upon them by the Watch Committee. They further stated that sickness among members of the staff was greater on cars where screens had been provided than where there were no screens, and that the drivers were quite satisfied with the arrangements made by them.

**Strike of Railway Employees.**—A serious strike occurred in the railway industry this week, following upon the recent claim of the railway workers for a weekly increase of 10s. for employees over 18, and 5s. for employees under 18. The War Cabinet had put forward as final a proposal of 5s. and 2s. 6d. This had been accepted by the executive and by a majority of a delegates' meeting on behalf of the National Union of Railwaymen; and later "under strong protest" by the executive of the Associated Society of Amalgamated Engineers and Firemen. The dissatisfaction felt by a section of the locomotive engineers and firemen resulted in a strike which commenced in South Wales on Monday, and soon extended to certain other centres. The railway principally affected was the Great Western, but places on the London and North Western and Midland lines were also affected. After a meeting of the War Cabinet on Tuesday, a statement was made by the President of the Board of Trade (Sir Albert Stanley) to the effect that the settlement would not be reconsidered; that the naval and military authorities would assist in maintaining services necessary for the transportation of war supplies, and food; and that the Government relied upon and would protect the very large number of railway workers who had remained at work. During Tuesday and Wednesday, the strike extended to other railways, including the Great Eastern, London and South Western, and London, Brighton and South Coast Railways. But at a mass meeting of railwaymen at Cardiff, on Wednesday, after a speech from Mr. J. H. Thomas, M.P., secretary of the National Union of Railwaymen, it was decided to resume work, and a similar decision was reached at Newport. This gave a lead to the strikers in other places and by Friday the strike was practically at an end. Large arrears of traffic remained to be dealt with and there was involved a certain amount of loss, owing to interruptions caused to other industries, especially coal mining, which cannot be recovered.

## PERSONAL.

**Sir Alexander Roger** has been elected a director of the British Insulated and Helsby Cables, Ltd.

**Mr. A. R. Dayson,** general manager of Sunderland Corporation tramways, has been granted an increase in salary from £600 to £700 per annum.

**Mr. E. S. Pinkerton,** permanent way engineer of the Belfast Corporation Tramways, has been appointed assistant city surveyor of Belfast.

**Mr. John Baker** has been elected to the executive committee of the Industrial Reconstruction Council, as representing the Iron and Steel Trades Confederation.

**Mr. James Taylor** has been elected chairman of the British Insulated and Helsby Cables, Ltd., following the resignation, owing to health reasons, of Dr. E. K. Muspratt, who, however, remains on the directorate.

**Mr. J. E. Edgcumbe,** borough electrical engineer of the Corporation of Kingston-on-Thames for the past twenty-five years, has resigned to take up the post of secretary of the Tungsten Lamp Association. Mr. Edgecumbe was selected from more than one thousand applicants.

**Mr. Walter Bond,** of the St. Helens Cable and Rubber Company, Ltd., has been appointed chairman of the Solid Tyre Committee of the British Rubber Manufacturers' Association, subsequent to the retirement of Mr. W. H. Paule, of the Dunlop Rubber Company, Ltd. He had previously filled the post of honorary technical secretary to the Association.

**Mr. Charles Challenger,** manager of the Bristol Tramways and Carriage Company, has entered upon the fiftieth year of his connection with the passenger transport industry. After a few years' service with the Midland Railway Company, he joined the staff of the enterprise of which he is now the manager.

**Capt. F. W. Mozley, R.E.,** who recently received his promotion from the rank of lieutenant, is the son of Mr. H. Mozley, manager of the Burnley Corporation Tramways. He joined the Artists Rifles in December, 1915, and after ten months' training, entered the Royal Engineers' Cadet School at Newark. He was commissioned on October 21, 1916, and went out to France in January, 1917. Before joining the Army, he was chief engineering assistant under Mr. Shackleton, permanent way engineer to the Nelson Corporation Light Railways.

## FINANCIAL REPORTS AND MEETINGS.

**San Paulo (Brazilian) Railway.**—An interim dividend of 5 per cent., free of tax, on the ordinary stock, has been declared.

**British Insulated and Helsby Cables, Ltd.**—An interim dividend on the ordinary shares has been declared at 3¾ per cent. (9s. per share) less tax.

**Madras Electric Tramways.**—Interim dividends in respect of the profits for the year ended December 31, 1918, have been declared of 6 per cent. on the preference shares and 8 per cent. per annum on the ordinary shares.

**British Aluminium Co., Ltd.**—Dividends have been declared at the rate of 8 per cent. per annum, less income tax, on the ordinary shares, and 6 per cent. per annum, less income tax, on the preference shares, both for the six months ended June 30.

**Southern Brasil Electric.**—Accounts for 1917 show, after deducting of charges and interest on debentures and loan, a profit of £4,838, which, together with £4,271 brought forward, makes a total credit balance of £9,109, which it is proposed to carry forward.

**Dundee, Broughty Ferry and District Tramways, Co.**—The report for the year ended July 31 shows a profit of £5,117, including £587 brought forward. A dividend of 3 per cent. per annum, less tax, on ordinary shares is recommended, together with the placing to reserve of £1,000 and the carrying forward of £83.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Sept. 25, amounted to £69,071, an increase of £11,237 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Sept. 25 (twenty-five and a half weeks), the total receipts were £1,659,072, an increase of £226,756 on the corresponding period of 1917.

## CONTRACTS AND ORDERS.

**Glasgow Tramways Committee** have recommended that orders be placed with the Carron Company for track brakes, with Thomas Bolton and Sons, Ltd., for trolley wire, and with the B.I. and Helsby Cables, Ltd., for lead covered cable.

**DICK, KERR & Co.,**

**Limited,**

**ABCHURCH YARD, CANNON STREET,**

**LONDON, E.C.,**

**ENGINEERS & CONTRACTORS.**

**Complete Equipment**

**TRAMWAYS & LIGHT RAILWAYS**

**at home and abroad.**

**Electric Tramcar Handbook**

FOR
MOTORMEN, INSPECTORS, AND DEPOT WORKERS.

By W. A. AGNEW.

120 Pages, 7 ins. by 4½ ins. Cloth. Price, *1s. 6d.* Postage, 2d.

Copies can be obtained from THE TRAMWAY AND RAILWAY WORLD Offices, Amberley House, Norfolk Street, W.C.

## WEEKLY LIST OF TENDERS INVITED.

### ATHERTON URBAN DISTRICT COUNCIL.

**Electricity Department.**

The above Council invite tenders for the supply of two 110 kw. Single-phase Transformers.

Full particulars may be had from Mr. B. Darby, Resident Electrical Engineer.

Tenders sealed and endorsed should be sent to the undersigned not later than Monday, September 16th.

WILLIAM GARNETT,
Clerk.

Town Hall, Atherton,
August 30, 1918.

## POSITIONS VACANT.

### COUNTY BOROUGH OF NEWPORT.

**Electricity and Tramways Department.**

Applications are invited for the position of Second Technical Assistant. Candidates must have had a thorough training and experience as Mechanical and Electrical Engineers, and occupied responsible positions in an Electricity Supply Undertaking, and have been accustomed to the supervision of constructional works. Applicants with a knowledge and experience of tramcar maintenance and reconstruction preferred.

Commencing salary £250 per annum inclusive of all bonus to date.

All applications must be made on the Official Form provided for the purpose, which, together with a list of duties and terms of engagement, may be obtained on application to the undersigned, and must be returned not later than Monday, September 23, 1918.

(Signed) A. NICHOLS MOORE,
Borough Electrical and Tramways Engineer.

Town Hall,
Newport, Mon., September 10, 1918.

### CITY OF BRADFORD.

**Tramways Manager.**

Applications are invited, from fully qualified persons with practical experience in tramway management, for the post of General Manager of the Bradford Corporation Tramways. Salary £800 per annum.

Applications, stating age, qualifications and experience, accompanied by three recent testimonials, and endorsed "Tramway Manager," must reach the Town Clerk's office not later than Tuesday, the 24th instant.

Canvassing is prohibited.

FREDERICK STEVENS, Town Clerk.

Town Hall, Bradford, September 10, 1918.

**Charge Engineer.**

Charge Engineer wanted for Certified Undertaking; turbines and water-tube boilers. Salary £3 7s. 6d. per week.

Apply, with full particulars, stating age (not less than 26), experience, etc., to—

THE BOROUGH ELECTRICAL ENGINEER,
Electricity Works, Bedford.

**Car Shed Fitter.**

Car Shed Fitter with knowledge of fitting and turning required. Preference given to man with knowledge of magnetic brakes. Reply, stating qualifications and wages required, not later than September 21, to F. NEWEY, Acting Borough Electrical Engineer, Electricity Works, Swindon.

**FOR ALL PLACES ABROAD—Thirty Shillings per annum.**

SATURDAY, SEPTEMBER 14, 1918.

## THE GAIN FROM FEWER STOPS.

THE elimination of a proportion of stopping places is having a strikingly good effect on some tramway services, and it is causing little real inconvenience to the public. In fact, on the whole, there is probably an actual gain in the advantages that are being obtained. A higher speed becomes possible, journeys are consequently more quickly made and, an even more important matter, there is an appreciable improvement in the regularity of the services. Drivers find it more easy to maintain their schedules owing to the fact that there are fewer occasions for delay than with the larger number of stopping places. It is true that complaints are often received from individuals of the inconvenience caused by the discontinuance of a particular stopping place; but persons who make these complaints do not stop to consider the matter in a broad light, and to balance the advantages which have to be set against their personal inconvenience. There is no doubt that on a large proportion of tramway routes stopping places have generally been fixed more closely than is desirable. No one expects a railway station to be placed within a few yards of his own door; passengers are content to walk considerable distances to reach their stations, and there seems to be no reason why they should expect to find tramway stopping places at such frequent intervals as have been regarded as necessary hitherto. It is often cited as an advantage of a motor omnibus that higher speeds are obtained; but this is largely due to the fact that the omnibuses on many routes are not required to stop so frequently. This is not invariably the case, but it occurs often enough to create a material advantage for the omnibus. It is far more important that tramway journeys should be made quickly than that passengers should be saved the trouble of walking a little farther than they now do in order to enter the cars. Tramway managers have first of all to consider their service from the larger point of view of the greatest good to the greatest number; and in doing so they must endure the occasional acrimonious criticism that will be levelled at them by selfish passengers who have little regard for others. While the present discontinuance of many stopping places is due to the necessity of economising coal, we have little doubt that in many cases the change will be permanent, and that it will lead to an improvement in tramway working. After the war much new tramway mileage will be constructed. If the tramways are to hold their own against other modes of transport, it is essential that every plan which conduces to improvement in the service should be adopted. Higher speed must be obtained; and one of the principal helps in this direction will be fewer stops.

## THE METROPOLITAN POLICE AND THE ILFORD TRAMWAYS.

MANAGER'S STATEMENT IN REGARD TO RECENT SUMMONSES

With reference to recent summonses taken out by the Metropolitan Police in regard to what were alleged to be breaches of the law on the part of the manager and employees of the Ilford Urban Council Tramways, Mr. L. Harvey, the manager and engineer, has sent us a statement from which is extracted the following :—

"On July 22 last a discharged soldier applied for a job here as a motorman. He was out of work and had a wife and three children and he had been a resident all his life of Ilford and the neighbourhood. We started him learning and the same day sent him to Scotland Yard to apply for a licence. It was twelve days afterwards when the Police sent him the requisition and medical forms, and he got them filled up and returned them as soon as he could.

"In the meantime he had been trained and passed out as an efficient motorman, and then Bank Holiday week came along. As you know, we are very short handed. We have spared a very large percentage of our staff to serve the King, and as a result, I employed the man to drive a tramcar on several days that week. On the Tuesday he had been driving some hours and had repeatedly passed the constable on point duty at the Broadway, and it was not until 6.30 p.m. that the latter suddenly (visions of an O.B.E.) demanded to see his licence—the police solicitor told the court on Saturday that they had information laid by one of our own disgruntled employees that there was an unlicensed man on the road and he then told us the name of the informant.

"The sequel was—three summonses served on me for employing an unlicensed man and three summonses served on the man for obeying his orders to drive a tramcar and incidentally to get a bit of bread and butter for his wife and family. Two of the summonses on each of us were dismissed, and on the third he was fined 20s., and I was fined 40s. The constable swore that when he interviewed me I practically defied the police and said that the man would work whether he had a licence or not; whereas what I did say was that I was very sorry to transgress the letter of the law, but being so short handed we had to use the man and possibly might have to use him again if his licence did not turn up.

"The next case was as follows :—We recently had a strike of tramway employees in Ilford, and it was our endeavour to run a decent service of cars morning and evening for the workers; and this we did. One of our former female conductors, who had meanwhile retired to private occupation, happened to be in Ilford on a week's holiday, and when she heard of our straits she came forward in a splendid patriotic spirit and offered to do a day's conducting for us. We were only too glad of her help; but alas, straightway was she hailed by the constable, and a summons was issued on her for acting as a conductor without a licence, and another on me for aiding and abetting! The Chief Commissioner of Police was informed of these facts and circumstances by letter from me and yet we were taken to court, with the result that the case was dismissed.

"The tramways in the metropolitan area are the only ones in the kingdom where the local authority is not allowed to employ whom they think fit on their tramways. The police in this area bind us down to the letter of an Act passed in 1869—50 years ago—an Act framed before electric tramways were thought of, an Act that never contemplated a public authority acting as the proprietor of a hackney carriage, an Act which was intended to regulate pirate omnibuses, one-horse shays and cab touts. Yet this is the year 1918, and we are in the fifth year of the great war, and we are hard pressed for men to run our tramways."

## REDUCTION OF SERVICES.

Reduction of services with a view to the urgent need for coal economy continues to take place.

At Birmingham further curtailment is contemplated. Whether this will be accomplished by the cars ceasing at an earlier hour in the evening or by a less frequent running of cars will be decided at the next meeting of the Tramways Committee, who, it is stated, have pointed out to the Coal Controller that the 15 per cent. reduction asked for would have an adverse effect on the output of munitions

At Grimsby the Corporation Highways Committee has agreed with the suggestion of the manager of the Great Grimsby Street Tramway Company (Mr. H. L. White) that the Sunday service shall be suspended, and that there shall be reduced hours on week days.

At Rochdale the service is to be suspended on Sunday mornings.

## THE PREMIER ON TRANSPORT PROBLEMS.

Mr. Lloyd George, in the important speech delivered by him at Manchester on Wednesday, outlining his policy of reconstruction after the war, referred to the subject of transport.

He said: "Another of the lessons of the war is the importance of improving transport facilities in this country. You are fairly all right in Manchester. You have a good many magnificent railways branching out from your city, but there are many towns and certainly multitudes of villages in this country that are not equally favoured. They are hardly favoured at all. Railways, light railways and the like, enter into every phase of national prosperity and well-being. Housing is a huge question. Agriculture is largely a question of transportation. Foreigners get their produce to the English markets more cheaply and more speedily than do our own farmers. That is folly, and it is equally true of many other industries. The war has shown the importance of transportation and shown how it can be speedily improved."

## INCREASE OF FARES.

At Sunderland the Corporation Tramways Committee has decided on an all round increase in fares of approximately 50 per cent., workmen's transfers excepted.

At Keighley it is probable that the fares on the Corporation Tramways will shortly be increased from one penny to three halfpence between any termini.

At Rochdale a half-penny is to be added to all fares up to three pence.

In reply to a letter from the Dewsbury Chamber of Commerce objecting to the increase of the fare on a particular route from 1d. to 1½d., the secretary of the Yorkshire (Woollen District) Electric Tramways Ltd. wrote that by the large increase in wages and the high prices of materials the cost of operating the tramways was enormously increased, and that any alteration in fares of an upward tendency was naturally objected to by those whom it affected, but while the same people paid a much higher price for their amusements and for luxuries they at once protested if an additional halfpenny was asked for on the tramways.

## MISCELLANEOUS NEWS AND NOTES.

**Ashton-under-Lyne** Town Council has purchased land for an extension of the Mossley tramway depot.

**Municipal Tramways Association.**—The executive of the Municipal Tramways Association met in London on Thursday to consider their annual report to be submitted to the meeting of the Association which, as previously announced, takes place at Leicester on September 26 and 27.

**Obstructing a Conductor.**—A fine of 10s., with 9s. costs, was imposed at Sunderland Police Court, for attempting to enter a car while in motion, and obstructing a conductor in the execution of her duty. Witnesses stated the defendant undid the gate, boarded the vehicle, and refused for a time to get off.

**Backing Omnibus Collides With Car.**—A motor omnibus that was backing, collided with a tramway car at Northampton, with the result that both vehicles were damaged and a passenger, who was standing on the platform of the omnibus, was thrown off and so seriously injured that he had to be taken to hospital.

**Light Railways for Banffshire.**—At the Banff Town Council it was stated that the Rural Transport Committee were considering schemes for the construction of light railways from Banff to places in the county. It was decided to associate with neighbouring town councils and with the country council in support of the schemes.

**The Russian Railway Industry.**—The current issue of *Russia*, a journal published at 37, Threadneedle Street, E.C.2, in the interests of Anglo-Russian trade, contains much interesting information, including a descriptive article dealing with the Siberian railway, and an account of the present position of locomotive building in Russia.

**Cost of Current for Bradford.**—The increased cost of production of electricity has prompted the Shipley Urban Council to make application to the Bradford Corporation for an increase in the rate of payment for electricity supplied for use on the Bradford tramways. The Bradford Tramways Committee has recommended the City Council to raise the present rate of payment by 20 per cent. which is the same increase as has been made by the Corporation Electricity Department in the charge for current supplied by them for the working of the tramways.

**The British Scientific Products Exhibition** at King's College, London, which has provided in its various sections such an excellent illustration of what can be achieved by British scientific research applied to British industry, closed on Saturday. During the four weeks that it has been open it has been visited by about 30,000 people. Professor R. A. Gregory, chairman of the Organising Committee, said the response of the public had agreeably surprised the promotors of the exhibition, and it was proposed to arrange similar exhibitions annually. "It has been somewhat of a disappointment to the committee," added Professor Gregory that no member of the Government, nor any representative of a State Department, has officially visited the exhibition or referred to it. Whatever is done for science or invention in this country is done with little recognition by the State. If more active official interest were taken in our potential capacity for scientific discovery and its industrial exploitation the nation need not fear competition with any other country."

**Proposed Electric Railway in Lewis.**—It is reported that Lord Leverhulme is considering the construction after the war of an electric railway in Lewis. The electrical energy for working the line, which will be about 100 miles in length, could be generated by water power from Lake Grimsharder, which is about 5 miles south west of Stornoway.

**Fatal Fall from a Tower Wagon.**—At an inquest at Rotherham on an employee in the Corporation tramways department, who died in hospital as the result of injuries received by falling from a tower wagon on which he was working, it was stated that the deceased slipped and fell, catching the rail at the top of the wagon. The rail broke and deceased fell to the ground.

**Public Asked to Wait.**—A notice has been posted in the cars at Newcastle-upon-Tyne to the effect that intending passengers will greatly assist the management by refraining from boarding full cars and waiting for the next car. Everything, it is stated, is being done to keep an adequate service of cars on each road such as present necessities due to shortage of labour and materials allow.

**The Vacancy at Bradford.**—With a view to filling the vacancy caused by the resignation of Mr. C. J. Spencer (general manager of the Bradford Corporation Tramways), the City Council are advertising in this issue for applications from persons with previous practical experience in tramway management for the post of general manager at the salary of £800 per annum.

**Workmen's Tickets at Darlington.**—The intention of the Darlington Tramways Committee to prosecute people who are said to be using workmen's tickets, when they are not entitled to them, raises, says the *North Star*, an interesting point. Is the clerk or the tradesman drawing a modest income to be compelled to pay the full price while munition workers with treble earnings are allowed the reduced rate?

**Wages in Dublin.**—At a meeting of the Dublin Branch of the Amalgamated Association of Tramway and Vehicle Workers, it was announced that the claim of the Dublin tramway workers to the 5s. award granted in July by the Committee of Production to all tramway workers in Great Britain, had now gone to arbitration. The Dublin workers had not been included in that award, though they were mentioned at the enquiry.

**Railway Industry Negotiations.**—In the course of an interview with a representative of the *Daily News*, Mr. J. H. Thomas, M.P., secretary of the National Union of Railwaymen, said: "I am at this moment engaged in dealing with serious negotiations affecting the whole of the railway men and railway women of the country, and just as for four years I have succeeded in keeping the industrial peace, so I hope the result of these negotiations will also bring about a satisfactory settlement."

**Tramway Employees as Food Producers.**—At the second annual vegetable show promoted by the Bradford Tramway Employees' Horticultural Society, there was an excellent dislpay of garden produce grown by the employees. The show was opened by the chairman of the Tramways Committee (Alderman Enoch Priestly), supported by other members of the committee, Mr. Spencer (the general manager), and Mr. Dawson (the assistant electrical engineer). Mr. Spencer announced his intention of providing a silver rose bowl for annual competition.

**Coke Instead of Coal.**—It was stated at Swansea Electricity Committee, says the *Western Mail*, that unless the consumption of coal could be successfully reduced by the substitution of coke, the tramway service would have to be curtailed by 50 per cent., and the engineer was instructed to experiment with coke so as to comply with the Board of Trade requirements for decreased coal consumption. The engineer reported that it would be necessary to increase the charges up to 20 per cent. (12½ per cent. only had been imposed so far) if the expenses were to be met.

**Bonuses for Fuel Saving.**—A considerable saving of coal has been effected by the Manila Electric Railroad and Light Corporation, as a result of the bonus system which was instituted some time ago. The standard of fuel efficiency was fixed by means of careful tests of the plant and of the calorific value of the coal used. According to the scheme, each employee is awarded each day a number of points according to his position and his opportunity to improve the efficiency of the operation. These points are recorded on a special board. Means are provided for preventing one shift making undue saving at the expense of another shift, *e.g.*, by allowing the steam pressure to drop unduly or the fires to burn too low before the other shift comes on duty. As a result of the scheme, the actual saving of fuel has increased from 5·5 per cent. in 1915 to 18·5 per cent. in 1917. The saving is divided between the staff and the Corporation.

**Transport Women Workers' Demands.**—At a meeting of railway workers, including both men and women, held in London on Sunday last, the following resolution was passed:—"That this meeting of London railway workers enters its emphatic protest against the procrastination and shuffling tactics of the union officials and the Government in regard to the demands made for equal war wages for women; and, in view of what may be described as glaring victimisation of men wounded in the service of their country, and who cannot get employment because of cheap women labour, we warn the union officials and the Government that we will accept no other settlement than the 12s. 6d. war bonus, which will make the women's wages the same as the men's; and we decide also to hold a further meeting within fourteen days to consider further action, seeing that the war bonus is needed to meet the high cost of commodities, and that women have to pay exactly the same as men."

Digitized by Google

**Melbourne Tramways Bill.**—It is expected, says the *Bendigo Advertiser*, that the first Bill submitted to the Australian Parliament by the State Ministry will be the Metropolitan Tramways Bill. This Bill is primarily to transfer to a new control the cable tramways of Melbourne, and, incidentally, all the new electric tramways that have been built during the last few years in the eastern and south-eastern suburbs will be combined with the cable trams. The cable trams are making big profits of over £300,000 a year, which is now being placed to a suspense account. The electric tramways have been making small profits, but are generally expected to show losses as the heavy cost of maintenance of electric tramways at the present time is met.

**The Admiralty and Queensferry Tramways.**—In connection with the Queensferry Tramway Scheme, which is being promoted by the Edinburgh Corporation, and is to be the subject of a provisional order inquiry in the opening days of next month, it is understood, says the *Scotsman*, that the Admiralty have now intimated definitely that they will not send a witness in support of the scheme. A deputation from the Corporation interviewed the Admiralty authorities in London about six weeks ago and supplied information on a number of points raised. The Corporation Tramways Committee has agreed to make further representation, and correspondence with the Admiralty is still proceeding. It is understood that the scheme from the first proceeded largely on the expectation of Admiralty traffic from the Forth.

**Wages Award Results.**—The Portsmouth Tramways Committee at a meeting presided over by the Chairman (Councillor J. Timpson), decided to pay 5s. a week increased war bonus to women employees, to date from July 9th, in accordance with the Committee on Production's award. It was stated that women employees on tramways generally are costing an average of 27 per cent. over and above the cost of the men employees whose places they are filling. At the Doncaster Town Council, Councillor Balmforth (chairman of the Tramways Committee) said that, as a result of the award of the Committee on Production, £1,988 had to be to provided, and this would swamp any surplus. In 1911-12 the 6d. per car mile was the outside estimate which they thought ought to cover the running cost, but that had now grown to 11½d. per car mile.

**The Road Board Report.**—The eighth annual report of the Road Board, signed by the chairman, Sir George Gibb, deals largely with a scheme for a proposed Western Avenue leading out of London from a point near the Marble Arch to a point on the Oxford Road, a little beyond Uxbridge, which was before the London Arterial Road Conferences in 1913-15. The report contains details of the construction and width and of the use by tramway and omnibus traffic of various sections of the Oxford road and the Harrow road, these being the roads which the proposed new highway is intended to relieve. The Board state that "the traffic on the Oxford and Harrow roads has not yet reached such a degree of intensity as to require the immediate construction of the Western Avenue at the cost of public funds, but the growing traffic cannot be provided for by widening the existing roads, which moreover would be so costly a proceeding as to be regarded as impracticable." Nor would it be practicable by improving and linking up existing roads to provide an additional artery. The first step towards any practical action is to prepare a detailed scheme of the road requirements of the area considered as a unit and to determine the ultimate complete cost of the scheme. A careful engineering survey and the preparation of plans and estimates may involve an expenditure of, say, £5,000. The Board express their willingness to undertake this duty and expenditure at the cost of the Road Improvement Fund.

## PERSONAL

**Mr. H. J. Burcham** has been appointed rating agent to the London and North Western Railway, in place of the late Mr. W. C. Neate.

**Mr. William H. Brown,** secretary of the Metropolitan Railway Company, has been made a Justice of the Peace for Middlesex.

**Mr. B. Hall** (of Chatham), has been appointed assistant to the general manager of the Keighley Corporation Tramways, at a commencing salary of £200.

The death has occurred at Edinburgh of **Mr. J. T. Oliver,** who retired from the post of assistant chief engineer to the North Eastern Railway at Newcastle-upon-Tyne a few years ago.

**Mr. R. L. Horsfield,** tramways manager of Walsall, is to be granted an increase of £100 in his salary by two yearly instalments to £700 per annum.

**Mr. H. Webber,** borough electrical engineer and tramways manager of Keighley, has been appointed district engineer by the Controller of Coal Mines.

**Mr. H. A. Howie,** electrical engineer of Walsall, has been granted an increase in salary as from April 1 to £600, rising by £50 in each of the succeeding two years to £700 per annum. The sum of £200 per annum on account of the salary is ultimately to be charged to the motor omnibus account.

**Mr. William Forbes,** assistant manager and traffic superintendent of the Aberdeen Corporation Tramways, has been recommended by the Tramways Committee for appointment as general manager in succession to Mr. R. S. Pilcher, who is shortly leaving to take up his new position as general manager of the Edinburgh Corporation Tramways. Mr. Forbes has been eight years in the Aberdeen Corporation department, and was previously eight years at the Caledonian Railway Company. His age is 36. The salary will be £450 per annum.

## CONTRACTS AND ORDERS.

**E. Allen & Co., Ltd.,** Sheffield, are supplying tools to the War Office.

**Stewarts & Lloyds, Ltd.,** Glasgow, have received an order from the War Office for tubes.

**Dennis Bros., Ltd.,** Guildford, have obtained a contract to supply pumping plant to the War Office.

**C. Macintosh & Co., Ltd.,** Manchester, are supplying the War Office with rubber-proofed goods.

**The British Thomson-Houston Company's** tender for tramway motors has been accepted by Manchester Corporation.

**The British Westinghouse Company, Ltd.,** London, have successfully tendered for the supply of consumers' switchgear to the Walsall Corporation.

**Burton-on-Trent Extension.**—The tramway depot is to be extended. Contracts for building work have been let to J. Hodges and Son, at £1,510 and to The Lumley Brick Company for ferro-concrete work at £603.

**Sheffield City Council** have accepted tenders from A. C. Parsons and Company for two 25,000 kw. turbo alternators with condensing plant; Stirling Boiler Company, sixteen boilers; A. Reyrolle and Company, 6 panels 3,300 volts three-phase switch gear; Brown Bayley's Steel Works, J. Brown and Company and Cammell Laird and Company each 300 tramway tires (a year's supply.)

## FINANCIAL REPORTS AND MEETINGS.

**Straker-Squire, Ltd.**—An interim dividend of 1s. per share, less income tax, on account of the current year, has been announced.

**Cammell Laird and Co.**—Interim dividends on the preference and ordinary shares of 2s. per share, being 2½ per cent., less income tax, has been announced.

**Manila Electric Railroad and Lighting Co.**—A dividend of 1½ per cent. $1.50 per share) for quarter ending September 30, has been declared on the common stock.

**City and South London Railway.**—The Board of Trade has extended by one year from August 15, 1918, the time allowed by the City and South London Railway Act, 1913, for the exercise of powers for payment of interest out of capital.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Sept. 11, amounted to £67,486, an increase of £9,926 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Sept. 11 (twenty-three and a half weeks), the total receipts were £1,521,894, an increase of £206,235 on the corresponding period of 1917.

**Brockhouse and Co.**—This year, as in the previous year, an ordinary dividend of 20 per cent. is to be paid. A further proof of the vigorous state of business is that more capital is needed to finance extensions, and that the ordinary shareholders are accordingly invited to double their holdings by subscribing for 57,000 more ordinary £1 shares at a premium of 50 per cent.

**Swansea Improvements and Tramways Company.**—The 79th annual report states that the revenue for the year amounted to £79,753, or an increase of £7,411 as compared with 1916. Of the available balance it is proposed to place £3,000 to reserve, payment of preference dividends absorbs £2,508, and a dividend at the rate of 6 per cent. for the year is recommended on the 13,000 ordinary shares, in respect of which an interim dividend at the rate of 5 per cent. per annum for the half-year was paid in October last. This absorbs £7,800; the carry-over is £2,654, or slightly more than the sum brought into the account.

**National Steam Car Co., Ltd.**—In view of statements which appeared in a recent issue of a financial paper, Mr. B. Smith, secretary of the National Steam Car Co., Ltd., writes as follows:—"(1) This company has no knowledge of any desire on the part of the London General Omnibus Company to take over the omnibus business of this company, and no negotiations to this end have ever been suggested. (2) The Ministry of Munitions has neither ordered nor encouraged the production of our new coke-fired vehicle, as stated (3) The enormous increase in both wages and fuel will very seriously discount the optimism expressed."

**DICK, KERR & Co.,**
**Limited,**
ABCHURCH YARD, CANNON STREET,
LONDON, E.C.,
**ENGINEERS & CONTRACTORS.**

**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad.**

## WEEKLY LIST OF TENDERS INVITED.

### CITY OF SHEFFIELD.

**Tramways and Motors Department.**

The Tramways and Motors Committee are prepared to receive Tenders for the manufacture and supply of Uniform Trousers, Reefers, Women Conductors' Costumes, Straw Hats and Caps, and Mackintoshes.

Particulars and Forms of Tender, together with Specification, may be obtained, and samples of articles giving a general idea of what is required may be inspected from September 23 to October 4, 1918, between the hours of 10 a.m. and 12 noon and 2 p.m., and 5 p.m. (Saturday, 10 a.m. to 12 noon) at the offices of the General Manager, Tramways and Motors Department, Division Street, Sheffield.

Tenders (enclosed in official envelope provided) and samples to be delivered at the Tramways and Motors Department, Division Street, Sheffield, not later than Wednesday, October 16, 1918.

Any person or firm sending in a Tender will be required to comply with the Council's Form of Clauses respecting wages, hours and conditions of labour, and prohibition against assigning or underletting, as set forth in the "Conditions of Contract," a copy of which may be obtained from the undersigned upon application.

Dated this 21st day of September, 1918.

A. R. FEARNLEY.
Division Street, Sheffield. General Manager.

### BURGH OF LEITH.

**Tramways Employees' Uniforms.**

The Town Council invite Tenders for the supply of summer uniforms, factory or tailor-made, as may be determined; conform to sample cloth and suits to be seen at the Tramways Offices, 165, Leith Walk, and to relative conditions of contract. Particulars may be obtained from the Tramways Manager there. Tenders (endorsed "Tramways Uniforms"), with separate sample of cloth, marked with a private mark, which shall not be recognisable until the Tenders are opened, must be lodged with me not later than 8th October next.

The lowest or any Tender may not necessarily be accepted.

J. A. GREIG,
Town Clerk.

Town Clerk's Office,
Leith. September 19, 1918.

## POSITIONS VACANT.

**Armature Winder.**

Armature Winder. Repair work in tramway depot. State experience and wages. Permanent job for right man.—SOUTH METROPOLITAN TRAMWAYS, 30, High Street, Sutton.

**Shift Engineer.**

Shift Engineer wanted for power station.—Apply, stating age and experience, to LANARKSHIRE TRAMWAYS CO., Motherwell.

### CITY OF BRADFORD.

**Tramways Manager.**

Applications are invited, from fully qualified persons with practical experience in tramway management, for the post of General Manager of the Bradford Corporation Tramways. Salary £800 per annum.

Applications, stating age, qualifications and experience, accompanied by three recent testimonials, and endorsed "Tramway Manager," must reach the Town Clerk's office not later than Tuesday, the 24th instant.

Canvassing is prohibited.

FREDERICK STEVENS, Town Clerk.
Town Hall, Bradford, September 10, 1918.

**Platelayer.**

Assistant Foreman Platelayer wanted; first-class man with experience of repairs and renewals of tramway permanent way. Wage £4 per week and overtime.—Apply, stating age, and experience with copies of testimonials, to GENERAL MANAGER, Corporation Tramways, Coventry.

**Engineer-in-Charge.**

Engineer-in-charge required for certified undertaking; alternating current experience essential. 52 hours per week. Salary £172 18s., including war awards to date.

Apply with full particulars and copies of testimonials to BOROUGH ELECTRICAL ENGINEER, Electricity Works, Tunbridge Wells.

## THE LOCAL TRANSPORT PROBLEM.

IN discussing in these columns in September, 1893, the outlook for local passenger transport in the United Kingdom, we wrote as follows :—" However excellent and plentiful underground electric railways may be in the future, tramways will always remain indispensable. Not only will they not be in any degree superseded, but we are convinced, taking them over all, that their usefulness and traffic will be greatly expanded. The public appetite for such facilities grows by what it feeds upon. All that is needed to produce an almost indefinite development of traffic is the providing of a certain, frequent, and rapid service. Everyone in the business knows why tramway development has lagged in this country. The baneful effect of the Tramways Act of 1870 has long been felt, and its provisions are continually becoming more and more intolerable alike to tramway authorities and the public." Although twenty-five years have elapsed, the statements then made remain equally true to-day. While the public benefits foreshadowed have been largely realised, they have always been, and still are, limited and confined by the effect of the Tramways Act of 1870. That measure became law long before electric tramways were thought of, and it is no more adapted to present conditions than were the horse tramways with which it was mainly concerned. In no other civilised country in the world can such an anachronism as the British Tramways Act be found ; and it is convincing proof of the neglect of the Government to foster industrial progress that in spite of the constant agitation on the subject—witness the abortive light railway legislation since 1896—no amending Act has ever been passed. Even yet there is no project for a change in the law; although after the war improvement in local transport must keep pace with the new housing schemes and industrial progress, and it is imperative that full opportunity should be given both to municipal and private enterprise to meet the needs of the public for local transport. Both Tramway Associations are now agreed in principle as to the necessity for a change in the law, and they should be able to impress their views on the Government. Numerous suggestions for reconstruction are being considered. However excellent some of these are, many years will be required to carry them into effect. Tramway authorities, however, will be ready to go ahead without delay if only they are given a reasonable opportunity to carry out new plans. These plans cannot be undertaken, however, until the Tramways Act is amended in such a way as to meet the conditions of the present day. How long are great public improvements of immense value to many communities to be rendered impossible by the neglect of Government departments to study thoroughly the problems of local communication ?

## MUNICIPAL TRAMWAYS ASSOCIATION.

ANNUAL MEETINGS.

The annual general meeting of the Municipal Tramways Association will be held, as previously announced, on Thursday and Friday, the 26th and 27th insts., in the Council Chamber of the Town Hall, Leicester. Mr. Alderman S. Flint, chairman of the Leicester Corporation Tramways Committee, will preside. The programme is as follows :—

THURSDAY, SEPTEMBER 26.

10. 0 a.m.—Meeting of the Executive Council at the Town Hall.
10.30 a.m.—Reception by the Mayor of Leicester (Alderman North, J.P.) and Chairman and Members of the Leicester Corporation Tramways Committee, in the Council Chamber at the Town Hall.
11. 0 a.m.—General meeting in the Council Chamber at the Town Hall.
Presidential address by Alderman S. Flint, J.P., chairman, Corporation Tramways Committee, Leicester.
"Some Notes and Considerations on the Post-War Position of Electric Power Supply." A paper by Mr. E. Hatton, engineer and general manager, Corporation tramways, Newcastle-on-Tyne.
Discussion to be opened by Mr. J. M. McElroy, general manager, Corporation tramways, Manchester.
1. 0 p.m.—Luncheon at the invitation of the Mayor of Leicester (Alderman North) in the Museum Buildings, Waterloo Street.
3. 0 p.m.—Resumption of the Meeting in the Council Chamber, Town Hall.
Consideration of the report of the Executive Council *re* the Formation of a National Joint Council for the Tramway Industry.
Statement by Mr. McElroy, on behalf of the Executive Council, as to the objects of the proposed Joint Council and as to the negotiations which have taken place in regard to its formation.
5. 0 p.m.—Adjournment.

FRIDAY, SEPTEMBER 27.

10 a.m.—Meeting of Executive Council at the Town Hall.
10.30 a.m.—Meeting of Managers' Section at the Town Hall.
11. 0 a.m.—Resumption of Business Meeting of Association in the Council Chamber, Town Hall.
1. 0 p.m.—Luncheon at the invitation of the President of the Association, Alderman S. Flint, chairman, Corporation Tramways Committee, Leicester, in the Museum Buildings, Waterloo Street.

The headquarters of the Association during the Conference will be at the Grand Hotel, Leicester.

## INCREASE OF FARES.

The increase of fares on the trackless cars between Guiseley and Otley has again been discussed by the Otley Urban Council. The opinion was expressed that the Leeds City Council, who work the system, had no power to increase the fares ; that they had not received the approval of the Board of Trade ; and that they were in the same position in the matter as a railway company. It was decided to communicate with the Board of Trade.

At Sunderland a fifty per cent. increase on most tramway fares has been approved by the Town Council. A penny fare from the centre to the east of the town has been allowed to remain, and children's and workmen's transfer tickets have not been affected.

A proposal to increase fares has been adopted at Newport.

A recommendation of the Keighley Tramways Committee that power should be given them to increase the fare between any two termini from 1d. to 1½d. from such date as might be determined has been adopted by the Town Council.

**Company's Claim on Town Council.**—The Paisley District Tramways Company, have written to the Paisley Town Council claiming £350 compensation for loss held to have been sustained owing to a breakdown in the power supply and consequent disorganisation of traffic.

## RAILWAY WORKERS' DEMANDS.

The demand for increased wages for railway workers has been the subject of conferences at the offices of the Board of Traded and eventually with the War Cabinet this week. The National Union of Railwaymen and the Associated Society of Amalgamated Locomotive Engineers and Firemen demanded an increase of 10s. per week for all workers, male and female, over 18 years of age, and 5s. for those under that age. The Railway Executive Committee offered increases of 5s. and 2s. 6d. respectively, but this offer was not at first accepted.

Conferences took place on Tuesday and Wednesday, when the President of the Board of Trade (Sir Albert Stanley), Mr. G. N. Barnes (representing the War Cabinet), and Sir Herbert Walker (chairman of the Railway Executive Committee) discussed the position at considerable length with representatives of the organised workers.

At a Conference at Downing Street, on Thursday, between the War Cabinet and the National Union of Railwaymen's Executive, proposals were made which were subsequently submitted to a full delegates meeting of the Nationa Union of Railwaymen, and after much discussion accepted by a majority. The terms of the settlement as outlined by Mr J H Thomas M.P., are :

That 5s. increase per week is to be given to men over 18 years of age ; 2s. 6d. to boys under 18 ; 5s. to females over 18 : and 2s. 6d. to females under 18, to date from Monday next, but to be retrospective on a flat rate as from August 5.

This decision is not to interfere with or prejudice the findings of the Committee set up to consider the question of equal pay for equal work : but the Government promises immediately to do all they can to expedite the Committee's work and give effect to its findings. A meeting will be arranged at once for that purpose.

Shopmen are to receive from August 10, the award given to the engineering industry. Their conditions are to be governed by such awards automatically, and the N.U.R. is to take part and share in such negotiations.

There is to be immediately set up a committee, composed of equal numbers of either side, whose duty it will be to ascertain the exact increase in the cost of foodstuffs, the datum line being August 5, when the increase was 110 per cent. and the relationship to be 30s. The function of this committee, on agreeing as to the basis, is to arrange for such amount to be automatically applied without any new movement or application being made.

It is stated that Mr. Bonar Law emphasised the very grave consequence of a strike and made it clear that the Government were not prepared to go beyond the terms offered by the Railway Executive Committee—viz., a further bonus of 5s. weekly for men and women over 18, and 2s. 6d. per week for boys and girls under that age.

The Locomotive Engineers and Firemen's Society, after considering the Government's proposals, adjourned, and up to the time of going to press their decision had not been announced.

A claim put forward on behalf of the engineers employed in railway works for a 100 per cent. advance on pre-war wages will, it is understood, be referred to the Committee on Production. It is stated that the greater part of this advance has already been secured.

## REDUCTION OF SERVICES.

A general stoppage of the Sunderland tramway service at 9.30 p.m. has been approved by the Town Council, on the understanding that discretionary power should be left with the general manager (Mr. A. R. Dayson) to meet the special needs of workmen returning from work about that time.

Dundee Tramway and Electricity Departments have found it impossible, says the *Dundee Advertiser*, to comply with the Board of Trade request to reduce the coal consumption by 15 per cent. per annum, but they have decided to curtail the service as much as is consistent with public utility in order to meet the demand of the authorities. The Sunday service, which hung in the balance, has been retained, but the services on one route and on a section of another have been suspended and some other reductions have been made.

Ald. Sir Charles Mander Bart., J.P., (chairman of Wolverhampton Corporation Tramways Committee) writing on the subject of restricted tramway services in the borough, states that at present current consumption is reduced by the following among other means :—In the morning services are reduced between 9.30 and 12.30, and in the afternoon between 2.30 and 5 p.m., and late in the evening, the number of stopping places has been reduced and the tramway staff is endeavouring to reduce the actual current used per car mile. In the event of further restrictions being imposed upon the current consumption ; additional means of reducing the load will be considered, such as the reduction or suspension of Sunday services, stopping car services earlier in the evening, and further reduction of services in the middle of the morning and afternoon. The Tramways Committee are fully alive to the desirability of maintaining the passenger transport facilities, and maintaining the services for munition workers, and only such reductions and curtailments will be made as are imperative in the national interest.

The Sunday service on the Middlesbrough, Stockton, and Thornaby electric tramway system is being discontinued.

At Huddersfield the cars have ceased to run on Sundays.

## NEW LIST OF CERTIFIED OCCUPATIONS.

ITS APPLICATION TO TRAMWAY AND RAILWAY WORKERS.

A new list of certified occupations has been issued by the Ministry of National Service. It comes into force on September 26, and supersedes all previous lists of certified occupations, and is confined to questions of exemptions coming before tribunals. Those who wish for detailed information as to the position of themselves or of employees will do well to obtain a copy. It may be remarked that inclusion in the list does not in itself confer exemption, but each man must obtain an individual certificate from a tribunal, and exemption is not necessarily granted. Instructions have, however, been issued that discrimination must be exercised in dealing with applications by men who establish that they are in certified occupations, and that these applications are not to be opposed unless in a particular case there are definite and specific reasons for contending that it is no longer necessary in the national interests that the man should remain in civil employment. Tramway workers, as such, do not appear by name in the index of occupations listed. But the tramway industry is obviously affected by implication in the special recommendations to tribunals in regard to exemptions of directing heads of businesses, managers and technical or managerial clerks. The same remark is applicable to the reservations attaching to the cases of electrical engineering employees and of employees at electrical generating stations, transmission and distributing mains, and lines (in which are expressly included those for tramway undertakings and electric railways). The railway industry generally seems to be similarly covered, with the addition of a specific reservation in regard to men certified as indispensable by the employing company.

## NEW MANAGER AT ABERDEEN.

Mr. W. Forbes has been appointed general manager of the Aberdeen Corporation Tramways at a salary of £450, in accordance with a recommendation of the Tramways Committee. Councillor Robertson (chairman of the Tramways Committee) said Mr. Forbes had had considerable experience not only as an organiser but in commercial work. He was a very fitting official to take the place of the late manager, Mr. Pilcher, who had given him a very high certificate. The Lord Provost (Sir James Taggart) said that the Town Council were anxious, when they had a man of their own qualified to fill a vacant position, as far as possible to promote him to that post, and they were very fortunate in having Mr. Forbes. The appointment of Mr. Forbes, who for some years past has held the position of assistant manager and traffic superintendent, was unanimously agreed.

## MISCELLANEOUS NEWS AND NOTES.

**Aberdare Strike Ended.**—The tramway employees, who, with other employees of the Aberdare Urban Council, had been on strike, have resumed work, on the understanding that their claims shall be considered by the local Conciliation Board.

**Dublin Workers' Claims.**—The Dublin branch of the Amalgamated Association of Tramway and Vehicle Workers have adopted a programme of improved working conditions. Their claims include the abolition of split duties ; one day off in the week, or a fortnight's holiday with pay ; 54 hours to constitute a week's work ; recognition of the Union, etc.

**The Institution of Automobile Engineers.**—The first meeting of the session will be held on Wednesday, October 2, 1918, at the Royal Society of Arts, John Street, Adelphi, at 7.30 p.m., when Mr. A. A. Remington will deliver his presidential address. Cards of invitation to the meeting may be had on application to the Secretary, the Institution of Automobile Engineers, 28, Victoria Street, London, S.W.1.

**Fatal Fall into an Inspection Pit.**—At an inquest upon a tramway employee who died from injuries to the head after falling into an inspection pit at the tramways depot, it was stated that deceased had suffered from bronchitis and influenza, and had complained on two occasions of feeling dizzy. Returning a verdict of "Accidental death," the jury suggested that the pits should be railed off for the mens' safety.

**Control of Electricity.**—A new regulation has been notified in the *London Gazette* in accordance with which the Minister of Munitions may direct the extinction or restriction of lights at such times and places as may be specified and may prohibit or restrict the supply of electricity. It is provided, however, that no order shall be made for the closing of any power station belonging to any local authority or for the connection of any such power station with any other power station, except with the concurrence of the appropriate Government department.

**A "Safety First" Poster.**—One of the latest of the series of useful posters issued by the London "Safety First" Council, calls the attention of drivers, cyclists and pedestrians to a variety of unusual accidents which sometimes happen. Illustrations and descriptions of the circumstances in which such accidents occur are subjoined to several bold introductory headlines. An award has been instituted by the Council, known as the "London 'Safety First' Meritorious Service Award," to be presented in recognition of conspicuous instances of acts which have resulted in the prevention of accidents in streets, factories, schools, etc., or on railways, within a radius of 20 miles of Charing Cross. The award will consist of a badge, a diploma and an honorarium.

Digitized by Google

**Tees-side Tramway Proposals.**—Thornaby Corporation have decided to join the Stockton Corporation in the purchase of the tramways undertaking in the boroughs of Stockton and Thornaby, subject to the cost being based upon the population of the parliamentary borough, and not upon the length of line. It appears probable that the portion of line in Thornaby will be sub-let for working to the Stockton Town Council. The Middlesbrough Corporation are purchasing the line in their own area.

**Driver's Supposed Fatal Omission.**—A driver of the Glasgow Corporation Tramways was accidentally killed in a car depot. He had run his car into the depot, and the woman conductor, following custom, had reversed the trolley and departed. The driver, noticing that the trolley had slipped from the wire, jumped off the car, which was stationary at the time, to replace it. Apparently he had omitted to turn off the power and apply the brake, because immediately the trolley touched the wire the car moved forward. The driver, taken unawares, was knocked down and run over by the car. The car was brought to a standstill by an employee who observed the accident.

**Two Street Explosions** occurred in Sheffield, owing to the failure of an underground tramway cable allowing the current to leak to earth, with the result that the temperature in the cable-box was raised, and the expansion forced the heavy metal cover off the box. This occurred at two points. In one case the forcible removal of the box cover with accompanying bang, was heard. In the other, the explosion was more violent, not only throwing the cover up but disturbing some of the stone sets of the roadway and the flagstones in the pathway. The explosions were followed by an underground fire, caused by the cable insulation becoming ignited, but this was quickly dealt with by the tramway department.

**Alleged Arbitration Delay.**—There is reported to be some dissatisfaction among the Liverpool tramway workers owing to alleged delay in the arbitration proceedings in connection with the recent Liverpool tramway strike. The branch secretary of the Municipal Employees' Association in an interview published by the Liverpool *Evening Express*, says he was eager to avoid any further trouble, but he regarded a delay of nine weeks which followed the promise of arbitration within a few days as not likely to tend toward peace. He knew the matter was out of the hands of the Liverpool tramway authorities, and his Association had made urgent representation to Sir George Askwith.

## PERSONAL.

**Mr. H. T. Wakelam,** county engineer of Middlesex, has been appointed a member of the Road Transport Board.

**Mr. A. R. Dayson,** general manager of the Sunderland Corporation Tramways, has received an increase of salary from £600 to £700 per annum.

**Mr. H. Yarwood,** who has been for many years assistant borough surveyor of Rochdale, has been appointed borough surveyor *pro tem*, at a salary of £400 a year.

**Mr. H. E. Mortimer,** of the Croydon Corporation electricity department, has been appointed assistant mains engineer to the Marylebone Borough Council electric supply department.

**Mr. William Clough,** general manager of Bury Corporation tramways, has been appointed assistant honorary secretary of the Municipal Tramways Association.

**Mr. S. S. Platt,** who recently resigned the position of borough surveyor of Rochdale and permanent way engineer to the Rochdale Corporation Tramways, is being retained as consulting engineer, at a salary of £200 a year.

**Mr. D. James,** general manager of the Swansea Improvements and Tramways Company, has been invited to confer with the Swansea Tramways Committee on matters affecting the local tramway service.

**Mr. R. L. Horsfield,** general manager of Walsall Corporation tramways, has been granted by a unanimous vote of the Council an increase in salary of £100 as from April 1, to £600, and an increase of £50 in each of the two succeeding years to £700. The sum of £200 per annum on account of the salary is ultimately to be charged to the motor omnibus account.

**Mr. Albert Vickers** resigned the chairmanship of Vickers, Ltd., on September 16, his eightieth birthday. In a letter conveying his resignation, Mr. Vickers recalls that he has spent sixty-four years of his life with the company, and that its fortunes have always been bound up with his own. Although Mr. Vickers felt compelled, owing to advanced age and somewhat failing health, to resign the chairmanship, he said that he would always be at the service of his colleagues for consultation and advice. Mr. Douglas Vickers has been appointed chairman.

**Mr. R. McKean Cant,** advertising manager of the B. F. Goodrich Company, of 117, Golden Lane, London, E.C., has accepted the post of assistant sub-director of education in Salonica. The work is carried on by the University Committee of the Y.M.C.A. at the direct invitation of the military authorities. The idea is to have a body of educationists, organisers and teachers, apart from the officers in the regular army, to assist soldiers in carrying on and completing their studies as they move from place to place. Mr. Cant is a fellow of the Institute of Commerce, and a holder of the diploma in literature of the Heriot-Watt College, Edinburgh. He has had practical experience of teaching during the past few years as lecturer of advertising and salesmanship, etc., for the London County Council. Mr. Cant hopes to leave London shortly, and will be absent for a year.

The many friends of **Mr. W. E. Hammond,** traffic manager of the Metropolitan Electric Tramways, Ltd., and vice-chairman of the Metropolitan Association of Electric Tramways Managers, will be pleased to learn that his son, L.Bombr. H. W. Hammond, who joined the R.G.A. in October, 1916, and was sent to Hong Kong (where he has been acting as master gunner's assistant), has been seconded to the Kowloon Canton Railway Company for temporary appointment as traffic inspector on the British section of the line. L.Bombr. Hammond joined the staff of the Metropolitan Electric Tramways, Ltd., in September, 1904. He was transferred in March, 1913, to the British Electrical Federation, and three years later again transferred to the London Electric Railways, both appointments being in the claims departments.

**Mr. R. Stuart Pilcher,** who was recently appointed manager of the Edinburgh Corporation tramways, has received a presentation from the employees of the Aberdeen Corporation tramways, where he was manager for the last twelve years. Among those present on the occasion who spoke in appreciation of Mr. Pilcher's services were the Lord Provost (Sir James Taggart) Councillor Robertson, chairman of the Tramways Committee, Mr. A. Wilkie, manager of the Aberdeen Suburban Tramways Company, and Mr. W. Forbes, who succeeds in the management of the Aberdeen Corporation tramways. Presentations were also made to Mrs. Pilcher and Miss Pilcher. At a meeting of the Edinburgh Corporation Tramways Committee on Tuesday, Mr. Pilcher was present in his formal entry upon the duties of his new appointment.

**Millars' Timber and Trading Company.**—The trading profit amounts to £59,000, as compared with £57,900, and the net profit after allowing for debenture service and setting aside £15,000 for depreciation, is £12,300, as against £11,200. In 1916 the preference interest for the first half of the year was forthcoming, but no further distribution has since been made, and the amount in arrear is now 12 per cent. The last ordinary dividend was 6 per cent. for 1913. The surplus for the past year is added to the carry-over, raising it from £36,500 to £48,800.

## FINANCIAL REPORTS AND MEETINGS.

**British Insulated and Helsby Cables, Ltd.**—An interim dividend of 9d. per share, less income tax, is announced.

**A. Darracq and Co. (1905) Ltd.**—A dividend at the rate of 7 per cent. per annum on the preferred ordinary shares for the half year ended September 30 has been declared.

**Leyland and Birmingham Rubber Co.**—A final dividend of 10 per cent. on the ordinary shares, less income tax, making 15 per cent. for the year is announced.

**Barsi Light Railway Co.**—After transferring £1,035 to reserve account for the equalisation of dividends, etc., the directors recommend a final dividend of 3 per cent. (6s. per share), making a total distribution of 6 per cent. for the year to March 31.

**The British Empire Trust Co., Ltd.,** announce that the Toronto Railway Company has declared a dividend on its ordinary shares of 1 per cent. for the quarter ending September 30, 1918. being at the rate of 4 per cent. per annum, payable on October 1,

**Hongkong Tramway Co., Ltd.**—The attorneys in London have received telegraphic advices from Hong Kong that the board of this company intends to redeem all the outstanding debentures on May 31 next. Formal notice will be sent in due course to h registered holders of the debentures.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Sept. 18, amounted to £67,802, an increase of £8,979 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Sept. 18 (twenty-four and a half weeks), the total receipts were £1,589,916, an increase of £215,434 on the corresponding period of 1917.

## CONTRACTS AND ORDERS.

**Dover Corporation Tramways Committee** is making inquiries as to the cost of installing a system of signals in connection with the tramways.

**DICK, KERR & Co.,**
**Limited,**
**ABCHURCH YARD, CANNON STREET, LONDON, E.C.,**
**ENGINEERS & CONTRACTORS.**
**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad.**

## WEEKLY LIST OF TENDERS INVITED.

### PORTSMOUTH CORPORATION TRAMWAYS COMMITTEE.

**Tenders for Supplies.**

The Tramways Committee of the above Corporation invite Tenders for the supply of the undermentioned goods from October 1, 1918, to March 31, 1919:—

Section A.—Ballast, Sand and Grit.
Section B.—Portland Cement (British manufacture preferred).
Section C.—Brooms and Brushes.
Section D.—Oils (not lubricating), Chemicals, Sheet Glass, etc.
Section E.—Smiths' Coal and Coke.
Section F.—Timber.
Section H.—Brake Blocks.
Section I.—Engine Packings, Asbestos Goods, etc.
Section J.—General Ironmongery.
Section M.—Steel Tramway Tyres.
Section P.—Car Repair Stores.
Section Q.—Insulating Materials, Lamps, and Motor Windings.
Section R.—Overhead Line Materials.
Section S.—Lubricating Oils, Greases, etc.
Section T.—Chandlery, etc.
Section U.—Castings and Machined Parts.

The Specification and form of Tender may be obtained upon application to the Engineer, Mr. V. G. Lironi, M.I.M.E., A.M.I.E.E., Engineer's Office, Vivash Road, Fratton, Portsmouth.

Tenders marked "Tender for ————" to be delivered to the Town Clerk, Town Hall, Portsmouth, not later than 10 a.m. on Tuesday, October 15, 1918.

The form of Tender must include a declaration that the person making the Tender pays the rate of wages and observes the hours of labour and conditions contained in the Corporation Fair Wages Clause.

The Committee do not bind themselves to accept the lowest or any Tender.

W. R. SPAVEN,
General Manager.

Town Hall, Portsmouth,
September 20, 1918.

## POSITIONS VACANT.

### REDDITCH URBAN DISTRICT COUNCIL.

**Shift Engineer.**

Shift Engineer wanted at once (Controlled Undertaking); experience of B. and W. Boilers, Turbo-Alternators, and E. H. T. A.C. supply essential. Salary, £3 17s. 6d. per week (inclusive of all bonuses to date), plus overtime rate for any additional time worked.

Apply, stating particulars of age, training and experience, with copies of recent testimonials, to The Engineer, Electricity Works, Redditch, Worcestershire.

### COUNTY BOROUGH OF WARRINGTON.

**Electricity Department.**

The Electricity and Tramways Committee of the County Borough of Warrington invite Tenders for One Water-tube Boiler.

Specification and Form of Tender may be obtained from the undersigned on payment of one guinea, which will be returned on receipt of a bonâ fide tender.

Five shillings will be charged for extra copies of the specification.

Tenders, addressed to the Chairman of the Electricity and Tramways Committee, Town Hall, Warrington, must be sealed with wax and endorsed "Tender for Water-tube Boiler," and delivered not later than 12 o'clock noon on Tuesday, October 22nd, 1918.

The lowest or any tender will not necessarily be accepted.

F. V. L. MATHIAS,
Borough Electrical and Tramways Engineer.

Howley, Warrington.

### BOROUGH OF BEDFORD.

**Electricity Department.**

The Corporation of Bedford invites Tenders for the supply and Erection of Two Water Tube Boilers, Mechanical Stokers and Induced Draught Plant.

Copies of drawings and specifications may be obtained from the Engineer, Electricity Works, Cauldwell Road, Bedford, on the deposit of £1, which sum will be returned on receipt of a bona fide tender. Additional copies of the specification will be supplied at 5s. each.

Sealed Tenders, marked "Boilers," to be delivered not later than noon on the 13th day of November, 1918, addressed to the Chairman of the Electricity Committee, Electricity Works, Cauldwell Road, Bedford.

The Corporation does not bind itself to accept the lowest or any tender.

CHAS. STIMSON,
Town Clerk.

## JOINT INDUSTRIAL COUNCIL SCHEME.

THE municipal and company-owned tramways, together with the employees' unions, have, as previously recorded in these columns, been engaged for the best part of the past year in formulating a scheme for setting up a Joint Industrial Council on the lines of the Whitley Report. The matter was not far enough advanced to receive final endorsement at last week's annual conference of the Municipal Tramways Association, but it is satisfactory to note that the action of the Executive Council received cordial approval. A hurried preparation of a scheme is undesirable in view of the novel and important questions involved, and it is clear that several months must yet elapse before it can receive the assent of the several interests. Even then, a further interval is inevitable prior to the Joint Council and the proposed nine District Committees being brought into working order. On the employers' side the position at present is that steps are being taken to harmonise the views of the two tramway associations on the subject of the voting on the employers' side of the proposed Council. It was reported last week that there is hope that an arrangement will be arrived at which will meet with the approval of both Associations. Apparently the difficulty arises from the proposal that municipal undertakings should be represented by nearly twice the number of members to be allowed to the privately owned enterprises. The point assumes greater importance in view of the fact that the employers and the employed are to be given equal voting strength. That course, indeed, is essential to successful working, and with such an equitable basis to work upon, the employees' unions should have no difficulty in confirming the scheme presented by the drafting sub-committee. Upon this body they are represented by the respective secretaries of the National Transport Workers' Federation, the London and Provincial Union of Licensed Vehicle Workers and the Amalgamated Association of Tramway and Vehicle Workers. The remaining three members are two representatives of the Municipal Tramways Association, and one of the Tramways and Light Railways Association. Further meetings of the representatives of the two Associations and of the unions will be necessary before the scheme is put forward in its final form by the executives of the constituent bodies. When that is done, the Council of the Municipal Tramways Association intend to submit it to each municipality for consideration and approval. It is to be hoped that that course will be only a formal one, for the municipalities have been represented by twelve members on the Committee entrusted with the consideration of the matter. There will be no time to spare for remodelling the arrangement, as the need is urgent for seriously tackling the problems that may be expected to arise upon the conclusion of the war, to say nothing of difficulties that have been accentuated during the progress of the conflict. Like most other industries, tramway interests have found it necessary to recommend the formation of District Councils as well as a National Industrial Council. The main object of both will be to secure a permanent improvement in the relations between employers and workmen by systematically reviewing industrial conditions. As at present drafted, the scheme provides that no action shall be taken an any matter unless the proposal is agreed to by a majority of each side, and its framers have also had regard to the intention of the Whitley Committee that their task is not to promote compulsory arbitration. It is intended that whatever agreements may be made for dealing with disputes must be left to the various industries themselves to frame. One thing greatly to be desired is that the Industrial Council should beget a spirit of confidence and co-operation on the part of the employees in place of their present tendency to seek to obtain all they can, and not to give improved service in return.

## UNIFICATION AT BLACKPOOL.

Mr. C. Furness, borough electrical engineer and tramways manager of Blackpool, has presented an important preliminary report to the Blackpool Corporation on the proposed unification of the Corporation Tramways, the Blackpool and Fleetwood Tramroad, and the Blackpool, St. Anne's and Lytham Tramways. The Corporation tramways have a track length of 21½ miles, the Fleetwood tramways 15 miles, and the St. Anne's and Lytham tramways 11½ miles, so that the combined system will aggregate 48 miles of track. Mr. Furness rightly says that the prosperity of greater Blackpool in the future will in no small measure depend upon the transportation facilities provided by the Corporation in enabling its residents and visitors to travel with ease and comfort throughout the borough. At the present time the three systems operating within the borough are restricted in their administration and usefulness by lack of co-ordination in their services, and passengers are obliged to travel over three separate and independent tramway systems. How important the matter has become is shown by the fact that the business of the three local systems has grown to over thirty million passengers per annum. During the past fifteen years the number of passengers has increased three-fold, and with a unified system the traffic would undoubtedly grow even more rapidly. The Blackpool and Fleetwood Company's undertaking will come into the unification scheme in the near future, and it remains only for the Corporation to acquire the Blackpool, St. Anne's and Lytham Tramways, which they will be able to do in the year 1921, under Section 43 of the Tramways Act, 1870. This will enable the Corporation to purchase the undertaking at the then value, exclusive of any allowance for past or future profits. If the scheme is carried out in its entirety, Mr. Furness estimates that in the sixth year the traffic would amount to fifty-five million passengers, and the total receipts from all sources to £340,000, and the total expenditure to £208,000. After allowing £72,000 for interest and sinking fund on an estimated capital of £800,000 for the whole undertaking, there would be a net surplus of £60,000. The possibilities of traffic development between Fleetwood and Lytham over a total of forty-eight single track miles, will be very great with the boom in building which is almost certain to follow after the world war has been successfully concluded.

## MUNICIPAL TRAMWAYS ASSOCIATION.

PRESENTATION TO MR. C. J. SPENCER.

A pleasant incident of the closing session of the annual meeting of the Municipal Tramways Association at Leicester last week was a presentation to Mr. C. J. Spencer on his resignation from the post of honorary secretary. Mr. Spencer's retirement has come about owing to his shortly leaving municipal service under the Bradford Corporation to take up an executive appointment on the London Underground Railway group. The presentation took the form of a gold watch with the following inscription: "Presented to C. J. Spencer, Esq., Bradford, by members of the Municipal Tramways Association in recognition of the valuable services rendered by him as honorary secretary, 1911-1918—27th September, 1918." It was accompanied by a fitted dressing-case for Mrs. Spencer.

Mr. J. B. Hamilton (chairman of the executive council) voiced the appreciation felt for the services rendered to the association by Mr. Spencer during the seven years that he had filled the position of honorary secretary. He thought that in Mr. Spencer the association had had a worthy successor to Mr. McElroy and Mr. Fearnley. He also testified to the excellent managerial work done by Mr. Spencer at Bradford, and to the fact that Mr. Spencer had shown himself fully equal to the increased demands which now fell upon the secretary of the association.

Alderman Priestley (chairman of the Bradford Tramways Committee) spoke from experience of the value of Mr. Spencer's services, and said that although Mr. Spencer's holding the secretaryship had meant some sacrifice on the part of the Bradford Corporation, they had received a great deal back owing the increased administrative knowlege thereby acquired by Mr. Spencer.

Further appreciative words were spoken by Councillor Akeroyd (vice-chairman of the Bradford Tramways Committee) and Alderman Fawcett (vice-chairman of the Halifax Tramways Committee). Amid cordial expressions of approval the gifts were handed to Mr. Spencer by the President (Alderman Flint), who also made a few appropriate remarks and said that every officer and member of the association associated themselves with the presentation.

Mr. C. J. Spencer, responding, tendered hearty thanks for the presentation and the kind sentiments that had been expressed. He remarked upon the advantages in the way of increased knowledge of his own business which came to any tramway manager occupying the post of honorary secretary to the association.

On the motion of the President, seconded by Mr. Hamilton and carried with acclamation, Mr. Spencer was elected an honorary member of the association, a compliment which was acknowledged by him as an honour that he would highly prize in company with the only other gentleman who occupied the same position, viz., Mr. John Young, the founder of their association.

## AFTER-WAR CONDITIONS.

The President of the Board of Trade (Sir Albert Stanley, M.P.) delivered a lecture on "Commerce and Industry after the War," at the Saddlers' Hall, Cheapside, London, on Wednesday. The lecture was the first of a series organised (as mentioned previously in these columns) by the Industrial Reconstruction Council. Mr. G. N. Barnes, M.P., presided.

Sir Albert Stanley urged the necessity of organisation, research, and efficiency and especially co-operation between employers and employees in the process of reconstruction which will follow the war. The Government could not say how businesses were to be conducted, but there must be Government action in certain directions. In regard to railways it was essential that we should not merely return to the condition which prevailed before the war, but that the lesson of united working during the war should not be forgotten, and in future the railways should be worked in such a manner as to secure the advantage of standardisation and avoid overlapping and waste. The canals must also be considered an integral and effective part of transport organisation with roads and port facilities.

Three other matters in relation to development were engaging the attention of the Government. One was the conservation of the coal supplies, as to which we had been reckless in the past, and another was the question of electric power supply. If electric power was to be sufficiently cheap for wide use industrially there must be large generating stations serving wide areas. Thirdly, attention must be given to the utilisation of the water-power of the country.

It was of importance that there should be no attempt at Government control of industry and trade after the war, except in so far as such control might be necessary during the transition from a war to a peace basis. Some amount of control there must be. It would be impracticable to revert suddenly to a state of complete freedom for individual action; but it should be for the shortest possible period, and should, as far as possible, be limited to definite purposes, such as the securing of food and material supplies, the prevention of a scramble for materials and plant, and the equitable allocation of materials among competing industries.

**Lost Mileage at Oldham.**—At a recent meeting of the Oldham Tramways Committee it was reported that a large mileage was lost owing to the absence of motormen, which was due in many cases to illness. The possibility of employing women to drive the cars was discussed, and the manager was requested to consider and report on the matter.

## GLASGOW CORPORATION TRAMWAYS.

The twenty-fourth annual report of the Glasgow Corporation Tramways Committee for the year ended May 31 last, which has just been issued, shows that the ordinary income amounted to £1,412,635, and the working expenses, including payments to dependants of employees serving with the Forces, to £1,044,183, thus leaving a net revenue of £368,452. These figures compare with the following for the year ended May 31, 1917:—Receipts, £1,260,115; expenses, £838,065. After adding interest on investments, the net revenue of £377,032 has been applied in payments to the Paisley Tramways Company, income tax, Parliamentary expenses, and an amount carried to depreciation and permanent way renewals fund. These items amount in all to £199,479; for the previous year they totalled £339,702. The net balance was £177,553, compared with £160,985, and under the Act of 1909 it is paid over to the Common Good. The reason why the deductions from the net revenue account are so small compared with the previous year is that, owing to the capital indebtedness having been wiped out, there are for the first time no payments to be made in the shape of interest on capital and contributions to sinking fund. It will be noticed, however, that this relief is more than swallowed up by the great increase in working expenses. These, including depreciation and payments to dependants, stand at £951,063, compared with £745,420. The increase is largely due to the enormous advances in wages which have been awarded during the year.

The following is a summary of the results for the last four years:—

| Year ended May 31. | 1918. | 1917. | 1916. | 1915. |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| Traffic receipts | 1,404,110 | 1,245,507 | 1,149,264 | 1,070,694 |
| Sundry receipts | 8,525 | 14,607 | 8,072 | 6,183 |
| Total revenue | 1,412,635 | 1,260,114 | 1,157,336 | 1,076,877 |
| Traffic expenses | 527,152 | 395,736 | 350,186 | 345,625 |
| General expenses | 156,949 | 137,816 | 144,297 | 142,020 |
| Maintenance and repairs | 179,811 | 143,758 | 133,659 | 144,530 |
| Power expenses | 86,019 | 67,231 | 64,346 | 51,995 |
| Clydebank bridges | 1,132 | 879 | 516 | — |
| | 951,063 | 745,420 | 693,004 | 684,170 |
| European War | 93,120 | 92,645 | 80,[illegible]8 | 51,817 |
| Total expenditure | 1,044,183 | 838,065 | 773,[illegible] | 735,987 |
| Balance carried to net revenue account | 368,452 | 422,049 | 383,894 | 340,890 |
| Dumbarton tramways | — | — | — | 126 |
| Interest on investments | 8,580 | 78,637 | 81,[illegible] | 65,701 |
| Total | 377,032 | 500,686 | 465[illegible] | 406,717 |
| Deductions— | | | | |
| Rent of Paisley lines | 11,119 | 8,453 | 6[illegible] | 5,559 |
| Interest on capital | — | 78,846 | 90[illegible] | ,797 |
| Sinking fund | — | 114,378 | 109[illegible] | ,492 |
| Income-tax | 64,405 | 64,622 | 39[illegible] | 790 |
| Parliamentary expenses | 61 | 98 | | 18 |
| Renewal and depreciation | 123,894 | 73,305 | 174[illegible] | , 10 |
| Total | 199,479 | 339,702 | 421[illegible] | 393,766 |
| Surplus to common good | 177,553 | 160,984 | 43[illegible]8 | 12,951 |

The following are the traffic statistics for the yea[illegible] 1917-18:—Average track mileage open single, 196¼; car mileage, 26[illegible]61,231, increase 475,184; traffic receipts, £1,404,110, increase [illegible],8,602; traffic receipts per car mile, 12·832d., increase 1·2[illegible], traffic receipts per passenger, ·782d., increase ·13d.; passer[illegible], carried, 430,946,566, increase 42,651,690; passengers per car[illegible]e, 16·410, increase, 1·351.

## MISCELLANEOUS NEWS AND NOTES.

**Forty-four Hour Week Refused.**—The Manchest[illegible] Tramways Committee has declined to grant an application fr[illegible] the Manchester Corporation Joint Workers Committee for the establishment of a forty-four hour week.

**Imprisonment for Assaulting Conductor and Driver.**—Two sentences of three months' imprisonment, to run concurrently, were imposed at Rotherham Police Court, for an assault on a woman conductor and a motorman, on the Mexborough and Swinton tramways system.

**Tees-side Tramway Project.**—The Stockton Town Council have decided, as have the Town Councils of Middlesbrough and Thornaby, upon the purchase of that portion of the Middlesbrough, Stockton, and Thornaby Tramways belonging to the Imperial Tramways Co., Ltd., which is situate in their borough.

**Railway Electrification in the United States.**—The Director-General of Railroads in the United States, Mr. W. G. McAdoo, has stated to the *New York Times* that he is in favour of the general electrification of American railroads, and he thinks it possible that it may be necessary to begin the conversion to electric traction even during the war.

**Bradford Tramway Management.**—At the meeting of the Bradford City Council on Monday, applications from nineteen candidates for the position of general manager of the Bradford City tramways were considered. Four of the applicants were finally selected to appear before the Tramways Committee at a meeting on Monday, October 7. The selected candidates are Mr. E. S. Rayner, engineer and tramways manager, Doncaster; Mr. J. F. Simpson, [illegible]ngineer and general manager, Preston Corporation Tramways; [illegible] R. H. Wilkinson, general manager and engineer, Huddersfield Corporation tramways; and Mr. J. F. Williams, general manager and electrical engineer, Erith Urban Council tramways.

Digitized by Google

**Leeds and Bradford Parcel Service.**—Parcels are to be carried on the joint service of the Leeds and Bradford Corporation tramways as from the beginning of November. The charges will range from 4d. for 3 lb. and under, to 9d. for 56 lb. The Bradford parcels service was fully described in our issue of May 8, 1913, but the service in Leeds has been established only recently.

**Two Cars Interlocked** at Sheffield, owing to one dashing into the other, the collision being of a force sufficient to derail the second car, the vestibule front of which was smashed. The steps and rails of both cars were considerably damaged. The derailed car was pulled back on to the metals by the other car, and both proceeded to the depôt for repairs. There was no personal injury owing to the accident.

**Leeds Tramway Extensions.**—The Parliamentary Committee of the Leeds Corporation has been asked by the Leeds Tramways Committee to obtain powers for the construction of a tramway through the Hawksworth Wood Estate and from Dewsbury Road to the new Middleton town planning site. Powers are also to be sought for an omnibus service from Dewsbury Road and Hunslet to the same site.

**Deductions for Wear and Tear of Plant** have an interest for those responsible for the direction and management of tramway undertakings. The subject is dealt with, by means of quotations from the Finance Act of 1918 bearing upon the subject, in the September issue of the *Tramways and Light Railways Association Journal*, in which are also reproduced the recent award of the Committee on Production and the Statutory Undertakings (Temporary Increase of Charges) Act.

**A 35,000 kw. Turbine Wrecked.** A 35,000 kw. 1,500 r.p.m. single cylinder impulse turbine in the North West station of the Commonwealth Edison Company, of Chicago, was completely wrecked on August 1. There were no casualties. The turbine had been in service since December, 1917, and was of the latest design of the General Electric Company, U.S.A. The newspaper "Power" says that the machine carried no load at the time it went to pieces, but it had been in service all day.

**United States Tramway Fares.**—The National War Labour Board has increased by about 40 per cent., the wages paid to the tramway employees. An increase in fares must thereore be made, or a large number of street railways will fail to meet expenses. The award of the National Labour Board entails an increase of about £20,000,000 a year in the wages of street railway employees, and it is estimated that this amount will absorb all the net income and over 50 per cent. of the amount now paid for fixed charges.

**War Men and Women.**—The Committee appointed by the Government in August to investigate and report "as to the relations which should be maintained between the wages of women and men having regard to the interests of both as well as to the value of the work," began the taking of evidence on October 1. The proceedings are private. Mr. Justice Atkin is chairman and the other members of the Committee are Dr. Janet Campbell, Sir Lynden Macassey, Sir W. W. Mackenzie, and Mrs. Sidney Webb; with Miss Matthews Nathan, secretary.

**Goods Traffic on Dublin Tramways.**—Reference has been made from time to time in these columns to the use made by the Dublin United Tramway Company for the transportation of its own maintenance material over its lines, of goods cars specially constructed for the purpose. At a recent meeting of the Irish sub-committee that is inquiring into matters relating to inland transport, Mr. Dockrell, of the Dublin Industrial Development Association, said that he thought wider use could be made of the tramways for goods transport. The lines should be linked up with the docks and goods distributed throughout the city.

**"The Industrial League Journal,"** which has just made its first appearance, is the organ of the Industrial League, which has for its object the improvement of relations between employer and employed. It deals extensively with the origin, constitution and aims of the League and is altogether a decidedly interesting and informing publication. It is proposed for the present to issue it quarterly. Among the contents of the current issue is a report of a conference on "workshop committees," at which Mr. H. E. Blain, of the London Underground Railways, presided, and among those who contributed to the discussion were Mr. T. B. Goodyer, manager of the Croydon Corporation Tramways, and Mr. J. P. Thomas, general superintendent of the London General Omnibus Company. Another speaker at this conference was Mr. G. H. Roberts, M.P., Minister of Labour, who also contributes a foreword of commendation to the new journal.

**"Key" Industries Exhibition.**—Mr. H. J. Mackinder, M.P., chairman of the Tariff Reform League, desires to draw attention to the fact that, by permission of the Ministry of Munitions, an exhibition of new British and "Key" Industries, organised by the Industrial Section of the League, will be held at the Central Hall, Westminster, London, in October. The Exhibition will be opened to ticket holders only, on Monday, October 7, and will be free to the general public from October 8 to October 22, after which it will be shown in Manchester and other leading provincial centres. Active co-operation and assistance has been secured from important firms interested in the industries concerned, many of whom have contributed valuable exhibits and expert information. The Exhibition will also include a very remarkable collection of photographs and diagrams. All interested are invited to communicate with Mr. Edward J. Duveen, Chairman of the Industrial Section, Tariff Reform League, 7, Victoria Street, London, S.W.1.

## PERSONAL.

**Mr. T. A. Kingham** has been appointed acting borough electrical engineer of Kingston-upon-Thames, at a salary of £400 per annum.

**Sergt. T. Dean,** formerly a driver on the Leeds Corporation tramways, has been awarded the Military Medal.

**Mr. McCullough,** the late manager of the Carlisle Tramways Company, has been presented by the employees with a piece of silver plate suitably inscribed.

**Mr. W. P. Durntall,** R.N.V.R., has been granted a temporary commission as staff captain in the R.A.F., and is engaged in the technical department of the chief electrical engineer of the Air Ministry.

**Mr. J. F. Mayoris,** acting electrical engineer of Hull Corporation, has been granted an increase in salary from £425 to £700 while carrying out the duties of Mr. H. Bell, who is absent on military service.

**Mr. A. E. Berriman,** chief engineer of the Daimler Company, has been appointed by the Minister of Munitions to be Deputy Controller of the Technical Department of the Department of Aircraft Production, in succession to the late Professor Perkin Hopkinson.

**Mr. J. E. Edgcome,** borough electrical engineer of Kingston-upon-Thames, who has accepted an appointment as secretary of the Tungsten Lamp Association, has been voted the sum of £500 for his special work in connection with the Kingston power station.

## FINANCIAL REPORTS AND MEETINGS.

**The British Empire Trust Co., Ltd.**—A dividend has been declared on the 5 per cent. cumulative perpetual preference shares for the half-year ending October 15, at the rate of 5 per cent. per annum.

**Dumbarton Burgh and County Tramways.**—A dividend of 5 per cent. (1s. per share), less income tax, on the ordinary shares for the year is announced. £6,000 has been placed to reserve, £1,770 to sinking fund for redemption of debenture stock and £2,333 carried forward.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Oct. 2, amounted to £67,387, an increase of £14,880 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Oct. 2 (twenty-six and a half weeks), the total receipts were £1,729,409, an increase of £241,647 on the corresponding period of 1917.

## CONTRACTS AND ORDERS.

**Barnsley Town Council** have accepted tenders for a boiler draught fan from Babcock and Wilcox, Ltd., and for steel steam pipes from Stewarts and Lloyds, Ltd.

**Messrs. William Airey and Sons** have closed a contract with Leeds Corporation for excavating and concrete work forming part of the building extensions at the electricity works. The amount of the contract is £10,999.

**Leeds Electricity Committee** have placed the following contracts:—British Westinghouse Company, Ltd., for three-phase switch gear at £6,300 and a switch cubicle at £540; Babcock and Wilcox, Ltd., for two boilers with unit stokers, at £33,980; and Richardsons Westgarth and Company, for a 6,000 kw. turbo-alternator condensing plant at £30,136.

**The Price of Current.**—A joint meeting of the Tramways and Electricity Committees of the Ilford Urban Council has considered the question of the charge to be made by the electricity department to the tramways department for current supplied for traction purposes for the year ended March 31, and fixed it at 1⅜d. net per unit.

## WEEKLY LIST OF TENDERS INVITED.

### COUNTY BOROUGH OF WARRINGTON.

**Electricity Department.**

The Electricity and Tramways Committee of the County Borough of Warrington invite Tenders for One Water-tube Boiler.

Specification and Form of Tender may be obtained from the undersigned on payment of one guinea, which will be returned on receipt of a bonâ fide tender.

Five shillings will be charged for extra copies of the specification.

Tenders, addressed to the Chairman of the Electricity and Tramways Committee, Town Hall, Warrington, must be sealed with wax and endorsed "Tender for Water-tube Boiler," and delivered not later than 12 o'clock noon on Tuesday, October 22nd, 1918.

The lowest or any tender will not necessarily be accepted.

F. V. L. MATHIAS,
Borough Electrical and Tramways Engineer.
Howley, Warrington.

### BOROUGH OF BEDFORD.

**Electricity Department.**

The Corporation of Bedford invites Tenders for the supply and Erection of Two Water Tube Boilers, Mechanical Stokers and Induced Draught Plant.

Copies of drawings and specifications may be obtained from the Engineer, Electricity Works, Cauldwell Road, Bedford, on the deposit of £1, which sum will be returned on receipt of a bona fide tender. Additional copies of the specification will be supplied at 5s. each.

Sealed Tenders, marked "Boilers," to be delivered not later than noon on the 13th day of November, 1918, addressed to the Chairman of the Electricity Committee, Electricity Works, Cauldwell Road, Bedford.

The Corporation does not bind itself to accept the lowest or any tender.

CHAS. STIMSON,
Town Clerk.

## POSITIONS VACANT.

### SOUTH SHIELDS CORPORATION.

**Electricity Department.**

**Charge Engineer.**

Required immediately, Charge Engineer, with experience of A.C. and D.C. Turbine and Reciprocating Plant, Rotary Converters, etc. Wages for 7 shifts of 8 hours (56 hours per week), £4 4s. 11½d. per week (including all bonuses to date), and 14 days' holiday per annum with pay.

Apply, stating age and experience, together with copies of testimonials, to the undersigned, stating date for commencing duties from date of appointment.

HARRY. S. ELLIS,
Borough Electrical Engineer.

## MANUFACTURING RIGHTS OF PATENTED SPECIALITIES.

Engineering firm with up-to-date plant and special facilities for turning out repetition work, are prepared to consider the manufacturing rights of patented specialities for sale amongst tramway and electrical undertakings. Box No. 58, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

**Wanted.**—Copies of the TRAMWAY AND RAILWAY WORLD of January 1 and 13, 1916; March 9, 1916; April 13, 1916; May 11, 1916; June 8, 1916; October 9, 1916; August 16, 1917; and October 18, 1917.—Reply to Box 12, The TRAMWAY AND RAILWAY WORLD. Amberley House, Norfolk Street, London, W.C.2

## LONDON TRAFFIC NEEDS.

THE importance of passenger transport facilities in the solution of the housing problem has often been emphasised in these columns. The point is briefly touched upon in the course of an article dealing with the wider subject of "After-war Reconstruction in London" which appears in the current issue of the *Contemporary Review*. The writer is the Rev. Dr. J. Scott Lidgett, who is a prominent member of what is called the "Progressive Party" of the London County Council, and he insists upon the importance of ample means of cheap locomotion. In company with every other competent critic of greater London's chaotic system of transport, he advocates the creation of a highways and traffic authority with powers to construct arterial roads, carry out street widenings, make traffic regulations, and deal with points of congestion. The necessity of tramway development is strongly insisted upon; through running facilities must be extended and dead ends abolished. The borough councils must cease to have the power to veto tramway schemes. All this is excellent. It ought to be possible to journey from the centre of London to Croydon or Wimbledon, for instance, just as one can now journey to West Ham, Enfield or Finchley. The attempts of the London County Council to obtain powers to remove dead ends must at length be successful. There are several thoroughfares in the London area which are suitable for tramways and on which tramways would be of immense public advantage. But the tramways are not there. The veto of the borough councils in the London county ought not to be allowed to stand in the way of tramway proposals which are obviously in the interest of the public in a much wider area. Dr. Lidgett claims for the suggested authority a measure of control over motor omnibus traffic, at any rate to the extent of co-operation instead of competition with the tramway service, which, in his opinion, would remain the chief means of locomotion. We part company with Dr. Lidgett when he goes on to advocate a monopoly of municipal as against company enterprise. There is room for both. But the need for a properly constituted traffic board to assist and co-ordinate regular street transport activities within, say, a fifteen miles radius of Charing Cross is even more clamant than when a traffic board was recommended by the Royal Commission on London Traffic in 1905. How much longer must London wait?

## COMPULSORY WAGES AWARD.

POSSIBLE CONTINUANCE AFTER THE WAR.

The following official statement was issued on October 10 :—

The situation which may result at the end of the war, in regard to the various wages awards which have been made during the war, has for some time been under consideration of the Departments concerned. The present scale of wages in many occupations depends upon the compulsory enforcement of awards which were made in view of circumstances arising out of the war; but the machinery for enforcing these awards will not continue after the war. It is necessary to consider whether the compulsory operation of such awards should be continued during a period of transition after the war, and also whether the power to make such awards should be extended so as to cover the same period.

With a view to immediate action on this most important subject the Minister of Reconstruction, with the concurrence of the Departments affected, is appointing a committee with the following terms of reference :—

1.—Whether the compulsory operation of awards made under the Munitions of War Acts, of orders extending such awards, and of orders regulating wages made under those Acts, should be continued after the war.

2.—Whether the power to make such awards or orders should be continued after the war.

3.—The manner in which awards and orders if made or continued should be enforced after the war and for what period.

Sir John Simon, K.C., M.P., will be the chairman of the Committee, which will consist of representatives of employers and trade unions, besides representatives of the Government Departments concerned.

## REDUCTION OF SERVICES.

Owing to the fuel scarcity, the Dudley, Stourbridge and District Electric Traction Company anticipate having to close the services earlier on week day evenings and to suspend the Sunday services.

At Belfast, the Tramways Committee propose to reduce the lighting on the cars by 50 per cent.

The Brighton Corporation Tramways Committee propose that on Sundays the cars shall cease running at 9 p.m., during the winter months, commencing October.

The Worcester Electric Traction Company have arranged to curtail their services and reduce the number of stopping places.

Burnley Corporation Tramways Committee has decided upon a shorter period of running on Sundays, that the week day services cease ten minutes earlier all round (except for soldiers and tramway employees) and that numerous stopping places be cancelled.

At Dundee reductions are being arranged both on the Corporation Tramways and on the Dundee, Broughty Ferry and District Tramways. On the former system about sixty stops are being abolished.

## MAXIMUM RUBBER PRICES CONTEMPLATED.

In view of the necessity for saving ocean freights, it is considered desirable to notify the rubber trade that the Minister of Munitions has appointed a Committee under the chairmanship of Sir Clarendon Hyde to advise him as to the control of rubber.

In the meantime it is deemed necessary to issue a warning that it may become necessary to fix maximum prices for transactions in rubber, and to point out that the Minister may be compelled to make orders rendering inoperative any forward contracts or transactions entered into after the publication of this notice.

**A Yorkshire Light Railway Scheme.**—The decision of the Light Railway Commissioners in respect to the application for an order to construct a light railway, 23 miles in length, between Longridge and Hellifield, is announced. The decision, the *Yorkshire Post* says, is favourable, subject to certain reservations regarding economic fluctuations, and to the promoters modifying the scheme so as to reduce the capital cost to about £6,000 a mile (the estimated cost was about £10,000 a mile), or in the alternative obtaining the promise of a subsidy from public sources to cover the additional cost beyond £6,000 a mile. The Commissioners point out that for the purposes of the decision the money values adopted have been taken without reference to the changes in the cost either of constructing or of working a railway, or of transport charges generally, which may be consequent on the present crisis. The possibility of increasing the productiveness of the fertile land through which the railway would pass is recognised by the Commissioners, but it is pointed out that the traffic now "in sight" would neither justify the cost of making a railway nor pay the cost of working it. The Commissioners, however, take note that the promoters anticipate a great influx of passenger traffic with the making of the line, and rely also on the supposition of some 10,000 acres being brought under the plough in accordance with the present national policy.

## MISCELLANEOUS NEWS AND NOTES.

**Increase in Fares at York.**—The Tramway Committee propose to apply to the Board of Trade for power to increase the fares by 50 per cent.

**Tramway Bank.**—A decorated tramway car lent by the London United Tramways has been used as a travelling bank at Ealing and Acton in connection with the war loan campaign.

**Current Charges at Ilford**—The Electricity and Tramway Committee of Ilford have decided that the price to be paid by the tramways for energy for the year ended March 31 last shall be 1⅛d. net per unit.

**Electricity Works Purchased at Rotherham.**—Rotherham Corporation, which recently purchased the electric lighting undertaking of the Mexborough and Swinton Tramways Company, took over the power station on October 1.

**For Interfering with the Brake** of a tramway car at Preston a fine of 30s. was imposed. Evidence was given that defendant refused to pay his fare. When told that he must get off, he said he would drive the car himself, and ran downstairs and released the brake.

**Tramway Ticket Books.**—Bacup Town Council has decided to approach Rawtenstall Town Council with a view to their permitting the sale of books of tramway tickets at the Bacup borough treasurer's office for the convenience of Bacup residents.

**Extension at Burton-on-Trent.**—The Tramways Committee have decided that the tramways be extended from the terminus on the Branstone Road to the Leicester Line Railway Bridge at a cost of about £3,500.

**Tramway Parcels at Bradford.**—On consideration of report of the General Manager on the results of operation of the Parcel Department for the year ended 31st March last the Tramways Committee of the Bradford Corporation recommend that the advance of 25 per cent. in parcel rates, sanctioned by the Council on 10th October, 1916, be increased to 50 per cent.

**St. Helens Tramways.**—The St. Helens Town Council have authorised the Tramways Sub-Committee to negotiate with the New St. Helens and District Tramways Company for an extension of the lease to the Company for a period not exceeding five years. The lease of 21 years expires in October, 1919.

**Tees-side Tramway Proposals.**—With reference to the purchase in co-operation by the Corporations of Stockton and Thornaby of the tramways system of the Imperial Tramways Company in their respective boroughs, Stockton Corporation have decided to suggest to Thornaby Corporation that the proportions be Stockton three-fourths and Thornaby one-fourth.

**Serious Sequel to Collision.**—As a result of a collision between two Middlesbrough tramway cars at the entrance to a loop, a passenger was thrown from the top of one of the cars and seriously injured, being taken in an unconscious condition to hospital. The women drivers escaped with slight injuries and were able to proceed home after treatment at the infirmary. The cars were considerably damaged.

**Damages for Damaged Car.**—Sheffield Corporation obtained judgment in the County Court for £18 17s. 4d. in an action brought to recover £21 10s. 3d. damages sustained owing to the negligent driving of a steam lorry. It appeared that the driver of the lorry attempted to cross the road in front of a car while the latter was in motion, and as a result of the collision which followed the glass front of the vestibule of the car was smashed.

**An Increase of Fares at Kalgoorlie.**—A representative meeting of the municipal councils and delegates from the gold fields unions in the district served by the Kalgoorlie Electric Tramways was recently held, at which Mr. Stanley, the company's manager, explained the financial position very fully and in the result an increase of 1d. in the workmen's tickets, and on all transfers from one section of the system to another was agreed to.

**Fatal Fall from Platform of Car.**—While riding on the front platform of an overcrowded tramway car at Wigan, a young woman fell into the roadway, owing to a jerk of the car, and was killed. At the inquest it was stated that there were six passengers on the platform with the driver. The Coroner expressed the opinion that people should not be allowed to stand on the front platform of a car. A verdict of death by misadventure was returned.

**Edinburgh-Queensferry Tramway Scheme.**—The Edinburgh Trades Council have adopted a resolution expressing their strong dissatisfaction at the action of the Town Council in postponing the Queensferry tramway scheme, recording their emphatic opinion that west end influence and private commercial interests had been permitted to block a laudable scheme for the general well-being of the citizens, and calling upon the Town Council to reconsider its decision.

**Reinforced Concrete Freight Car.**—The Board of Trade Journal gives currency to a report that a contract has been let in the United States for the building of a reinforced concrete gondola freight car, which will be completed in sixty days. The car is to have a capacity of 100,000 pounds and a length of forty feet. It will cost several hundred dollars less than wooden and steel cars of the same type, and will require only 6,000 pounds of steel in its construction as compared with 32,000 pounds for the ordinary steel cars.

**Edinburgh Tramway Matters.**—Edinburgh Tramways Committee have recommended the Corporation to join the Municipal Tramways Association. They have also sanctioned the attendance of the general manager at all Tramways (Board of Trade) Scottish Advisory Committee's meetings. Various matters connected with the arbitration on the transfer to the Corporation of the Edinburgh tramways system, which will take place in June, have been remitted to the town clerk. A sub-committee is to deal with the question of offices for the work of the committee.

**Gratuities to Deceased Employees' Families.**—Hull Tramways Committee have decided to allow a year's pay to the widow of a driver (an old employee) who is left with several young children. A similar payment was suggested for another employee's widow, who was stated to be living in her own house and to have no one dependent on her. Eventually it was decided to continue a temporary payment of 17s. 6d. a week, pending the consideration by the Town Council of a resolution referring the question of gratuities to employees' widows to a special committee with a view to obtaining uniformity of action.

**Bradford Accident Claims.**—At a meeting of Bradford Tramways Committee it was reported that the claims for compensation arising out of the serious tramway accident at Allerton, a few months ago, had all been settled. There were altogether twenty-two claims, and the total amount of the allowances was £1,236 14s., giving an average of between £56 and £57 per claim. Congratulations on the successful completion of their task were extended to the chairman (Alderman E. Priestley), the vice-chairman (Councillor I. F. Akeroyd), the deputy town clerk (Mr. N. L. Fleming), and the general manager (Mr. C. J. Spencer).

**For Hanging on to a Tramway Car** at West Hartlepool, two boys were fined 10s. each. Evidence was given that the boys travelled in this way for a distance of 200 yards. Mr. Sparks, acting tramways manager, emphasised the danger to the boys themselves which arose from this practice, as well as the damage to the cars caused by the lifeguards being knocked down.

**Review of the Foreign Press.**—The War Office is now issuing fortnightly the Economic and the Reconstruction Supplements to the "Daily Review of the Foreign Press." The price of these supplements is 6d. The Economic Supplement deals with trade and commerce, railways and shipping, banking and finance, labour conditions, social and economic policy, and legislation, etc. The Reconstruction Supplement describes the measures being taken or suggested in Germany and elsewhere in connection with the return of peace conditions. These publications are issued by His Majesty's Stationery Office, and can be purchased through any Bookseller or directly from H.M.Stationery Office.

**Magnetic Brake not Applied.**—At an inquest at Newcastle-upon-Tyne upon a woman who died from injuries received through jumping from a tramway car while it was in motion, the jury expressed the view that the accident might have been averted had the motorman, instead of allowing the power to remain on, shut it off and applied the magnetic brake. It was stated that the car when ascending a hill commenced to run backwards at a moderate speed. Deceased, being frightened, jumped off and fell on the back of her head. The motorman said as the car was going up the hill he felt the wheels were not gripping the rails, and then the car went backwards slowly down the hill. It travelled at the rate of about four miles an hour. He kept the power on, and that prevented the car from going down at a greater speed. Near the bottom of the hill he applied his brake and brought the car to a standstill. His instructions were, in the event of the car running backwards, to keep the power on, and apply sand. He applied sand, but the wheels did not grip. The rolling stock superintendent stated that the motorman ought to have shut off his power, and applied the magnetic brake. He had examined the car, and from the flats on the wheels came to the conclusion that the driver had applied his hand brake, with the result that the car had slipped backwards.

## PERSONAL.

**Mr. G. E. Cooper,** general manager of the Wagon Finance Corporation, Ltd., has been appointed managing director.

**Mr. A. B. Slater,** manager of Burton-on-Trent Corporation tramways, has been granted an increase in salary of £50 and war bonus.

**Professor W. E. Dalby,** F.R.S., has consented to serve on the expert sub-committee of the Gas Traction Committee in place of the late Colonel Bertram Hopkinson.

**Lieut. L. F. Burgess,** of the staff of the British Westinghouse Electrical and Manufacturing Company (Australia), has been awarded the Military Cross.

**Mr. J. W. E. Brown,** first engineering assistant to the borough electrical engineer of Burnley, has been appointed engineer and surveyor to the Failsworth (Manchester) Urban District Council.

**Mr. J. R. Groves,** manager of the Gravesend and Northfleet tramways, has been transferred to a similar position at Barrow-in-Furness, his place being taken by **Mr. J. Dobson,** manager of the Barrow-in-Furness tramways.

**Sec.-Lieut. A. W. Godber, R.F.A.,** has been wounded in action. He was for fifteen years in the Nottingham Corporation Tramway offices. He enlisted at the outbreak of the war and has served for two-and-a-half years in the Egyptian campaign. He recently received his commission.

**Mr. R. H. Wilkinson,** tramways manager and engineer for the Huddersfield Corporation, has been appointed general manager of the Bradford Corporation tramways, at a salary of £800 per annum. Mr. Wilkinson, who has been at Huddersfield for 14 years, was previously manager of the Oldham Corporation tramways for four years, and had two years' service in the Liverpool tramways depart-

Digitized by Google

ment. He has had mechanical, electrical, and marine engineering experience. His application was one of 19 of which 4 were selected for special consideration.

---

The death has occurred from wounds received in action in France of **Sec.-Lieut. J. Lever, M.C.,** who was formerly a conductor on the South Lancashire Tramways.

The death is recorded of **Mr. W. Clacy May,** who has been acting manager of the Great Eastern Railway in the absence of Mr. H. W. Thornton, general manager. Mr. May had previously been chief traffic manager and goods superintendent.

**Second Lieut. J. A. Higgins, R.F.A.,** who was recently wounded in France, has, we regret to learn, had to have his left leg amputated from above the knee. The operation became necessary owing to septic poisoning supervening. He is progressing favourably, however, and there is every hope of a speedy recovery. Second Lieut. J. A. Higgins is the eldest son of Mr. J. P. Higgins, general manager of the Midland Rubber Company, Ltd., Birmingham, and prior to joining the Army was himself a member of the staff of that company. He joined the R.F.A. in September, 1916, receiving his commission in June 1917, and going to France in September of that year. He was twenty years of age in February.

---

## FINANCIAL REPORTS AND MEETINGS.

**Brisbane Electric Tramways Investment Company, Ltd.** An interim dividend of 4s. per share, free of tax, has been declared on the ordinary shares.

**The Chemins de Fer Economiques, Brussels,** which controls a system of 172.6 km. in Italy, as well as one of 32.4 km. in Brussels, and which participate in many European street railways, has reported a net profit for 1917 of Fr.1,210,534 and has paid a dividend of 5 per cent.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Oct. 9, amounted to £68,883, an increase of £16,231 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Oct. 9 (twenty-seven and a half weeks), the total receipts were £1,795,357, an increase of £257,882 on the corresponding period of 1917.

**John I. Thornycroft and Co., Ltd.**—The report of the year ended 31 July, 1917, states that the available balance, after deduction of debenture interest and interim dividends, is £102,337. The following dividends have since been paid:—3 per cent. on preference shares for six months to 30th June, 1917, final dividend of 10 per cent. on ordinary shares, leaving £81,547. The directors transfer to reserve £50,000, contribute to benevolent fund £5,000, and leave to be carried forward £26,547.

**Silverton Tramway Company.**—The report for the year ended 30th June states that revenue shows a decrease of £29,025 and expenditure a decrease of £25,421, compared with the previous year. Profit and loss account shows:—Balance from working account, £67,315; interest on investments, £4,431; refund Federal Income-tax Commissioner, £2,559; transfer from No. 2 reserve fund, £9,084, making a total of £83,389. This was absorbed in payment of dividends, £75,000; interest added to No. 2 reserve fund, £4,431, and depreciation, £3,956.

**Gloucester Corporation Light Railways.**—A statement of the operating expenditure and income for the year ended March 31, prepared by the general manager and engineer (Mr. F. H. Corson), shows a revenue totalling £22,960, including £22,153 for traffic receipts. Operating expenses amounted to £17,385, leaving a gross profit of £5,575. Statistical information includes the following.—Population served, 53,972; passengers carried, 4,134,262; car miles, 546,172; percentage of operating expenses to receipts, 76; average operating expenses per car mile, excluding power cost, 6·48d.; including power cost, 7·63d.

**Camps Bay Tramways.**—The report of the Cape Town Consolidated Tramways and Land Company, Ltd., for the year ended December 31, 1917, shows a debit balance of £539, against £631 in the previous year. No dividends have been declared by the subsidiary companies. The Camps Bay tramways realised a profit of £3,018 against £2,225 in the previous year. The number of passengers carried showed an increase of 207,236, and the receipts an increase of £3,794, but the cost of operation was £3,001 more. The Cape Town Corporation have completed improvements and other work at Camps Bay which have added to its attractions and increased the number of passengers.

**Birmingham Small Arms Co., Ltd.**—Final dividends on the "A" preference shares at the rate of 5 per cent., on the "B" preference shares at the rate of 6 per cent. (both less income-tax), and on the ordinary shares of 5 per cent., together with a bonus of 2s. per share, free of income-tax, have been declared. Speaking at the annual meeting Sir Hallewell Rogers (chairman of the company) referred to the problem of the utilisation of their facilities after the war, stated that when the war was finished they would be able speedily to turn to a peace programme which should ensure the continued prosperity of the country. One item in that programme from which they anticipated good results was that, in association with the Metropolitan Carriage Wagon and Finance Company, they were actively interesting themselves in a line of manufacture forming a "key industry" for which in the past manufacturers had almost entirely been dependent upon importation from other countries.

**Reading Corporation Tramways.**—The statement of accounts for the year ended March 31, issued by the general manager and engineer (Mr. G. F. Craven), shows an increase of £56,796, including £55,232 from traffic receipts and £617 from advertisements on cars, and an expenditure of £35,281, including working expenses £33,396 and army services allowances £1,264; there being a gross profit of £21,515. After payment of dividends on corporation stock, interest on loan and contribution to redemption of corporation stock and repayment of loan, there remained a net profit of £8,400, of which £4,000 was allocated to the borough fund in aid of rates for the year 1918-19, and £4,400 placed to reserve and renewals fund. The traffic statistics for the year ended March 31, 1918 and 1917, include the following: track mileage reckoned as single, 13 miles, 13 92 chains; estimated population served, 76,800; passengers carried 13,771,598, 10,919,533; average distance of 1d. ordinary fare, 1·59 miles; car miles run, 920,174, 912,258; traffic revenue, £55,232, £43,618; working expenses, £33,396, £23,817.

**Birmingham Corporation Tramways.**—Appended is a comparative statement of the finances, together with other details of the working, of these tramways for the year ended March 31 (noted in our issue of August 3) and the three preceding years:—

| YEAR ENDED MARCH 31. | 1918 | 1917 | 1916 | 1915 |

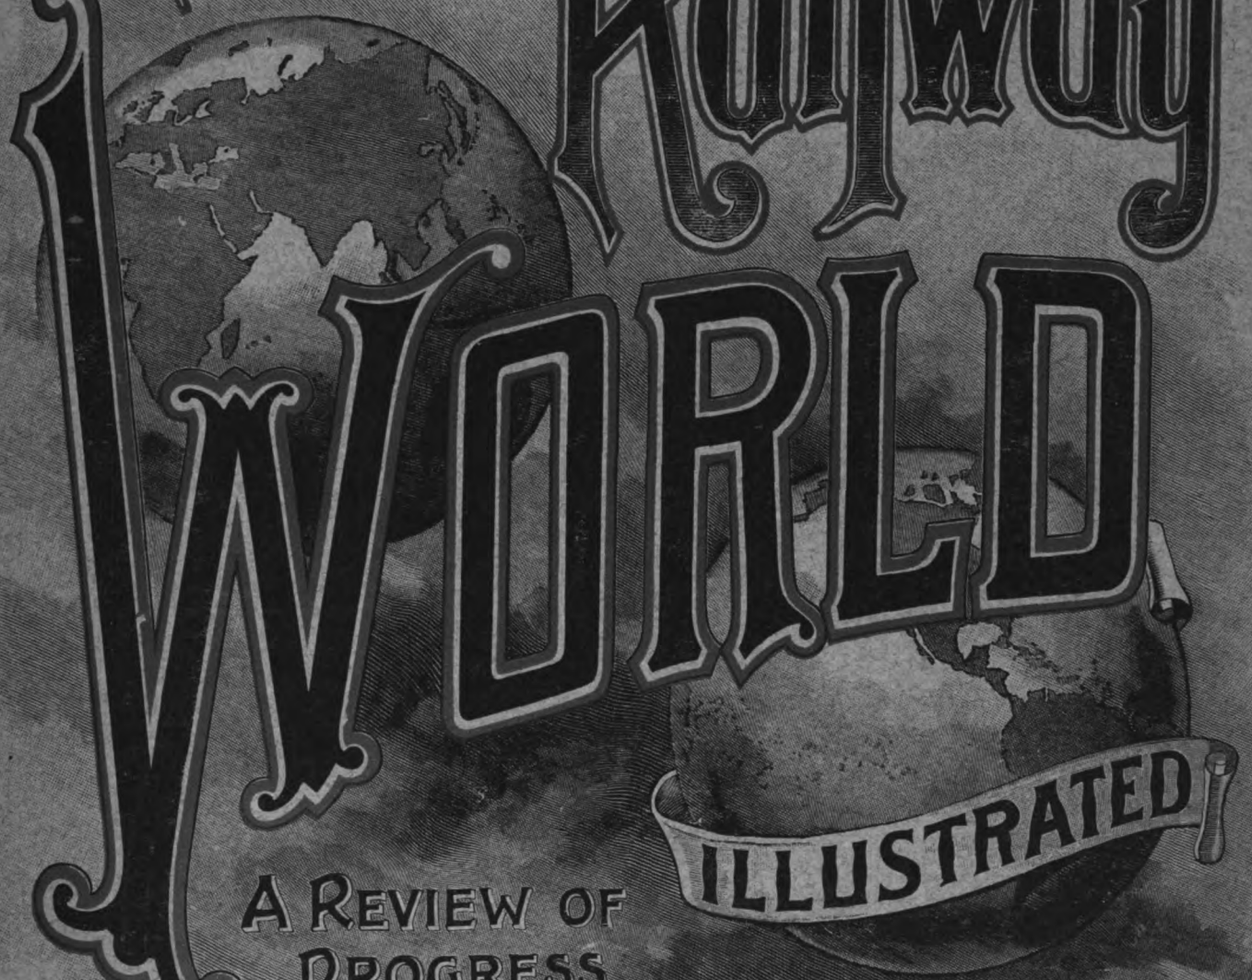
# The Tramway and Railway WORLD

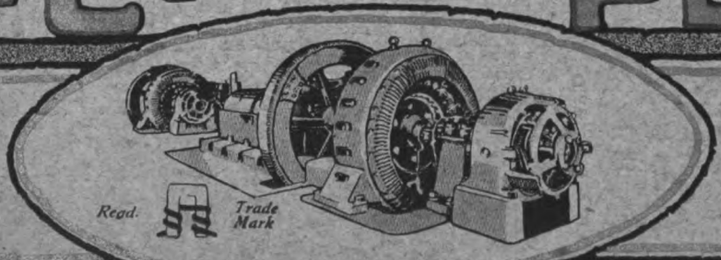


ILLUSTRATED

A REVIEW OF PROGRESS IN *Electric* AND OTHER *Traction.*

G·E·C· Electrical PLANT

The Alternators illustrated are driven by horizontal internal combustion engines. Good parallel running is successfully attained in spite of the difficulties due to this form of drive.

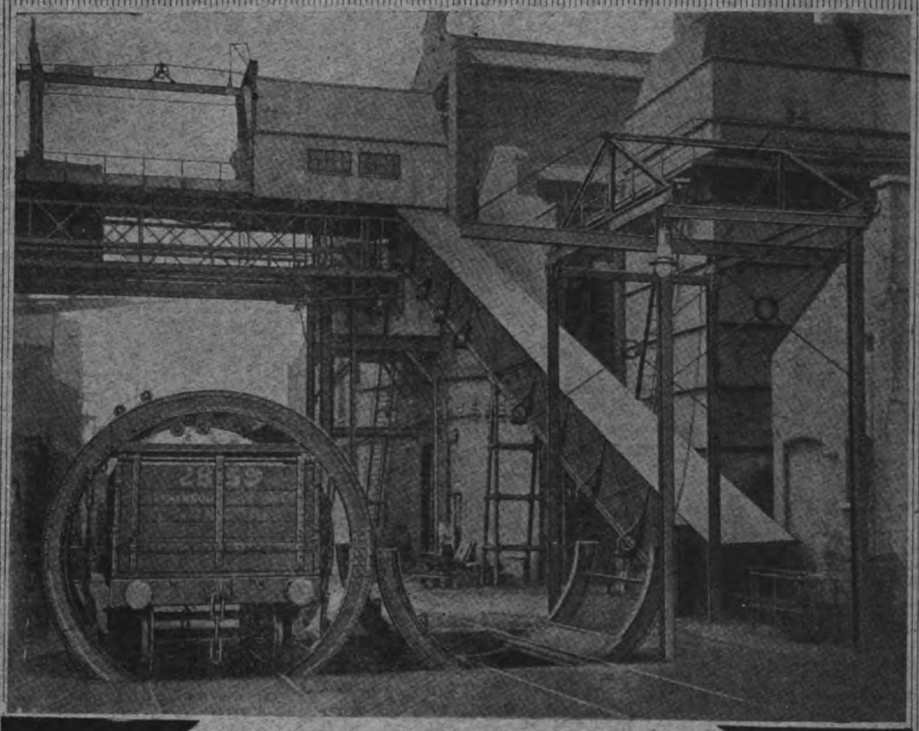


Regd. Trade Mark

Highest Possible Efficiency and Unfailing Service all the year round. These are the outstanding characteristics of G.E.C. Electrical Plant.

*The General Electric Co. Ltd., Queen Victoria Street, London.*

Digitized by Google



THE best and quickest way of unloading coal is to use a "BENNIS" Truck Tippler. In the illustration is shown such a Tippler installed at a famous railway company's works. After discharge, the coal is carried by elevator to a conveyor which delivers it direct to the stoker hoppers. Send to-day for our new catalogue on

## Important Announcement

The whole of the shares of THERMIT LIMITED are owned by Nobel's Explosives Co. Ltd., of Glasgow.

THERMIT, LIMITED, originally established in 1904, are the owners of the Alumino-Thermic Process Patents, and are in no way connected with any other firm or firms adopting somewhat similar titles.

REG. TRADE MARK.

*Entirely British owned and managed*

# We are the Pioneers in THERMIT Welding in the U.K. We guarantee all joints made with our THERMIT by our trained men. We not only

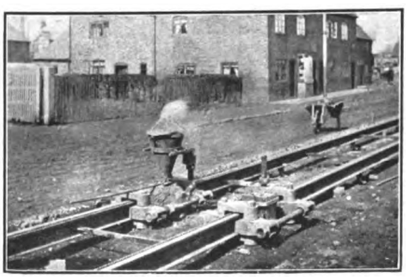
weld new rails on new and reconstruction work, but we are now able to place at your disposal a satisfactory process for welding joints on existing track.

# OUR THERMIT JOINTS

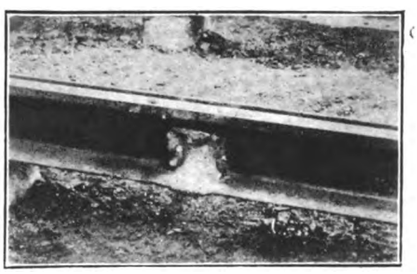
Will reduce your maintenance costs and add years to the life of your rails and track.

Ensure a permanently smooth rolling surface and prevent any knocking noise such as is caused by cars passing over uneven joints.

Give a perfect and permanent electrical conductivity without the use of bonds.



Rail Welding



Finished Thermit Joint

**THERMIT joints have stood the test of many years' traffic on most of the leading tramway systems of the U.K. and the Colonies.**

*Our knowledge and experience are at your disposal*

# THE PARAGON EARTH CONE

is the safest, surest and most reliable. Careful tests have proved that its geometrical form provides a good contact. Will carry heavy currents for short periods without overheating. THE PARAGON EARTH CONE is made of pure copper—perforated—and filled with charcoal. This attracts the moisture and ensures a certain contact. Suitable for Electric Railways, Tramways, Telegraph, Telephone, Electric Light, Power, Lightning Conductors, etc.

THE

# RAIL WELDING COMPANY

119 Victoria Street, Westminster, LONDON S.W.1

## ELECTRIC RAIL WELDING FOR NEW AND EXISTING RAILS

The only process by which the premature renewal of rails owing to defective joints can be avoided, the life of the rails prolonged for several years, and silent running ensured.

(Until recently carried out by The Rail Welding Dept. of the Tudor Accumulator Co. Ltd.)

*THIS PROCESS HAS BEEN CARRIED OUT ON THE FOLLOWING UNDERTAKINGS*

| | | | |
|---|---|---|---|
| ABERDEEN | LEITH | NEWPORT | SALFORD |
| BRADFORD | LIVERPOOL | OLDHAM | SHEFFIELD |

# More Albions and still more Albions

Why is it that some of the largest firms in the world order Albions, more Albions and still more Albions? Why is it that large firms have such confidence in Albions that they order whole fleets at a time?

It is because Albions are ABSOLUTELY RELIABLE, so simple to control, so economical; because the all-round efficiency is so high and the running costs are so low—that is why Albions are ordered again and again.

*Fully illustrated Handbook published for each Albion Model, price 3s. each.*

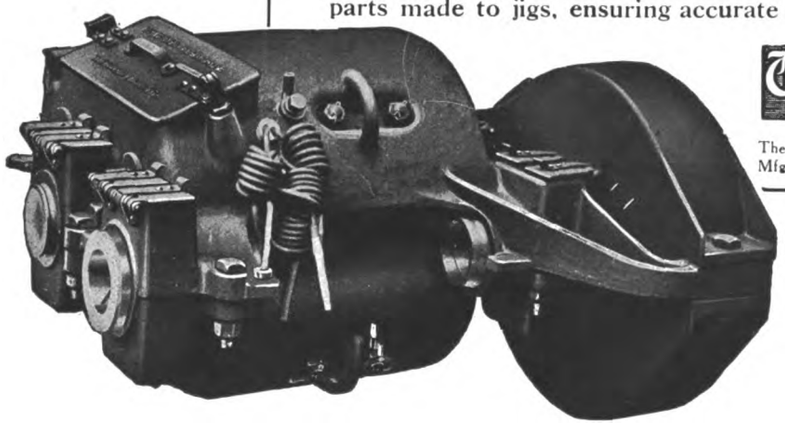
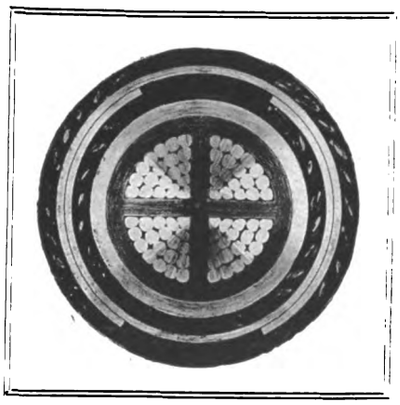
## Over 4500 Westinghouse
# Tramway Motors

have been supplied to the London County Council and the Glasgow Corporation. These motors are famous for their efficiency and low maintenance costs. All renewable parts made to jigs, ensuring accurate fitting of spare parts.



Westinghouse
Manchester

The British Westinghouse Electric and Mfg. Co. Ltd., Trafford Park, Manchester



*·075 sq. in. Cable, Class 202, Paper Insulated, Lead Covered, Served, Steel Tape Armoured and Served.*

# HENLEY CABLES

EVERY year we manufacture tens of thousands of miles of small electric wire insulated with Vulcanised India Rubber, in addition to Paper insulated Mains.

WE have separate factories (at North Woolwich and Gravesend, England), each devoting its energies to one type.

YOU should ask us to quote for your requirements in *any* size or type of Electric Cables for use under any working condition.

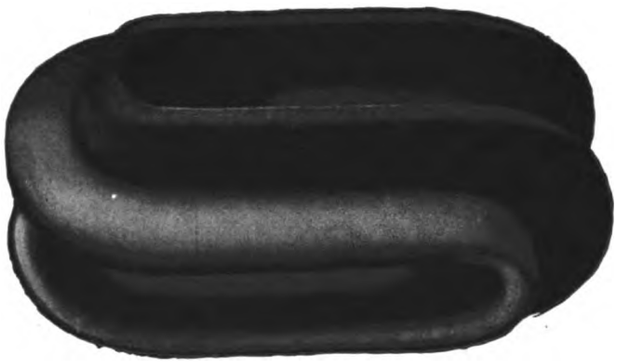
# PRESCOT INSULATORS



Regd. No. 639667/14.

These Insulators are insulators all through and do not depend on the attractive green glaze for their insulating qualities.

They are designed to maintain their alignment when erected, and their mechanical and electrical factors of safety are high.

**The following are particulars of the sizes stocked:**

| | D 4411 | D 4412 |
|---|---|---|
| Working Load ... ... ... | 500 lbs. | 2,500 lbs. |
| Breaking Load ... ... ... | 2,000 lbs. | 10,000 lbs. |
| Flash over Voltage (dry) ... ... | 20,000 A.C. | 30,000 A.C. |
| Flash over Voltage (wet) ... ... | 2,000 A.C. | 10,000 A.C. |

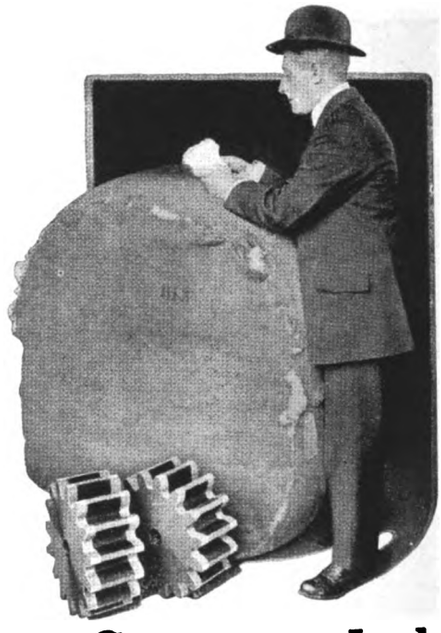
# A Bale of Cotton in two Fabroil Pinions

This bale of cotton, after special treatment, was compressed to make the two Fabroil Pinions shown. No wonder that Fabroil Pinions are silent, strong and durable, unharmed by oil or water, dampness or dryness, heat or cold.

Over a million silent Fabroil Pinions are in operation in all parts of the world on all kinds and sizes of machines from delicate looms to heavy metal-working machines, and, although operating under every conceivable condition, in no case have they failed to uphold the claims for silence in operation, strength, durability, immunity from oil, water, dampness, dryness, heat, cold, or the attacks of vermin.



Write for illustrated list TR. 918 on Fabroil Pinions.

# Improved Brill-made 21-E Truck

1. Brill Wide-Wing Journal Box.
2. Low-lid Opening (Patented).
3. Additional Lubricating Hole in top of lid.
4. Journal Box made lighter and stronger.
5. Half-ball Patented Brake Hanger.
6. Interchangeable Brake Shoes.
7. Tie Bar for Motor-suspension Bolts.
8. Improved Semi-Elliptic Spring.

MEANING of the Improvements: (1) The Wide-Wing Journal Box adds another 7 in. to the lower spring base. It breaks up the galloping—relieves the Side Frame of stresses at these points—ensures easier and smoother riding cars. (2) The Low-lid Opening is our Patented construction. No need to jack up Car and put Car out of service to get at Oiler—simply remove lid and draw out by hand. (3) A convenient fitment is the additional hole in top of Lid for temporary or periodical oiling. Just unscrew plug at top of lid and run the oil into the box. (4) The Brill Malleable-Iron Box saves a matter of 50 lbs. per truck in dead weight over the usual Cast Iron. (50 lbs. useless weight is some consideration.) Another point—our malleable-iron box is 12 per cent. stronger than the usual cast-iron box. (5) The Brill Half-ball Hanger means higher efficiency and longer life to this overworked portion of the brake equipment. Half-ball on Links fits snugly into sockets, the whole held in tension by a special spring on a bolt; no chattering and no loose movement; half-balls case hardened; automatic adjustment for wear. (6) The Brill Interchangeable Brake Shoe means one pattern of shoe only; simply invert to change from right to left hand. Capital saved here, not forgetting storage space. (7) The Short Tie Bar maintains the motor suspensions at correct angle, prevents sagging of motor. (8) The Improved Brill Semi-Elliptic Spring arrests galloping due to our combination of steel dimensions, depth, and flexibility.

# B.C.287 — A.D.1914

The Helical Thread: ARCHIMEDES

"The Nut which Locks:" — VISLOK —

Considerably over 2,000 years to invent a principle capable of embodiment in an ordinary nut to complete finally the discovery of the helical thread by Archimedes, the Greek!

All praise to Archimedes. Every bolt or screwed part is his monument. And because ordinary nuts slack off under the influence of vibration, is no reason to deprecate his achievement. Neither, if you are so inclined, need you do so. The Twentieth Century has positively produced the necessary

# RELIABLE SAFETY LOCK NUT

The slack nut trouble has—like the poor—been "always with us." So that it has come to be regarded as a necessary evil—attendant with danger to life, damage to property and loss of time. But there is no need to further suffer the danger and disadvantages of using ordinary nuts on machinery and plant subjected to vibration and successive shocks. The antidote has been proved by four year's continuous sales. It is

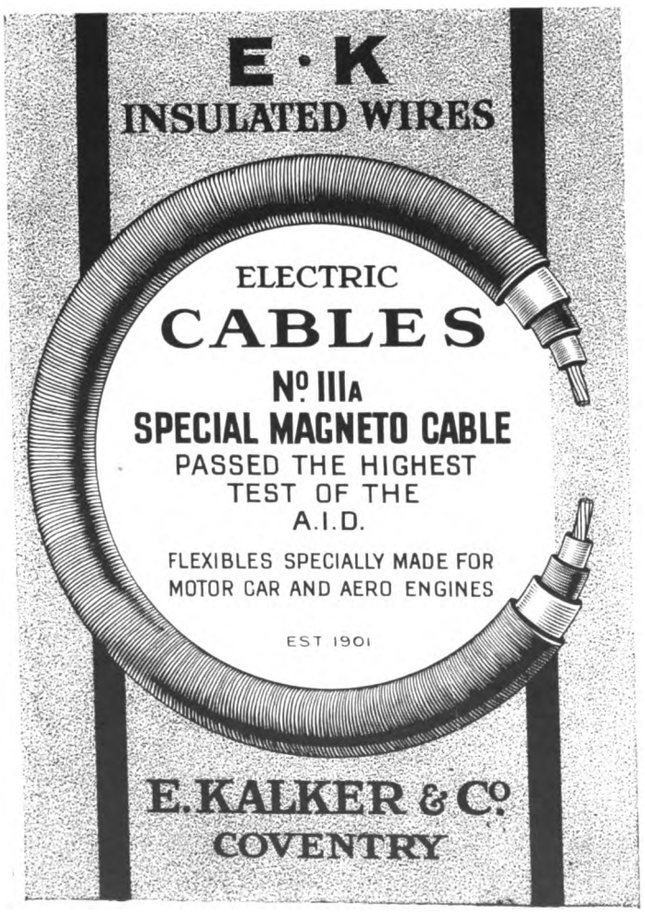
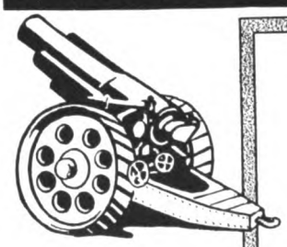
## SPECIFY "AETNA" INSULATION

Large Stock of Line Material, Porcelain Insulators, "Shaw" Lightning Arrestors, Fuses, Tools, and Accessories for Traction and Transmission Lines



# Standard Insulating Varnishes & Compounds



Standard insulating specialities are regularly used by the leading electrical manufacturing firms, lighting and power stations, railways, etc., which constitutes definite proof of their practical utility.

**One gun does not make an army**

Neither does the original insulation given by the makers to electric plant afford complete protection for all time. Periodical coatings are necessary, and the best varnish is essential. That is why you should use Standard Insulating Varnishes and Compounds. They are the finest obtainable.

# TRAMWAY TRACK CONSTRUCTION AND MAINTENANCE

BY

R. BICKERSTAFFE HOLT,

HIGHWAYS AND PERMANENT WAY ENGINEER, CITY OF LEEDS;
MEMBER INSTITUTION OF MECHANICAL ENGINEERS;
MEMBER INSTITUTION OF CIVIL ENGINEERS, IRELAND;
MEMBER INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS;
MEMBER MUNICIPAL TRAMWAYS ASSOCIATION;
FELLOW PERMANENT WAY INSTITUTION.

## CONTENTS.

FOREWORD.
"What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water gravel—Sand—Clinker sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring new tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS.
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in sets—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

To all engaged upon track construction, and even to those concerned in road engineering, we can strongly recommend this work.—*The Surveyor.*

This volume is bound to be of the greatest possible value to permanent way engineers.—*The Glasgow Herald.*

It is a thoroughly practical book. Mr. Holt has confined himself to really important matters, and has written on them with the authority that comes of practical scientific experience.—*Yorkshire Post.*

# OUR PRINCIPAL AIM

**When designing E.M.B. Resistances was to build a resistance which would give absolute satisfaction to the User.**

**This involved using the highest class of material throughout, of ample electrical capacity and mechanical strength.**

**It was of course impossible to build a resistance on these lines to compete in price with some of the existing types.**

**But we were quite confident the User would prefer to pay a higher price if he were satisfied he was obtaining a resistance that would cost nothing to maintain.**

**Time has justified our policy for we now have many hundreds of customers who would not use any other type even if it were given them.**

THE Tramway & Railway World
WITH MOTOR TRAFFIC SECTION

Founded 1892. LONDON, OCTOBER 17, 1918. VOL. XLIV.

# ELECTRIC TRACTION ON THE CENTRAL ARGENTINE RAILWAY.

BRITISH EQUIPMENT OF A SUBURBAN SYSTEM OF 100 MILES.

The Central Argentine Railway, with a mileage of 3,300, serves the northern portion of the Argentine between Tuouman, Cordoba, and Rio Quarto on the west, and Santa Fé, Rosario, and Buenos Aires on the River Plate. The number of passengers carried on the system during the twelve months ending June, 1914, was 23 millions, of whom 16 millions were carried on the three sections which serve the north-western suburbs of Buenos Aires (Fig. 2). The explanation of the large ratio which the suburban traffic bears to the total traffic is found in the fact that Buenos Aires, with a population of over one and a half millions, contains more than one-fifth of the whole population of Argentina. The city handles more than half (in value) of the total imports and exports of the country, and new docks are under construction which will increase the capacity of the port by more than 50 per cent. All the great railways, British-engineered and British-owned, converge towards it; it is the centre of Government, and its climate is good. During the last twenty years its growth has been at the average rate of 7½ per cent. per annum, and there is every reason to believe that this rate will be maintained during the next twenty years. Realising the importance of dealing economically with the development of their suburban traffic, the directors of the Central Argentine Railway decided to electrify the suburban sections, and the work was put into the hands of Messrs. Merz and McLellan, who were instructed to act in co-operation with the consulting engineers of the company, Messrs. Livesey, Son and Henderson, the two firms being jointly responsible for the design and supervision of the whole equipment.

**Fig. 1.—Retiro Terminus of the Central Argentine Railway at Buenos Aires.**
Showing Electrified Lines.

On August 24, 1916, the President of the Republic, Dr. Victorino de la Plaza, inaugurated electric traction on the line from Retiro Terminus in Buenos Aires (Fig. 1) to Tigre on Las Conchas River *via* Victoria. The Central Argentine Railway thus had the distinction of being the first of the great railway lines in the Argentine to adopt the modern method of dealing with suburban traffic.

The service on the branch has operated with marked

Digitized by Google

success, not only from the engineering but also from the traffic point of view, the passenger journeys in the first six months of the year 1917 being some 11 per cent. in excess of the figures for the same period of 1916.

The complete electrification works for the suburban system include a power-station of 15,000-KW. capacity, 57 miles of high-tension transmission cables, four traction sub-stations with 14,000 KW. of converting plant, and the electrical equipment of 100 miles of single track. Power is produced in the generating station as three-phase current at 20,000 volts with a periodicity of 25 cycles, transmitted to the sub-stations, converted to direct current at 800 volts, and supplied to the trains through a third rail.

List of Contractors.

Power station buildings and complete boiler-house equipment—
Babcock and Wilcox, Limited.

Turbo-alternators, transformers, and motors—
C. A. Parsons and Company, Limited.

Condensing plant and pumps—
British Westinghouse Electric and Manufacturing Company, Limited.

Switchgear in power-station, auxiliary motors, etc.—
British Thomson-Houston Company, Limited.

Rolling stock—bodies, underframes, and bogies—
Metropolitan Carriage, Wagon, and Finance Company, Limited.
and Birmingham Carriage and Wagon Company, Limited.

Structural steel work for power-station, entrance way, test room, offices and sub-stations; also the cranes for the sub-stations—
David Rowell and Company, Limited.

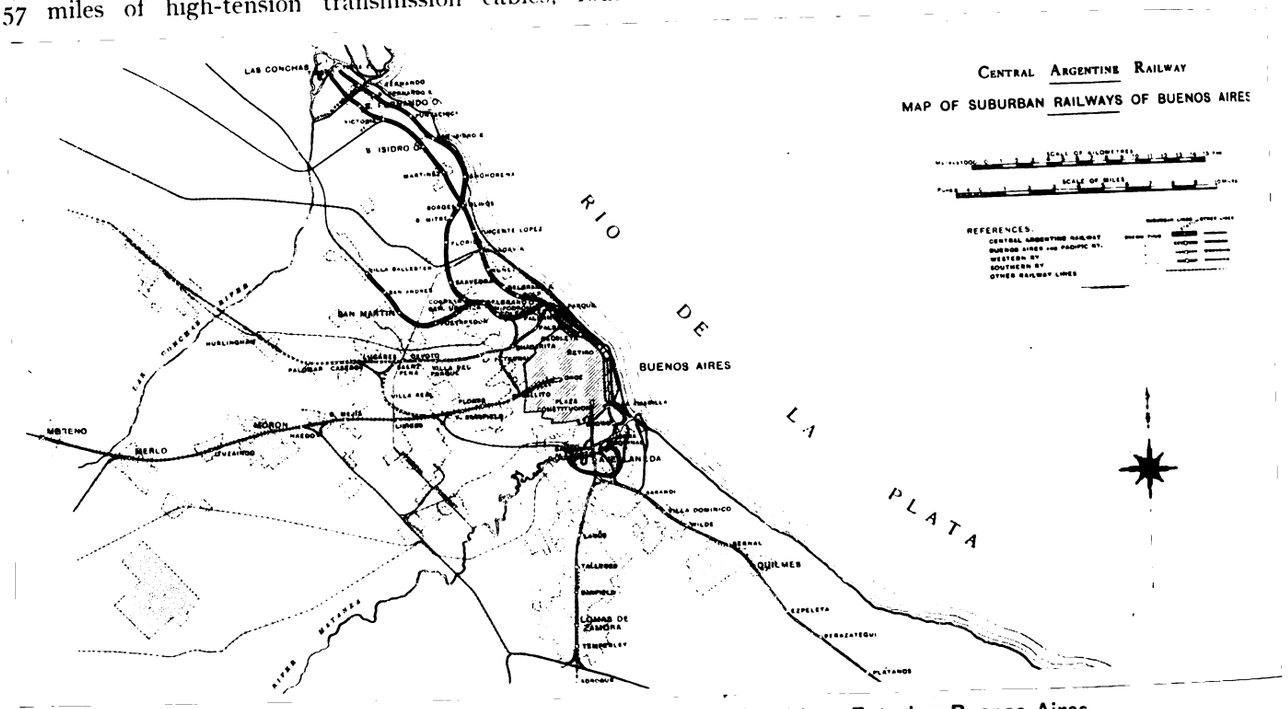

**Fig. 2.—Map of Central Argentine Railway and Other Lines Entering Buenos Aires.**

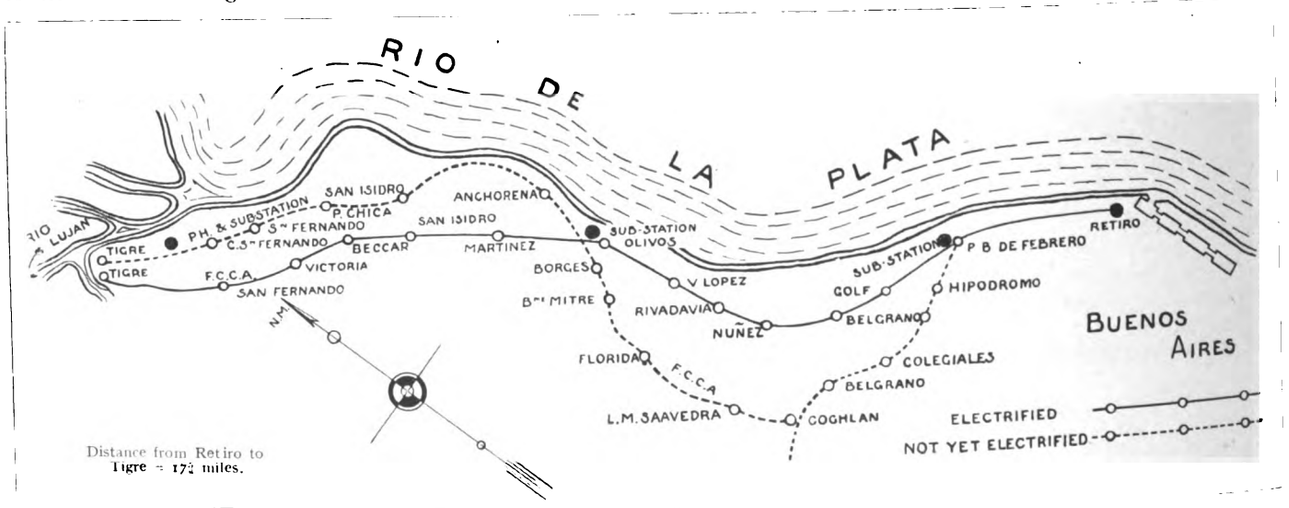

**Fig. 3.—Map Showing Suburban Route of the Central Argentine Railway now Electrified.**

The suburban route of the Central Argentine Railway already electrified is shown in Fig. 3, with the location of the power-station and existing sub-stations. The whole of the apparatus used in connection with the electrification was manufactured in Great Britain, and the principal contracts covered the erection of their plant by the various contractors; they are set out in the following list:—

High tension transmission and low tension track cables—
W. T. Henley's Telegraph Works, Limited.

Electrical equipment of sub-stations—
British Thomson-Houston Company, Limited.

Electrical equipment of rolling stock—
British Thomson-Houston Company, Limited.

Supervision of erection of electrical equipment of permanent way—
British Thomson-Houston Company, Limited.

The provision of the foundations for the power-station and sub-stations, the walling of the sub-stations,

Digitized by Google

excavation for cables, and the erection of the third rail were carried out by the railway company with their own staff.

**POWER-STATION.**

The power-house (Fig. 4) has been placed at the station of Canal San Fernando on a parcel of ground between the Tigre (Rosario) line and the Rio Lujan. The site was swampy, and in order to make a sound foundation some 3,000 ferro-concrete piles were driven down 33 feet till they reached the hard clay (tosna), which is found at varying depths all around Buenos Aires. On top of the piles a concrete raft, 2 ft. 6 in. thick, reinforced with old rails, was formed, to which pipes were laid for the cables serving the apparatus in the station. The level of the engine-room floor is 4·50 metres above datum. This was fixed with reference to the highest recorded flood level, 4·07 metres; since the station was built flood water has reached 4·38 metres above datum.

As shown in the view given in Fig. 4, the engine-room and boiler-house are arranged parallel to each other, with coal and ash handling sidings behind the latter. In front of the engine-room are a rotary converter sub-station, laboratory, and offices. A fitting shop and workmen's accommodation are provided at the permanent end of the engine-room. There is space on the site to double the capacity of the station by extending the buildings towards the river.

The buildings are steel-framed structures panelled with armoured concrete and finished with a white cement. The roofs of the sub-station and offices are concrete; that of the boiler-house is corrugated iron. The engine room roof consists of a wood ceiling covered with waterproof felt and with corrugated iron on top; this construction was required to avoid the condensation of moisture from hot humid air striking a cold corrugated iron roof.

BOILER-HOUSE.

The boilers are arranged four a side, grouped in pairs, each boiler having its own superheater and economiser. One steel chimney with an induced draught fan serves each pair of boilers, and forced draught is supplied to the furnaces by four fans in the basement.

The following are the particulars of the principal plant in the boiler-house:—

DETAILS OF BOILER-HOUSE PLANT.

Number and type of boilers—Six Babcock and Wilcox marine type water-tube boilers.
Normal evaporation of each boiler—20,000 lb. of water per hour.
Working steam pressure and temperature—210 lb. per square inch, 600° F.
Heating surface of each boiler—4,170 square feet.
Grate area of each boiler—98 square feet.
Type of stokers—Underfeed.
Type and size of economisers—Green's; 200 pipes in each.
Number of fans—Eight "Sirocco" fans.
Number and type of feed pumps—Two impulse turbine driven centrifugal pumps; two vertical reciprocating, Nichols type; capacity of each feed pump, 75,000 lb. per hour.

The furnaces are lined with Glenboig bricks, and are suitable for burning either Welsh or Durham coal. The stokers are of the underfeed type operated by steam rams. In anticipation of a shortage of coal two of the boilers were arranged for oil firing, and a complete equipment of the Wallsend-Howden system has been put into operation, with storage tanks, filters, and pumps. As the shortage of both coal and oil, due to war conditions, became more acute, other boilers were adapted for wood firing, and the fuel consumption figures for a recent week are:—Coal, 72·5 tons; oil, 15·5 tons; wood, 690 tons.

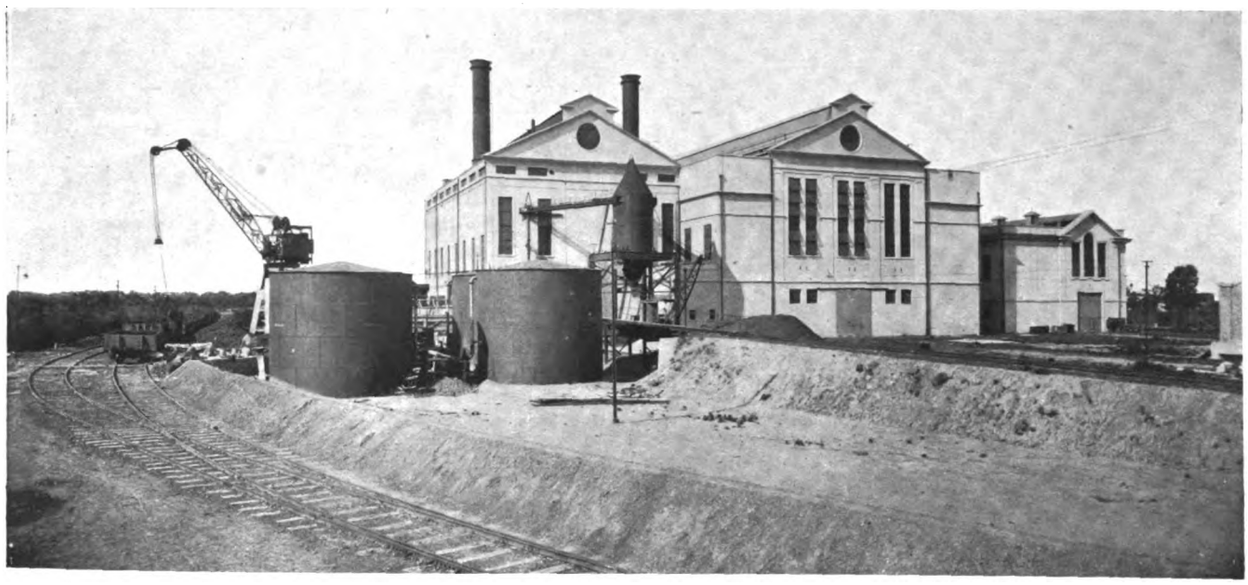

**Fig. 4.—General View of the Electric Power-Station of the Central Argentine Railway at Canal San Fernando.**

The wood burnt is red and white quebracho and algarrabo, and the relative values of the different fuels are roughly as follows:—1 lb. of coal (calorific value, 15,000 B.T.U.) is equivalent to 0·8 lb. of oil, 2·5 lb. of red quebracho, 3·3 lb. of white quebracho, or 3·3 lb. of algarrobo.

Labour and transport difficulties have become very acute recently, and the supplies of oil and wood have become so precarious that experiments have been made in burning maize. The results obtained indicate that maize is a slightly better fuel than red quebracho.

The combined efficiency of the boilers and economisers works out at about 85 per cent. when Welsh coal is being burnt.

The steam piping consists of a range of solid-drawn pipes, the flanges of forged steel being rivetted in the case of pipes of 7-in. diameter and over, and screwed in the case of smaller pipes. The blow-off piping is solid-drawn steel, and connects to a blow-off sump formed of a boiler drum. The exhaust and escape

Digitized by Google

steam piping is lap-welded. A high-pressure water main served by the feed pumps gives a supply to fire hydrants throughout the boiler-house, and also for boiler tube cleaning. The feed pumps draw their supply from hot-well tanks in the pump-house, and make-up water comes from a storage reservoir constructed alongside the power-station to two storage tanks erected above the hot-wells. Water is pumped from the River Lujan through a 6-in. pipe to the reservoir, and is there treated with alumino-ferric to precipitate the sediment which the river water contains.

### Coal and Ash Handling Plant.

The storage and handling of coal is provided for by means of an elevated railway track running alongside the boiler-house at firing floor level, a gantry parallel to the buildings, and carrying a level-luffing jib crane, with a grab of two tons capacity and two sidings at ground level (Fig. 4). The coal trucks are brought on the site from the main line at Canal San Fernando Station, and the coal can be grabbed from them and either filled direct into two 15-ton receiving hoppers, or into bottom-discharge wagons, which can be hauled along the elevated siding by a winch till they come over the receiving hoppers; thence the coal passes through crushers to gravity bucket conveyers. These elevate it to a tray conveyer, which takes it to coal bunkers above and between the two ranges of boilers. The coal bunkers have a capacity of 1,000 tons; they are built of mild steel plates lined with armoured cement, and the bottoms are "V" shape in section. Alternatively the arriving trucks can be pushed direct up the 1 in 25 incline to the elevated siding, and the fuel—coal or wood—can be discharged direct on the firing floor by hand. The stock coal is grabbed from the trucks and stored below and around the gantry in a coal deposit floored with sleepers, and constructed within range of the jib crane, which can plumb to a radius of 50 feet. The capacity of the store is 10,000 tons. The ash-handling arrangements comprise a suction ash plant with two 38-H.P. exhausters, which take the ashes from the furnace ashpits through electrically-operated crushers and specially heavy cast-iron pipes to a mild steel ash bunker of 80 tons capacity, lined internally with armoured concrete. The bunker is erected at the end of the boiler-house at such a height that railway trucks can pass underneath to receive and remove the ashes. Alternatively the ashes can be taken from the ashpits by half-ton wagons along rail tracks laid along each side of the boiler-house basement, and deposited outside on the site.

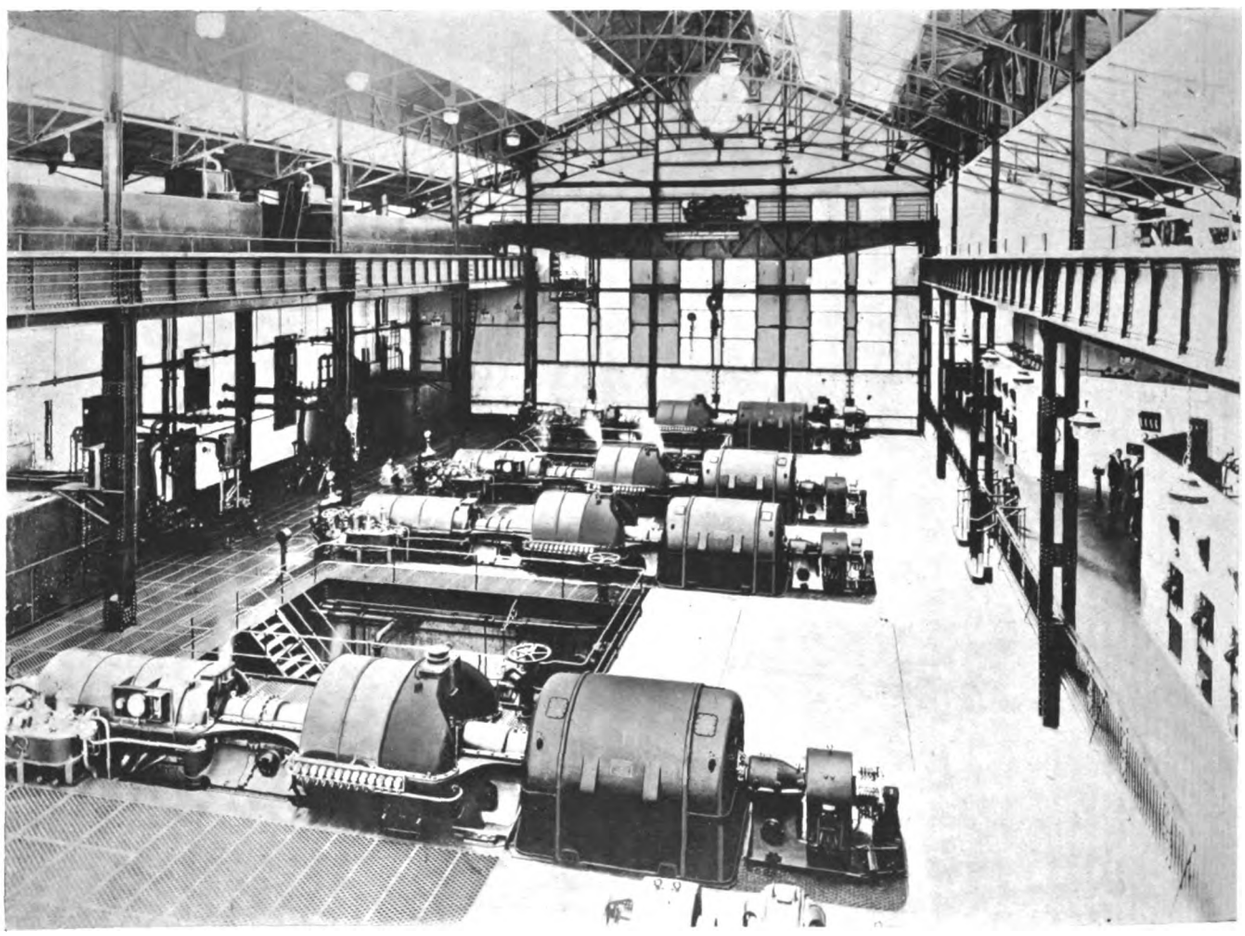

**Fig. 5.—Interior of Engine Room with Four Horizontal Turbines.**

### Engine-room.

The generating plant is so arranged that provided one boiler is steaming any one of the turbo-alternators can be started up, and can give a supply to the main busbars and to all the station auxiliaries. In addition, the breakdown of anything comprised in one generating unit will not prevent the operation of the remaining sets. There are four turbines in the engine-room (Fig. 5); each has its own steam-driven oil pump for use when starting up, its own condenser with air and water extraction pumps, and an independent circulating water pump. On the electrical side it has a self-excited exciter direct-coupled to the alternator shaft; leads from the alternator run direct to the "unit" transformer, which steps down the generated voltage from 2,500 to 440, and gives a

Digitized by Google

supply to the unit distribution board. From this board are fed the motors which operate the auxiliaries definitely belonging to the generating set to which it is attached, viz., those driving the air pump, exhaust valve, step-up transformer, oil pump, and circulating water pump. The other station auxiliaries which are common to the whole station, e.g., economiser and fan motors, are fed from a station distribution board divided into four sections, each of which can be isolated at will and fed from one of the unit boards, the feeders to the auxiliaries being so distributed among the sections that failure of one section will not put out of operation all the individual pieces of any auxiliary gear. The main leads from the alternator (1 square inch single-core cable) run to a step-up transformer, housed in the same compartment as the unit transformer, which steps up the generated voltage from 2,500 to 20,000, at which pressure the power is supplied to the station busbars. The station equipment as a whole is divided into two independent parts either capable of running without the other. The main busbars are divided in the middle by a busbar sectioning switch; two generators feed each half, and from each half a supply is given to a "station" transformer. Either of these station transformers can feed the station distribution board, the four sections of which are normally run coupled up. Connected to the extreme sections of the station distribution board are two motor generators giving a supply for lighting the station and for charging the two batteries, which form a duplicate source of power for the tripping coils on the switches and the indicating lamps on the switchboard. The main outgoing feeders are distributed between the busbar sections, so that failure of one section will not shut down any sub-station.

Details of the engine-room plant are given below:—

DETAILS OF ENGINE ROOM PLANT.

| | |
|---|---|
| Number and type of turbines ... ... | Four Parsons' horizontal reaction turbines with high and low pressure cylinders. |
| Working conditions | Steam pressure, 200 lb. per square inch; steam temperature, 600° F.; vacuum, 2½ in. of mercury; normal speed, 1,500 revolutions per minute. |
| Current generated... | Three-phase, 25 periods, 2,500 volts. |
| Economical output of set ... ... | 3,000 KW. at 0·85 power factor. |
| Maximum continuous capacity of alternators ... ... | 3,750 KW. at 0·85 power factor. |
| Momentary capacity of set ... ... | 5,500 KW. at 0·85 power factor. |
| Type of condensers | British Westinghouse surface condensers; cooling surface, 8,250 square feet; cooling water required, 6,800 gallons per minute, giving an absolute pressure of 2 in. of mercury with 45,000 lb. of steam per hour each, and cooling water temperature of 80° F. |
| Air and water extraction pumps ... | Westinghouse Leblanc, direct driven by 40-H.P. electric motors at 1,440 revolutions per minute. |
| Circulating water pumps ... ... | Four Gwynne vertical rotary pumps with Westinghouse motors, 240 H.P., running at 720 revolutions per minute, and each delivering 6,800 gallons per minute. |
| Purified water, bilge, and emergency pumps ... ... | Gwynne vertical rotary, driven by 13-H.P. electric motors running at 1,440 revolutions per minute. |
| Air exhausters ... | Gwynne air pumps. |
| Type of transformers in power-station | British Westinghouse three-phase, shell type, oil-immersed, oil or air cooled. |
| Main step-up transformers ... ... | Ratio, 2,500/20,000; connections mesh-star; continuous capacity, 4,860 KVA. |
| Unit transformers... | Ratio, 2,500/440; connections mesh-star; continuous capacity, 250 KVA. |
| Station transformers | Ratio, 20,000/440; connections mesh star; continuous capacity, 1,250 KVA. |
| Lighting motor-generators ... | British Thomson-Houston; 440-volt induction motor; 55-KW. direct current generator; 10-KW. battery-charging booster. |
| Engine-room crane | Babcock and Wilcox 40-ton crane, with 5-ton auxiliary hoist; span, 60 feet. |

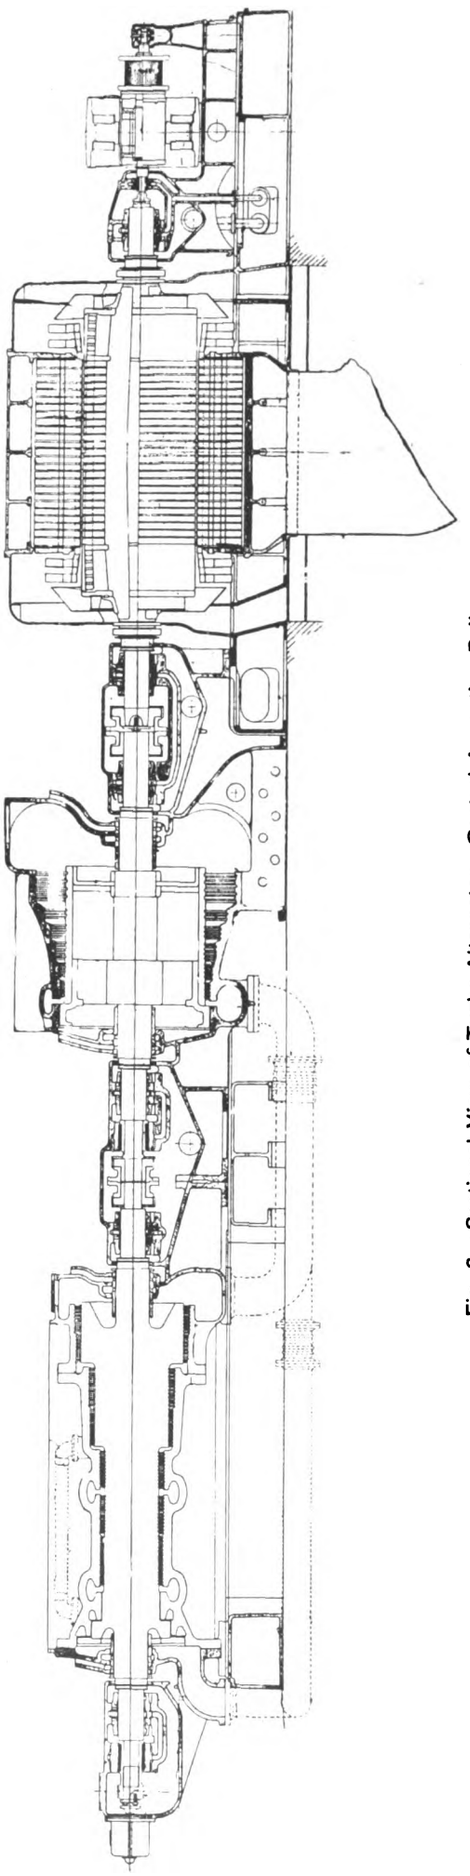

Fig. 6.—Sectional View of Turbo-Alternator—Central Argentine Railway.

Digitized by Google

The high and low pressure portions of the turbines are in separate cylinders, the high pressure cylinder being of cast steel. This was steamed with superheated steam for 24 hours both before and after blading. The rotor shafts and drums are forged solid of steel with a tensile strength of 35 to 40 tons and an elongation of 20 per cent. The blades are brass. Each turbine is connected by an expansion pipe to the condenser situated underneath it. Between the turbine and the hand or electrically operated main exhaust valve is an atmospheric release valve. The governor is mechanical and automatic in action and so constructed that the speed between no load and maximum load can be varied 5 per cent. up or down while the turbine is running. The speed can also be controlled by hand or from the switchboard by electrical means. Oil is supplied continuously under pressure to the bearings, whence it passes through strainers to the oil reservoir to be picked up by an oil pump and forced through the tubes of an oil cooler. Fig. 6 is a sectional view of the turbo-alternator.

The alternators are totally enclosed and ventilated by fans on the rotor, which draw air from the basement through a dry air filter and discharge it outside the engine room. The combination of an alternator and a step-up transformer as one generating unit permitted the actual alternator voltage to be selected so as to give the most simple and robust stator winding, the stator slots, which are completely closed, each containing only one conductor. The rotors are of the built-up plate construction with a distributed winding in slots, and are fitted with mild steel slip-rings.

The step-up and unit transformers belonging to each generating set are housed in a separate chamber in the basement with hatchways in the engine room floor, through which they can be handled by the crane. The chambers are ventilated by fans which draw air from the basement, and provision is made for running off the oil from the transformers to the outside of the building in case of fire. Each step-up transformer has its own oil-cooler, through which the oil is circulated by a rotary pump driven by a 10-H.P. 440-volt 3-phase squirrel cage motor. The unit transformers are air cooled. The station transformers are situated in separate chambers at the ends of the engine-room basement, and are air cooled.

An oil store was built on the power station site to contain the supplies of transformer and lubricating oil. An electrically operated oil-purifying outfit is used for filtering and drying the transformer oil after it has been in service for some months.

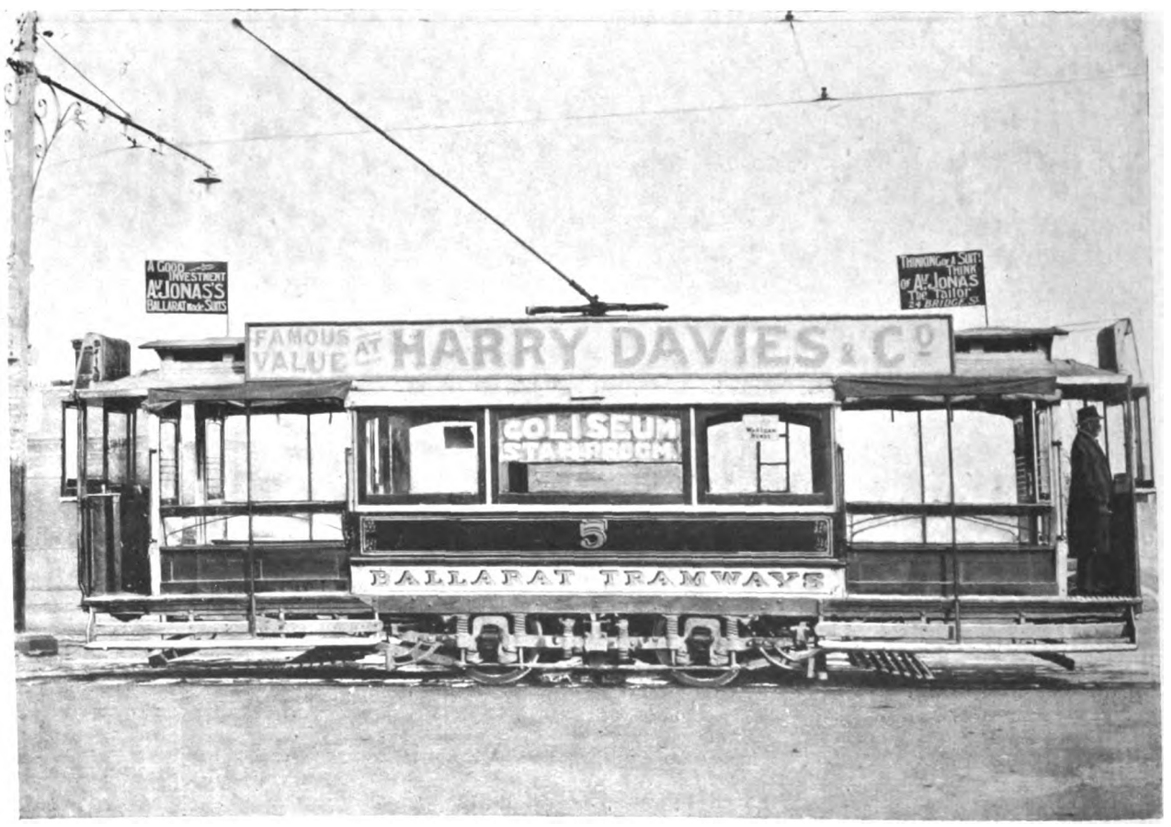
*(To be continued.)*

## THE ONE-MAN CAR IN AUSTRALIA.

Through the courtesy of Mr. P. J. Pringle, chief engineer and general manager of the tramways of Ballarat and Bendigo, we are able to give some interesting particulars regarding the fare arrangements for the one-man cars which are in use on the undertakings named.

In the one-man car there is at each end of the car, and opposite both entrances, a hinged gate with a notice "Enter front end." A simple form of fare-box, of which a sketch is produced, is placed on the partition just behind the driver, and the upper part of the box has a glass window back and front, making it possible for the driver and passengers in the car to see exactly the coin which drops on to the collecting plate. After each lot of people have paid, this plate is tipped by the driver, so that the coins fall into the lower receptacle.

A looking-glass is fixed in the upper part of the box at a suitable angle, so as to reflect light on the coins dropped on to the collecting plate, which permits all the coins being seen by a considerable number of

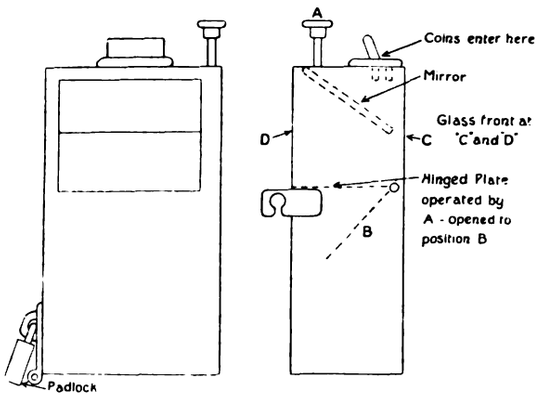


One-Man Car—Ballarat Tramways.

Digitized by Google

passengers in the car. This effects a good moral check on the payments made in the fare box, and results in a more satisfactory fare collection and fewer mis-fares than with the ordinary ticket system.

Platform accidents, due to people boarding and leaving the car, have been reduced to one-sixth of the number when the car was manned with a motorman and conductor. "One-man" drivers, in view of the extra duties they are carrying out, are paid at the rate of 10d. per day above the ordinary motorman's rate.



**Fare Box Used on One-Man Car at Ballarat.**

At each end of the car, just above the dash, is a hinged notice-plate marked on one side "Pay as you enter," and on the other side "Pay as you leave." The "Pay as you enter" sign is visible at both ends of the car in the case of cars travelling from the suburbs to the centre of the town. The "Pay as you leave" sign is similarly exhibited on the reverse journey.

This system, introduced about five years ago on the Ballarat and Bendigo tramways, is working with every satisfaction. Latterly three other Australian tramways have decided to adopt the system, and there are others in New Zealand considering it. Within the last three or four years America has taken up the one-man car with great seriousness, there being over 160 undertakings operating these cars, with over 1,000 cars in use.

These facts, Mr. Pringle maintains, are sufficient to justify English tramway managers in giving the system serious consideration in order to conserve man and woman power, reduce operating expenses, and avoid as far as possible the raising of fares.

The one-man cars in Ballarat are also distinguished by a novel form of advertisement consisting of a metal flag placed at each end of the roof as shown in the illustration of the car. The flags measure 2 ft. 6 in. long by 1 ft. 8 in. wide; they are made of thin sheet-iron with a stiffening wire around the edge, and are attached to a steel rod which projects 7½ in. below the bottom part of the flag. This drops into a piece of tube with a flange attached to it, which latter is bolted to the car roof. The end of the rod attached to the flag is conically shaped and hardened, and drops into a hardened coned bearing. The flag therefore revolves very readily, and sways to and fro with the wind and movement of the car. Therefore, being a moving advertisement, it attracts more attention than the ordinary fixed ones commonly in use. The idea was worked out by Mr. E. H. Grenfell, collector in the Ballarat electricity department.

Ten of these flags bring in an annual revenue of £100. The tramway company guarantee that they will be run on the regular running cars. To effect this, they can be readily changed over to permit of a car being sent to the depot for repairs by removing the flag out of the tube socket into one fixed upon another car.

## A TRAMWAY TANK AT SHANGHAI.

The accompanying photographs illustrate a tramway "tank" which the Shanghai Electric Construction Company has had in service under different disguises. Mr. Donald McColl, the general manager, writes that its first appearance was in celebration of Empire Day. The design, as will be seen, is quite realistic. The caterpillars revolve at the proper rate in relation to the speed of the vehicle, and are operated from the car motors by means of gearing, belting, and pulleys.

Although the tank looks substantial enough, it is really of inexpensive construction. The rivets, for instance, are merely stamped out from old kerosene tins, and cost nothing at all for materials and only a trifle for labour. The tank did good service in connection with the Chinese Tank Week, during which in a few days over £100,000 was contributed by Chinese to British War Loans. In celebration of the King's birthday the tank bore large portraits in silk, being illuminated by means of electric lamps placed behind them.

## SELECT COMMITTEE ON TRANSPORT.

The Select Committee on Inland Transport appointed last session by the Government resumed their sittings on October 10. Prior to the recess several preliminary meetings were held, the proceedings being private. A sub-committee appointed by the main body to take evidence in Ireland held a number of sittings in that country. The Select Committee is composed of the following members of the House of Commons:—Mr. Wilson Fox (chairman), Mr. A. Acland Allen, Sir A. Shirley Benn, Mr. Davison Dalziel, Mr. Duncan, Mr. W. Field, Mr. J. D. Gilbert, L.C.C., Colonel Gretton, Sir F. Hall (a former chairman of the Highways Committee of the London County Council), Colonel F. S. Jackson, Mr. Keating, Mr. R. Mason, Colonel Wedgwood, and Mr. Lewis Haslam. Lt.-Col. A. St. John Cooke, D.S.O., Controller of Roads and Bridges, War Office, has been lent by the Army Council to the Select Committee. He is a member of the Road Transport Board and served as a transport officer in the South African War.

**The Municipal Tramways Association Meeting.**

In view of the prevailing conditions the seventeenth annual meeting of the Municipal Tramways Association, which is reported in full in this issue, was surprisingly well attended. It is by no means easy for tramway managers and committeemen in these days of shortage of staff and general strain to leave their personal duties in order to turn their attention to the welfare of the industry as a whole. Then, too, the meeting unfortunately synchronised with the outbreak of local strikes by railway employees, and for a time it appeared that railway travelling generally might become impracticable. Happily the firm attitude of the Government and the wide-spread disapproval of the public quickly convinced the men that their action was disloyal, and unjustifiable; and the strike was abandoned on the day the conference met. Delegations were present from sixty-one municipal authorities, and most of them included the tramway manager and several members of the tramway committee. It should be gratifying to the Executive Council of the Association that tramway committees throughout the country recognise so generally the value of the Association and the advantages that they derive from it. During the past year its services have indeed been indispensable; and in view of the closer organisation of the industry now taking place, it is destined to bear an increasing share of the responsibilities of local authorities in their tramway work. There are still a number of municipal tramway committees which are not members of the Association; and the time has come when they should ask themselves whether they are not neglecting a plain duty, both to their own undertaking and to the industry, by neglecting to join the Association. In the days of difficulty that will follow the war, the industry must be closely organised, and the first step is for every tramway undertaking to secure enrolment in its proper industrial parliament. The interest and importance of the proceedings at the meeting at Leicester should encourage additions to the membership. Delegates came from all parts of the country with the single purpose of considering in a business-like way the subjects that were placed before them; and the proceedings were followed with close attention throughout. The mistake of attempting to consider too many subjects was avoided. Only one paper was read—that by Mr. Hatton, who dealt with the "Post-war Position of Electric Power Supply"—and there was thus a reasonable opportunity for discussion, although not all the members who desired to speak found time to intervene. It was necessary, however, to limit the discussion to the Thursday morning session in order to deal in the afternoon with the important report of the Executive Council on the formation of a national joint council for the tramway industry. The discussion occupied the whole of the session, but as the project is still in the formative stage, it was considered desirable that members should be able to speak on the matter in the freedom of a private meeting, and no report of what proved to be an interesting and profitable discussion is given. That the members thoroughly approved of the steps taken by the Council in the matter was indicated on the following day when the report for the year was unanimously adopted. The Council is thus empowered to proceed with the negotiations, and there is good reason to hope that a fair and workable scheme in definite form will before many months be submitted for the

Digitized by Google

approval of municipal authorities. At the concluding session of the meeting, officers for the following year were, as is usual, elected. By the unanimous choice of the members, Mr. T. B. Goodyer was chosen for the office of president—an honour well merited by his services to the association and the tramway industry. His year of office will be one of unusual stress, but with his energy and tact it cannot fail to be a successful one.

**Select Committee on Transport.**

In the interest of tramways, light railways, and road motor authorities it is imperative that answers should be forthcoming to two questions. The first is, have they considered the subject of putting forward evidence before the Select Committee on Transport. The second is, have any steps been taken to urge the Government to carry out the recommendation made in the report of the Sub-committee of the Reconstruction Committee dealing with rural transport by light railways and road motor vehicles, which appeared in our issue of September 12. The recommendation was to the effect that the whole question of better transport of every description should be made the subject of detailed inquiry and report by a special sub-committee. If, as appears to be probable, the appointment of the Select Committee on Transport, towards the end of last session, was in part the answer of the Government to the aforementioned report, road traction interests will be able to concentrate their energies upon seeing that their case for reform is put in its entirety before the Select Committee of the House of Commons. How favourable is the opportunity presented will be seen by a glance at the following terms of reference :—

> To consider what steps, if any, it is desirable to take to develop and improve the internal facilities for transport within the United Kingdom ; to secure effective supervision and co-ordination ; to ensure that such development and improvement shall be adequate and suitable to meet the national requirements ; and to make recommendations.

Not only have the Committee power to send for persons, papers, and records, but they can appoint from outside such additional persons as they may think fit to serve on any sub-committee which they may decide to establish. There is also the customary power to report from time to time. Prior to the recess the Committee held several preliminary meetings, which have not been reported, owing, it is alleged, to the desire of the Board of Trade that the proceedings should be private. The Committee resumed their sittings on October 10. It is difficult to conceive that Sir Albert Stanley, who introduced publicity as the most potent method to increase the prosperity of the London traffic group, would consent to the adoption of a course that would rob the proceedings of the Committee of half of their value. No time should be lost by those concerned in road traction in offering evidence to the Committee, and in urging the appointment of a sub-committee of experts to report upon their special needs. Several reports are in existence to support their case, for besides the document to which we have already referred there are the recommendations of the Reconstruction Committee in favour of a reform of Parliamentary Bill procedure in relation to traction and other public utilities. In addition, the Prime Minister declared at Manchester a few weeks ago that railways, light railways, and the like enter into every phase of national prosperity, notably housing and agriculture, while on October 4 the President of the Local Government Board, replying to a deputation from the Federation of British Industries and the National Alliance of Employers and Employed on the matter of housing, asserted with truth that an equally important question is the provision of tramways to connect the new housing areas with the towns.

**Glasgow Tramway Finance.**

The remarkable and exceptional position of the finances of Glasgow Corporation Tramways, as revealed in the accounts for the past financial year, is worthy of special notice. This is the first year in which the effect of the total discharge of the undertaking from capital liabilities makes itself manifest. In the past the half-penny fare has been a great success in Glasgow—a greater success undoubtedly than in any other town—and this may be credited partly to local conditions and partly to excellent management. Under the stress of war conditions other undertakings have been obliged to abolish half-penny fares. Not so Glasgow, however. The revenue increased, as compared with the previous year, by about £150,000, but the working expenses rose, in round figures, by £200,000. The amount set aside for renewals and depreciation, £124,000,

Digitized by Google

was nearly double that of the previous year. Yet the net profit available for transfer to the Common Good, £177,000, showed an increase of some £16,000. The explanation of this result is that for the first time no interest on capital and no contribution to sinking fund were chargeable. These items in previous years approximated to £200,000 per annum. There had been a reduction in revenue derived from interest on investments of £70,000, so that the amount which could be carried to net revenue account was down by £123,000. It was from the reduced figure that interest, sinking fund, depreciation, etc., would have to be met. It will thus be seen that if capital charges had remained there would have been no surplus for the Common Good at all; in fact, there would have been a debit balance of about £23,000. This, of course, could have been prevented and a surplus of £27,000 shown by allocating to depreciation and reserve only the same amount as in the previous year. Taking into account the great increase in working expenses and the retention of the half-penny fare, this is indeed a remarkable and creditable showing. But even in Glasgow it seems tolerably clear that but for the abolition of capital charges a drastic revision of fares would have been necessary if anything like the net results of former years was to be attained. It may be noted that the traffic receipts per passenger were ·782d., being an increase of ·13d., while the passengers increased by over 42 millions, or about 10 per cent. The traffic receipts per car mile, at 12·832d., showed an increase of 1·24d., while the working expenses (exclusive of war expenditure) were 8·682d., an increase of 1·753d. It follows from the various figures that if expenses do not further materially rise it may be possible for Glasgow to continue the half-penny fares. No other tramway undertaking is, however, in the favourable position of being free from capital charges.

---

**The Industrial League.**

The foremost place in the mind of the nation is necessarily occupied by the war, so long as it shall last. But next in importance is Reconstruction. The requirements of the war and of reconstruction are in many respects different. But there is at least one requirement which is common to both and which may be summed up in the word "co-operation." The war has resulted in a tremendous output of co-operative effort on the part of all classes of the community, both under the direction of the State and also through private channels. The value of all this hardly needs dwelling upon. But what is perhaps not always obvious is that co-operation will be equally necessary for reconstruction. In some respects indeed it will be even more necessary, because in regard to the war there is, generally speaking, unanimity of view; but in regard to reconstruction there will be involved problems on which very pronounced differences will inevitably arise between various interests. We therefore commend and support such a movement as that represented by the Industrial League, which has, as its declared object, "the improvement of relations between employers and employed." It was founded about three years ago, and it has received the recognition and approval of prominent men on both sides, or as we prefer to put it, in both departments, of industry, as a valuable means of mutual education and as a useful channel for the interchange of opinion and information. Its tendency is clearly in the direction of promoting understanding and sympathy between the parties, which is a necessary condition of that co-operative effort which will be essential if the demand for productive work after the war is to be sufficiently met. It is in accordance with the recommendation of the Whitley Committee in favour of the self-government of industry by means of trade councils representative of employers and employed. A few such are already at work and several others, including one for the Tramway Industry, are in process of formation. In concluding we may point out that the Industrial League has the hearty sympathy and support of the Minister of Labour, who, in a foreword to the first issue of its quarterly journal, commends it as "a body which deserves every support in its aim to elevate all without hurting any, which makes appeal to men of faith in their country's destiny, to those who believe in wisely ordered progress and balanced enthusiasms." "For," adds Mr. Roberts, "it is with these that abide the surer hope for the enduring greatness of our country and the well-being of its people as a whole."

# THE MUNICIPAL TRAMWAYS ASSOCIATION

(INCORPORATED)

## Seventeenth Annual Meeting, held at Leicester, September 26 and 27, 1918.

The seventeenth annual meeting of the Municipal Tramways Association was held on September 26 and 27 in the Council Chamber of the Town Hall of the ancient borough of Leicester. The delegates numbered well over a hundred and represented 61 municipal authorities. Adhering to the custom that has been adopted during the war, the meeting was limited to a day and a half, and the programme was confined to business proceedings. The one paper read dealt with a topic that will before long be much discussed by every local authority that possesses electricity works or a tramway undertaking. Great developments are in prospect with regard to organisation for the supply of electric energy, and all existing authorities may be involved by the drastic changes which may be found necessary in the national interest. The subject is therefore of immediate practical concern to all those interested in electric traction, and merited a place in the business-like agenda.

At the opening session on the Thursday, the Mayor of Leicester (Alderman J. North) extended a cordial welcome to the Association in a speech which showed that, although not a member of the Leicester Tramways Committee, he was by no means unacquainted with the difficulties that from time to time have been encountered and successfully overcome by that committee. He paid a fine tribute to their work and to the skill and ability of their permanent officials. In Leicester they were proud of their tramways, and notwithstanding occasional criticism the people were well satisfied with the service.

At the conclusion of the Mayor's remarks, Alderman S. Flint (chairman of the Leicester Corporation Tramways Committee), the President of the Association during the past year, took the chair and delivered his presidential address. After some interesting reference to the historical associations of Leicester, he briefly reviewed the work of the year, which he described as much greater than that of any previous period, a statement which there is little doubt all the members of the Council heartily corroborated. The President made particular allusion to the secretarial duties, which had become so heavy that unless extra assistance were obtained, he feared no one would be willing long to occupy the position, and he urged that the Executive should be empowered to make suitable arrangements for the work of that office. The address showed the manifold activities of the Council, and should enable the members, as the President desired, to appreciate the extent of the work of the Association. In conclusion, he thanked the officers and members for the cordial support given to him during his year of office. On the motion of Councillor Raine (Hull), and seconded by Bailie Montgomery (Glasgow), a vote of thanks was given to the President for his address.

Mr. Ernest Hatton, engineer and general manager of Newcastle Corporation Tramways, then presented his paper on "Some Notes and Considerations on the Post-war Position of Electric Power Supply." The paper was read with good effect and notable clearness, and was listened to with close attention. Mr. Hatton made his position, which seems to have been misunderstood in some quarters, perfectly clear. He was not in any sense a reactionary. In the interests of the whole country progress in the development of electric power supply was necessary, but he deprecated too optimistic anticipations of the benefits to be derived. Implying that the controlling authorities were satisfied that the electrification of the railway systems of the country was desirable, he said that this policy would lend itself to the most advantageous method of setting up the general power supply all over the country, for the railways touched almost all centres of industry and population, and as a rule provided the shortest routes for laying main trunk supply cables. The best solution of the question of electric power supply could, however, be obtained only by careful investigation, and he was of opinion that for a practical demonstration of the policy of general power supply over a large area, a particular district in the North-east of England, which he mentioned, should be chosen. Whatever power boards were set up in an area, they should in every case have a majority control of public representatives elected by the area, together with the representatives of large consumers. The proposed plans would take time to accomplish, but their adoption would ultimately lead to the greatest good of the community.

Mr. McElroy, in opening the discussion, emphasised the extent of power required for traction. At least 25 per cent. of the total output of the power stations in the United Kingdom was used for tramway purposes, and the tramways, he thought, provided central station engineers with the best paying class of customers they had. It was therefore not out of place that the subject should be considered by the Association. He looked for the development of power supply in a way that would benefit all industries, including tramways, and he welcomed the two valuable reports which had been issued on the subject. Other speakers in the discussion were Messrs. Webber (Keighley), Stokes (Bexley), Murray (Walthamstow), Wilkinson (Huddersfield), Rayner (Doncaster), Stewart (Rawtenstall), and Furness (Blackpool).

On the adjournment of the morning session, the delegates were entertained at luncheon by the Mayor of Leicester at the Mayor's rooms. It had been expected that Sir Albert Stanley, president of the Board of Trade, would be present, but he was unavoidably detained in London pending the settlement of the railway strike.

In opening the afternoon session the President read a telegram which had been received from Sir Albert Stanley, and which is given in our report. The session was then continued in private to consider the draft constitution of the proposed Industrial Council for the Tramway Industry. As the constitution may have to be further revised, it was thought inadvisable that the draft should be published until ready for submission to members for their final approval.

At the closing session on Friday morning, the report of the Executive Council, which is given in full in the following pages, including the report of the work of the Council in connection with the formation of the Industrial Council, was approved. The election of officers followed. Mr. T. B. Goodyer, general manager of Croydon Corporation Tramways, was elected President with enthusiastic unanimity, and Sir John Courtis, Deputy Mayor of Cardiff and chairman of Cardiff Corporation Tramways, was elected Vice-president. The following were elected to the Executive Council:—Councillor J. Timpson (chairman, Portsmouth Tramways Committee), Mr. A. L. C. Fell (general manager, London County Council Tramways), Mr. J. B. Hamilton (general manager, Leeds City Tramways), Mr. G. W. Holford (general manager, Salford Corporation Tramways), and Mr. R. L. Horsfield (general manager, Walsall Corporation Tramways). Mr. William Clough, general manager, Bury Corporation Tramways, who has recently acted as assistant honorary secretary, was appointed Honorary Secretary.

A pleasing incident of the closing session was the presentation to Mr. C. J. Spencer of a gold watch, accompanied by a fitted dressing bag for Mrs. Spencer, as an expression of the gratitude of the Association for his long service as honorary secretary, a position which he was now resigning as he was taking up an important appointment in London. Mr. J. B. Hamilton, speaking on the invitation of the President, who made the presentation, said that Mr. Spencer had occupied the post of honorary secretary since the meeting in Glasgow in 1911, and paid a high tribute to the work he had done. Alderman Priestley, chairman of the Bradford Corporation Tramways Committee, expressed the warm appreciation of his committee of the services of Mr. Spencer, both as honorary secretary of the Association and as general manager of their tramway undertaking. Other speakers testified to the high regard in which Mr. Spencer is held. Mr. Spencer, in replying, expressed his great regret at severing his connection with the Association; but the members, by electing him on the motion of the President an honorary member, clearly showed that they did not propose to treat the separation as final. In expressing his appreciation of this honour, Mr. Spencer alluded to the fact that there was only one other honorary member, namely, Mr. John Young, the founder of the Association.

In the following pages a full report is given of the proceedings of what proved to be an interesting and useful meeting.

# LIST OF DELEGATES PRESENT AT THE ANNUAL MEETING.

Aberdeen ... ... W. Forbes, general manager.

Ashton-under-Lyne ... Alderman R. S. Oldham, chairman.
E. Holt, general manager.

Belfast ... ... Councillor J. M'Donald, vice-chairman.
J. S. D. Moffet, general manager.

Bexley and Dartford... ... Councillor E. J. Reid, member of committee.
H. P. Stokes, general manager.

Birkenhead ... C. Clarke, general manager.

Birmingham ... Councillor J. Fryer, vice-chairman.
A. Baker, general manager.

Blackburn ... ... Councillor C. Higham, vice-chairman.
J. H. Cowell, general manager.

Blackpool ... ... Councillor H. Brooks, vice-chairman.
Charles Furness, general manager.

Bolton ... ... Councillor P. Higson, chairman.
Councillor J. W. Keighley, member of committee.
J. Barnard, general manager.

Bradford ... ... Alderman E. Priestley, chairman.
Councillor I. F. Akeroyd, vice-chairman.
Lieut. Sydney Newman.
C. J. Spencer, general manager.
J. W. Dawson, assist. electrical engineer
H. Wheatley, assistant secretary, M.J.A.

Burnley ... ... Councillor E. Heap, chairman.
Councillor D. Irving, vice-chairman.
H. Mozley, general manager.

Burton-on-Trent ... Alderman T. Metcalfe, member of committee.
A. B. Slater, general manager.

Bury ... ... Alderman T. S. Collinge, chairman.
Councillor H. Hargreaves, vice-chairman.
W. Clough, general manager.

Cardiff ... ... Alderman Sir J. W. Courtis, J.P., chairman.
Arthur Ellis, city electrical engineer and manager.

Chester ... ... W. H. Ellis, manager.

Chesterfield ... R. L. Acland, engineer and manager.

Coventry ... ... Councillor H. W. Wale, chairman.
Councillor J. Grant, vice-chairman.
T. R. Whitehead, general manager.

Croydon ... ... Councillor A. A. Thomson, chairman.
T. B. Goodyer, manager.

Darwen ... ... G. A. Newsome, general manager.

Doncaster ... ... E. S. Rayner, general manager.

Dundee ... ... Councillor G. A. Johnston, chairman.
Peter Fisher, general manager.

East Ham ... ... W. C. Ullmann, engineer and manager.

Erith ... ... J. C. Williams, general manager.

Exeter ... ... R. O. Baldwin, general manager.

Glasgow ... ... Councillor Montgomery, chairman.
James Dalrymple, general manager.

Halifax ... ... Alderman A. Fawcett, vice-chairman.
J. W. Galloway, tramways engineer.

Huddersfield ... Councillor E. H. Sellers, chairman.
Councillor T. Canby, vice-chairman.
R. H. Wilkinson, general manager.

Hull ... ... Councillor W. Hakes, chairman.
Councillor C. Raine, vice-chairman.
W. J. McCombe, manager.

Keighley ... ... Councillor A. Smith, chairman.
Councillor J. G. Ambler, vice-chairman.
Harry Webber, general manager.

Leeds ... ... J. B. Hamilton, general manager.
A. Daggett, traffic superintendent.

Leicester ... ... Alderman S. Flint, chairman.
Alderman G. Banton, vice-chairman.
A. F. Lucas, manager and secretary.
T. R. Smith, electrical engineer.
W. Evans, traffic superintendent.
H. Pool, accountant.

London County Council ... ... W. J. Squires, member of Council.
E. W. Morrison-Bell, member of Council.
A. L. C. Fell, general manager.

Lowestoft ... ... H. H. Saunders, general manager.

Maidstone ... ... A. T. Lambert, general manager.

Manchester ... Alderman J. Bowes, chairman.
Alderman A. W. Chapman vice-chairman.
J. M. McElroy, general manager.

Nelson ... ... Councillor W. F. Cooke, chairman.
G. F. Nayler, engineer and manager.

Newcastle-on-Tyne Councillor R. Mayne, chairman.
Councillor G. G. Elliott, member of committee.
Councillor T. Matthewson, member of committee.
Ernest Hatton, engineer and general manager.

Newport ... ... N. J. Young, general manager.

Northampton ... Councillor W. E. Beale, vice-chairman.
J. F. Cameron, general manager.

Nottingham ... Councillor C. Coggan, member of committee.
J. Aldworth, general manager.

Oldham ... ... Councillor Stanbury, vice-chairman.
W. Chamberlain, general manager.

Plymouth ... ... Councillor J. Moon, vice-chairman.
C. R. Everson, general manager.

Portsmouth ... Councillor J. Timpson, chairman.
Alderman R. Payne, vice-chairman.
W. R. Spaven, general manager.

Preston ... ... Alderman J. Ormrod, chairman.
Councillor T. Parkinson, vice-chairman.
J. F. Simpson, engineer and manager.

Rawtenstall ... C. L. E. Stewart, general manager.

Reading ... ... Alderman C. G. Field, chairman.
G. F. Craven, general manager.

Rochdale ... ... Alderman James Taylor, chairman.
Alderman H. Clark, member of committee.
George Webster, general manager.

Rotherham ... H. Jagger, general manager.

Salford ... ... Alderman H. Linsley, chairman.
G. W. Holford, general manager.

Sheffield ... ... Alderman W. C. Fenton, vice-chairman.
Alderman J. Knowles, chairman of the engineering committee.
A. R. Fearnley, general manager.

Southampton ... Alderman F. A. Dunsford, chairman.
Alderman G. J. Tilling, member of committee.

Southport ... ... Councillor Clayton, chairman.
Councillor Richardson, vice-chairman.
T. J. Kendrew, general manager.

South Shields ... Alderman W. G. Wylie, chairman.
J. C. Whiteley, general manager and engineer.

Stalybridge ... Alderman R. Wood, chairman.
Councillor S. C. Homer, vice-chairman.
Frank Schofield, commercial manager.

Stockport ... ... Councillor T. W. Potts, chairman.
Councillor C. Littler, vice-chairman.
A. T. Eardley, general manager.

Sunderland ... Alderman G. New, chairman.
Councillor W. Walker, vice-chairman.
A. R. Dayson, general manager and engineer.

Wallasey ... ... Councillor F. E. Howse, chairman.
R. R. Greene, general manager.

Walsall ... ... Councillor Somerfield, member of committee.
R. L. Horsfield, general manager.

Walthamstow ... Councillor R. G. Woolley, member of committee.
Councillor A. Attwell, chairman of finance committee.
W. Murray, manager.

West Ham ... W. Thorne, M.P., mayor.
Councillor Kensett, chairman.
Lewis Slattery, general manager.

Wigan ... ... Alderman R. T. Fletcher, chairman.
Councillor J. Walkden, vice-chairman.
F. Buckley, general manager.

Wolverhampton ... C. O. Silvers, general manager.

Mr. Sidney F. James, hon. solicitor of the association.

There were also present the following :—

Mr. James Devonshire, chairman of the Tramways (Board of Trade) Committee.

*Representing the Tramways and Light Railways Association.*

Mr. R. J. Howley, chairman, Tramways and Light Railways Association.

Mr. E. H. Edwardes, general manager of the Lancashire United Tramways Company, Limited.

## OPENING SESSION.

RECEPTION BY THE MAYOR OF LEICESTER.

The seventeenth annual meeting of the Municipal Tramways Association (Incorporated) was opened on Thursday morning, September 26, in the Council Chamber of the Leicester Town Hall, when the members and delegates were received by

**His Worship the Mayor** (Alderman J. North, J.P.), who said:—Mr. President, ladies and gentlemen, I had no idea that I was likely to meet such a large and imposing body as I see before me this morning. During the period that I have filled the position of Mayor of Leicester it has naturally fallen to my lot—and perhaps to a greater extent during the present year than at any other time in the last four years—to attend conferences which have assembled here for various purposes; but judging from the size and excellent appearance of this Tramways Conference this is the most important of any in connection with which I have had to discharge the pleasant duty which now devolves upon me. I do most gladly avail myself of the opportunity of extending to you a very cordial welcome to our historic borough. What I have to say about your appearance is, I think, to some extent justified by the fact that you have shown good judgment in selecting such an important town as Leicester for your conference. Now I have frequently said that we claim to have the best of everything in Leicester—the best officials and certainly the best committees, and whatever it may be we have the presumption or innate vanity to believe that it is the best, the last word. Now as far as the tramway undertaking is concerned, I am not going to say much. We are very proud of it in Leicester, and the people are quite satisfied; but I know you are such experts in the matter, and so capable of judging of the qualities of a tramway undertaking, that I am quite willing to leave that to speak for itself, with the assurance that you may to some extent share the views we entertain, although perhaps you will not be disposed to give us credit for all the vanity that we take to ourselves. Now it has never been my good fortune to be a member of our Tramways Committee. Perhaps from some points of view I am to be congratulated on that, because I have noticed that the Tramways Committee seem to be possessed of one outstanding weakness, and that is that they have never been able to give something for nothing, although I may tell you that that demand has often been made in Leicester, with a good deal of growling when wages have increased, and the cost of almost everything that is connected with the undertaking is enormously enhanced. The public have been accustomed to get very long rides for a penny, and to have the cars stop almost at their own doors, and everything which comes along to disturb the equilibrium results in the usual resort to the newspapers. There are protests, the committee are condemned, we are told that it is time to scrap it or that a higher authority should take matters into their own hands to get a higher degree of efficiency, that the public service should be the first consideration, and so on and so on. Therefore I frequently feel that I have been a very fortunate man in escaping the Tramways Committee, although that has not been a question of choice, but simply it has happened that circumstances have not made it possible for me to devote my energies to this important undertaking of the Corporation. Still I feel that the fates have been on my side and that there has been a good deal of compensation for any deprivation which I may have suffered through not belonging to that important body. I will say this, however, that the Tramways Committee are never likely to be unduly elated, or to have their vanity flattered by the praise they get either from the members of the Council or from the public in general. Whatever merits they may possess they have to take gratitude generally as unexpressed; and sometimes it is the case that the things about which we think the most and appreciate highest we keep within our own breasts and never express aloud. Now I believe it to be the case, and I think it should be stated on behalf of our Tramway Committee, that we have been excellently served.

I often wonder what we should do in these trying days, these exceptional days of pressure, were it not for the excellent service, for the skill and ability which are evidenced by those permanent officials who have charge of the working of this great undertaking. Were it not for their solicitude for the public convenience I am quite sure that we should feel after all that our grumblings and dissatisfaction that we are so ready to express are as nothing compared with the inconvenience we should suffer were it not for the efforts, the zeal, and the good judgment which are exercised both by the officials and by the Tramway Committee who are responsible for the undertaking. Perhaps at times we fail to realise the ease with which the public are conveyed from one side of the city to the other, and perhaps we overlook really what are the practical advantages of a good and efficient tramway service. I believe tramway systems have had in the past, and possibly will have more in the future, a large share of the credit for the removing of congested areas. I know that a large number of the industrial class of Leicester have thus been enabled to reside in the suburbs, where they have received advantages of health and sanitary convenience which mean so much both to themselves and to the right bringing up of their families—which means so much for the future of our race.

There is only one thought which comes into one's mind, and that is a regret at times that the cost of these advantages which are provided by the ratepayers do not always fall equitably on those who benefit. It is the ratepayers who stand behind any commercial undertaking. I am not going to enlarge upon the vexed question who are the riders who should be conveyed, whether the general public, regardless of their position whether they are ratepayers or otherwise, whether they should pay the net cost of every journey that they take; that is a vexed question. But the local ratepayers have to provide the facilities, or rather I should put it that they have to stand behind the undertaking. If by any chance there should be a loss—possibly there are some here who can call to mind some of the less fortunate towns and cities where the ratepayers have had to subsidise the funds of the local tramways undertaking (that has not been our experience in Leicester, I am glad to say)—that loss would be the ratepayers'. So I have always held myself that all these commercial undertakings should be conducted on strictly economical and business lines. (Hear, hear.) Well, then, we are confronted with this difficulty, that a big city is surrounded by small county authorities whose people enjoy all the advantages that come to property owners and to those outside local communities from the enterprise of the ratepayers generally in the adjoining town, in providing means of travel and so securing an increased rateable value, often to the loss and detriment of the tramway-owning authority. Now I hope the time will come when not only from this point of view but from other considerations also there

**The Mayor of Leicester,**
Alderman J. NORTH.

will be a more enlightened policy with regard to all these adjacent areas, that they shall be brought within the borough, be subject to one control, and shall participate in all the privileges and pay for all the blessings they enjoy. I believe that such a policy as that would ultimately add to the common good. However, I must not allow myself to drift into these side issues. I can assure you that it is in no perfunctory way, but as an honour and with great heartiness, that I extend to you all a cordial welcome to this town. In doing so, may I express the hope that you will confirm the good opinion that our most zealous citizens could have desired, that your meetings will be both profitable and interesting, and that you will be justified in the wisdom of your choice in coming to Leicester for your 1918 conference. I hope, in conclusion, that before you call your meeting again, in the good providence of God, the dark clouds which now overhang the world will be dispersed, and that we shall have established a permanent and righteous basis for that peace for which we all long. (Loud applause.)

**Mr. T. B. Goodyer** (general manager, Croydon Corporation Tramways).—I am sure we are all very much indebted to his worship the Mayor for the kind and cordial reception he has given us this morning. Later in the day we shall be partaking of the Mayor's hospitality, when there will be a better opportunity than the present to express our gratitude. I will simply ask you now to join with me in thanking him for his sympathetic words this morning. (Applause.)

**The Mayor.**—I am extremely obliged to you all, gentlemen.

# PRESIDENTIAL ADDRESS.

By Alderman S. FLINT
(*Chairman, Leicester Corporation Tramways Committee*).

Gentlemen,—Let me in the first place give you a very hearty welcome to Leicester. This is the first time our annual conference has been held here. I trust that the meetings may be interesting and profitable.

Some of you may not know much about Leicester. I may say that it is not of mushroom growth. It is stated on reliable authority that Leicester was founded by King Lear as far back as B.C. 800. There is proof that the Romans planted a military camp here in the centre of the town in the year A.D. 50. Some very fine specimens of old Roman pavement can be seen, and are well worth a visit. Also St. Nicholas Church is built on the site of an old Roman Temple. The great Simon de Montfort, Earl of Leicester, the champion of the people's rights and the father of English Parliaments, lived at the Castle in about the middle of the thirteenth century. The great Cardinal Wolsey died in Leicester Abbey. It was there he uttered those memorable words, "Would I had served my God as I have served my King; He would not thus have cast me off." The old Town Hall still exists where William Shakespeare produced some of his plays.

The town enjoyed the distinction for over 1,000 years of being called a city. I suppose we lost that privilege through having incurred the Royal displeasure. So much for its history.

The principal industries of Leicester are the manufacture of boots and shoes, and all kinds of hosiery. These goods are exported to all parts of the world. Many other trades are carried on, and Leicester may be considered a prosperous town, with a population of a quarter of a million.

The gas, electric, and tramway undertakings and markets are all owned and run by the Corporation. The two electricity stations are controlled by the Tramways Committee. Facilities will be given for a visit to these stations to anyone who may care to go.

Now I must leave local matters and come to subjects of a more general character, and of more practical interest to this conference. My remarks must be chiefly of a retrospective character, as I wish to emphasise the enormous amount of work done by your Executive Council during the past year. I have no hesitation in saying that the work and the strain have been much greater than during any previous period. New problems have sprung up nearly every month. Fresh claims have been made upon us from one quarter or another demanding the special care and attention of your Executive Council and involving considerable labour on the part of the officers.

I should like to make special reference to the burden placed upon your secretaries, first Mr. Fearnley, then upon Mr. Spencer, our present secretary; and here I should like to say that while we congratulate Mr. Spencer on his recent appointment, we shall be exceedingly sorry to lose him as a member of our association, for he has rendered us very valuable services for many years past.

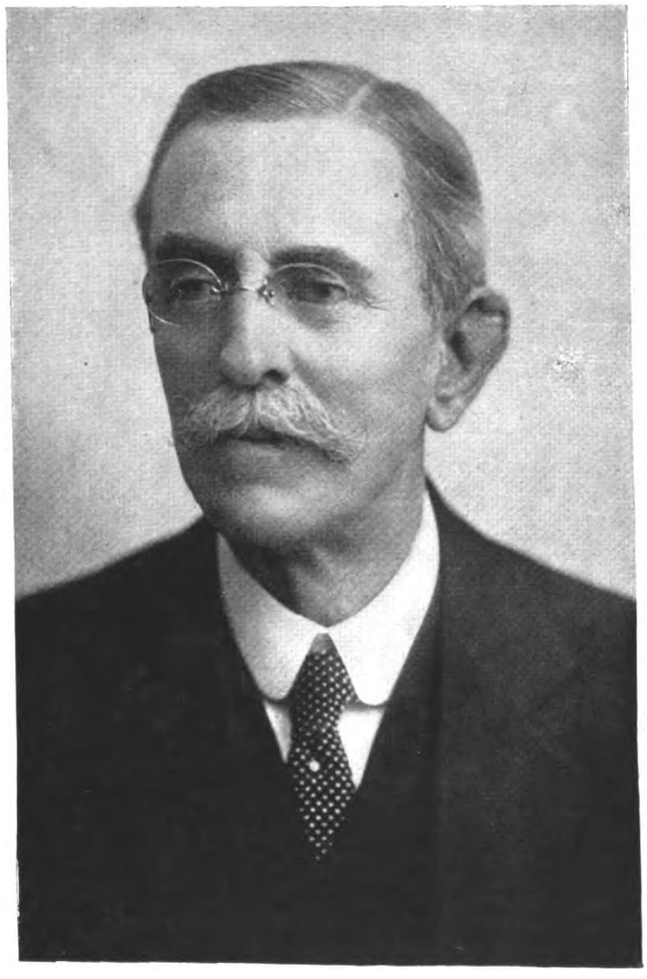
May I say here that the secretarial duties of this association are becoming so numerous and so heavy that unless extra assistance is given I am afraid that no one will be willing to accept the post. I therefore wish to urge that your Executive Council be empowered to make suitable and adequate arrangements for carrying on the work of that office. Mr. Hamilton and Mr. McElroy have also rendered signal service to the association during the year, and I might individualise further, but it is difficult where all have done their best.

I consider that we may congratulate ourselves on the general result of our labours during the year.

I should like now to refer briefly to a few of the more important matters that we have had to consider since our last annual meeting.

The twin questions of coal conservation and electric power supply, and the Parliamentary reports thereon, have raised discussions of immense interest and importance, and will continue to do so in the immediate future. I therefore suggested that Mr. Hatton, of Newcastle, should be requested to read a paper on this subject, and he has kindly consented to do so. He has given much consideration to the matter, and with his experience and ability I am quite sure he will have something very interesting to tell us. Those who have read his pamphlet on the Report of the Coal Conservation Parliamentary Committee will be eager to hear this paper also.

Another matter of considerable importance that has occupied much time and consideration of your Executive Council has been the creation of Joint Industrial Councils as suggested in the Whitley Report. This matter is very much to the front. It is being taken up by nearly all the principal industries in the country, and the Ministers of Labour and Reconstruction are urging its importance. We have had several conferences with the men's representatives, and the outlines of a scheme will be submitted to you for your consideration. The object as set out in the Whitley Report is to improve the relations between employers and employees—a most desirable object both now and after the war.



**Alderman S. Flint,**
*President, Municipal Tramways Association.*

The continued advances in wages and all classes of materials have placed heavy burdens on many of our undertakings, necessitating further increases in tramway fares. Those municipalities that have hesitated or refrained from taking action in this respect are in some cases faced with probable deficits when making up their annual accounts. Of course it is disagreeable and always unpopular to increase charges to the public, but in the interests of sound finance it should be done under present conditions, without undue delay, where it can be done.

In many cases it has been found that it could not be done unless the statutory limits were raised or abolished.

You already know that we have had joint conferences with the Tramways and Light Railways Association on this matter. Joint deputations secured interviews with the Board of Trade, with the result that Parliament has given authority to the Board of Trade to raise the statutory limits under certain conditions. Whether these conditions meet the case for our purpose is for this conference to consider and decide.

An application for a further increase of bonus of 12½ per cent. was put in by the National Transport Workers' Federation on behalf of the Amalgamated Association of Tramway and Vehicle Workers. It was an application on behalf of women as well as men. The claim was submitted to the Committee on Production, and after a long hearing, during which the case was put forward elaborately for both sides, the men were awarded 5s. per week increase of bonus, whilst the claim on behalf of the women was not established, and was therefore dismissed.

To our surprise and regret an appeal was made against the award as regards the women, and although this part of the case was fully argued and considered before the award was given, the Committee on Production after further consideration granted the 5s. extra bonus to the women the same as to the men, thus reversing their former decision, in spite of the fact that it was clearly proved that it costs much more to run the cars by women than by men.

Digitized by Google

This raises a very serious question. If one side to an arbitration is allowed to appeal against an award, then the other side may claim the same right, and that may lead to serious results.

In this case also our thanks are especially due to Messrs. McElroy and Spencer for the manner in which they presented our case. We all desire that our employees shall be well paid, otherwise we cannot expect to be well served. We are not out for cheap labour. Compared with other industries we can say that our employees are all in receipt of good wages, and working under good conditions.

Another matter of considerable interest was the appointment of the Tramways (Board of Trade) Committee. To be quite frank, I was not very favourably impressed with this proposal from the first. Perhaps I am over jealous for the freedom of our municipalities from red tape and central control, especially in the management of their trading undertakings. The avowed object for the appointment of this Committee was to assist our undertakings in securing sufficient labour and materials to carry on our work. If that is the chief object, then good only should result from it.

The success of the municipal tramways of this country has been obtained not so much by Government assistance as by local enterprise and effort, and I am rather alarmed when it is proposed to set up other authorities to exercise control over them.

I have referred to various matters that have claimed the attention of your Executive Council during the year more fully perhaps than could be dealt with in the annual report, because I want you to know the extent of its services.

I have no inclination, even if I had the time, to speak at any length of the future, but all the indications are that we shall have to carry on under greater difficulties than any we have yet had to face.

The greatest of all wars still casts its black shadows over us. Besides the difficulties that face us in our public work, most of us have private difficulties and sorrows to meet. While we earnestly pray that peace on a sound and permanent basis may soon be restored to us, let us meanwhile do all we can, individually and collectively, to assist the Government in carrying on the war to a successful issue.

In conclusion, may I again thank you for electing me to the honourable position as President of our Association. My thanks are also due to the other officers and to the members of the Executive Council for their cordial support in the various matters that have come before us; and I trust that in the coming year this association may not only justify its existence, but that its usefulness may be extended in many directions, and that in all our undertakings there may be harmony, co-operation, and respect between employers and employees.

**Councillor C. Raine** (vice-chairman of the Hull Corporation Tramways Committee).—I have been signally honoured by a request to move a vote of thanks to our esteemed President for his excellent address. It were better had the task fallen into abler hands than mine, but I take the honour as a very great one. Listening to the address, the first thing that occurs to one's mind is the great and ancient town in which we have gathered. I had no idea before hearing the president's address that Leicester could claim such a far away history as it does. While the President rightly claims a good deal of credit for the ancient history of his town I am glad to remember that Leicester, unlike some towns and cities I could name, has not been satisfied to rest on its laurels as an ancient city or township. But I think those who come from what is called the hardy North particularly have looked upon Leicester for a long time as a quite up-to-date, progressive business town. Leicester, with such a long history behind it, has not merely rested on that; but the citizens have been dissatisfied, if I may use that term, and they determined that they would keep themselves up-to-date. They are known and noted for several industries; these have been mentioned in the presidential address. They have other reasons for being notorious in England, but one of them I dare not mention here. (Loud laughter.) Referring now to our work and the more serious part of the day's proceedings, this conference is the seventeenth annual gathering. But I think I can claim, and I think all here will agree with me, that there never has been a conference of tramway representatives at which more important business has had to be considered, where the importance and value of the collective wisdom of the delegates are so much in evidence. As the President has very truly said, and I have had the honour on several occasions lately to foregather with the executive in London, there never was a time in the history of the tramway undertakings of this country when so many and so difficult problems have had to be faced and in some cases overcome. It is not my intention to-day—because, perhaps, we have met for more serious business than that—to dilate upon the presidential address itself; but reference has been made to one subject that I think we ought for one moment to consider, particularly in the light of what has happened this week in the railway world. I am glad the President has drawn particular attention to the position in which we find ourselves after an award that, as he said, was given due consideration. The arguments were put from both sides fairly and fully by our representatives, as they were by the representatives of the men, and to our sorrow and to our regret, after the two parties agreed to abide by the award, we found ourselves in the unfortunate position of having that award reopened by a request from the women. One could have wished, and the wish was expressed most strongly at the executive committee, that we had been strong enough to insist that an award, having been given under proper conditions, should have held good for a reasonable time. Things are shaping just a little better now than they were yesterday. I may also say in passing while we have had many difficult questions to deal with in the past, in my opinion, as in yours, Mr. President, we are not near the end of our troubles. A good many questions of great difficulty are likely to crop up. Without trespassing further on your address, or anticipating any of the discussions, I should like personally to thank you for the able manner in which you have covered the whole ground of the work of the executive on the various problems that had to be dealt with during the year. In the name of the delegates and members present I beg to move that the best thanks of this large gathering be tendered to you for your admirable address. (Applause.)

**Mr. Baillie Montgomery** (convener of the Glasgow Corporation Tramways Committee).—I have great pleasure in seconding the motion. Councillor Raine has spoken at some length, so I will not say more than that we are all delighted with your address, which will be a great stimulus to us in our proceedings during the conference. (Hear, hear.)

The motion was carried with acclamation.

The PRESIDENT.—I thank you, gentlemen, for the very kind vote you have just passed.

# SOME NOTES AND CONSIDERATIONS ON THE POST WAR POSITION OF ELECTRIC POWER SUPPLY.

By ERNEST HATTON.

(*Engineer and General Manager, Newcastle Corporation Tramways.*)

Entering so closely as it does into the daily life of the majority either in domestic requirements, industries, or travelling facilities, the production and distribution of electric power calls for the most careful consideration of the public.

In its inception electricity was primarily regarded as an illuminant, and not until the advent of street traction did it make much headway on a large scale in this country. From this period, however, round about 1900 it made rapid strides as a motive power, due largely to the fact that now for the first time production on a large scale with correspondingly reduced costs brought it within the field of competition with other well-established sources of motive power. The power companies in the North-East Coast area are amongst the foremost in rapid development, due to the exceptional facilities in this area and wide range of action in their operations.

Municipalities, however, not enjoying these advantages were compelled to adopt a more cautious policy in the expenditure of the ratepayers' money. In addition their efforts were regarded by many as encroaching on private enterprise, and in a measure this also had a retarding effect. This view is now fortunately changing. The limitation of local areas also was too restricted, and in the event of a local authority desiring to break the bounds, local feeling was invariably created which as a rule could only be appeased by concessions in some form or another, thus adding to the costs of power production and generally retarding the sale of electric power in keen competition with other sources of mechanical energy.

This great war, however, has caused searching investigations into the policy and methods in vogue in this and other countries with results not flattering to those who have hitherto guided our destinies or to the enterprise of ourselves generally, and now we all appear to be seized with a strong desire to put the industries of the country upon a proper basis. Let us hope that we do not cool off in our endeavours when times are more peaceful, and give way to a strong desire to slow down after the strenuous times we are now living through and again adopt the policy of letting "well" alone.

These investigations into our past efforts have produced two reports on electric power production, which, whilst condemning us for our apathy, contain many valuable suggestions. It would, however, have shown a better spirit if some of the insinuations regarding the past efforts of municipalities had been omitted altogether, and it would also have ensured a better reception for these reports. Another objection to these reports is that implied benefits that will be derived from their complete adoption appear too rosy, and has the effect of inducing many estimable people without sufficient technical knowledge into believing that they are about to receive something for nothing or electric power at impossible figures, for the present at any rate.

Now electric power and most other commodities can be produced very cheaply in large quantities with proper facilities in most large commercial centres in this country, but after production must be taken or distributed to consumers requiring a supply, and it is in the economical distribution of such commodities or keeping middlemen's profits within reasonable limits, which ultimately determines

Digitized by Google

the price of any article (leaving out of consideration dumping policies, to which electric power supply does not lend itself). The cost of electricity as between producer and user is therefore largely influenced by the charges on capital outlay in bringing the product or supply to the user. In our large cities the costs incurred in taking up and relaying street works is a very heavy item of expenditure, and after all we must not forget that streets are made primarily for the use of the public and transport services, and must therefore be constructed and maintained with this end in view, and whilst from lack of foresight in not laying mains of a greater capacity in the early stages of development, and thus saving expenditure on street works at later periods, one has at the same time to keep in mind the annual charges from too venturesome a policy in this direction.

In the future laying out of trunk roadways, when possible space should be left at the sides to accommodate electric cables, etc., and arranged so that the cost of taking up and relaying would not be expensive. These spaces could in many cases be made ornamental and pleasing to the eye at small cost to the community.

The policy pursued in most towns in this country has been to have one authority responsible for production of electric power for general commercial uses, light, and traction supply, and it is alleged by some critics on the subject that the traction supply has been overcharged to support the sale of power to other users at lower charges than were warranted by the circumstances at the expense of the traction authority.

With certain exceptions I think this argument can be conceded, as without the traction demand, certainly in the early stages, the power production in some cases would have cut a poor figure, but looking at the subject from a wider view, where the local authority is the owner of power supply and traction, and where the surplus profits, if any, go into a common fund, is there any reason or argument against the one helping the other, at any rate in the initial developments, for in almost every case of traction in the early stages, when working costs were very much less than such figures reached in 1914, the traction scheme was invariably a paying proposition.

Now if that traction authority had produced its own power, it would as a rule have obtained its supply at a less inclusive cost than purchasing it from some other committee, the result being that the surplus profits of the tramway would have been greater (it must be granted that there were few traction schemes in the early stages that did not make surplus profits). There would therefore have arisen demands for still further reductions in fares and other concessions, and with the continual increase in the costs of operation a point would have been reached earlier when the fares would materially have had to be increased or the upkeep of the undertaking neglected. At the same time the adoption of the separate policy of power production would have left the Electric Supply Committee struggling to make ends meet if at all, with unfortunate results in many cases. By a combined policy, however, where municipally owned this stage has been in most cases safely passed with benefit to the community of that town.

It, however, must not be overlooked that the separate policy of some tramways owning and producing their own power did stimulate the desire and efforts of the advocates of the combined policy to produce power at lower costs; hence the policy of competition in all matters affecting public life must not be lost sight of when considering the ultimate welfare of a country.

Having dealt generally with the power supply up to the present time, we now come to the proposals in the two reports formerly mentioned. These reports insinuate that we have only in the past been dealing with the subject in a playful mood, and that if we do not now alter our methods we shall be hopelessly left behind by other nations. Criticism, however, on our past conduct does not get rid of our annual charges on existing undertakings, and these charges, coupled with the new annual charges on capital account on the proposals in these reports, will ultimately be the measure of our future success and charges for electric power, reduced of course in proportion by the influence that increased output will have if these schemes are developed. At present, however, this is an unknown quantity, but must subsequently be very great. Even then, however, we must bear in mind that wages and everything which counts in the production of electric power, will for many years be a determining factor upon cheap power supply, so that in some cases it may, even under the most favourable circumstances, be some time before we again get inclusive prices per unit which will compare with the charges made in 1914, but in the years to come if the schemes, or some modification of them as outlined in the reports, are adopted, it must ultimately lead to a general reduction in charges to the great benefit of the country.

I have been regarded by some technical journals as a reactionary because I dare differ with some of the suggestions outlined in the reports referred to. In many respects I think there are better ideas formulated in the first report than in the second. They are certainly more original, and have greater possibilities. What I deprecate is the too rosy view put forward in matters of this kind, leading even estimable people to believe that within a few weeks at most they will have a power supply at extraordinary cheap prices, and even if you try to convince them that it is not so, they mark you at once as a reactionary.

Any scheme worthy of support (and these schemes are) should never require puffing. Sane argument alone, without trimmings, is the factor which always appeals to the intelligent.

Now any scheme of general power supply if it is to be a success must within a reasonable period, by its more economical working and production on a large scale, be able to carry on its back the annual charges upon the plant which will be superseded or closed down by its adoption, and it seems to me that much of the plant which will be superseded in some areas under the proposed schemes could well be transferred to areas with lesser immediate demands, and be in the meantime used with advantage, or suitably disposed of, leading to great capital saving and consequently lower annual charges upon the accounts, and the subject therefore in the first instance requires an impartial survey of the proposed areas, the plant requirements for the area, and the best use some of the existing plant (which must make way for plant of greater capacity) can be put to in order that the new capital charges can be kept within reasonable limits. Where demands are heavy, of course, the existing plant will have to be kept in commission until the larger and more efficient plant decided upon for the several areas can be brought into operation, and therefore these matters should be decided without delay, and a programme for each area could then be settled, and with a clearing house for making the best use of existing plant superseded under these schemes the greatest economy in capital expenditure would be obtained.

It is important to remember that with the introduction of electric traction in this country the ability of the new system to carry on its back existing expenditure on horse traction was a vital factor, and when it was clearly demonstrated by results that electric traction could carry the existing capital charges of the obsolete horse traction out of the additional revenue and profits from its operation, the electrification of tramways forged ahead with results now well known to us, and I believe with care and foresight in development the establishment of a general electric power supply on a large scale will have the same beneficial results.

Overlying, however, all the foregoing there is the policy to be pursued by the controlling authorities with regard to the railways of this country, for if the authorities have, or are about to decide, upon the electrification of the railways of this country after full consideration of all national requirements—if this course is eventually to be adopted, then the whole policy of the country with regard to electric supply will require to be treated from a wider standpoint altogether. Now obviously if this is the intention and future policy of the country, commencing with the electrification of the branch lines or local railway services in populous areas, and the more general electrification policy following on this, then it is apparent the existing stations with their plant, whilst no doubt suitable for ordinary commercial purposes, would not, either in plant capacity of their existing units or general location of the station in many cases, be suitable for the larger purposes under review.

Following on the above, take the case of an isolated town with its own power station working economically according to its present demands, say located on the main line of any of our principal railways, should that main line of railway subsequently be electrified, then rarely would it be advantageous to extend the small local power station to meet the larger demands unless it was most favourably situated in regard to the essentials for cheap power production on a large scale, but generally we should find the most advantageous way of dealing with such a case would be to shut down this small local station as a generating centre, and to make it a sub-station of the greater electric supply to the railway system passing through the town. It is therefore vital to deal with this subject in its broadest and truest sense that some declaration should be made by the authorities at the earliest possible moment, as it would undoubtedly allay many conjectures and cause a concentration of thought upon the whole problem from a national point of view with beneficial results, inasmuch as it would allay the local jealousies of each municipality desiring to grab a super power-station within its own area, as they would quickly realise there are only certain places where such stations or groups of stations can be economically located, and that is where the chief essentials for cheap power production on a large scale are situated to yield the greatest economies to that area, all things taken into consideration.

Once the foregoing main principles are decided upon all other considerations will follow as a natural consequence.

If the railways are electrified then it will bring power supplies into almost every area in this country, since it is so well served by railways, with great advantages in the future to street and road traction services, etc. Some areas, due to their possession of the essentials and location, will be able to produce power at lower costs than other areas not possessing these great advantages, and it is a matter which should receive the closest attention of the authorities as to whether standard rates and charges should eventually be set up; in other words, should a universal rate be adopted or differential rates in areas? In the event of differential rates the tendency will be in the future for intense development in some areas where undertakings will gravitate to those areas supplying power at the cheapest

Digitized by Google

rates, whereas I am of the opinion that general development all over the country should be encouraged instead of intensive developments in some areas. This would ultimately give the greatest benefit to the population, especially with regard to housing, etc., and food supplies.

If the controlling authorities are satisfied that the electrification of the railway systems of the country is desirable, then this policy will lend itself to the most active and advantageous method of setting up a general power supply all over the country, touching as the railways do almost all centres of population and industry within reasonable distances, and as a rule providing the shortest routes and cheapest opportunity of laying main trunk supply cables.

Again, some areas will have the advantage of waste heat from certain manufactures and processes, and where possible the erection of such works having a surplus of waste heat which could advantageously be used in the generation of power, should be encouraged in areas not now enjoying these advantages. This is a matter that may require the parental control of the Government of the day, which, with the experience gained in the past few years, should enable them to give practical advice and assistance in this direction.

Where possible the more general setting up of the main industries of the country over larger areas the less would be spent in railway rates by transit from one area to another on partly finished goods, and if the raw manufactures of an area could finally be finished in that area, then transit from inland places to seaboard on finished products is not a serious handicap. All charges on unfinished goods from one part of the country to another for final manufacture does add to the price of the articles when finished. These considerations

**Mr. Ernest Hatton.**

have also a great bearing upon the production of cheap power, and the above conditions should be aimed at within reasonable limits.

I am of the opinion, having in mind the existing electric power developments of the North East Coast, that an area embracing the North Riding of Yorkshire and the counties of Northumberland and Durham should be chosen, in the first instance, for a practical demonstration of the policy of general power supply operating over a large area under one authority, and the experience gained thereby would be of the greatest benefit to other areas of the country.

The constitution of the Power Boards set up in the areas should in every case have a majority control of public representatives elected by the area, together with the representatives of large consumers.

All generating stations in the area, together with the main transmission system of the area, including the power supply to railways and all public bodies, should be under control of the Board, but those localities or towns where preference is in favour of local distribution should, in the first instance, be allowed to act in that capacity only, but in any case the power generation and supply mains must for obvious reasons be under the complete control of the Power Board.

There will, of course, as in all matters, be certain exceptions where the proposed taking over of some existing power-stations will point to no further economies from such procedure, and in these cases special consideration should be given.

All the foregoing desires and aims must take time to accomplish, but their adoption should ultimately lead to the greatest good of the community. In the meantime, however, we will have to do our best with the existing conditions to meet the competition in the world's manufactures, but no time should be lost by the controlling authorities in deciding a policy, so that an embracing programme could be drawn up with reasonable chances of being carried out in the immediate future, and thus put the whole country and not a part of it only in the position to withstand the severest competition which must follow the post-war period of heavy demands in most trades and industries, whilst good prices will be the rule, and we should then at the end of the trade boom be in a better position when prices fall of holding our own with the manufactures of other countries.

## DISCUSSION.

**Mr. J. M. McElroy** (general manager, Manchester Corporation Tramways).—If any excuse were needed as to why this Association should interest itself in the future of the electric power supply of this country—a matter which is being fully considered by other kindred associations, particularly by the I.M.E.A.—it is only necessary to state that we are vitally concerned as regards the proposals which are now receiving the Government's consideration because at least 25 per cent. of the total output of the power-stations in the United Kingdom is used for tramway purposes. It cannot therefore be considered out of place if at the outset we approach this subject as an industry which provides our friends, the central station engineers, with the largest (and, shall I say, the best paying ?) class of customers they have got. There are 176 tramway undertakings in the United Kingdom—93 municipal undertakings and 83 company undertakings. These undertakings are using about 620,000,000 units per annum, which, as I have already stated, is rather more than one-fourth of the total output of the United Kingdom for all purposes. Of the total consumption for tramway purposes 79 per cent. is used by the municipal undertakings and 21 per cent. by company undertakings. Now, some tramway systems have their own power-stations, and it may be interesting to compare the number of such undertakings with the number which take their energy from combined stations. Out of the 176 tramway undertakings, 38 have their own power-stations and 138 purchase their energy. This does not give a true relative figure, because I find that, when looked at from the point of view of consumption, 50 per cent. of the total consumption for tramway purposes is generated by those undertakings which supply their own power, and 50 per cent. is purchased from combined stations. In this connection, however, it must be remembered that those undertakings generating their own supply include the London County Council. If the London County Council were excluded, it would alter the figures to the following, namely, those taking supplies from combined stations, 61 per cent., and those supplying their own power, 39 per cent. The question as to whether tramways were justified in providing their own power-stations was discussed *ad nauseam* in the old days. At this stage we need not go over the old arguments ; but we must admit that the whole situation and outlook has altered since the days when the controversy on this subject was at its height. On theoretical grounds it was argued by many central station engineers and others that, by taking supplies from combined stations, tramways could be more cheaply supplied than by installing their own power-stations. But broadly speaking, actual experience in the past has not justified these predictions. I am voicing the opinions of many tramway managers in saying that in certain towns the tramway authorities have been called upon in the past to pay prices which could not be justified when compared with the prices charged for energy supplied for industrial purposes, having regard to the relative load factors. In this connection it will be remembered that in the year 1911 the two associations, the I.M.E.A. and the M.T.A., prepared jointly a scheme settling the principles upon which the charges for traction supplies from combined stations should be based. I have just sent out a query to all the municipal undertakings with a view of ascertaining how many have had the price fixed in accordance with this basis, and I find that practically none of the towns has adopted the scheme. This is significant, and it would be interesting to know why. Mr. Hatton asks if there is any reason or argument why the traction side of the business should not help the power side in cases where the surplus profits go into a common fund. There is a strong suspicion among tramway managers, fairly well founded, I fear, in some instances, that in order to develop the power supply side of the business exceedingly low prices have been charged to power consumers which would not have been possible had it not been for the high prices the tramways have been called upon to pay. A cheap supply of electrical energy for power purposes is all-important in the national interests. But to develop our industries by the supply of cheap power obtained at the expense of the millions of workers who use the tramways is a form of taxation which is altogether wrong in principle. In thus drawing attention to the relations which have existed in the past as between power supplies for industrial purposes and supplies for traction, I may be charged with taking a narrow view of the situation, and having a limited outlook at a time when a " hill-top " view is necessary if the supply of electrical energy for industrial purposes is to be developed along proper lines in the national interest. This charge, if made, will not be justified. I am out for the development of the power supply in a way which will benefit all industries, including tramways ; and in this connection I welcome the two valuable reports which have

Digitized by Google

been issued on the electric power supply of the country. The first report was made by the Coal Conservation Sub-Committee. Many points in the report are no doubt open to criticism, but its main conclusions are worthy of favourable consideration. It advocates the appointment by the Government of a Board of Electricity Commissioners with full powers to direct the development of the electric power supply throughout the country. These Commissioners, the report suggests, should have power, *inter alia*,

1. To stop the extension or multiplication of uneconomical stations for public supply.

2. To arrange for the handing over on equitable terms of the generation, transmission, and main distribution systems in each of the areas into which (the report suggests) the country should be divided, to a new electricity body appointed for that area.

3. To standardise for each area the frequency and voltage of the main transmission and distribution system.

When the report was presented to Parliament, it was prefaced by the following note of the Minister of Reconstruction :—"It will be observed that important issues affecting municipalities and public bodies are raised in the report. They will be explored in all respects by the Government before any action is proposed to Parliament upon the subject. In its legislative aspects the whole matter is being investigated by a committee appointed by the Board of Trade and presided over by Sir A. Williamson, Bart., M.P."

The report of the Board of Trade Electric Power Supply Committee is dated April 29, 1918. I don't know whether all the members of this Association have read this valuable report, but I think it would not be out of place for me to read the final recommendations which were unanimously adopted by the members of the committee. They were as follows :—

(*a*) That a new body to be called the Electricity Commissioners should be set up, to whom should be transferred the existing powers of the Board of Trade, Local Government Board, Local Government Board for Ireland, and Scottish Office, relating to the supply of electricity, and to whom large additional powers should be given for regulating and encouraging the generation and distribution of electricity.

(*b*) That the Electricity Commissioners should, subject to an appeal to Parliament, in certain cases have general control over the generation and distribution of electricity in the United Kingdom.

(*c*) That the existing system under which electricity is separately generated for small areas should be abolished.

(*d*) That the Electricity Commissioners should, after local inquiries, divide the United Kingdom into districts technically suitable for the economical generation and distribution of electricity.

(*e*) That in each electrical district a District Electricity Board should be set up which should purchase all generating stations of authorised distributors, whether local authorities, companies, or power companies.

(*f*) That the District Electricity Board should be responsible, by themselves or their lessees, for the future generation of electricity in their district, and for the establishment of new generating stations and proper systems for the main transmission of electricity in their district.

(*g*) That existing electrical undertakers should, if they so desire, retain their power of distributing electricity within their local areas, but should purchase electricity in bulk from the District Electricity Boards or their lessees, due provisions being made for controlling the profits of distributors so as to ensure a cheap supply of electricity to consumers.

(*h*) That District Electricity Boards should make no divisible profits.

(*i*) That District Electricity Boards should be financed, in whole or in part, by funds raised with Government assistance, except where it is shown to be desirable and practicable to finance the Boards locally.

I may be excused if I read one or two paragraphs from the Committee's report :—

> "There are to-day about 600 bodies generating electricity for public purposes, apart from the large number of manufacturers, collieries, and others generating their own power. We have no doubt that these separate stations can be reduced to a relatively small number in the course of time, and that the country will greatly benefit thereby. Past and present conditions have encouraged manufacturers to set up small independent installations, in the belief that it is cheaper to generate electricity themselves than to buy it from existing public electricity undertakings. Most of these independent small plants involve an unnecessary expenditure of capital and comparative waste of fuel and labour. The parochial system of generation and distribution should give place to more economical methods, involving wider areas of distribution and the combination of diverse kinds of industry in order to obtain the fullest use of larger generating plant. It may be laid down as an axiom that, in order to ensure a cheap supply of electric power for all consumers in industrial districts, all should unite in taking their supply from a common system."

Again, take another clause illustrating the lack of centralised control :—

> 13. "Owing to the chaos of different systems, and the absence of any attempt to standardise pressures and frequencies, co-operation between neighbouring authorities is difficult and expensive. In London, for example, there are seven railway and tramway systems which generate electricity for the purposes of traction at differing frequencies—one at 50, two at 33⅓, and four at 25—thus rendering exchange of electricity between them impracticable except at the great expense involved in converting it. Again, there are in the area of Greater London 70 authorities who supply electricity to the public, and own some 70 generating stations, with 50 different types of system, 10 different frequencies, and 24 different voltages."

The main proposals of the committee, namely, first the setting up of a national authority for directing the general development of electric power supply throughout the country; secondly, the setting up of District Boards for wide areas to deal with all generation of electrical energy within such areas, are, I think, sound principles which those best qualified to judge will not dispute. The details of the scheme will have to be carefully considered when we see exactly what steps Parliament proposes to take to give effect to the committee's recommendations. Particularly shall we have to consider the financial side of the proposals, and the question as to who will be eligible for appointment on the District Boards. Something will have to be done—and done quickly—to deal with the present unsatisfactory position of the electric supply industry and to direct its future development. To continue the present wasteful condition of affairs is against the national interests, and if we are to keep our end up in competition with foreign countries a cheap supply of power is of the greatest importance, and the development of the power supply, if we are to get the best results, should be directed nationally and not from the point of view of the "parish pump."

**Mr. H. Webber** (general manager and electrical engineer, Keighley Corporation Tramways).—I quite agree with the remarks of the two gentlemen who have introduced this subject to the conference, but I do not know that we can anticipate any results in the immediate future. There is no doubt that all existing undertakings have suffered from the standing charges which developed as they grew up owing to the rapid change in the method of dealing with electrical energy in various phases, and this new scheme is going to be burdened with a tremendous capital expenditure. It will not only have to compensate local authorities for their generating plant in existence now, but the promoters will have new stations to put down, and there will be a tremendous length of either underground or overhead feeder cables. Moreover, there is the moot point as to whether the transmission losses will not almost equalise the transit of coal by railways. If that is so, the great advantage of having the main generating station near a colliery will be almost counteracted. We all know that the North-East Coast for some time has had a big power company developing on lines very similar to those proposed in these schemes. I do not think they can supply electrical energy much cheaper than we are supplying it at Keighley. For some considerable time before the war our average price was ½d. per unit; and it has been proved with a station comprising 6,000 kilowatt single units, well situated and run economically, that a large station is not going to be much improvement on steam consumption, although the saving of labour may be considerable. Another point is that, if there is a big breakdown in one of these super-stations, you will certainly have more serious results than with present conditions, where the supply is split up in a number of smaller stations. That will be a consideration that will have to be borne in mind. They will have to duplicate their trunk feeders, probably two or three times, to avoid what might be almost a national calamity. I believe that in the long run the scheme would develop into a satisfactory working organisation for the benefit of the community, but I do not think they should rush it. It almost amounts to requiring a Ministry to deal with this matter when it gets on to its feet. I do not think the scheme as put forward is large enough or comprehensive enough to deal with what it will develop into. If trunk cables are going to be run alongside the whole of the railways, and the railway system of this country electrified, the business will be a tremendous one. I had a considerable experience on the North-East Coast before I went to Keighley, and know what the Newcastle Power Company have done in that district, but they have not been able to sell power at exceptionally cheap rates; not much cheaper than we have managed to do at Keighley, although, of course, we are pretty well placed for coal, well placed for water, and the town has about 30,000 to 40,000 horse-power in a compact little area. So that it will be a moot point, taking a case like it, whether they could shut our generating plant down and do better by giving us a bulk supply from perhaps 20 or 30 miles distant.

**Mr. H. P. Stokes** (general manager, Bexley Council Tramways.—This matter which we have under discussion is one which I am afraid is rather likely to get into local narrow circles, yet it should be looked upon entirely in its broad outlook from the national point of view. The principal point which we have to consider,

Digitized by Google

and which I take it the Government is considering at the present time, is the utilisation of the resources of our mineral wealth, and this paper deals with it primarily as far as coal is concerned. Generally speaking, engineers, in looking upon the proposals put forward, still do so with a narrow and prejudiced outlook, thinking only of our present ancient methods which fail to utilise the most valuable elements in these resources. We must look upon the whole subject from the point of view that coal has been most extravagantly and wastefully used, although it is a material which should be dealt with as the most valuable asset which the nation possesses. Coal must be used in a very much more economical way than it has ever been used or can be used with our present methods of converting it through steam into electricity. We should go forward first of all on the lines of utilising the coal itself to its utmost advantage, first taking from it all the valuable properties it contains, and eventually arriving at that stage when the residual can be turned into electricity and looked upon as a cheap by-product which can then be almost given away. Now there is one other feature connected with the electrical side of the business of which I think we ought to be a little suspicious. We are too apt nowadays to think of everything in standardised form. We have standard ships, standard clothing, standard boots; there is an absolute mania of standardising everything at the present time. Now, electrical energy, as it is used in various industries to-day, cannot be confined absolutely to one particular form. It can be utilised in many different ways, and each of these different forms of energy in themselves represent peculiar advantages for certain processes. It seems to me instead of adopting an absolute standard throughout the whole of the country, it might be advisable, at any rate it is worth considering, as to whether some special standards might not be set up in certain areas. But in arriving at standardisation you can consider it on broad lines, though not too binding. Take, for instance, railways and tramways, the ordinary transport services. You could have a standard form in connection with them, standard pressures for light, but you must also go on and have other standard forms for dealing with peculiar phases in industry. And so to begin with, one standard which is to be applied willy-nilly throughout the whole business, I venture to suggest, would be a somewhat wrong line to go upon. Standardise by all means, but at the same time let your standardisation be sub-divided to a certain extent in order to meet all the national requirements without fettering scientific progress. I have read both these reports, and although one can always criticise individual paragraphs, I think we should look upon it more from the broad standard as to whether it is in the national interest or not. I must say that I agree with Mr. Hatton himself, as the first report appeared to me to deal with this on its prime basis, that is the question of coal; but even that in my opinion somewhat misses what I look upon as the most vital point in connection with the whole business—the utilisation of coal for all it is worth first, and letting electrical energy be one of the side issues which emanate from the good utilisation of that invaluable material. (Applause.)

**Mr. W. Murray** (manager of the Walthamstow Tramways).—I hesitate to intervene in this discussion because I have not got the necessary technical knowledge to judge properly of the engineering problem introduced in the scheme. But I take for granted what I have heard as the general consensus of opinion of electrical engineers, i.e., that, so far as the engineering point of view is concerned, the scheme is a desirable one and a good one. With regard to the financial aspect, I think it is more open to criticism; and there are some points in the Board of Trade Committee's report to which I should like to refer. I shall not elaborate them, but merely mention them in the hope that some other speakers who have technical knowledge of the subject may give us some further information or some guidance. Of course this matter is of prime importance; but at the same time we want to see before this national scheme is launched that it has at least a fair prospect of success. In reading through the committee's report the first thing that strikes me is this, that the whole success or non-success of this scheme depends on what is done with the present generating stations once they are taken over. Are they to be scrapped? Because, if so, the new scheme is going to be handicapped with an enormous burden of debt which I think will go a long way to prevent it being possible to supply electricity at a low figure and avoid a serious financial loss. Of course I know that Section 31 of the report suggests that the present stations are to be continued, that they should be linked up and run so long as they can be run efficiently and economically. But later sections in the same report seem to avoid this point, and to indicate that there is an intention at once to set up these super-stations, and to scrap existing generating plants. Now, as I have said, I think that the failure or the success of the scheme depends upon the policy adopted. If the Government act wisely in launching the scheme, then there is a reasonable chance for its success; if they act mistakenly I think grave financial disaster is sure to follow. Now a point has been raised by a gentleman on my left which had already struck me as a comparative outsider, i.e., the saving effected in generation is there not a danger of its being lost in the increased cost of distribution? In London, and I presume in all great cities, there is the costliness of laying mains. The difficulties in dealing with an intricate network of gas mains, water mains, telephone cables, and other things makes the expense of main-laying exceedingly great, and then the reinstatement of the roadway comes on top of that. I should like to hear the opinion of some technical expert whether there is not a possibility of the gain at one end of the question being lost at the other. Then if a loss is made, who has got to bear that loss? This report of the Board of Trade Committee makes no reference or suggestion in regard to that. I am inclined to think, so far as I have heard from engineering experts, that they certainly consider that for a few years a loss is a possibility, and perhaps a very probable thing to have to face; and the question is, if a loss is so incurred who is going to make it good? In that matter we get no guidance from the report whatever. Then there is another point, the question of the exemption of private stations. Clause 42 says that a private station or a station used for the owners' use and not for the sale of electricity shall be exempt, and yet the report itself recommends the taking over of tramway stations and railway generating stations, and leaves the stations belonging to private individuals and other manufacturing companies severely alone. So that a municipality owning its own tramway station, used for nothing else but tramways, has got to part with it no matter how successful, no matter how efficient, whereas a private manufacturing company can hold on, and can build others without restraint. I think that clause is altogether objectionable. Then there is another point about the charges—are they to be uniform or varied? Is a works put down in a thinly populated district to charge more than one put down in a great centre of population? This is a very grave matter and requires consideration. These are the big things, but there are one or two little things that ought not to be lost sight of. There is the question of the appointment of the Electricity Commissioners. It is proposed to appoint five, three of them to be paid salaries of not less than £3,000 per annum, and suitable arrangements made for pensions. The other two are presumably men in a lower category, and will get less. It is further suggested that the appointment of these Commissioners should be left absolutely in the hands of the President of the Board of Trade. Now, sir, I do not think that that is a good arrangement. I am inclined to think that some gentlemen sitting around this table will agree with me in thinking of past appointments, that there ought to be some consideration for the President of the Board of Trade. (Laughter.) There is another point I rather take exception to. Section 51 urges that the District Boards should be *small Boards*. Why? One is apt to be suspicious, and there is a reason for it. I venture to think that there would be greater safety in greater numbers, and that it should not be possible for a party of two or three gentlemen to capture, by any possible means, these District Boards. Then, finally, there is one other point. The report suggests that the Commissioners or the District Boards may compensate engineers and other officials who are displaced by the new scheme. I think it is grossly unfair that the word "may" should be used. Compensation should be made compulsory. Any man displaced by the change ought to be compensated for the loss of his position. I do not think our two hours' meeting is of much practical use for discussing this report. It will demand a long series of meetings, and every section should be taken up individually and considered in all its bearings before the thing goes forward. Fortunately the Bill has not yet been drafted; certainly it has not been circulated. We are more or less in the dark as to what is going to be put forward, and I hope before anything becomes law there will be earnest and serious consideration of all these matters. Otherwise we may take on something so big that we do not realise its bearings in all directions, and perhaps be saddled with a white elephant such as we have been saddled with before in these great undertakings, and suffer for it afterwards.

**Mr. R. H. Wilkinson** (general manager and engineer, Huddersfield Corporation Tramways).—I would like to thank Mr. Hatton for his very estimable paper. I believe that it will result in a great deal of good to tramways and all other consumers of electricity. But, as representing a town which has its own power-station for generating electricity for tramway purposes, I would like to point out what I believe many towns have missed. When Huddersfield were considering the adoption of electric tramways they carefully considered the electric power supply, and if they had not adopted their own station they would have had to pay at that time something in the neighbourhood of 3d. per unit for a supply of electricity. They erected their own power-station, very wisely I think, and the cost of generating electricity did not reach ¾d. per unit, and is in the neighbourhood of that figure to-day. I can safely say that if we had not had our own electricity station at Huddersfield the tramway system would have been very much smaller than it is to-day. We serve a population of 160,000, have 56 miles of track, and earn £170,000 per annum, with excellent results financially. So you will see how cheaply we must be working, and the foundation of that success I attribute to having our own power-station.

**Mr. E. S. Rayner** (manager and electrical engineer, Doncaster Corporation Tramways).—I also should like to thank Mr. Hatton for his paper. I enjoyed reading it as I enjoyed reading his report to the Newcastle Corporation on the proposals of the Committee

Digitized by Google

of Electric Supply. I take it, from some of the remarks in this paper and the remarks which he made in that report, his opinions on the scheme have altered somewhat. The whole question resolves itself into whether, for the supply from the stations which are going to be taken over, there is to be substituted a cheaper supply. It seems to me that no generating station, however large, or small, should be taken over unless there is a guarantee that the town or district concerned receives in return a cheaper supply of electricity. Because, when all is said and done, it is only a question of price and profit. The bogey of the scheme as I see it is the question of Government control. Have the various things that have been taken over and controlled by the Government shown by their management, since they have been so controlled, that they have been more economically and efficiently managed. I think in some cases that is open to question. If we take, for instance, the telephones. The telephone companies were not all that could be desired; but at any rate they were satisfactory undertakings when you consider that they had to pay a large royalty to the Government and in addition managed to pay a dividend to their shareholders. Under Government control prices have gone up, and I believe that the telephone system is now worked at a loss. Now if the Government are going to take over and control the electricity supply, we surely ought to have some very clear guarantee that the prices at which electricity is to be sold to the smaller undertakings will be less than the cost of generation by them. Ours is a small undertaking, and I really do not mind from a sentimental point of view, whether the station I manage is taken over by the Government or not. If I am to receive a cheaper supply I am quite prepared. But I do feel rather dubious about handing over absolute powers to a Board which starts out with the fixed idea of making a clean sweep. They say we will have super-stations, and I am of the opinion that there is a great danger in a department coming in with certain fixed ideas of washing out everything at present existing, and putting in super-stations regardless of cost, regardless of the millstone of capital expenditure. I think some adequate safeguards are essential, so that the final result shall be cheaper electricity. Where capital charges bear such a very large proportion to the actual cost of the supply of electricity—not the cost of generating—these points must not be lost sight of. You are assured that from these super-stations electricity is generated at a very low figure. Granted. Mr. Hatton, in his report, gives us some very useful figures with regard to coal consumption at various stations, varying from 5 lb. down to as low as 2 lb. per unit. The cost of generation from an engineering point of view, and from a technical point of view, is certainly all very well, but if you pile up your distribution and capital charges the advantage of the low cost of generation is lost, and care must be taken that the burden of capital and other charges does not outweigh the advantage of cheap generation. It seems to me that the great point that has to be watched is that, where stations are taken over and where schemes are brought forward, some guarantee shall be given that we are going to get a cheaper supply of electricity in place of the stations that are taken over. Mr. Hatton, in one paragraph, talks about a variable price. Now if we are to have a variable price, that is to say, if the price of supply to a small town is to be governed by the existing cost of generation, then why take over the small towns? I take it that in any particular idea of lumping the supply the strong point is that we shall get a universal price, and if you are going to get cheap electricity it seems to me the only way to do it is to have a standard price. There are one or two other points in Mr. Hatton's paper which are of great interest. As to his remarks with reference to the spreading of manufactures over various districts, it seems to me there are other considerations in regard to the location of industries. For instance, in regard to the steel trade, we have Sheffield as a steel centre, because you have the necessary raw materials at hand; Manchester as a cotton centre because the environment is suitable for cotton; the Tyne for shipbuilding, because the environment is suitable for shipbuilding. I do not think the distribution of industries is a question of power supply altogether, and I do not think that we are going to do away with freight by distributing these centres flatly all over the country, as suggested by Mr. Hatton.

**Mr. C. L. E. Stewart** (borough electrical engineer and tramways general manager, Rawtenstall).—I should like to thank Mr. Hatton for his paper, and to express my appreciation of the report which he sent to his committee and of which he very kindly sent me a copy. I think the most remarkable thing in connection with any of the reports issued has been this. You read the Coal Conservation Report, and then read the Electric Power Supply Report, and note how they compare. To my mind they show in the time that elapsed that practically the bottom had been knocked out of the Coal Conservation Report. Their second report was watered down and was a much more carefully considered report altogether. Now, the first report really gave everybody to understand that we were going to get something for nothing, as Mr. Hatton says, but when one comes to look into the history of various stations, and follows them along for a number of years, what do we find? Do we find the large stations generating all the cheap power? No, we find certain stations of very moderate dimensions are beating them, and therefore up to the present the big station has not proved its case. Of course a very great deal depends on the particular local circumstances, and one must not pick out stations here and there and draw positive conclusions without knowing local circumstances. But when one finds that as a whole the big stations are beaten by quite moderate stations, it makes one rather think. Now I should like to mention a point where I think a lot of people get rather misled, and that is that all the reports have dealt with units *generated*. Now they have made quite a big show with units generated. I should just like to illustrate what this means by giving figures of my own station which supplies the tramways and also gives a general supply. If you want to put the Rawtenstall electricity undertaking on all fours with the figures given in the *Electrical Times* for tramways owning their own generating stations, remember first of all there is no management, no capital, no rates and taxes, and a lot of other items of expenditure included in those figures, and therefore the figure simply compares with works costs. Rawtenstall's total over-all cost, including capital charges and distribution losses, is ·9d. per unit sold. The works costs amount to ·4d. per unit generated, but we have to get ·9d. per unit to cover the capital charges, management and distribution losses, etc. In connection with these large supplies the distribution loss, I should say, would amount to 20 per cent., so that they have got to better the figures by 20 per cent. right off. Now going into the question of big areas of supply, I do not think anything could have been more striking than the remarks made by Mr. Fenton, of Sheffield, and borne out by Mr. Pearce, of Manchester, at the I.M.E.A. meeting this year in connection with large power supplies, and one must not get mixed up between the large power-stations and the large areas of supply. Mr. Fenton told how he had to go into the question of building a new station for giving very large power supplies, and drew up a report on putting down a station on an ideal site at varying distances from the centre of his load, and found that when everything was taken into account it paid best to put the station near the centre of load in spite of the handicap in the way of cooling towers, etc., rather than go a distance of 20 miles away. His remarks are well worth reading in the *Municipal Electrical Association's Journal*. They were very striking and exceedingly well thought out. His report to his committee was not got up for the occasion, but it was got out because they had the load to supply, and had to find the best means of supplying it. Mr. Murray asked some questions with regard to the Electric Power Supply Committee's Report, and I think I can answer some of them. There were several members of the committee who prepared the report present at the I.M.E.A. meeting. This is what I gathered—I may or may not be right—but I give you what I understand from the discussion. In the first place it was not intended to set to and scrap all existing stations; it was not intended suddenly to go and build a lot of super-stations. The idea was to appoint a Control Board who would have a general scheme in mind in letting the smaller and less efficient stations drop out as circumstances permitted, and extending suitable economical stations in suitable areas. His next question was about the distribution loss. All I can say is that no figures, even in the first report of the Coal Conservation Committee, were given to show that it would pay an economical station to take a supply in bulk. When distributions and other charges are added, the cost to the consumer would be higher than at present, and the pounds of coal that super-stations would have to burn per unit delivered to the consumer would be higher, and after all that is the only thing that matters. It is no good merely generating cheaply if you are going to lose all the advantage so gained in delivering the power to the consumer. I think you will find distribution an exceedingly heavy item, not only in capital but also in loss of current. According to the report, private plants appear as though they would be allowed to remain, but it does not look fair that firms using the national asset, coal, should be allowed to go on burning coal as they like while certain other people are to be stopped. Then there is another point too which I think may turn out to be rather more serious than might appear at first sight, and that is that as soon as they decide that the various works are going to be taken over by the Government they are going to lose what I believe is a most valuable asset, which is the individual effort of each man to try and show up well with his friends in other towns. Take them over by the Government, and they become simply one tiny little wheel in the Government machine. There is another point which has been raised in the discussion in regard to the difficulty in standardisation. Clearly the Electric Supply Committee's Report only has one thing in mind, and that is generation and main distribution. What one wants to get clearly in mind is that there are only two things that matter, which to my mind must be standardised whatever purpose the current is going to be used for. One is that it has got to be a 3-phase alternating current, and in the second place a standard frequency. You can have what voltage you like, it only means putting in a transformer having an efficiency of about 99 per cent. You can alter any voltage for any special purpose. If you want direct current or anything different you only convert the little bit you want for that purpose. Have the main standard of one frequency, and that should be 3-phase, and then I think you have cleared the whole job, and that is I think all they mean in their standardisation.

**Mr. C. Furness** (borough electrical engineer and tramways general manager, Blackpool Corporation Tramways).—I was not going to enter into a discussion on the merits or demerits of this report on electric power generation, but I rather feel the discussion is degenerating and rather detracting from that report. As I hold very strong opinions from a national point of view that it is in the right direction, I feel that it is my duty to stand up and support it. I think there is a mistaken impression in regard to the intentions of the committee who drafted the report. There is no intention, in my opinion, to scrap plant that is efficient in order to generate cheap units. I think one has to look to the future developments in regard to the generation of electricity, and you can only do that by looking at your local circumstances and environment. I do not wish to follow the line which some other speakers have taken by referring to my own particular town and put that forward as an example and argument against centralisation. Let any one of us here take their own station, and we find we have been strictly marking time since August, 1914, in regard to capital expenditure. I know of a certain town with seven generating stations within a six mile radius, each of which is waiting to spend capital in the development of its own particular undertaking. Immediately Blackpool can get sanction we want to spend at least £100,000 in extensions on our own power-station. I know many other undertakings within a few miles radius which have a large prospective capital expenditure in view. We should reach altogether about some £300,000. Now the question very properly is—which is the best way of laying out this future capital expenditure? Shall each of these six or seven municipalities go their own way separately in buying generating plant, in putting up buildings which represent unremunerative capital? Shall we each go our respective way; or shall we have a joint board and find out the best means of spending that £300,000 in generating plant, when we could put down a unit five times as large as one individual station could require? (Applause.) That is the touchstone in this report which is before us this morning. I am very pleased to have heard the discussion, but I cannot congratulate the executive in suggesting to Mr. Hatton to write a paper on this matter. I am pleased Mr. Hatton has taken the burden upon his own shoulders. I do not think, with all due respect to the conference, we are in a position as tramway managers to seriously discuss it this morning. I think we have far more important matters in connection with tramway work than discussing this report. I feel that I would like to have heard a discussion on trailers, the Coal Controller's order regarding the 15 per cent. reduction, etc. The time will come when we shall have to exercise our minds on more practical matters than this report.

**The President.**—We have not time now to discuss trailers.

**Mr. Furness.**—I am only pointing out that there are practical matters of very serious and immediate concern for this conference, more pertinent than the paper we have had this morning. I do not altogether agree with Mr. McElroy's figures. I think he takes rather an inflated view of the importance of traction supply in the generation of electricity. Manchester takes only 15 per cent. of the city's electricity output for traction purposes. The cost is not altogether of such serious moment. I do not believe in the fetish of low cost which is overshadowing other important considerations governing electricity generation and distribution. Any sound commercial undertaking can afford to pay a reasonable price for electricity, and should not be in a position to object, and supply authorities ought to have a reasonable margin of profit. I do not believe there is any need for such great importance to be attached to tramway supply in connection with this report; 25 per cent., as Mr. McElroy said, is over the mark. But I will not labour the point, and will only mention that at Manchester the power cost is only 13 per cent. of the revenue obtained, and at Newcastle only 7 per cent. of the undertaking's revenue. In Blackpool it is 12½ per cent., and we are generally charged with having a high price for our traction supply. Cardiff holds the record with 5 per cent. of traction charges to their revenue. In Birmingham it is 20 per cent. Really the cost of traction current is not a dominating one; capital charges and the cost of wages, maintenance, and other things are far more important than the cost of power.

**Mr. E. Hatton,** replying to the discussion, said:—I was led to believe this morning from Mr. McElroy that we were to have a gas attack. (Mr. McElroy.—You've had it.) Instead of that he has written another paper. With reference to the remarks of Mr. Webber, of Keighley, he, of course, is very well placed as he stated, and more closely represents a huge works. It may be that the extent of his area does not exceed that of Armstrong, Whitworth's works at Newcastle-on-Tyne, and of course his outlay on cables, etc., may be very small compared with his load. With reference to the question of breakdowns in big stations being proportionately worse than in smaller stations, I do not think that is borne out by the experience of the big power companies. Mr. Stokes, of Bexley, spoke on the use of coal for other purposes before generating power. I think that matter is being investigated by a Committee of the Government. Certainly on the north-east coast of England, as to heat from the consumption of coal used for other purposes, it is very largely used as a by-product in the generating of electric power. Mr. Wilkinson, of Huddersfield, spoke of the value of a tramway authority having its own power-station, and he is quite right in what he said. His remarks also very closely apply to my own case. With regard to Mr. Rayner, he speaks of my having changed my mind. The first report I made was on the Coal Conservation Committee's Report; the other report had not appeared on that date, and I could therefore only speak of what was then before me. Many of us would like to remain as we are, but if the Government of the country decide that in the national interest we must all come together, why then we must all come together. But in that case we must have public control, not company control. (Hear, hear.) I do not know that I have very much to say on the remarks of Mr. Stewart, of Rawtenstall. Of course the question is simply as to the best way of generating and distributing electricity cheaply. We know of small stations that do so, but his position will be very seriously affected if electric traction on railways comes about. There is no doubt that it will have a tremendous bearing on the country, and why Mr. Furness, of Blackpool, should take exception to a meeting of the Municipal Tramways Association, whose undertakings are large consumers of electric power, discussing this matter I cannot understand, because if the electrification of the railways comes about it will have an important and vital effect on tramways, not to their detriment, but possibly to their enormous expansion. He further thought that it would have been better to discuss trailers and matters of that sort. Well, he is entitled to his opinion, but you will ultimately have a national supply set up, and we in Newcastle and the authorities on the north-east coast, with certain exceptions, are preparing a scheme whereby large consumers also will be on the Board, and therefore I took it you would feel an interest in such matters. It may not be in Mr. Furness' interests to have such a Board, but that is a matter for himself. (Hear, hear.)

**The President** said:—We are indebted for this very interesting discussion to Mr. Hatton for his paper, and also to Mr. McElroy for leading off. I want to move that the thanks of the conference be given to those two gentlemen for the way they have introduced the subject.

This was agreed to with acclamation, and the morning's session was then concluded.

## AFTERNOON SESSION—THURSDAY.

The President again presided at the afternoon session.

TELEGRAM FROM THE PRESIDENT OF THE BOARD OF TRADE.

The following telegram to the President from Sir Albert Stanley, M.P., President of the Board of Trade, was read:—

"I extremely regret, owing to the railway situation, that it is impossible for me to be away from the Board of Trade to-day. Greatly disappointed from fulfilling engagement to lunch with Association, as I had looked forward with great pleasure to meeting and addressing your members. One matter to which I had intended to refer in my address is the coal situation. The necessity for coal economy is at present one of the most vital considerations, and I am sure I can rely upon your members realising this, and making every effort to economise. While it is true that tramway undertakings are being asked to make every possible reduction in their coal consumption, they are most certainly not being singled out for special treatment in this respect. The coal position at the present time is that even certain munition works are short. The domestic supply is extremely short, and for several months past it has not been possible to ship to our Allies or to the neutral countries the amount of coal which the Government is under obligation to despatch. If and when the rationing of coal for industrial purposes is put into force there will be many industries which will be compelled to make a much greater reduction than 15 per cent. With regard to those undertakings who really do make the reduction which has been asked for, it will be an especial obligation of the Board of Trade and the Coal Mines Department to see that they obtain the amount of coal necessary to run the reduced services, and no effort will be spared to secure this. Please accept and convey to your colleagues my sincere regrets at unavoidable absence, and best wishes for the success of your meeting.

ALBERT STANLEY."

**The President** then announced that the meeting of the Conference Executive might have to be held after the meeting that afternoon instead of the following morning, as some of the members were unable to wait till then. He also drew the attention of the Press to the fact that the important subject for discussion, viz., A National Joint Council for the Tramway Industry, would be considered in committee, and that the discussion was not to be reported except by the official shorthand writer.

The conference then resolved itself into committee and discussed at length the draft constitution of the National Joint Council.

## FRIDAY MORNING SESSION.

## MEETING OF THE MANAGERS' SECTION.

Mr. J. B. Hamilton presided over a formal meeting of the Managers' Section on Friday morning, held at the Town Hall.

**The Acting Secretary** (Mr. W. Clough) reported that the spring meeting of the Section, arranged to be held at Birmingham, had been abandoned in consequence of the difficulties of travel and the pressure of other meetings connected with tramway industrial affairs.

**Mr. A. L. C. Fell** suggested that at the next annual conference, in view of the volume and nature of the business, the meeting of the Managers' Section should be called the day before the conference, so that there would be ample time to discuss any matters requiring attention. It would be a pity if the Managers' Conference ceased to exist.

**Mr. J. M. McElroy** pointed out this necessarily enlarged the time occupied by the conference, and managers might be in a difficulty. He moved that a meeting of the section be held in the coming spring, and this was agreed to.

**Mr. A. Baker** said he was extremely sorry the meeting fixed for Birmingham had to be abandoned, but he knew that at the time owing to prevailing circumstances it was the right thing to do, especially as many meetings of the Executive Council were taking place about that time. He took the opportunity of again extending a cordial invitation to the managers to meet at Birmingham next spring. This invitation was accepted with thanks by the chairman, and the proceedings terminated.

## THE ANNUAL GENERAL MEETING.

The annual general meeting of the members of the Municipal Tramways Association, Incorporated, was held in the Council Chamber at the Town Hall, Leicester, on Friday, September 27, the President (Alderman S. Flint, J.P.) in the chair. There was a large attendance.

The minutes of the preceding annual general meeting were taken as read and confirmed as printed and circulated.

### REPORT OF THE EXECUTIVE COUNCIL.*

The annual report of the Executive Council was submitted.

**Mr. J. B. Hamilton** (chairman of the Council), in moving the adoption of the report, said the Council had had a very busy session, with many meetings, and the amount of work which had been got through was only partly represented even in the long report before them. This, perhaps, was due to the endeavour to keep it within limits, but even so it was longer than they would have liked it to be. They had scarcely done justice to one committee, which was dealing with the question of the standardisation of overhead line material. That sub-committee had been working most assiduously during the year, and whilst the only decision come to was the one recorded in the report, viz., on the question of overhead gear, he knew that at the present moment they had in hand a great deal of work which would bear good fruit in the immediate future. He thought it was only right to mention that, because he knew the work the committee had done, and it was exceedingly valuable. Then he was also reminded that in the paragraph dealing with the Board of Trade Tramways Committee they ought to have included a fact known to most members, i.e., that Mr. Fell (London County Council) and Mr. Dalrymple (Glasgow), in addition to three other gentlemen, had been appointed on that committee. It was unnecessary to say anything further; the year's work had been fairly recorded, and he hoped the members would accept the report.

The motion having been formally seconded,

**Alderman Fletcher** (chairman, Wigan Corporation Tramways Committee) suggested it would be advantageous if in future the annual report of the Executive Council were circulated before the meeting, in order to give members an opportunity to appreciate its contents.

**The President** intimated that the suggestion would be adopted.

**Mr. A. R. Fearnley** (general manager, Sheffield Corporation Tramways) endorsed the remarks of the chairman of the Council in regard to the work of the standardisation sub-committee. He agreed that the report hardly did justice to that work. It would be within the knowledge of the professional members of the Association at any rate that the work of this committee was likely to be very valuable to all tramway undertakings in the country. He was glad to see that the Tramways and Light Railways Association was collaborating with them. The committee had held numerous meetings, had visited a large number of tramway undertakings throughout the country, and were going very thoroughly into this question of standardisation. It might be of interest to some members of the Association to know the opinion of manufacturers on this question As a result of communications with them, a variety of opinions had been expressed, generally to the effect that it was more than time that something of the sort was taken in hand. One large firm wrote that their manufacture of tramway material was so extensive, and covered such a multiplicity of design, that it would not be practicable to submit drawings. Another firm, pioneers in the tramway industry, stated that there were so many different types, involving a variety of patterns, that they discontinued the manufacture of them some three years ago. They had drawings of the various material they supplied, but as these were practically obsolete, they did not think it would serve any useful purpose to send them on. They fully agreed with the committee as to the desirability of standardisation. He thought they ought to, and he was sure the members would, give Mr. Harvey, of Ilford, the chairman of the sub-committee, all possible support in the efforts he was making along with other members, Mr. Wilkinson, of Huddersfield, and over-line superintendents in various parts of the country, to carry out this important work.

**Mr. Furness** referred to the meetings of the Executive Council, and suggested that it was desirable that the report should contain information as to the attendances of the members.

**The Acting Hon. Secretary** accepted the suggestion.

The motion to adopt the report of the Executive Council was then agreed to *nem. con.*

FINANCIAL STATEMENT.

**Mr. Fearnley** (hon. treasurer) submitted the statement of accounts and balance sheet, and said if there were any questions in regard thereto he would be pleased to answer them. The expenditure showed an excess of £56 17s. 3d. over income. In view of the difficulties of the times there was nothing remarkable in that. The excess was due to the increased cost of printing, typing, stationery, etc.

On the formal motion of **Alderman Fletcher**, the statement of accounts and balance sheet were received and adopted.

*Vide pages 242-244.

## ELECTION OF PRESIDENT.

**The President.**—Gentlemen, the next motion I have to submit to you is really a matter of form. Mr. Goodyer has been our vice-president for the past year, and has been the supporter of the committee generally. I have now great pleasure in proposing that he be asked to fill the presidential chair for the coming year. I need not say anything to extol his virtues to a gathering of tramway administrators. He is a man of considerable experience in tramway work, and a very genial man withal, capable of putting forth a lot of effort. He has devoted a good deal of time to the Executive Council, and has been a very earnest attendant at its meetings. I am quite sure that he will make a very good president for next year. He has had a good deal of practice during the last few months, as the chairman of the Executive has already told you, for the work of the Executive has been considerable, and there will be plenty for the president of this Association to do in the near future as well as for the chairman of the Executive.

**Mr. W. J. Squires, J.P.** (member of the London County Council).—I rise with very great pleasure indeed to second the nomination of Mr. Goodyer as president for the coming year. I have known him now for many years, perhaps because he is closer to us in the London County Council than any other tramways undertaking in the London district. I venture to say this, gentlemen, that our friend, Mr. Goodyer, has to prepare himself for an arduous year's work, and I think he must bear one fact in mind, that he is following the very many excellent presidents which it has been the happiness of this Association to possess. Therefore to inspire and encourage him, I hope that we shall be unanimous in electing Mr. Goodyer, and on behalf of the London County Council, which is in close contact with Croydon and the surrounding districts, I venture to express the hope that he will be acceptable to the whole conference.

The motion was then put and carried with acclamation.

**Councillor A. A. Thomson** (chairman of the Croydon Corporation Tramways Committee).—May I be allowed, as chairman of the Croydon Corporation Tramways, to heartily congratulate our tramways manager on the signal honour which you have just conferred upon him. I most heartily endorse the remarks which you, sir, have made, and I am very glad indeed to think that Mr. Goodyer's ripe experience and abilities, of which you are cognisant as I am, have been recognised in this way. I think it is a fitting acknowledgment of his many years meritorious service in the tramway world, and I have no doubt that his sound judgment and advice will be an immense advantage to the Association in its anxious deliberations in the future. His election, I feel, is not alone honouring Mr. Goodyer, but that you are also honouring Croydon. I very much appreciate this, and I wish him a very happy year of office, and predict for him a very pleasant time, because he possesses your confidence and esteem. (Applause.)

**Mr. T. B. Goodyer**—Mr. President, Mr. Squires, and gentlemen, I thank you exceedingly for the high honour you have so generously and unanimously conferred on me to-day in electing me as president of this important Association for the ensuing year. I recognise very fully that I am following a number of distinguished tramway managers, who have set before us very high ideals indeed as they have passed through their years of office. But with your

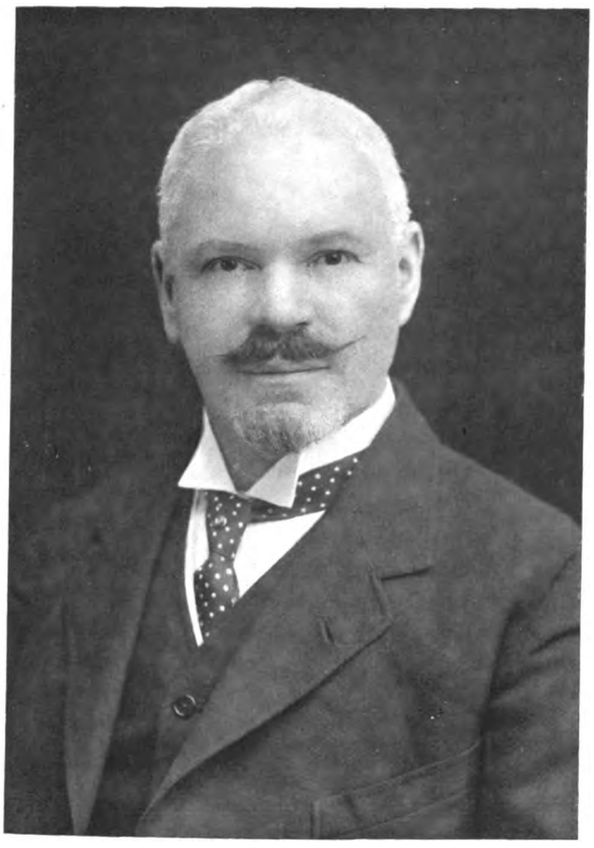
Digitized by Google

kind support, and with your co-operation, I sincerely trust I shall not be found at the end of my term to have been unsuccessful. I thank you very much.

ELECTION OF VICE-PRESIDENT.

**Mr. T. B. Goodyer,** taking advantage of the privilege of the incoming president, submitted the name of Alderman Sir John Courtis, Deputy Lord Mayor of Cardiff and chairman of the Cardiff Corporation Tramways Committee, as vice-president for the ensuing year. As they were all aware, Sir John had attended the meetings of the Association for many years, and had taken a considerable part in their discussions and in the business of the Association. He was a member of the Executive Council, on which he had already done very excellent work. He submitted his name with confidence, and trusted that his election would be unanimous.

**Mr. G. A. Johnston** (chairman, Dundee Corporation Tramways Committee) seconded the motion with a great deal of pleasure, and said those members who had attended the meetings of the Association during the past few years could appreciate the ability Sir John Courtis had displayed in the discharge of his duties as a member of the Association. They felt honoured that Sir John had consented to fill the office.



**Mr. T. B. Goodyer,**
*President of the Municipal Tramways Association for 1918-19.*

**The President** said they could not find anyone more suitable to fill the office. Sir John Courtis was a man of wide experience, and had energetically devoted zeal and interest to the work of the Association in many ways. He was quite certain he would reflect credit on the office and give satisfaction in every way.

The motion was carried with acclamation.

**Sir John Courtis,** in acknowledgment of the honour done him, thanked the mover, seconder, and president for the kind remarks they had made upon his nomination. He had been a member of the Association for quite a number of years - he was almost afraid to think how long, for it might make him seem an old man - but he had taken an interest in it for some eighteen years. He had only recently been elected a member of the Executive Council, so he had not much of a record to show. He did not know whether it was because of his appointment or not, but since he had been a member of the Council the meetings seemed to be very much more frequent than they were before. He had attended the meetings very largely as a listener, as his colleagues would bear out, but it seemed to him that the Executive had very arduous duties in front of them, and a very busy year in prospect. He could only say that it would be his endeavour in his new position to do everything he could to benefit the Association, and especially in support of the president, for whom he had the very greatest respect. He knew his father in Cardiff for a number of years, and had also known Mr. Goodyer himself for a long time. He felt the Association was fortunate in having such a man to step into the presidency, and he prophesied the Association would have a good year.

On the motion of **Mr. Fearnley**, seconded by **Alderman Linsley** (chairman of the Salford Corporation Tramways Committee), Sir E. R. Pickmere, M.A., town clerk of Liverpool, and Mr. S. F. James, town clerk of Ilkeston, were re-elected hon. solicitors.

ELECTION OF HONORARY SECRETARY.

**The President** said it now became necessary to fill the office of hon. secretary. It was with very great regret that he had to announce that Mr. C. J. Spencer had been compelled to resign the office. Personally he was very sorry, and he had no doubt that that feeling was shared by every member of the Association who realised not only the importance of the secretarial work, but also its heaviness They all knew the sterling way in which Mr. Spencer had discharged the duties of his office. He had always found that Mr. Spencer laid himself out as far as he could in whatever position he held and threw his whole heart into the work. Sometimes he wondered how Mr. Spencer got through his personal work as well, but they were most grateful for the way in which he had devoted his energies and abilities to the work of the Association. It was a very pleasant thing, and one could not speak too highly of the way in which Mr. Spencer had looked after the interests of the tramway industry. They did not like to hold men back when openings occurred which might properly be regarded as promotions; it was their duty to see that no obstacles were put in the way. In parting with Mr. Spencer under these circumstances, they felt they were getting a friend in another sphere, and no doubt his interest in tramway administration and the tramway organisation would continue in the years to come. He did not think it would be possible, even if he wanted to, for Mr. Spencer to be otherwise than interested in tramways. They would have an opportunity later on of showing their appreciation of what Mr. Spencer had done for them, and now it was for the Association to appoint someone to the office.

**Mr. J. M. McElroy,** in moving that Mr. W. Clough, general manager of the Bury Corporation Tramways, the assistant hon. secretary, be appointed hon. secretary of the Association, said he felt this office was assuming a different character from what it had done in years gone by. The work of the Association, particularly within the last six months, had changed considerably, and the Executive Council had had in mind that at some future, possibly early, date they would have to appoint a permanent secretary with offices to carry on the work of the Association. Those members of the Executive who had seen the enormous work that had had to be done by the hon. secretaries, first by Mr. Fearnley, who had done such valuable work for many years, then by Mr. Spencer, and latterly by Mr. Clough, would not be surprised at the development. These conferences and meetings involved an immense amount of work, which largely had to be done out of office hours. This kind of thing could not continue for many years longer. At the present moment, seeing that the proposals in regard to the Whitley Council had not yet formed definite shape, the Executive were not in a position to submit a precise recommendation in regard to the matter, but they suggested asking Mr. Clough to become the hon. secretary for the time being, subject to the Council thinking over the steps they would take for carrying on the secretarial work in the time to come. He therefore had very great pleasure in proposing that Mr. Clough be appointed hon. secretary. That gentleman for some months had been doing the work, and labouring for late hours every night, and he thought they would be doing him an honour by appointing him that morning. He moved accordingly.

**Mr. Spencer,** in seconding the motion, said he had been glad to be associated with Mr. Clough during the last twelve months, and could entirely confirm what Mr. McElroy had said as to the tremendous amount of hard work that gentleman had recently put in on behalf of the Association. Previous to that Mr. Clough had put in some good work for his country at the Admiralty, where he was very closely associated with him. He had formed a very high opinion of Mr. Clough's ability and fitness to hold any post which he might be called upon to fill. The Association would be serving its own interests as well as honouring the assistant hon. secretary by making the appointment.

**Councillor J. Timpson** (Portsmouth) cordially supported the nomination. It had been his privilege recently to witness the way in which Mr. Clough had acted as assistant secretary to the Association, and he felt sure if he was elected that morning the Association would have no cause to regret the step.

**The President** said the choice was a very wise one.

The motion having been carried with acclamation,

**Mr. Clough,** in acknowledgment, said he fully recognised the honour which had been conferred upon him that morning, and in accepting the office he quite realised the able and excellent men whom he was following. All he could promise them was that he would aspire to do equally good work to that which had been done in the past. He would do all he possibly could to make the Association, so far as he was concerned, the success which it had undoubtedly been in the past. (Applause.)

## PRESENTATION TO MR. C. J. SPENCER.

**The President** said that it was proposed to intervene in the course of business in order to show their esteem for Mr. Spencer, and express their appreciation for the work which he had done during the last seven years for the Association. He would ask Mr. Hamilton, the chairman of the Executive Council, to say a few words. (Applause.)

**Mr. J. B. Hamilton** said it was his most pleasing duty to have to draw the attention of the members for a few minutes to a very pleasant function, apart from their formal business. As they had already heard from the President, Mr. Spencer had been called to a higher sphere of public duty. His responsibilities would be greatly increased, and many of those who had been associated with him desired to express their appreciation of the services which he had so ungrudgingly rendered to them for the last seven years, during which he had held the office of secretary of that Association. They desired to show in some tangible form their respect for him, and admiration of the work which he had done, so that he could carry it with him in his new sphere as a simple reminder of the friends with whom he had been associated in past years. He need hardly say that this little movement, having been once initiated, was immediately and spontaneously carried out by all the members, the most gratifying response being given to the proposal. He took it that Mr. Spencer would regard the significance of the gift at its highest value. If one went back, as Sir John Courtis had done, for a number of years, one would understand why they felt in this way towards Mr. Spencer. It had been his own great pleasure to nominate Mr. Spencer for election as hon. secretary at their Glasgow meeting in 1911, and he then ventured to prophesy that in Mr. Spencer they would have a worthy successor to Mr. McElroy and Mr. Fearnley. He thought that his prophecy in that respect had been fully justified, and he could further testify to the sterling managerial work of his friend Mr. Spencer in the neighbouring undertaking. Beyond that it was a good many years since he had made Mr. Spencer's acquaintance ; indeed, he met him when he was a small boy, and had been astonished at the frank audacity of the youth who had talked to him. At that time he asked himself, " What is this chap going to come to ? " for he was laying down the law on the subject of brakes. They all realised that in Mr. Spencer they had a man with infinite capacity to administrate, and this had been a great source of satisfaction to the people of Bradford, who were very sorry to lose him ; but this would doubtless also be to the advantage of his colleagues and the tramway industry.

In his own capacity as chairman of the Executive Council, his relations with Mr. Spencer had been very close, especially at a time when the alteration of social and industrial conditions had culminated in work of a new character. The formation of Whitley Councils for dealing with municipal labour matters had been suddenly thrown upon them by the coalition of the various trade unions, and as a natural consequence the duties of the hon. secretary of that Association had tremendously increased. But he was glad and pleased to say that on every occasion Mr. Spencer had shown himself absolutely equal to the increased work and responsibility which had been thrown upon him. It was unnecessary to detain the members longer, because he felt that every one of them was absolutely with him in this tribute which he was endeavouring to pay to their old friend and also to Mrs. Spencer, whose share in the work ought not to be forgotten. In his new sphere Mr. Spencer would take with him the gratitude, the good will, and the warmest thanks of his friends in the tramway administration of this country ; and he believed they would not look in vain to Mr. Spencer's assistance and influence in the new sphere of public duty to which he had been so honourably and wisely promoted. (Loud applause.)

**The President** then asked Mr. Spencer to accept a gold watch with the inscription, " Presented to C. J. Spencer, Esq., of Bradford, by the members of the Municipal Tramways Association in recognition of the valuable services rendered by him as hon. secretary, 1911-1918, September 27, 1918." He also asked Mr. Spencer to accept on behalf of his wife a very handsome silver-fitted dressing-case. He explained that every officer and member associated themselves with this mark of their esteem, admiration, and respect—he might go further and say affection—(applause)—for their old friend Mr. Spencer. They hoped that he would receive the gift as an encouragement for the years that were to come and a proof that although they were parting with him they had lost nothing of their old feelings of regard for one with whom they had so long and successfully worked. They associated Mrs. Spencer with the gift because they knew that she too must not only have made sacrifices, but have inspired and encouraged her husband to do all that he had done in his great work on behalf of the Association for so many years. (Loud applause.)

**Alderman Priestley** (chairman, Bradford Corporation Tramways Committee) desired to express on behalf of the city of Bradford their sense of gratitude at the kind words of Mr. Hamilton and the President. Mr. Hamilton had described Mr. Spencer as an audacious lad, and as one who had been closely associated with Mr. Spencer for a number of years he felt that the description was not unjustified. It had been his privilege to work with Mr. Spencer in Bradford, and his experience led him to say that every tribute paid that day to their friend was absolutely justified. Everything that had been said was true in regard to his energy and the earnestness with which he had thrown himself into the work of administering an important system of tramways. He wanted to say that, although Mr. Spencer's services to the Association had meant some sacrifice on the part of the Bradford Corporation, they had received a great deal in return for those services in the shape of experience and administrative knowledge. They were sorry to lose Mr. Spencer. It would be a positive loss to Bradford ; they would like to have kept him, but they felt that while this was Bradford's loss it would be a gain to the great city of London. Mr. Spencer had given them high services, and he was eminently fitted to render great service in whatever sphere he entered. He had endeared himself not only to the citizens of Bradford but also to thousands of workers in the tramway industry ; indeed this was so to an extent not equalled in any other undertaking that he knew of in the kingdom. He left them with the best wishes of all the people of Bradford, and they sincerely hoped that he would be happy in his new sphere. All he (Alderman Priestley) could say was, as the village blacksmith said to his daughter when she left home on being married, " Well, lass, if he (the husband) doesn't do reight to thi, tha mun coom back whoam agean." He wanted to say that at any time Bradford would be only too glad to have Mr. Spencer come back again. (Loud applause.) He added that Lieut. Newman, a former deputy

**Mr. C. J. Spencer,**
*Hon. Secretary, 1911-18.*

chairman of the Bradford Tramways Committee, who was present, desired to be warmly associated with the sentiments he had expressed. (Hear, hear.)

**Councillor J. F. Akeroyd** (deputy chairman, Bradford Tramways Committee) said that although he had only been associated with Mr. Spencer for two or three years, it had been long enough to enable him to form a high opinion of that gentleman's ability. That day happened to be his own birthday, and he sincerely hoped that Mr. Spencer, whenever he looked at the watch, would remember him, for he could assure the meeting that he should always esteem him most highly.

**Alderman A. Fawcett** (vice-chairman, Halifax Corporation Tramways Committee) also testified to the satisfaction with which the people of Halifax regarded the honours which were being paid to Mr. Spencer, whom they had known from boyhood. They had watched his progressive career with undisguised pleasure.

**The President** then made the presentation amid applause.

**Mr. C. J. Spencer,** who was received with loud applause, said, Mr. President, Mr. Hamilton, Mr. Alderman Priestley, and gentlemen, I am sure you will quite understand that in the very special circumstances of this morning I can scarcely hope to compete with the eloquence already displayed in this room. I feel far more than I can express extreme gratitude and thankfulness for the very

Digitized by Google

kind and generous sentiments which have been uttered by the various speakers. Now, sir, this is not altogether a pleasurable occasion. I am parting with the Municipal Tramways Association. I had the honour to be at the first meeting at the inception of this Association at Manchester, where, in Mr. McElroy's office, with Mr. John Young, of Glasgow, in the chair, it was considered desirable that the managers of the various tramway undertakings in the country should form some kind of Association for the interchange of ideas. As you know, that Association has now grown into something very different. It was considered that to give this Association a proper status in the country membership should extend to others than managers, and Corporations themselves—through their chairmen and deputy chairmen of Tramways Committees—became members of the Association. My pride as your honorary secretary in the achievements of this body has been in the past, and is to-day, very great. I consider that I have had great privileges and a very great honour in being able to follow my predecessors in office, Mr. McElroy, the first honorary secretary, and then Mr. Fearnley, of Sheffield. The Association has steadily grown. I remember the words of my good friend Mr. Fearnley, who was then vacating the office, when I was first asked to take the position of secretary. He said, "Well, it means a lot of hard work, Spencer, but you will never regret it." Mr. Fearnley was absolutely right. The opportunities which come to the hon. secretary of this Association in the way of education in his own business are wonderful; and I know of nothing which has had more effect in widening my ideas and lifting the horizon of my view than the affairs of the Municipal Tramways Association. I just put this hint forward for the many members who are in this room who may at some time aspire to this or a similar office in the Association. It means hard work, and a good deal of hard work; but it is pleasant work and it is educative, and from the selfish point of view it is worth while. I have been associated as your hon. secretary with the Executive Committee for a good number of years. I have had the honour to be associated with a number of committees, but I have never yet met a more businesslike or a better body than the Executive Council of the Municipal Tramways Association. Their deliberations, as I am sure you will all agree, have always been of the very highest order, and such as will educate any man who has the privilege of sitting there and having something to do with the matters they are discussing.

Now, sir, I could not possibly have continued as your secretary, or even have acted in the first place, without the consent of my Corporation of Bradford. The Bradford Corporation very cheerfully gave consent when the matter was first mooted to them, and I do not think that it is always realised what a burden of work falls upon the tramways office of a Corporation whose official may be the secretary of this Association. I would like here and now gratefully to recognise the kind forbearance of my chairman and my committee at Bradford. The Corporation have undoubtedly done well, and are deserving of thanks from this Association for the part they have taken. (Hear, hear.) On the other hand, as my chairman, Mr. Alderman Priestley, properly recognised, undoubtedly some benefits have accrued to the Corporation. No time can possibly be wasted in educating their own officials, and in the widening of view and in the knowledge of the troubles of other people this has paid the Bradford Corporation to some extent for the sacrifices they have been making in other directions. In addition to the assistance of the Bradford Corporation, which I most gratefully recognise as far as I am personally concerned, I also recognise the assistance which I have received, first from Mr. Falkingham, my secretary at Bradford, and, later, from Mr. Wheatley. A great deal of the work has fallen on the shoulders of these assistants, and I beg gratefully to recognise the help that I have received. Now, sir, mention has been made of the future. I feel in accord with previous speakers that it is getting almost impossible to go on very much longer on a purely voluntary basis, and you will have to consider a very much bigger organisation.

Gentlemen, when I look at these very handsome presents, which are substantial tokens of what you have said, I scarcely know how to express myself. The watch is undoubtedly a good one. I have no doubt it will keep good time, and certainly after the speech of my deputy chairman I shall never look at the watch without thinking of him, and wishing him again and again many happy returns of his birthday. My wife, I am sure, were she here, would ask me to thank you very much indeed for the kind present you have seen fit to offer. As the president said, she is my better half, and when she hears of this she will be only too sorry she had no opportunity of expressing her thanks herself. There is little more that I can say except to again try and make you feel how much I regret this parting. I hope in the future I may have the opportunity of attending here, perhaps as a guest. I should not like to break off entirely my associations with all my friends in the tramway world, and in a sense I feel I am not leaving it altogether. Mr. President, Mr. Hamilton, and gentlemen, I again thank you for your great kindness to me. (Loud cheers.)

**The President** said that, interpreting the feelings of the meeting, it would not be agreeable that Mr. Spencer should cease to have any connection with the Association. It was fortunate there was a way out of the difficulty, and he therefore had very great pleasure in proposing that Mr. Spencer be elected an hon. member of the Association.

**Mr. Hamilton** formally seconded, and the motion was agreed to with acclamation.

**Mr. Spencer** returned his thanks for what he considered was the greatest honour of all. He had scarcely thought that such a thing could happen. It was an honour which he would highly prize in company with the only other gentleman, as far as he knew, who occupied the same position, Mr. John Young, the founder of the Association. (Applause.)

### Election of Other Officers.

Mr. A. R. Fearnley was unanimously re-elected hon. treasurer, and Mr. Blakeborough, of Sheffield, hon. auditor.

The meeting then proceeded to elect members of the Council, the retiring members being Sir John Courtis, Messrs. Linsley, Fell, Hamilton, Holford, and Clough.

The attendance of the members of the Council having been read out, the following nominations were received for the five vacancies:—Messrs. Timpson, Horsfield, Fell, Hamilton, Holford, Slattery, Barnard, and Wylie.

On a ballot the following gentlemen were declared elected:—Messrs. Timpson, Fell, Hamilton, Holford, and Horsfield.

**Mr. William Clough,**
*Hon. Secretary of the Municipal Tramways Association.*

A resolution of sympathy with Mr. Robson, the general manager of the Southampton Corporation Tramways, expressing the earnest hope for his speedy restoration to health, was unanimously agreed to.

**Councillor Raine** (vice-chairman, Hull Corporation Tramways Committee) proposed a hearty vote of thanks to the members of the Executive Committee, and this was seconded and cordially agreed to.

Some discussion ensued upon the question of reconstituting the Council of the Association and an alteration of the Articles of the Association, but a motion to refer the matter to the Council was lost.

On the motion of **Alderman Fenton** (vice-chairman, Sheffield Corporation Tramways Committee), seconded by **Councillor Timpson** a hearty vote of thanks was accorded to Alderman Flint for his presidential services during the year and this was duly acknowledged.

On the motion of **Alderman Bowes,** a cordial vote of thanks was passed to the Corporation of Leicester and the chairman and members of the Leicester Tramways Committee, and Mr. Lucas, the general manager, for the arrangements made for the conference.

**The President** briefly acknowledged the compliment.

**Councillor Raine** moved that the question of an appointment of a permanent secretary and future office arrangements be referred to the Executive Council.

Digitized by Google

**Mr. J. B. Hamilton,** as chairman of the Council, accepted the resolution, and explained that the matter had been under consideration for some time, and, as already explained, the Council were only waiting a suitable opportunity to take a step forward. They hoped shortly to be in a position to make an announcement on the subject.

The proceedings then concluded.

## ANNUAL REPORT OF THE EXECUTIVE COUNCIL.

The Executive Council submitted the following report on the work of the past year :—

### Annual Conference.

Due to the continuance of the European War the Executive Council decided that instead of holding the usual annual conference, business meetings should be held at Leicester, extending over two days, the first day to be occupied by the reading and discussion of papers, and the second day by the annual general meeting of the Association.

### New Members and Resignations.

The following have joined the Association during the year :—
West Hartlepool Corporation.
R. Oswald Baldwin, general manager, Corporation Tramways, Exeter.

There has been one resignation during the year, viz., Liverpool Corporation.

### Membership.

### Subscriptions of Members on Active Service.

The Executive Council decided that where it has been the practice of an individual member to pay his own subscription and he is on active service, such member shall continue in membership without payment until such time as he may return to civil life.

### Chairman of Executive Council.

Mr. J. B. Hamilton (Leeds) was appointed chairman of the Executive Council in accordance with the amended form of Articles of Association, and has occupied the chair at the meetings of the Executive Council during the past year.

### Honorary Secretaryship.

Mr. A. R. Fearnley, who has acted as hon. secretary *pro tem.*, after having held the position for a period of 14 months, found that it would be necessary to relinquish the office in consequence of his duties in connection with the Tramways (Board of Trade) Committee.

Mr. C. J. Spencer, who was about to conclude his temporary appointment with the Admiralty, was requested by the Executive Council and kindly consented again to take up the position as hon. secretary for the remainder of the Association year, and relinquished the office of hon. treasurer for this purpose.

### Honorary Treasurership.

Mr. Fearnley, on handing over the duties of hon. secretary, was unanimously appointed hon. treasurer of the Association.

### Appointment of Assistant Honorary Secretary.

In consequence of the increased work of the hon. secretary, the Executive Council, at their meeting on July 31, appointed Mr. W. Clough, general manager, Corporation tramways, Bury, to the position of assistant hon. secretary of the association.

### Alteration to Articles of Association.

At an extraordinary general meeting of the Association, held on August 31, 1917, alterations to the Articles of Association in regard to chairman of meetings were approved. These were confirmed by an extraordinary general meeting held September 21, 1917.

### Meetings of the Executive Council.

Since the last annual meeting, 13 meetings of the Executive Council have been held—11 in London, 1 in Manchester, and 1 in Birmingham. A number of committees and sub-committees have also been appointed to deal with specific matters, and these have reported periodically to the Executive Council.

### Decimal Coinage.

The Decimal Coinage Association proposed to introduce a Bill in Parliament for the purpose of establishing a decimal system of coinage in this country and requested this Association to support the measure. A committee was formed to investigate and report. Subsequently the Executive Council decided to support the proposals. A resolution to that effect was forwarded to the Board of Trade and other authorities. The Bill as introduced failed to pass the second reading, it being considered the time was inopportune for any change in the coinage of the realm. A Royal Commission has now been appointed to "consider and report whether it is advisable to make any changes in the denominations of the currency and money account of the United Kingdom with a view to placing them on a decimal basis, and whether, if any alteration of the present system is recommended, it is desirable to adopt, with or without modification, the proposals embodied in the Bill recently introduced in the House of Lords by Lord Southwark, or some other scheme, and in the latter alternative to make specific recommendations for consideration by Parliament."

### (National) Trade Advisory Committee (Disabled Sailors and Soldiers).

(Electricity, Power, Light, etc.)

A Trade Advisory Committee has been set up by the Ministry of Labour in conjunction with the Ministry of Pensions to advise those two departments as to the conditions under which the training of disabled men in this industry can best be given and the most suitable methods of obtaining convenient centres for it, and generally to secure uniformity in the training of disabled men. The Committee consists of an equal number of representatives nominated by associations of employers and of workpeople.

As representing the employers, Mr. Alfred Baker, the general manager of the Birmingham Corporation Tramways, was nominated by the Executive Council to serve on the Committee. This Committee has met at frequent intervals during the year, and has prepared schemes for presentation to the above-mentioned Government departments providing for the training of disabled soldiers and sailors in the minor operations of the industry as well as in the skilled trades.

The schemes cover the period of training in works and in technical schools, wages, maintenance allowance, etc.

The labours of the Committee are not yet concluded, but it is anticipated that much benefit will accrue to disabled sailors and soldiers as a result of their efforts.

### Standardisation of Overhead Line Material.

The Executive Council invited the Tramways and Light Railways Association to appoint representatives to sit on the committee formed to consider the advisability of standardising overhead line material, and four representatives were duly appointed.

This joint committee has held meetings periodically throughout the year, and has confined its attention chiefly to the consideration of trolley wire.

### Electric Vehicle Committee.

Mr. A. R. Fearnley, of Sheffield, was reappointed the representative of the Association on this committee.

### Rule of the Footpath.

This question was the subject of discussion during the last annual meeting, when it was decided to communicate with the Home Office in order to ascertain if it were possible for the present practice of pedestrians keeping to the right of the footpath to be altered to "keep to the left," so that when proceeding along the pavement pedestrians would be always facing the traffic on the carriage-way, and many accidents would thereby be prevented.

The Home Office in their reply stated that they had no authority to make a regulation for the purpose of altering the existing custom, and that any change in this direction would probably involve legislation, which was not practicable at the present time. Having regard to the reply of the Home Office the Executive Council decided that, for the present, no further action could be taken in the matter.

### Increase of Statutory Fares and Charges.

The following communication was received from the Secretary of the Board of Trade (Railway Department) :—

Copy.

"Board of Trade (Railway Dept.),
7, Whitehall Gardens, London, S.W.1,
February 21, 1918.

Sir,—With reference to the letter from this Department of March 5 last, with regard to the possibility of increasing the existing statutory maximum fares on tramways, I am directed by the Board of Trade to state, for the information of the Municipal Tramways Association, that the Tramways and Light Railways Association have now suggested that the existing maximum charges applicable to tramway undertakings should be increased by 50 per cent.

The Board would be glad to be informed of any views which your Association may hold in the matter, and to be furnished with facts and figures proving the necessity of any action which the Association may desire to recommend.

I am, Sir,
Your obedient servant,
(Sgd.) Ernest J. Moggridge.

The Hon. Secretary,
Municipal Tramways Association,
Division Street, Sheffield."

After consideration of the above, the Executive Council passed the following resolution :—

"That the Board of Trade should be invested with powers to increase the maximum statutory tolls, charges and rates in such cases where the necessity is proved to exist."

The President of the Board of Trade (The Rt. Hon. Sir A. H. Stanley, P.C., M.P.) received a small deputation on this question, and figures concerning various undertakings were placed before him showing the necessity of immediate action being taken as regards the revision of fares. He expressed himself satisfied that a case had been made for a temporary revision of statutory rates and charges, and suggested that the best course to adopt was the formation of a Select Committee of the House of Commons to take evidence

Digitized by Google

and report. Following this interview a Select Committee of the House was appointed, and the hon. secretary (Mr. C. J. Spencer) was requested by the Executive Council to give evidence before such Committee on behalf of the Association. The hon. secretary was also requested to give evidence on behalf of the Association of Municipal Corporations. The hearing took place on Wednesday, May 8, and the Select Committee presented their report on Wednesday, June 5, 1918. This report was circulated amongst the members and has also appeared in the technical press.

As a result of these investigations a Bill entitled "Statutory Undertakings (Temporary Increase of Charges) Bill," which gives power to increase fares for the continuance of the present war, and for a period of two years thereafter, has passed through both Houses and has received the Royal assent.

### Tramways (Board of Trade) Committee.

The following communication was received from the Board of Trade (Railway Department), regarding the appointment of a Committee to assist tramway undertakings in the difficulties experienced as to the shortage of labour, material, etc.

Copy.

"Board of Trade (Railway Dept.),
7, Whitehall Gardens, London, S.W.1,
November 10. 1917.

Dear Sir,—I am directed by the Board of Trade to state for the information of your Association that the President of the Board of Trade has decided in view of the serious difficulties under which tramways are at present labouring, to set up an expert committee to consider the needs in respect of materials and labour of tramways essential to the prosecution of the war, and to take such steps as may be necessary to supply such needs even at some temporary sacrifice on the part of the less essential undertakings.

The president is confident that he can rely on the assistance of your Association in this important matter, and he would be glad if the Municipal Tramways Association would be good enough to nominate at the earliest possible moment three representatives to serve on the committee.

I am to add that it is proposed that Mr. James Devonshire should be chairman of the Committee.

I am, Sir,
Your obedient servant,
(Signed) Ernest J. Moggridge.

The Hon. Secretary,
Municipal Tramways Association,
Division Street, Sheffield."

The Executive Council at a meeting held on Wednesday, November 14, 1917, nominated Mr. A. R. Fearnley, Mr. J. B. Hamilton and Mr. J. M. McElroy for appointment as the representatives of the Association on the proposed Committee.

Mr. A. L. C. Fell, of the London County Council Tramways, and Mr. J. Dalrymple, of the Glasgow Corporation Tramways, are also members of the Committee.

The terms of reference of this Committee are as follows:—

> "To be a Committee to consider the needs in respect of rolling stock, materials and plant of tramways and light railways which are essential to the prosecution of the war, and, subject to the approval of the Board of Trade, to take such steps as may be necessary or desirable to supply these needs by means of transferring rolling stock, materials or plant from less essential tramways or light railways, or otherwise, as may be practicable. Representatives of the Board of Trade and the Ministry of Munitions will attend the meetings of the Committee in an advisory capacity when necessary."

An explanatory memorandum issued by the Board of Trade further defines the duties of the Committee in the following terms:—

(1) To take steps to provide, where necessary, for the loan or transfer of rolling stock, materials or plant from one undertaking to another.
(2) To determine the relative priority of the demands of various tramway and light railway undertakings for necessary materials and supplies, and to make the necessary arrangements in the matter.
(3) To deal with questions of new or increased services and the maintenance of existing services, and, if considered necessary, to make recommendations for the closing of the traffic of any undertaking, either wholly or in part.
(4) To consider the question of the construction of new lines, or the existing lines, and to make recommendations as to the supply of the necessary materials, plant, etc., therefor.
(5) To value the materials and plant which may be released by the reduction of services, or the closing of any existing lines, and to advise as to the amount of compensation payable in respect thereof, and the loss involved in revenue, if any.
(6) To consider such applications for the revision of existing statutory tolls and charges on tramways and light railways as may be referred to them by the Board of Trade, and to make recommendations as to the action to be taken.

### Board of Trade Transport Board.

The attention of the Executive Council having been drawn to the fact that the Board of Trade had appointed a Road Transport Board, it was decided to request the Board of Trade to receive a deputation with the object of the Association being represented thereon. The President of the Board of Trade in his reply pointed out that there was no necessity at the present time for such a deputation, as the activities of the Road Transport Board would be confined to goods-carrying vehicles and would not affect tramway interests.

### Military Service (Withdrawal of Exemptions) Order (No. 2), 1918.

Under this Order, as from June 22, 1918, certificates of exemption from military service were withdrawn respecting the following:—

*Tramways (excluding Electrical Generating Stations).*

| | Grade. | Category. | Born in or after |
|---|---|---|---|
| (*a*) Traffic Inspector, Chief Storekeeper and Parcel Superintendent ... | 1 | A | 1880 |
| (*b*) Driver ... ... ... ... | 1 | A | 1883 |
| (*c*) All other classes of workmen ... | 1 | A | 1875 |

With regard to the occupations coming under the heading of "Maintenance Staff," Code No. X004 of the schedule, representations were made to the Ministry of National Service as to their inapplicability to the tramway industry. A list of occupations comprised in the term "Maintenance Staff," approved by the the Ministry of National Service, was subsequently circulated amongst the members.

### Board of Trade Committee on Electric Power Supply.

As intimated in the last annual report, negotiations were proceeding between the Board of Trade and the Association with the object of local authorities being given increased representation on this Committee, and the name of Mr. J. Dalrymple, of Glasgow, was suggested as the representative of the Association. The President of the Board of Trade in his reply pointed out that the Committee, as at present constituted, in his opinion was sufficiently representative of the general interests of the electric power supply industry, and that it was not desirable to increase the number of members.

The report of the Board of Trade Committee has now been published and contains proposals with regard to electric power supply which are of the greatest importance to tramway authorities. The Executive Council has appointed a committee to consider the effect which the adoption of these proposals would have on municipal tramways. On receiving the report of this committee, the Executive Council decided that it is desirable the Association should act in concert with the Association of Municipal Corporations and the Incorporated Municipal Electrical Associations and should urge upon them the necessity for immediate joint consideration of the matter.

### Joint Industrial Council for the Tramway Industry.

The Executive Council has during the year taken active steps in the direction of the establishment of a joint industrial council for the tramway industry on the lines of the Whitley Report.

A committee consisting of the following members of the Executive Council was appointed to deal with this matter, viz.:—

| | |
|---|---|
| Mr. A. Baker. | Mr. T. B. Goodyer. |
| Mr. W. Clough. | Mr. J. B. Hamilton. |
| Sir J. W. Courtis. | Mr. W. J. McCombe. |
| Mr. A. R. Fearnley. | Mr. J. M. McElroy. |
| Mr. A. L. C. Fell. | Mr. H. Mozley. |
| Alderman S. Flint, J.P. | Mr. C. J. Spencer (hon. secretary). |

The committee held a number of meetings and subsequently attended joint conferences with representatives of the Tramways and Light Railways Association and of the National Transport Workers' Federation, at which a representative of the Ministry of Labour was present.

After general discussion of the subject at the joint conferences, a small sub-committee was appointed to draft a scheme for the consideration of the constituent associations. The members of the drafting sub-committee were:—

Mr. J. M. McElroy, Municipal Tramways Association.
Mr. C. J. Spencer, ,, ,,
Mr. R. J. Howley, Tramways and Light Railways Association.
Mr. R. Williams, National Transport Workers' Federation.
Mr. Ben Smith, London and Provincial Union of Licensed Vehicle Workers.
Mr. S. Hirst, Amalgamated Association of Tramway and Vehicle Workers.

It was also agreed that a representative of the Ministry of Labour should attend the meetings of this sub-committee.

The drafting sub-committee, after a number of meetings, prepared a scheme and submitted same to their respective Associations. Your Council made certain suggested amendments to the draft and again remitted it to the committee.

At this stage the matter was considered by a joint committee consisting of representatives of the Municipal Tramways Association and the Tramways and Light Railways Association. Whilst the representatives of the two Associations were in agreement as regards the main outlines of the scheme, a difference of view was expressed on the subject of voting on the employers' side of the council.

A proposal was put forward on behalf of the Tramways and Light Railways Association and counter proposals were made on behalf of the Municipal Tramways Association. The point in difference between the two Associations has not yet been adjusted, but it is hoped that an arrangement will shortly be come to which will meet with the approval of both Associations. The draft which your Executive Council now submits must not be taken as a final draft, because further meetings with the representatives of the tramway companies and of the employees will be necessary before the scheme

Digitized by Google

can be put forward in its final form. In submitting the scheme to the annual conference the Executive Council asks for a general approval of the steps taken so far in connection with this matter. When the scheme has received the provisional approval of the executives of the constituent associations, it is proposed to submit the same to each municipality for consideration and approval.

MEETING OF MANAGERS' SECTION.

At a meeting of the Managers' Section held at Blackpool, on September 21, 1917, it was decided that the meetings of this section should be resumed, and the next meeting be held in Birmingham. On considering this matter further, however, the Executive Council decided that in view of the difficulties of transport, catering, hotel accommodation, etc., and the numerous conferences and meetings which were being called from time to time in different parts of the country, it was not advisable to hold a meeting of the Managers' Section this year, and the members were notified accordingly.

FINANCE.

The Executive Council has to report an excess of expenditure over income during the year of £56 17s. 3d. The total income amounted to £366 16s. 3d. and the expenditure £423 13s. 6d. The great cost of printing, together with the inevitable increases on other items of expenditure, is responsible for the adverse balance. The available balance (excluding reserve fund) stands at £224 8s. 9d.

By order of the Executive Council,

SAMUEL FLINT, *President.*
J. B. HAMILTON, *Chairman.*
C. J. SPENCER, *Hon. Secretary.*

## THE MAYOR'S LUNCHEON.

Delegates, members, and friends were entertained at luncheon on Thursday by the Mayor of Leicester in one of the picture galleries of the Museum. His Worship occupied the chair, and among the company were the Mayoress (Mrs. North), Mr. James Devonshire, Chairman of the Tramways (Board of Trade) Committee, Alderman S. Flint, the chairman of the Leicester Corporation Tramways Committee, and Alderman J. Benton, the vice-chairman, Mr. H. A. Pritchard, the Town Clerk, Alderman J. Russell Frears (Deputy Mayor), various members of the Leicester Tramways Committee, etc.

After the loyal toast, the MAYOR, in submitting the toast of "The Board of Trade," said they regretted the absence of Sir Albert Stanley, M.P., the President of the Board of Trade. They were very pleased, however, to have with them Mr. James Devonshire the chairman of the Tramways (Board of Trade) Committee. Many committees of that important Government department exercised considerable control over tramway undertakings, and therefore it seemed suitable that this toast should be the principal one on the list. The present occasion was obviously not one when they should criticise the department, or show any lack of enthusiasm for it in its dealings with local authorities. They were very pleased to meet the representative of the Board of Trade, and it gave him great pleasure to couple that gentleman's name with the toast. (Cheers.)

**Mr. James Devonshire,** who was cordially received, in responding, said he felt inclined to quarrel with Mr. Spencer, the secretary of the Association, for manœuvring him into this position, for when he entered the room he had no idea that he would be treated as the guest of the occasion by their genial host, or that he would be entrusted with the reply to such an important toast. It had been arranged that Sir Albert Stanley should have attended that day, and he believed that a message from him was on its way. Owing to the trouble on the railways, the President of the Board had been working night and day, and they could understand how difficult it was for him at such a time to leave London. Sir Albert had been very anxious to say something to them on the question which he knew had been greatly exercising all their minds, i.e., the coal situation and the rationing of coal. Dealing with that matter from a business standpoint, he knew there had been a certain amount of irritation among tramway people at being singled out for rationing of their coal supplies, while other less important industries were allowed to go scot free. He had particularly asked the President of the Board to deal with that matter in his message. All he could say for the Tramways Committee in that matter was that they were really acting under instructions. The Coal Controller's Department was under the supervision of the Board of Trade, and so was the Tramways Committee. The result of collaboration between them and the Coal Department was that it had been decided by the powers that be that there must be this rationing of coal for tramways. It was not so severe as at first blush it might seem, and he was sure they could rely with confidence on tramway administrators to act like all other patriotic citizens and do their best to economise with coal, or even to do something more. They were assured by the Coal Controller that, although as an organised industry they were easy to select for rationing, yet the very fact of their being an organised industry would redound to their advantage in the long run, because he would make it his first care that they, being an industry of great national importance, would be the last to be starved in regard to this most important commodity of coal. That was worth bearing in mind. Meanwhile he begged them to be content with things as they stood. They were asked to do their best, and it was proposed to leave the matter there until further more stringent orders were issued in due course.

**Councillor Mayne** (Newcastle), in the absence of Mr. H. E. Blain, operating manager of the London General Omnibus Company, proposed the toast of "The Town and Trade of Leicester." He congratulated Leicester on its municipal enterprise; for in several respects it set a wonderful example to the rest of the towns of England. He trusted its people would long continue to possess that prosperity, fairness, and freedom they had enjoyed in the past. (Applause.)

**Mr. H. A. Pritchard** (Town Clerk), in replying, congratulated the company in having such an excellent substitute for Mr. Blain. Those who were associated with the administration of Leicester had the welfare and prosperity of its people very near to their hearts, and in that respect they were somewhat locally centred. In modern city life a great many things went to make the amenities of the people what they should be, and he could not think of anything more decisive for the welfare and comfort of the people of a large industrial town like theirs than adequate means of transit. He did not hesitate to say that the Leicester tramways were second to none. Since the far-off days of horse cars great improvements had taken place, and as experts he thought they would agree with him that there was scope for still further improvement. Tramway enterprise had close connection with public work, and, whether run by municipalities or companies, it never lagged behind. He had many pleasant recollections of their Association, and of old friends like Mr. Hamilton, Mr. Baker, Mr. Bellamy, and many others. He had also had some little connection with their friends at the Board of Trade. British Governments always came in for a great deal of criticism; it seemed to him that the Government departments realised their responsibilities and did their best. He thought that it was an encouraging sign that practical business men were now taking charge of various departments, and they sincerely hoped Sir Albert Stanley would be able to cope with the many difficulties of the present time. The prosperity of their old town was wrapped up in the prosperity of the British Empire. They had a long history behind them, and he was optimistic enough to think they might look forward hopefully to the future. (Applause.)

**Alderman J. Russell Frears** (Deputy Mayor), proposing the toast of "The Municipal Tramways Association," said that in Leicester they felt that as a town they had derived great benefit from the proceedings of the Association. They were proud of their tramway system, and felt that for their many advantages they were indebted to the hard and efficient work of the tramways committee, whose members were inspired by meeting with representatives from other towns who were engaged in the same work as themselves. Such an Association as theirs enabled them to solve many difficulties in a helpful way, and to make things better for the whole country. Another thing which gave Leicester a special interest in the Association was the fact that its president was Alderman Flint. He need not praise that gentleman, because they all knew him so well, but he could say that in their Town Council none was held in higher respect and esteem than their president. He had been a most successful chairman of the Tramways Committee, and they were indebted to him for much sterling work. The committee kept steadily before them the improvement of the service, and they looked with confidence to that Association to help them in their work. (Applause.)

**The President,** who was received with applause, briefly responded, and on behalf of the Association warmly thanked the company for the generous reception of the toast. He assured them all that the Association keenly appreciated the way in which they had been welcomed to that town. As an organisation consisting of municipal representatives and officials engaged in the tramway administration of the whole country, they could understand the difficulties now facing the Board of Trade, and he believed they would respond to the earnest appeal made to them by Mr. Devonshire. (Hear, hear.)

**Councillor Timpson,** Portsmouth, proposed the health of the Mayor, whose reception and hospitality were greatly appreciated by everyone. The Mayor had taken no mean part in the civic and public life of the borough, whose head he had been continuously for the past four years. In Leicester the Mayor had raised no less a sum than £100,000 for wounded soldiers, and he believed that was a record collection. Considering, too, that the Mayor was chairman of the Education Committee, they could well understand how much time he must devote to promoting the welfare of his fellow citizens. They tendered to him their warmest thanks. (Applause.)

**The Mayor** briefly acknowledged the compliment. He explained the real pleasure it had given him to welcome the Association to Leicester and thanked the proposer for the too generous things said about his work. He announced that a telegram had been received from Sir Albert Stanley's private secretary expressing the President's regret at being unable to leave the Board of Trade, and adding that a further telegram had been sent to the Town Hall.

Digitized by Google

On Friday afternoon visits were paid to various places of local antiquarian interest and to several of the largest boot and shoe and hosiery manufactories, arrangements for which had been thoughtfully made by Mr. A. F. Lucas, the tramways manager.

## TRAMWAYS COMMITTEE LUNCHEON.

The Chairman of the Leicester Corporation Tramways Committee entertained the conference to luncheon in the Museum Buildings on Friday at the conclusion of the annual meeting. Alderman Flint presided, and there was a large company. After the loyal toast,

Alderman BOWES proposed the health of the Chairman, whose services to the conference had been so excellent. They all recognised Mr. Flint's public spirit, and trusted that Leicester would long enjoy the advantage of his experience and ability.

The toast was accorded musical honours.

Alderman FLINT, replying, said he had been anxious to make the conference a success, and as it was being held in a very central town he felt there had been a prospect of good attendances. He believed that hope had been realised. On the whole the attendance had been very good. Personally he had been delighted with the good spirit displayed throughout the proceedings. As to the Leicester tramway system, it had been their object to make it second to none in any industrial area. Their object was to instal a good system, and then keep it thoroughly up to date. He paid a tribute to the road work of the borough surveyor, Mr. Mawbey, whose skill and successful efforts were visible in the various thoroughfares. In Mr. Lucas, the tramways manager, they had an earnest and loyal official, who played his part admirably, together with Mr. Smith, the engineer, a capable man who had charge of the power-station. He wished the members a safe return home, and expressed the hope that they had found the Leicester conference profitable as well as interesting. (Applause.)

## THE NEW PRESIDENT OF THE MUNICIPAL TRAMWAYS ASSOCIATION.

The newly-elected president of the Municipal Tramways Association, Mr. Thomas Boyce Goodyer, A.I.E.E., tramways manager to the Croydon Corporation, was born in Glasgow and educated at the Royal High School, Edinburgh. On leaving school, Mr. Goodyer was several years in the office of Mr. D. W. Paterson, solicitor, for many years secretary to the Edinburgh Street Tramways Company, of which system Mr. Goodyer, sen., was traffic manager. In 1884 he joined the traffic office staff of the London Road Car Company, Limited, and some months later was appointed manager and secretary to the Northampton Street Tramways Company. His next appointment was that of manager of the West Metropolitan Tramways, part of which is now the London United Tramways. Mr. Goodyer resigned this post in order to take up, in October, 1887, the appointment of assistant traffic manager to the Birmingham Central Tramways Company, Limited. In addition to the horse car and omnibus services, the company also worked cable, electric (accumulator), and steam cars. In 1894 Mr. Goodyer was appointed traffic manager. In 1896 a new company, called the City of Birmingham Tramways Company, Limited, was formed to take over and work the "Birmingham Central," and he remained with the new company until April, 1898, when he resigned to become the general traffic superintendent of the British Electric Traction Company, Limited. In this appointment Mr. Goodyer was responsible for the general traffic arrangements on the company's numerous tramway systems, consisting of electric, steam, and horse lines, the aggregate mileage of which was about 190 miles. During 1900 he spent several months in the United States and Canada, inquiring into tramway matters. When the office of general traffic superintendent was abolished in December, 1901, Mr. Goodyer was appointed general manager at Croydon, for the British Electric Traction Company, Limited, the lessees of the Croydon Corporation Tramways, and held that appointment during the currency of the lease, which terminated in May, 1906, and since that time he has occupied his present position. He has been a member of the Executive Council of the Municipal Tramways Association for some years, and is also a member of the Council of the Tramways and Light Railways Association. Since 1907 Mr. Goodyer has been honorary secretary to the Metropolitan Association of Electric Tramway Managers, and also acts in a similar capacity to the Tramways (Board of Trade) Local Advisory Committee for No. 1 area, Metropolitan and East Coast.

**Control of Electricity.**—By a new regulation published in the *London Gazette* the Minister of Munitions may direct the extinction or restriction of lights at such times and places as may be specified and may prohibit or restrict the supply of electricity. It is provided, however, that no order shall be made for the closing of any power station belonging to any local authority or for the connection of any such power station with any other power station, except with the concurrence of the appropriate Government department.

## GLASGOW CORPORATION TRAMWAYS.

The twenty-fourth annual report of the Glasgow Corporation Tramways Committee for the year ended May 31 last, which has recently been issued, shows that the ordinary income amounted to £1,412,635, and the working expenses, including payments to dependants of employees serving with the Forces, to £1,044,183, thus leaving a net revenue of £368,452. These figures compare with the following for the year ended May 31, 1917 :—Receipts, £1,260,115 ; expenses, £838,065. After adding interest on investments, the net revenue of £377,032 has been applied in payments to the Paisley Tramways Company, income tax, Parliamentary expenses, and an amount carried to depreciation and permanent way renewals fund. These items amount in all to £199,479 ; for the previous year they totalled £339,702. The net balance was £177,553, compared with £160,985, and under the Act of 1909 it is paid over to the Common Good. The reason why the deductions from the net revenue account are so small compared with the previous year is that, owing to the capital indebtedness having been wiped out, there are for the first time no payments to be made in the shape of interest on capital and contributions to sinking fund. It will be noticed, however, that this relief is more than swallowed up by the great increase in working expenses. These, including depreciation and payments to dependants, stand at £951,063. compared with £745,420. The increase is largely due to the enormous advances in wages which have been awarded during the year.

The following is a summary of the results for the last four years :—

| YEAR ENDED MAY 31. | 1918 | 1917 | 1916 | 1915 |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| Traffic receipts ... ... ... ... | 1,404,110 | 1,245,507 | 1,149,264 | 1,070,694 |
| Sundry receipts ... ... ... ... | 8,525 | 14,607 | 8,072 | 6,183 |
| Total revenue ... ... ... | 1,412,635 | 1,260,114 | 1,157,336 | 1,076,877 |
| Traffic expenses ... ... ... ... | 527,152 | 395,736 | 350,186 | 345,625 |
| General expenses ... ... ... ... | 156,949 | 137,816 | 144,297 | 142,020 |
| Maintenance and repairs ... ... | 179,811 | 143,758 | 133,659 | 144,530 |
| Power expenses ... ... ... ... | 86,019 | 67,231 | 64,346 | 51,995 |

The following are the traffic statistics for the year 1917-18 :—Average track mileage open single, 196¼ ; car mileage, 26,261,231 ; increase 475,184 ; traffic receipts, £1,404,110, increase £158,602 ; traffic receipts per car mile, 12·832d., increase 1·240d. ; traffic receipts per passenger, ·782d. increase ·13d. ; passengers carried, 430,946,566, increase 42,651,690 ; passengers per car mile, 16·410, increase 1·351.

# FINANCIAL REPORTS AND MEETINGS.

BRITISH INSULATED AND HELSBY CABLES, LIMITED.—An interim dividend of 9d. per share, less income-tax, has been announced.

STRAKER-SQUIRE, LIMITED.—An interim dividend of 1s. per share, less income-tax, on account of the current year, has been announced.

BRITISH INSULATED AND HELSBY CABLES, LIMITED.—An interim dividend on the ordinary shares has been declared at 3¾ per cent. (9s. per share), less tax.

TYNESIDE TRAMWAYS AND TRAMROADS COMPANY.—A dividend of 2½ per cent. has been paid for the past half-year, £3,600 has been carried to reserve, and £1,696 carried forward.

MADRAS ELECTRIC TRAMWAYS (1914), LIMITED.—An interim dividend in respect of the year ending December 31st next of 8 per cent. per annum, free of tax, on the ordinary shares has been announced.

HONG KONG TRAMWAY COMPANY, LIMITED.—The attorneys in London have received telegraphic advices from Hong Kong that the Board of this company intends to redeem all the outstanding debentures on May 31 next.

Digitized by Google

BARSI LIGHT RAILWAY COMPANY.—After transferring £1,035 to reserve account for the equalisation of dividends, etc., a final dividend of 3 per cent. (6s. per share), making a total distribution of 6 per cent. for the year to March 31, has been paid.

THE BRITISH EMPIRE TRUST COMPANY, LIMITED, announce that the Toronto Railway Company has declared a dividend on its ordinary shares of 1 per cent. for the quarter ended September 30, 1918, being at the rate of 4 per cent. per annum.

BRITISH ALUMINIUM COMPANY, LIMITED.—Dividends have been declared at the rate of 8 per cent. per annum, less income-tax, on the ordinary shares, and 6 per cent. per annum, less income-tax, on the preference shares, both for the six months ended June 30.

ABERDEEN SUBURBAN TRAMWAYS COMPANY.—For the half-year to July 31 the net profits amounted to £2,300, and £1,614 was brought forward. A dividend at the rate of 5 per cent. per annum has been declared, £1,200 has been added to the depreciation fund, and £1,061 is carried forward.

BROCKHOUSE AND COMPANY.—This year, as in the previous year, an ordinary dividend of 20 per cent. is to be paid. A further proof of the vigorous state of business is that more capital is needed to finance extensions, and that the ordinary shareholders are accordingly invited to double their holdings by subscribing for 57,000 more ordinary £1 shares at a premium of 50 per cent.

SWANSEA IMPROVEMENTS AND TRAMWAY COMPANY.—The 79th annual report states that the revenue for the year amounted to £79,753, or an increase of £7,411 as compared with 1916. Of the available balance it is proposed to place £3,000 to reserve, payment of preference dividends absorbs £2,598, and a dividend at the rate of 6 per cent. for the year is recommended on the 13,000 ordinary shares, in respect of which an interim dividend at the rate of 5 per cent. per annum for the half-year was paid in October last. This absorbs £7,800; the carry-over is £2,654, or slightly more than the sum brought into the account.

BIRKENHEAD CORPORATION TRAMWAYS.—The seventeenth annual report for the financial year ended March 31 states that the income was £97,837 16s. 5d., or £17,090 3s. 3d. higher than the previous record made during the preceding twelve months. The traffic receipts, £96,386, showed an increase of £16,714, and the parcel receipts £206, an increase of £7. The total working expenses amounted to £53,815, an increase of £11,708. The available balance of £17,372 has been allocated as follows:—In aid of rates, £8,550; reserve fund, £3,822; renewals fund, £5,000. The credits to reserve fund now stand at £12,013, and to renewals fund £39,338. The war bonus at present being paid to employees of the department was at the rate of £12,800 per annum. War allowances to dependants of employees on active service amounted to £998 8s. 9d., making a total since the war commenced of £4,996 7s. 4d. The passengers carried for the past year were 20,538,476, being an increase of 2,588,043 over the previous year, and an increase of 5,370,518 over the pre-war year. These figures did not include the large number of wounded sailors and soldiers who were allowed full use of the cars without charge. The effect of the withdrawal of the 1½d. stages in June, 1917, showed that, whilst there was a loss of 1,720,645 passengers at 1½d., there was an increase of 2,114,138 passengers at 2d.

**Birmingham Corporation Tramways.**—Appended is a comparative statement of the financial results, together with other details of the working, of these tramways for the year ended March 31, 1918, and the three preceding years:—

## PERSONAL.

**Sir Alexander Roger** has been elected a director of the British Insulated and Helsby Cables, Limited.

**Mr. W. H. Brown,** secretary of the Metropolitan Railway Company has been made a Justice of the Peace for Middlesex.

**Mr. H. T. Wakelam,** county engineer of Middlesex, has been appointed a member of the Road Transport Board.

**Mr. W. J. Hadfield,** permanent way engineer to the Sheffield Corporation Tramways, has been appointed local fuel overseer.

**Driver W. H. Spencer, R.F.A.,** formerly a conductor on the Brad ford Corporation Tramways, has been awarded the Military Medal.

**Mr. H. Yarwood,** assistant borough surveyor of Rochdale, has been appointed borough surveyor *pro tem.* at a salary of £400 a year.

**Mr. H. J. Burcham** has been appointed rating agent to the London and North Western Railway, in place of the late Mr. W. C. Neate.

**Mr. A. B. Slater,** manager of Burton-on-Trent Corporation Tramways, has been granted an increase in salary of £50 and war bonus.

**Mr. B. S. Pinkerton,** permanent way engineer of the Belfast Corporation Tramways, has been appointed assistant city surveyor of Belfast.

**Mr. W. Clough,** general manager of Bury Corporation Tramways, has been appointed honorary secretary of the Municipal Tramways Association.

**Mr. H. Webber,** borough electrical engineer and tramways manager of Keighley, has been appointed district engineer by the Controller of Coal Mines.

**Mr. A. R. Dayson,** general manager of the Sunderland Corporation Tramways, has received an increase of salary from £600 to £700 per annum.

**Lieut. L. F. Burgess,** of the staff of the British Westinghouse Electrical and Manufacturing Company (Australia), has been awarded the Military Cross.

**Sergt.-Major J. H. Jones,** formerly a driver on the West Ham Corporation Tramways, has been awarded the D.C.M., having previously received the M.M.

**Mr. John Baker** has been elected to the executive committee of the Industrial Reconstruction Council, as representing the Iron and Steel Trades Confederation.

**Professor W. E. Dalby, F.R.S.,** has consented to serve on the expert sub-committee of the Gas Traction Committee in place of the late Colonel Bertram Hopkinson.

**Mr. A. J. Griffin** has resigned his position as engineer in charge of the West Ham Corporation power-station, to take up an appointment with the Western Electric Company.

**Mr. H. E. Mortimer,** of the Croydon Corporation electricity department, has been appointed assistant mains engineer to the Marylebone Borough Council electric supply department.

**Mr. S. S. Platt,** late borough surveyor of Rochdale and permanent way engineer to the Rochdale Corporarion Tramways, is being retained as consulting engineer at a salary of £200 a year.

**Mr. James Taylor** has been elected chairman of the British Insulated and Helsby Cables, Limited, following the resignation, owing to health reasons, of Dr. E. K. Muspratt, who, however, remains on the directorate.

**Mr. R. L. Horsfield,** general manager of Walsall Corporation Tramways, has been granted by a unanimous vote of the Council an increase in salary of £100 as from April 1, to £600, and an increase of £50 in each of the two succeeding years, to £700.

**Mr. Struan Robertson** has been appointed engineer and manager of the Hawthorn Tramway Trust. Since 1914 he has been engineer and manager of the Melbourne, Brunswick and Coburg Tramway Trust, whose undertaking he designed and constructed.

**Private T. Temple, M.M.,** Grenadier Guards, is the fourth Cardiff Corporation tramway employee who has won distinction in the war. He has been presented with a watch, chain and pendant by the employees at a gathering at which Mr. Arthur Ellis, general manager, presided.

**Mr. J. E. Edgcome,** borough electrical engineer of the Corporation of Kingston-on-Thames for the past twenty-five years, has resigned to take up the post of secretary of the Tungsten Lamp Association. Mr. Edgcome was selected from more than one thousand applicants.

**Mr. Charles Challenger,** manager of the Bristol Tramways and Carriage Company, has entered upon the fiftieth year of his connection with the passenger transport industry. After a few years' service with the Midland Railway Company, he joined the staff of the enterprise of which he is now the manager.

**Mr. Robert N. Tweedy,** on receiving a commission in the R.A.F., A.G.S. branch, has resigned his position as manager of the Dublin and South of Ireland branch of William Coates and Sons, Limited, which he has held for nearly twelve years. He will have charge, under the C.O., of the power and lighting installations of all the aerodromes in Ireland.

Digitized by Google

**Mr. A. R. Green,** only son of Mr. W. J. Green, manager of the Weston-super-Mare branch of the Bristol Tramways Company, has been gazetted a lieutenant in the Royal Air Force. Before the war he was in the electrical department of the Bristol Tramways. He has served in Egypt for over two years in the Army Service Corps (Motor Transport).

**Capt. F. W. Mozley, R.E.,** who recently received his promotion from the rank of lieutenant, is the son of Mr. H. Mozley, manager of the Burnley Corporation Tramways. He joined the Artists Rifles in December, 1915, and after ten months' training entered the Royal Engineers' Cadet School at Newark. He was commissioned on October 21, 1916, and went out to France in January, 1917. Before joining the army he was chief engineering assistant under Mr. Shackleton, permanent way engineer to the Nelson Corporation Light Railways.

**Mr. R. H. Wilkinson,** tramways manager and engineer for the Huddersfield Corporation, has been appointed general manager of the Bradford Corporation Tramways, at a salary of £800 per annum. Mr. Wilkinson, who has been at Huddersfield for 14 years, was previously manager of the Oldham Corporation Tramways for four years, and had two years' service in the Liverpool tramways department. He has had mechanical, electrical, and marine engineering experience. His application was one of 19 of which four were selected for special consideration.

**Mr. Albert Vickers** resigned the chairmanship of Vickers, Limited, on September 16, his eightieth birthday. In a letter conveying his resignation, Mr. Vickers recalls that he has spent sixty-four years of his life with the company, and that its fortunes have always been bound up with his own. Although Mr. Vickers felt compelled, owing to advanced age and somewhat failing health, to resign the chairmanship, he said that he would always be at the service of his colleagues for consultation and advice. Mr. Douglas Vickers has been appointed chairman.

**Mr. R. Stuart Pilcher,** who has entered on his duties as general manager of the Edinburgh Corporation Tramways, has received a presentation from the employees of the Aberdeen Corporation Tramways, where he was manager for the last twelve years. Among those present on the occasion who spoke in appreciation of Mr. Pilcher's services were the Lord Provost (Sir James Taggart); Councillor Robertson, chairman of the Tramways Committee; Mr. A. Wilkie, manager of the Aberdeen Suburban Tramways Company; and Mr. W. Forbes, who succeeds in the management of the Aberdeen Corporation Tramways. Presentations were also made to Mrs. Pilcher and Miss Pilcher.

**Mr. W. Forbes** has been appointed general manager of the Aberdeen Corporation Tramways at a salary of £450. In recommending his appointment to the Council, Councillor Robertson (chairman of the Tramways Committee) said Mr. Forbes had had considerable experience not only as an organiser but in commercial work. He was a very fitting official to take the place of the late manager, Mr. Pilcher, who had given him a very high certificate. The Lord Provost (Sir James Taggart) said that the Town Council were anxious, when they had a man of their own qualified to fill a vacant position, as far as possible to promote him to that post, and they were very fortunate in having Mr. Forbes, who had been traffic manager for several years.

**L.-Bombdr. H. W. Hammond,** son of Mr. W. E. Hammond, traffic manager of the Metropolitan Electric Tramways, Limited, and vice-chairman of the Metropolitan Association of Electric Tramways Managers, who joined the R.G.A. in October, 1916, and was sent to Hong Kong (where he has been acting as master gunner's assistant), has been seconded to the Kowloon Canton Railway Company for temporary appointment as traffic inspector on the British section of the line. L.-Bombdr. Hammond joined the staff of theMetropolitan Electric Tramways, Limited, in September, 1904. He was transferred in March, 1913, to the British Electrical Federation, and three years later again transferred to the London Electric Railways, both appointments being in the claims departments.

---

**Alderman V. Fowler,** a director of the Scarborough Tramways Company, died recently at the age of 69. He had been Mayor of Scarborough.

We deeply regret to record the death from wounds of **Lieutenant Leonard G. Byng, M.C.,** Grenadier Guards, second son of the late Mr. J. Byng, and a director of the General Electric Company.

The death is reported of **Mr. S. A. Mahood,** who was for many years with the Brush Electrical Engineering Company, and later with the Birmingham and Midland Tramways Joint Committee as resident engineer at Smethwick Power House. He was 60 years of age, and leaves a widow and one son, who is a lieutenant in the Royal Engineers.

---

**Extension at Burton-on-Trent.**—The Tramways Committee have decided that the tramways be extended from the terminus on the Branstone Road to the Leicester Line Railway Bridge at a cost of about £3,500.

# TRAMWAY AND LIGHT RAILWAY NOTES.

## ABERDARE.

STRIKERS' CLAIMS TO BE CONSIDERED.

The tramway employees, who, with other employees of the Aberdare Urban Council, were on strike, have resumed work on the understanding that their claims shall be considered by the local Conciliation Board.

## BANFF.

LIGHT RAILWAY PROJECTS.

The Banff Town Council have decided to associate with neighbouring Town Councils and with the County Council in support of projects for the construction of light railways from Banff to places in the county.

## BRADFORD.

INCREASED COST OF ENERGY.

The increased cost of production of electricity has prompted the Shipley Urban Council to make application for an increase in the rate of payment for electricity supplied for use on tramway lines worked by the Bradford Corporation. The Bradford Tramways Committee has recommended the City Council to raise the present rate of payment by 20 per cent., which is the same increase as has been made by the Corporation Electricity Department in the charge for current supplied by them for the working of the tramways.

## BIRMINGHAM.

THE ROAD WIDENING AND SLEEPER TRACK TRAMWAY SCHEME.

A reference to the scheme for widening all the main arterial roads of Birmingham to a minimum of 110 ft. or 120 ft. is contained in the annual report of Mr. H. E. Stilgoe, the city engineer. The proposal was approved by the Corporation on January 8 last, and it provides for the widening of 43 miles of radial main roads and the construction of seven miles of new roads. A further provision is for a tramway on sleeper track, with a carriageway and footway on either side. Mr. Stilgoe remarks that the project is the greatest and most complete scheme of arterial road improvement ever adopted in this country, and that it will have a far-reaching effect, not only in dealing with ordinary traffic of a great manufacturing district, but by providing facilities for quick-moving traffic and the construction of tramways on independent sleeper tracks it will be of great assistance in solving the housing problem by facilitating the development for building purposes of land near the outskirts of the city.

## DEWSBURY.

INCREASED FARES EXPLAINED.

In reply to a letter from the Dewsbury Chamber of Commerce objecting to the increase of the fare on a particular route from 1d. to 1½d., the secretary of the Yorkshire (Woollen District) Electric Tramways, Limited, wrote that by the large increase in wages and the high prices of materials the cost of operating the tramways was enormously increased, and that any alteration in fares of an upward tendency was naturally objected to by those whom it affected, but while the same people paid a much higher price for amusements and for luxuries, they at once protested if an additional halfpenny was asked for on the tramways.

## DUBLIN.

EMPLOYEES' CLAIMS.

The Dublin branch of the Amalgamated Association of Tramway and Vehicle Workers have adopted a programme of improved working conditions. Their claims include the abolition of split duties; one day off in the week, or a fortnight's holiday with pay; 54 hours to constitute a week's work; recognition of the Union, etc.

## EDINBURGH.

QUEENSFERRY TRAMWAY SCHEME WITHDRAWN.—PREPARATIONS FOR THE TRANSFER OF THE TRAMWAYS TO THE CORPORATION.

Edinburgh Town Council, by a majority of 21 to 13, have decided to withdraw for the time being the Queensferry tramway scheme, the main reason for this being that they have been unable to come to terms with the Admiralty to gain the latter's support. At the same time the Council recorded its opinion that such a tramway was necessary, and should be provided as an extension of the Corporation tramways. Various matters connected with the arbitration on the transfer of the system to the Corporation, which will take place in June next have been remitted to the Town Clerk. The Tramways Committee have recommended the Corporation to join the Municipal Tramways Association. They have also sanctioned the attendance of the general manager, Mr. R. S. Pilcher, at all Tramways (Board of Trade) Scottish Advisory Committee's meetings. A sub-committee is to deal with the question of offices for the tramway department.

## GLASGOW.

FATAL ACCIDENT TO DRIVER.

A driver of the Glasgow Corporation Tramways, noticing that the trolley had slipped from the wire, jumped off the car, which was stationary in the depot at the time, to replace it. Apparently he had omitted to turn off the power and apply the brake, because

Digitized by Google

immediately the trolley touched the wire the car moved forward, and he was knocked down and run over before the car was brought to a standstill by an employee who witnessed the accident.

### MIDDLESBROUGH.

PROPOSED TRAMWAY PURCHASES.

Middlesbrough Corporation have decided to purchase the Middlesbrough, Stockton and Thornaby Tramways Company's system in their borough. The Stockton and Thornaby Corporations propose to purchase jointly the portions of the same undertaking which are situate in their areas.

### NOTTINGHAM.

STRIKE AVERTED.

A strike of about two hundred members of the Amalgamated Association of Tramway and Vehicle Workers employed by the Nottingham Corporation was averted by the decision of the employees to remain at work pending arbitration.

### PAISLEY

COMPANY'S CLAIM ON COUNCIL.

The Paisley District Tramways Company have written to the Paisley Town Council claiming £350 compensation for loss held to have been sustained owing to a breakdown in the power supply and consequent disorganisation of traffic.

### POOLE.

DISSATISFACTION WITH BOURNEMOUTH'S SERVICE.

Owing to recent reductions, the Poole Town Council are dissatisfied with the tramway service of the Bournemouth Corporation in their borough, and have decided, failing improvement, to make representations to the Board of Trade.

### SHEFFIELD.

EXPLOSION DUE TO LEAKAGE.

Two street explosions occurred in Sheffield recently owing to the failure of an underground tramway cable allowing the current to leak to earth, with the result that the temperature in the cable-box was raised, and the expansion forced the heavy metal cover off the box at two points. In one case the explosion was so violent as to disturb some of the stone setts of the roadway and the flagstones of the pathway. The explosions were followed by an underground fire, caused by the cable insulation becoming ignited.

### TYNEMOUTH.

PROPOSED TRAMWAY ACQUISITION.

Tynemouth Town Council propose to promote a Bill in the next Session of Parliament for taking over the tramway system of the Tynemouth and District Electric Traction Company, and to obtain powers for running railless cars along routes to be agreed upon.

### WORCESTER.

WIND SCREENS FOR CARS.

The Worcester City Watch Committee have received letters from the Worcester Electric Traction Company in regard to the provision of wind screens at both ends of the cars. The company intimated that the directors only agreed to provide screens in view of the strong pressure put upon them by the Watch Committee. They further stated that sickness among members of the staff was greater on cars where screens had been provided than where there were no screens, and that the drivers were quite satisfied with the arrangements made by them.

## CONTRACTS AND ORDERS.

**Stewarts and Lloyds, Limited,** have obtained a contract for supplying to Salford Electricity Committee elbow pipes for boilers.

**British Thomson-Houston Company's** tender for tramway motors has been accepted by Manchester Corporation.

**British Westinghouse Company, Limited,** have successfully tendered for the supply of consumers' switchgear to Walsall Corporation.

**British Insulated and Helsby Cables, Limited,** have obtained a contract for supplying cable to South Shields Electricity Committee.

**Glasgow Tramways Committee** have recommended that orders be placed with the Carron Company for track brakes, with Thomas Bolton and Sons, Limited, for trolley wire, and with the B.I. and Helsby Cables, Limited, for lead-covered cable.

A **"Safety First" Poster.**—One of the latest of the series of useful posters issued by the London "Safety First" Council, calls the attention of drivers, cyclists, and pedestrians to a variety of unusual accidents which sometimes happen. Illustrations and descriptions of the circumstances in which such accidents occur are subjoined to several bold introductory headlines. An award has been instituted by the Council, known as the "London 'Safety First' Meritorious Service Award," to be presented in recognition of conspicuous instances of acts which have resulted in the prevention of accidents in streets, factories, schools, etc., or on railways, within a radius of 20 miles of Charing Cross. The award will consist of a badge, a diploma, and an honorarium.

## PATENT LIST.

### Abstracted for "The Tramway and Railway World" from the Official Journal of Patents.

*** If the inventions have been communicated the names of the communicators are given in italics.

APPLICATIONS FOR LETTERS PATENT.

*The number of the patent is given in brackets.*

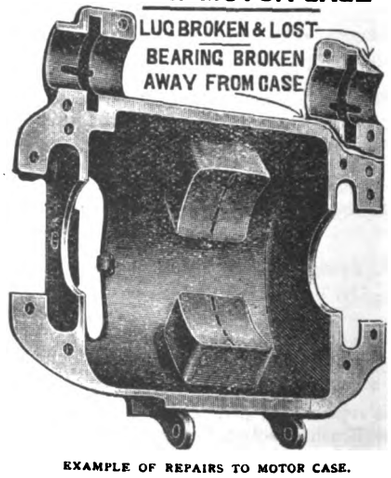
Driving gear for speedometers, etc. (13,877)—P. O. Dorer and S. Smith and Sons.
Trolley heads of electrical vehicles (13,975)—H. Dowden and J. J. Sampson.
Railway joints (14,142)—F. J. Harkin.
Lifting jacks (13,935)—W. Matthewman and E. Sandow.
Appliance for engaging overhead conductor with trolley sheave of electric cars (14,155)—W. H. Simmonds.
Wheel tires and brake shoes (13,939)—T. C. Way.
Signalling apparatus (14,567)—British Thomson-Houston Company (*General Electric Company*).
Transmitting and controlling motion in motor-driven vehicles, etc. (14,430)—T. F. Evans.
Chair for holding rails (14,391)—D. John.
Variable transmission gearing (14,503)—L. R. Jones.
Driving and steering wheels (14,330)—C. M. Motte.
Automatic braking apparatus for motor car trailers (14,529)—A. E. C. Paris.
Direct variable gear (14,561)—W. Sheehan.
Driving gear for motor vehicles (14,294)—G. Woodvine.
Signalling systems (14,703)—T. W. Case.
Steel keys for sleepers (14,779)—J. E. Davies (*P. Clewes*).
Repair of axles of motor vehicles (14,788)—E. Hodges.
Motor vehicles for road or rail (14,892)—C. Hyland.
Change-speed gear (14,603, 14,604, and 14,770)—S. Bramley-Moore.
Epicyclic change-speed gear (14,772)—E. Reeve and Wolseley Motors, Limited.
Resilient self-driving wheel for highway and railroad conveyances (14,749)—L. E. Stephens.
Brakes for railway and road vehicles (14,754)—S. T. Tregaskes.
Steering mechanism for vehicles (14,945)—E. Jensen-Valeur.
Variable speed friction gears (15,033)—G. Barker.
Car stopping and holding mechanism (15,117)—A. Barraclough.

# REPAIRS

We are specially laid out to deal Promptly with All Kinds of Welding Repairs in Steel, Wrot or Cast Iron, Aluminium or its Alloys, by the Latest Oxy-Acetylene and other Special Processes.

**Broken Bearings Welded, New Lugs Added, Worn Pl·ces Refilled, and generally speaking USELESS CASES MADE USEFUL**

**TRAMWAY MOTOR CASE**



EXAMPLE OF REPAIRS TO MOTOR CASE.

Repairers to over Forty Corporations. May we ask you to send us a trial order? We can save you money right along the line.

**MAJOR, ROBINSON & CO. LTD.**

Motor vehicles (15,688)—H. Burridge.
Jack for motor cars, etc. (15,645)—W. F. Cottrell.
Gearless variable speed transmission (15,692)—W. Dunn.
Rail joints and chairs (15,707)—J. Frecska and Z. Frecska.
Variable speed gear (15,470)—A. G. M. Jack.
Engine starters for motor vehicles (15,721)—A. Jackson.
Speed change mechanism (15,792)—E. Maillard.
Variable speed transmission gear, etc. (15,711)—J. V. Nash.
Wheel tire and run for motor vehicles, etc. (15,804)—J. M. Parker.
Damper for laminated springs of motor vehicles (15,583)—C. D. Peach.

## Specifications Published.

1916.

Electric traction systems (8,166—*102,923*)—Ateliers de Constructions Electriques du Nord et de l'Est.

1917.

Tramway systems and transporting goods thereon (10,859—*117,835*)—P. Kenyon.
Brake mechanism for vehicles (11,304—*117,850*)—Birmingham and Midland Counties Transport Company and G. E. D. Ralls.
Wheels for railway and tramway vehicles (11,553—*117,954*)—C. Hyland.
Self-acting mechanical brake for railway and tramway vehicles (11,586—*117,956*)—T. Grey and T. M. Williams.
Speed indicators (11,681—*117,960*)—J. W. Robinson.
Speed indicating and distance measuring apparatus (11,576—*118,143*)—L. E. Cowey.
Steering mechanism for motor vehicles (11,913—*118,158*)—W. Ellis.
Anti-friction rail wheels (13,134—*118,171*)—H. N. Barnes and E. Pollard and Company.
Collapsible gas-holders for use in connection with motor-driven vehicles (13,641—*118,176*)—United Automobile Services, Limited, and J. C. Jolly.
Mechanically-operated pump for the inflation of tires of motor vehicles and the compression of coal or other gas used in the propulsion of such vehicles (16,611—*118,198*)—T. B. Gibson.
Repeating accelerator for compressed air brakes (18,217—*112,932*)—Soc. Generale des Freins Lipkowski.
Speed-changing and reversing gear (11,712—*118,308*)—G. Pollard and Menco-Elma Syndicate.
Motor vehicles (12,096—*118,326*)—Coventry Premier, Limited, and G. Funck.
Apparatus for storing coal gas in motor vehicles (12,151—*118,327*)—G. P. Ottini.
Speed-changing and reversing gear (12,273—*118,444*)—G. Pollard and Menco-Elma Syndicate.

1918.

Spring suspension for motor vehicles (6,820—*115,831*)—Lancia and Company.
Variable speed gear (9,460—*117,900*)—G. Taylor.
Electric starting apparatus for motor vehicle engines (617—*118,050*) and 616—*118,220*)—H. Lucas and C. L. Breeden.
Electric relays particularly for traffic controlling apparatus (2,907—*113,615*)—McKenzie, Holland and Westinghouse Power Signal Company.
Electrical starting and lighting systems for automobile vehicles (1,277—*118,221*)—J. Bethenod.
Speed indicators for vehicles (3,339—*113,788*)—H. Meyer.
Rail joints (5,042—*118,242*)—E. Henderson and J. Henderson.
Lifting apparatus for motor road vehicles, etc. (7,266—*118,257*)—F. Coultas and A. Pick.
Gear-shifting mechanism (883—*118,547*)—H. Wade (*Vulcan Motor Devices Company*).

**"Key" Industries Exhibition.**—Mr. H. J. Mackinder, M.P., chairman of the Tariff Reform League, opened (in the absence, owing to indisposition, of Mr. Austen Chamberlain, M.P.) an exhibition of new British and "Key" Industries, organised by the Industrial Section of the League, at the Central Hall, Westminster, London, on October 7. The exhibition continues to October 22, after which it will be shown in Manchester and other leading provincial centres. Active co-operation and assistance had been secured from important firms interested in the industries concerned, many of whom contributed valuable exhibits and expert information. The exhibition, which was arranged with the sanction of the Ministry of Munitions, covered a wide range of articles, prominent among which were samples of the British magneto industry and a variety of rubber products.

**Parcel Rates at Bradford.**—On consideration of report of the general manager on the results of operation of the Parcel Department for the year ended March 31 last the Tramways Committee of the Bradford Corporation recommend that the advance of 25 per cent. in parcel rates, sanctioned by the Council on October 10, 1916, be increased to 50 per cent.

# All Commercial Motor Vehicles

need daily attention to maintain efficiency—the simpler therefore the mechanism the easier and quicker becomes the daily preparation.

The Daimler Engine is remarkable in its time and labour-saving qualities. With no springs to create trouble, no valves that need grinding, and no loss of compression, oiling is practically the only daily operation. It occupies a matter of minutes and the vehicle is then always good for a full day's service without fear of mechanical troubles. Day-in day-out, year-in year-out, it gives of its best. That best is the high standard of efficiency and good service the Daimler Commercial Vehicle initiated.

### TRAILERS FOR MOTOR VEHICLES.

In these notes last month reference was made to some of the regulations which govern the use and incidentally tend to restrict the design and development of heavy motor vehicles. Perhaps the direction in which the existing laws stand in the greatest need of amendment is where they touch upon the employment of trailers. Amendment is here required from two points of view. The first and most obvious is that the existing regulation under which no heavy motor car may draw a trailer at a greater speed than five miles an hour should certainly be altered to allow of higher speeds when power vehicles and trailers are rubber-tired. So long as there is no difference between the legal speed limits for rubber and iron tires, no encouragement is offered to the use of the former. It would certainly be better for the roads if tractors and trailers were fitted with resilient tires ; for a combination so fitted would undoubtedly do less injury to road surfaces and foundations with a speed limit of eight miles an hour than would a steel-tired tractor and trailer with a speed limit of five miles an hour. Presumably the existing speed limit is imposed principally in the interests of the roads, and if this is so there is a clear case for an alteration. Of course, if it is regarded as inherently unsafe to allow any vehicle to draw a trailer at anything above five miles an hour the position is changed, but we hardly think that this could be seriously argued in view of the somewhat extensive use of trailers behind heavy lorries both by our Allies and by our enemies for purposes connected with military transport.

### THE TRACTOR AND TWO-WHEELED TRAILER.

The second reason why a change is needed in the law regarding trailers is that, as it stands at present, there is no clear definition as to what a trailer really is. In certain instances there is no room for doubt. The ordinary four-wheeled trailer attached to the power vehicle by a drawbar is an obvious case, but this is by no means the only conceivable type. Extensive use is made in America of a device known there as a semi-trailer. This consists of a two-wheeled vehicle carrying a body and attached to the power vehicle through the medium of a turntable and suitable joints over the rear axle of the latter. The result is a six-wheeled combination such that the bulk of the useful load is so placed as to assist the adhesion of the driving wheels. The length of the whole combination is considerably less than that of a tractor and trailer. Any danger that the ordinary type may suffer when negotiating steep down grades is decreased, if not entirely removed. There is not the same tendency for the load to push the power vehicle round in the road and so to cause an accident. In certain ways a combination of this kind has a distinct advantage over an ordinary four-wheeled lorry. The load-carrying body, with the pair of back wheels, can be detached from the power unit, its forward end being then supported on legs. Loading and unloading can proceed while the power unit is out on the road doing useful work. It would be reasonable to regard a combination of this kind simply as a six-wheeled motor vehicle, but at present the regulations are obscure upon the point and it might quite possibly be classified as a tractor and trailer.

### THE AUTO TRAILER.

Yet another type of attachment is exemplified by the device known as the auto-trailer. This consists of a small carrying platform supported on a single wheel, which works on the castor principle. The platform is attached to the power vehicle at both ends of the rear of the frame so that independent lateral movement is impossible. Consequently a vehicle with an attachment of this sort is quite easy to back and to manœuvre. Here again we have a case in which the attachment might or might not be regarded legally as a trailer. It is certainly hauled behind a power vehicle and the greater part of its load is carried upon its own wheel, and therefore does not help the adhesion of the driving wheels. When rounding a corner it behaves in the same way as an extension of the overhang of the main vehicle. On the other hand, it does not complicate steering and cannot possibly tend to push the power vehicle round in the road. It is completely under control and consequently may reasonably be regarded as an extension of the power vehicle itself, in which case its presence would not entail any special reduction of legal speed.

### THE ROAD TRAIN.

Another doubtful case is that of the road train, in which the following vehicles are not merely trailed, but do their share in the propulsion of the whole train, the load upon them assisting to secure adhesion. This result can either be achieved by mechanical or electrical transmission of power, the latter being perhaps the simpler method. Moreover, the following vehicles of a road train can be so coupled up as to be exactly steered in the track of the leading vehicle. Altogether the method does not introduce most of the disadvantages of the ordinary trailer ; consequently it would be

Digitized by Google

# MOTOR TRAFFIC.

reasonable to provide for the use of a road train with more than one following vehicle without reducing the legal speed to that of a road locomotive with trailers. The load is well distributed and all the units of the train are well controlled, and so it is possible to back with great accuracy. A road train consisting merely of a leader and one following vehicle might be allowed a speed limit only a little lower than that of an independent vehicle, but the limit should be progressively reduced as the number of the following vehicles is increased.

**COMPREHENSIVE TRAILER REGULATION NEEDED.**

All the special devices briefly described in the preceding notes are at present in a very vague and unsatisfactory position from the legal standpoint, and we hope that as a preliminary to the work of reconstruction and of securing increased economy of transport, such cases will be taken in hand and comprehensive and satisfactory regulations framed to cover them all and to permit development to proceed unimpeded by doubtful decisions based upon the confused state of the law.

**RESEARCH WORK IN THE MOTOR INDUSTRY.**

We are all in agreement as to the desirability of a comprehensive system of research into many matters relating to the design of motor vehicles. Consequently, it is satisfactory to note from the report of the Research Department that the motor industry is one of those that is active in the formation of a Research Association. The Government scheme, as our readers will remember, provides that such associations may be financed partly by the industries concerned and partly by the Research Department of the Government. In such circumstances the Research Department must necessarily exert some kind of supervisory control. Nevertheless, one can see distinctly the danger of an industry allowing the Department to have the chief voice in deciding what shall be done with the results of research. If this power were indiscreetly exercised the firms subscribing to the Research Association would obtain no more benefit than those who refrained from doing so, and a most unsatisfactory position would be set up. In this matter we think the Research Department should be satisfied with the power of determining in what cases results must not be published on grounds of national interest. They should certainly not be enabled to hand any such results over to firms that have not subscribed to the associations which obtained them. Another interesting point arises as regards the internal government of such as association. The research is to be carried on for industrial purposes and, therefore, too free a hand should not be given to the investigators employed to conduct those researches, but a general supervision should be exercised by the practical but nevertheless scientific element contained in the industry itself. The details of research work must, of course, be controlled by a single brain, but it would not be safe to allow any one man to have complete authority to decide upon the broad lines of the work and the objects towards which it should be directed. The exact allocation of responsibility is somewhat difficult to arrange, but it is clear that we must not on the one hand give too much control to purely financial interests, or on the other allow a scientist with insufficient practical knowledge to waste money upon investigations more likely to be interesting to him than productive to the industry for which he works.

**ENGINEERING TRADES COMMITTEE.**

We understand that good progress has been made, so far as the motor trade is concerned, by the Engineering Trades (New Industries) Committee. Large numbers of firms have successfully applied for facilities for manufacturing experimental vehicles of post-war type, and the necessary materials are now being made available to them. Such vehicles, when constructed, will of course require to be subjected to road tests before being standardised, and this will involve the consumption of a certain amount of petrol. We gather that the Engineering Trades Committee, and the appropriate Branch Committee, are also taking this matter up, and it is hoped that fair allowances of fuel will be granted for this specific purpose. All this is most important for the future of the industry, because it is obviously impossible to complete plans for quantity production early enough to secure continuity in the employment of labour when Government contracts cease unless all the preliminary constructional and testing work can be completed well in advance.

**THE LUXURY TAX.**

While the luxury tax will not in any case apply to commercial and public service vehicles, yet if it becomes law it may well affect any of our readers considerably in their capacity as motor car owners. The principle of taxing a modern alternative, which is offered in place of an old method, does not appear to be a sound one, especially when the new form of locomotion depends upon vehicles somewhat expensive in the first instance but showing their superiority rather as time-savers and as a result of low operating costs. The fallacy about the luxury tax may perhaps be best illustrated somewhat as follows:—One man sticks to his old car, on which he paid no tax, and in the course of the year spends £200 on operating costs. Of this amount perhaps £100 is represented by fuel which the old vehicle uses somewhat extravagantly. Another man buys a new car on which he has to pay £100 luxury tax. He covers the same annual mileage with a total expenditure of another £100, and uses only half as much fuel as the first man. He carries out his business more efficiently because he has a more reliable vehicle. He calls for the occupation of less tonnage in importing his fuel. Ought he not to be encouraged rather than discouraged? Under the proposed tax, the man who stuck to the obsolete vehicle would apparently be regarded as a more praiseworthy and patriotic member of the community than his friend. As a matter of fact, it is the man who encourages progress who deserves encouragement. The tax, if ever applied, will probably prove to be open to numerous forms of evasion and to be extremely expensive of collection. Altogether it is doubtful whether the Government will not find that in this and other items there are so many openings for failure as to make it politic to drop the whole scheme.

THE WOLSELEY SCHOLARSHIP.—This scholarship, which is one of those given annually by the Wolseley Motors, Limited, to students in the faculty of engineering at Bristol University, has been awarded to Mr. C. W. Lalonde, who has secured the B.Sc. (engineering) degree. The scholarship is of the value of £100 per annum, and is tenable for two years in the Wolseley works. Mr. Lalonde is the son of Mr. W. L. Lalonde, one of the principals of the firm of Messrs. Lalonde Brothers and Parham, of Weston-super-Mare and Bristol.

## SOME PROBABLE EFFECTS OF THE WAR ON THE AUTOMOBILE INDUSTRY.*

In his presidential address at the first meeting on October 2 of the 1918–19 session of the Institution of Automobile Engineers, held at the Royal Society of Arts, Mr. A. A. Remington dealt with "Some of the Probable Effects of the War on the Automobile Industry." He referred more particularly, although not exclusively, to those aspects of the subject that affect the Institution, and to which, as most of his auditors were aware, he devoted most of his public activities, namely, standardisation and research.

It was early found that once the Armies were supplied, the automobile industry could with accelerated production, quite within its capacity, turn out more vehicles than were required, and fortunately many firms were able to turn to the manufacture of machinery that was within their capacity and badly wanted for the use of the Armies, namely, aircraft engines and aircraft. With the development of the use of aircraft in war, it was soon clear that the facilities for manufacture would have to be materially increased, and many firms that normally produced nothing but automobiles had the honour of teaching the special points of their business to engineering firms that had hitherto been manufacturing in other more or less similar directions, so that they might devote all their own energies to the aircraft industry, or other work that was within their capacity, and badly wanted for the prosecution of the war. It was exceedingly fortunate that the automobile industry in this country had developed, to a high degree of proficiency, methods that were essential to the rapid production of the more complicated munitions. I refer to the accurate production of complicated machinery out of high grade materials on a manufacturing scale, so that large quantities of such parts could be produced on an interchangeable basis rapidly and economically.

The introduction of similar methods into kindred industries where they were not generally employed previously has been accelerated by the war, and will undoubtedly have a great effect on production after the war. The dissemination of information as to essential methods in regard to the interchangeable and accurate manufacture of machine parts in large quantities that had been accumulated will not handicap the automobile industry by having caused it to lose its so-called secrets, but will benefit that industry by increasing the general prosperity of the country and by enabling it to enlarge its markets. It will also directly benefit the engineering industries by enhancing the possibility of an increase in output without any essential increase in the man-power. This matter can be considerd from another point of view. Those firms who have had to take up manufactures that were foreign to them to the exclusion of their normal productions, will find that they have had a most valuable experience, one that will be reflected in their post-war products, greatly to the benefit of themselves and their supporters. On the other hand, those firms who are perhaps looked on as fortunate in that they are still able to continue with the manufacture of their normal product in much the pre-war way, will, after the war, if they do not exercise the greatest care, be at a considerable disadvantage.

Other directly beneficial effects will be produced throughout our industry by the co-operation and interchange of ideas that this change in and interchange of products has necessitated, which has brought our engineers into close touch with each other with a common object in view. Interchange of ideas is always beneficial, so while individual firms may feel they have lost by so much dissemination of information, they will find that on the whole no one has lost, but all have gained.

The author of the paper does not take the pessimistic view that the tremendous war expenditure will restrict the after-war trade to cheap lorries and cars. During the war trade in general has been greatly restricted, and in many cases has practically come to a standstill, while in the war area there has been great destruction, as compared to normal times when the world produced a little more than was required to maintain its standard of living. During the war we have been to a large extent living on this accumulated margin, and after the war shall be compelled to make up the shortage. To enable wealth to be again accumulated it will be necessary to devise and utilise every possible means whereby everyone can produce more for the same labour. One of the factors that enables this to be done is rapid, economical, and convenient transport, and I am at a loss to find anything that provides this better than the various classes of automobiles.

We shall doubtless suffer from severe taxation and high cost of living, but as the automobile is a time-saver, the adverse conditions of life will accentuate rather than diminish the necessity for it, and it will be more than ever a necessity and money-maker. The transport of men and munitions of all kinds by motor lorry and the use of motor cars of open types has been a tremendous object lesson as to the utility of motor transport. Men who will ultimately return to civil life have had this lesson before them, and when conditions render it possible we shall see, as the result of this education, a great extension of the use of motor transport. Fortunately this country will not be alone in high costs, as the high costs here and in other belligerent countries will mean high costs throughout the world, which will in a very great measure tend to balance matters and largely prevent British industries being at a disadvantage in comparison with foreign competition. Doubtless the temporary high cost of labour and materials and the, in all probability, permanent reduction in the value of money will make the price of post-war vehicles appear high judged on a pre-war standard, but value can only be considered in relation to the cost of other commodities, and if the increased knowledge of manufacturing and the higher possible efficiency of cars consequent on increased knowledge obtained during the war be taken full advantage of, post-war cars ought to compare very favourably with other products on a basis of comparative cost.

After the war the personnel of all branches of the automobile industry will have to make great efforts to put the industry on a proper basis once more, and the result of these efforts on the part of the technical staffs of the various factories will be to effect great improvements in the motor vehicle in many directions. Representatives of all branches of industry, commercial as well as technical, will have learned many lessons under that stern master, war, and these lessons are going to be used to advantage in industry.

It yet remains to be seen to what extent it will be policy for the automobile engineer to take advantage of his aeronautical engine experience. The aeronautical engine has a much higher mean effective pressure, higher mechanical efficiency, and lower specific fuel consumption than even the most advanced pre-war automobile engine, but the requisite characteristics for the two classes of work are so different that while aeronautical engine experience can with advantage be used to some considerable degree in the automobile engine, it is difficult to say just how far results will warrant this utilisation.

Great changes will in all probability be noticeable in the organisation of our factories, and some of these changes will have far-reaching effects. Owing to experiences in the management of factories during the war the technical officials of our engineering industries will be more appreciated than was frequently the case before the war, and will continue to exercise greater powers and carry greater responsibilities than formerly. In the past the technical man in the engineering industry has always been subordinate to the equivalent commercial man. The requirements of the higher positions on the scientific side of industry will necessitate the employment of many more highly-trained scientists, and it is to be hoped that ultimately all management positions in engineering industries will be filled by men possessing scientific knowledge as well as business experience. This change which is rapidly taking place cannot help but have a far-reaching effect on the automobile industry, as well as on the economics of the country in general. The automobile industry has shared in no small way in helping to provide the conditions that are bringing about this change of view point, and now the art of flying is carrying on the same good work.

In the early days of the industry every automobile works was in effect a research laboratory, or an experimental shop on a commercial scale, but as design and practice became more stabilised and manufacture came to be carried out on a larger scale, this naturally came to be less and less the case. In stabilising design, research is still as necessary as formerly, perhaps more necessary as improvements become less obvious, but it has to be carried out in a different manner. Most large firms now have a research laboratory, but it is impossible for the smaller firms to go to this expense, and this is where it is the duty and privilege of the larger firms to help them. In connection with unpatentable improvements it is impossible and, in my opinion, undesirable for the general good, and ultimately for the individual good, that a firm should be able to confine the use of such improvements exclusively to its own products.

The research laboratories of most large firms—all those that I have had any relations with—are usually more than fully occupied in investigations directly connected with the firm's products, and have little or no time to give to pure research, or to any researches that are not rendered immediately necessary, or to carry even such researches any deeper than is absolutely necessary, so that the establishment of means for co-operative research would not in any way reduce the amount of work done in firms' existing laboratories, but would be additional thereto. I need not refer to the Government scheme for the establishment of State-aided Research Associations under the ægis of the Department of Scientific and Industrial

* From a Paper by Mr. A. A. Remington, President of the Institution of Automobile Engineers.

# MOTOR TRAFFIC.

Research, except to emphasise that in the event of the automobile industry establishing a research association of its own, it will not cause any reduction in the amount of research work to be done in the private research laboratories of the various firms but will enable researches of a more far-reaching character than can be attempted individually to be carried out on a co-operative basis.

As regards the classes of research it is desirable should be carried out co-operatively, I would cite the research in connection with standard automobile steels that is now in progress, and also call attention to the great advantage that would accrue to the industry as a whole from researches such as the following :—

(1) An investigation to establish the most economical application of the laws relating to conductivity, heat transference and diffusivity, as affecting motor car radiators, so as to enable the smallest or lightest radiator for a given case to be determined, including the most suitable proportions for the provision of air draught, the most suitable rate of air draught, and rate of flow of the water.

It does not take much consideration to see that for the most efficient cooling of the circulating water the radiator should be maintained at the highest possible temperature equally all over ; how to attain this ideal is not so obvious. It cannot be completely attained in practice, but present practice does not approach anything like as near to the ideal as it might do.

(2) An investigation to determine the factors making for comfort in suspension, including the inter-relationship between such factors as :—

(a) Vertical periodicity of the front and rear springs respectively in relation to each other.

(b) Rolling periodicity.

(c) Pitching periodicity.

(d) Metacentric height (to adopt a term well known in naval architecture).

(e) Wheelbase.

(f) Weight distribution.

Referring at considerable length to standardisation, the author called attention to the work accomplished by the British Engineering Standards Association for the automobile industry, with the co-operation of this institution. Through its sectional committee on Automobile Parts, the British Engineering Standards Association has so far published 19 reports useful to the automobile industry.

The war had been the means of causing almost every British pre-war motor car factory to be greatly enlarged, and it is therefore to be expected that after the war the output will be greatly increased, and this will mean that greater standardisation will not only be possible, but profitable. It is therefore highly desirable that we should all, in our mutual interests, do everything we can to forward the work of standardisation for the automobile industry.

It is unnecessary to say much about invention. The institution does not, however, forget the inventor and his interests, and is at this moment negotiating with other institutions with a view to promoting Government action to remove the hardship that has been inflicted upon many inventors, owing to their inability to work their patents during and on account of the war. The automobile industry has been largely dependent on inventions for improvement, whereas now, although the inventor pure and simple is still highly important, he shares the responsibility for improvements with the more systematic research and production engineers.

Closely associated with invention is design, and it is now appropriate to consider some probable effects of the war on the design and probable performance of the post-war motor car.

The war, particularly in its earlier phases, gave great impetus to individual metallurgical research owing to the necessity for greatly increased output of machinery of the highest class from the plants of the country, and also owing to the necessity for the whole of the output to meet stringent Government requirements, whereas previously only a select portion had been required to such high standards. (Whether these high standards which most of our Government departments demanded were really necessary is not within my province to discuss to-night.) One of the immediate results of this work will be to give automobile engineers after the war an adequate supply of materials superior to what they had available before, and also superior means of ascertaining the quality. A reaction on the part of engineers as a result of this can already be seen in so far that at any rate the more advanced technical members of the industry are looking for means of turning the possibility of better materials to advantage in still further increased reliability, in weight reduction, in cost reduction, and in many other directions.

One effect of the war will be to increase materially the interest of engineers in matters affecting pure design, just as it has increased the interest of the steel maker in metallurgy. By taking advantage of the increased knowledge particularly of materials, of distribution of stresses in engine parts, and of flow of gases, gained from research primarily on behalf of aeronautical engine development, there is no doubt that the post-war automobile engine will embody great improvements, perhaps more particularly as regards power-weight ratio, economy, and improved power performance at lower cost without serious corresponding disadvantages.

Concluding a lengthy reference to design, Mr. Remington said it is to be regretted that there has in all probability been less thought given to automobile design during the war than in previous years, particularly as regards the inventive side and in connection with the development of accessory improvements, and we must therefore not look for too much advance in such directions. In all probability the post-war car will carry forward with a considerable step the same developments that were continuously in evidence during the ten years, 1904 to 1914, in which period we can trace certain more or less well-defined continuous, even if comparatively slow, developments. In engines the trend has been continuously towards obtaining more power from less weight of metal, and in cars towards reduction of tare weight for a given load, the main underlying objects being presumably improvement of performance coupled with a reduction in cost for a given performance.

To enable the scientific development consequent on the war to be taken full advantage of will require some re-organisation of departments as compared to the usual pre-war British method. It was becoming usual before the war for the organisation of the British automobile factory to include a " chief engineer " in charge of the technical and scientific organisation as distinct from the production departments. The laboratories that will in the future form an essential part of all up-to-date factories will be subordinate to the chief engineer, and the chiefs of such laboratories will be responsible solely to that official.

Usually it will be found advisable to arrange for the test house, in which the physical tests for the passing of production material will be made, to be under the control of the inspection department, and also to deal similarly with routine analysis, so as to avoid the upset and delay of research work that inevitably results from introducing " output " work into research departments.

It is too much to expect that one man can be at the same time a fully qualified metallurgist, chemist, physicist, and experimental engineer, and therefore the research work must be sub-divided among several " scientists," each, under the general control of the chief engineer, taking care of his own branch of the work, and co-operating closely with the others. The terms metallurgist, chemist, and experimental engineer are now comparatively well-known in connection with the organisation of an engineering works, but outside of educational establishments the term " physicist " is perhaps not in common use. The studying of, and necessity for, the more general use of methods of investigation of causes of fatigue, of distortion of structures under stress, of stress distribution, of factors of safety, of strength of materials under special conditions, and such like matters, has introduced work outside the ordinary scope of either the chemist, the metallurgist, or the experimental engineer. This comprises in the main a form of analytical engineering, and in all probability the gap can only be filled by introducing into the works organisation a further position requiring a distinct title, which I have for convenience called the " physicist."

In conclusion, the author congratulated the institution on the great work it initiated—work which will in the future benefit almost every branch of engineering in this country—and carried out by co-operation with the British Engineering Standards Association, the standardisation of steels for the automobile industry. This work is now approaching completion, and the author has hopes that it will be completed and published during his term of office. He added that the question of strength of materials and standardisation thereof, together with standardisation of methods of testing, is by no means exhausted. He is of opinion that the institution could usefully co-operate in the formation of a society that would further the interests of testing and specifications for testing and the supply of materials somewhat on the lines of the Society for Testing Materials in America.

GLASGOW CORPORATION GARAGE.—The special committee of the Glasgow Corporation motor car garage have had under consideration the question of the charges to be made for the use of the cars belonging to the department, in view of the further advances in the costs of maintaining the garage. After discussion, and having heard the tramways manager on the subject, it was agreed that the charges be increased. The War Wages Committee recommend that an additional war bonus of 3s. per week be granted to the chauffeurs in the garage, thus raising their remuneration to 25s. per week over pre-war rates (present wages 38s., bonus 20s. per week). The tramways manager has been instructed to have the city arms painted prominently on the motor cars belonging to the department.

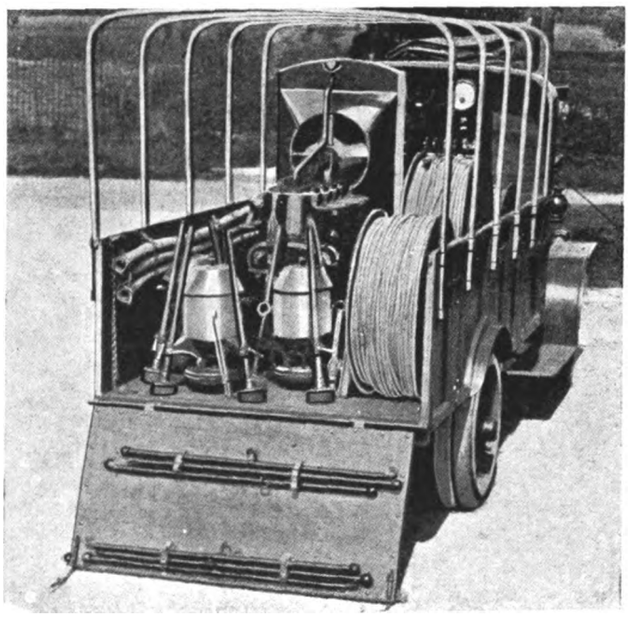
# MOTOR TRAFFIC.

## FOR TRENCH PUMPING.

Motor appliances are now used by the British Army to pump out trenches on the Western front. This is a new use for the motor vehicle and it suggests similar work in commercial service in pumping out ditches and excavations where other forms of power are not readily available.

In the early fighting at Ypres, where the Canadians stood waist high in water in the trenches, the hand scoop and pail were the methods of getting rid of the water. Then came hydraulic pumps, but these were not entirely satisfactory, because of the slow rate of pumping. The motor outfit, says the *Commercial Vehicle* of New York, is capable of pumping out 3,000 gallons an hour.

The equipment comprises an Austin 2-ton truck with a separate 4½ by 6 four-cylinder motor of 32 rated horse-power, mounted in the body and directly connected to a compound-wound direct-current dynamo; three portable combination 200-volt electric-motor and centrifugal pumps, and reels of cables by which the



**Trench Pump Outfit on an Austin Wagon. It Comprises a Motor Generator, Three Portable Pumps, and Three Reels of Cable.**

pumps may be set down in the trenches while the truck is some distance back of the lines. The pumps are especially designed to handle muddy water without clogging.

The wagon serves as a means of making the outfit mobile. The truck and outfit can be used with greater success at night, because it will draw less of the enemy's fire, although it can be used in daylight when camouflaged. The compact manner in which the outfit is carried in the wagon is shown in the accompanying illustration. These appliances are being supplied in considerable numbers.

---

Fatality Due to Latent Flaw in Steering Rod.—At an inquest held by the City of London Coroner on September 26, on the body of a newspaper carman, whose death was caused by a collision between his cart and a motor omnibus, due to a defect in the steering gear of the omnibus, Mr. George Shave, engineer to the London General Omnibus Company, said that the steering rod snapped off because of a latent flaw recently developed. Every year every omnibus was stripped and re-assembled. The steering gears were sent for special examination, and the date of the examination was stamped on the metal. In the present case the annual examination was due in a few weeks. Steering gears were also examined every 14 days, but it was impossible to detect such a flaw as the present one, even by expert test. The jury returned a verdict of accidental death.

## ELECTRIC VANS FOR DUST COLLECTION.

Having had exhaustive reports on dust collection by electric vehicles prepared by Dr. Buchan, the medical officer of health, Willesden Urban District Council have now decided to make application for the necessary priority certificate for the purchase of three 2-ton electric wagons.

The report declared the essential conditions in the selection of a vehicle for the purpose of house refuse collection to be as follow:

(1) The capacity must be at least 7½ cubic yards, equivalent to 2½ tons by weight of house refuse.

(2) The body must be low slung for easy loading. (It is suggested that there might be folding sides to the body in order to get the greater part of the loading done without a ladder.)

(3) The body should be of galvanised steel with a wooden strip at the top to save damage to the vehicle and bins. The wooden strip would be renewed when worn out.

(4) Covers of wood or metal should be provided.

(5) The chassis should be adapted to take a trailer.

(6) Both wagons and trailer should be mechanically tipped.

(7) The motive power should be sufficient for a range of 45-50 miles on one charge.

(8) The vehicles should be able to turn in a small circle.

One trailer should also be obtained to be used in the event of bad weather, a breakdown, or other contingency preventing regular collection.

As to vehicles, men, and work to be done, the report stated:—

Vehicles to be obtained.—Three 2-ton electric wagons.

Area from which collection is to take place.—(1) The whole of the South Kilburn ward; (2) the whole of the Mid-Kilburn ward; and (3) the parts of Brondesbury Park and Kensal Rise wards south of London and North Western Railway.

Refuse to be collected.—The area contains 3,971 houses yielding approximately 4,000 tons of house refuse per annum, or on the average approximately 14½ tons on each of the 279 working days in the year.

Men to be employed.—Three drivers and six dustmen.

Number of loads and amount of refuse collected.—The two vehicles working at the furthest points of the district from the shoot at Waxlow Road would each do two loads per day, and the third vehicle would do three loads per day. On this basis 14 tons would be collected per day, approximately the quantity required. There would still be some spare in these three vehicles, as with a little overtime each vehicle could do three journeys per day if necessity demanded it.

Garage.—The electrical engineer has estimated £50 per annum for garaging the vehicles at Salusbury Road.

The financial report is given as follows:—

The estimated capital cost is as follows:—

| | £ | s. | d. |
|---|---|---|---|
| Three vehicles (ten years' life) ... ... | 4,000 | 0 | 0 |
| Charging plant ... ... ... ... ... | 150 | 0 | 0 |
| Registration and number plates ... ... | 6 | 0 | 0 |
| | £4,156 | 0 | 0 |

On average daily running of 25 miles per vehicle, the annual costs are estimated as follow:—

| | £ | s. | d. |
|---|---|---|---|
| Wages of drivers and men at, say, 50s. per week each ... ... ... ... ... | 1,170 | 0 | 0 |
| (N.B.—It is a matter for decision whether these men should be paid, say, 3s. 6d. per ton moved plus, say, 50 per cent. of the tots, or whether they should receive a wage without tots or a wage with all the tots.) | | | |
| Repairs and maintenance of chassis, at 5d. per mile ... ... ... ... ... | 43 | 11 | 10 |
| Repairs and maintenance of batteries, at 4d. per mile ... ... ... ... ... | 34 | 17 | 6 |
| 125 units of electricity per week, at 1½d. per unit ... ... ... ... ... ... | 60 | 18 | 9 |
| Insurance, £30 ... ... ... ... ... | 30 | 0 | 0 |
| Tires: 6,975 miles per vehicle, at 1d. ... | 87 | 3 | 9 |
| Six licences ... ... ... ... ... | 1 | 10 | 0 |
| Rent of garage ... ... ... ... ... | 50 | 0 | 0 |
| Repayment of capital costs at 6 per cent. ... | 564 | 0 | 0 |
| Rent of shoots, at 2s. per load—2,000 loads | 200 | 0 | 0 |
| Sundries, at ·25d. per mile ... ... ... | 21 | 16 | 0 |
| Total ... ... ... | £2,263 | 17 | 10 |

# MOTOR TRAFFIC.

## ANNUAL REPORT OF THE ROAD BOARD.

On account of the war the work of the Road Board, of which Sir Geo. S. Gibb is chairman, was greatly curtailed so far as concerns the making of grants and loans during the year ended March 31, 1918. The reason is because the whole of the proceeds of the petrol duty, and the share of the proceeds of the carriage duties, which were formerly paid to the Board, were retained for war purposes by the Exchequer. The only receipts during 1917-18 were from interest and profit on investments and loans, the total being £173,002.

During the year applications were made to the Board for advances amounting to £860,288, of which £797,645 was for improvement of road crusts. The Board distributed a limited sum out of the Road Improvement Fund, mainly in the form of assistance for the tar treatment of roads. The total sum distributed for road crust work was £153,109, and £76,182 by way of loans. For other purposes the grants amounted to only £6,182. Since the establishment of the Board in 1910 the grants and loans to road authorities have totalled £4,458,489, of which £707,347 has been repaid. During the same period the receipts were £7,566,099, of which £703,682 was shown as interest on investments and loans. From the motor spirit duties the receipts were £4,075,608, and from the carriage licences, £2,786,809.

### Control of Stone and Tar.

Attention is again drawn to the deterioration of the roads by reason of the shortage of labour and materials, and the increase of heavy motor traffic directly and indirectly connected with military movements. It became necessary to stimulate the production of road stone; to secure that such supplies of road material as were available should be used on roads of military importance and the more important roads of the country; and also to reduce as much as possible the transport of material by requiring that each locality should take its supplies from the nearest and most convenient quarries. Under a Defence of the Realm Regulation the Road Stone Control Committee, composed mainly of experienced road engineers, was appointed in August, 1917, and has done useful work. Later on it became necessary to limit and control the supplies of tar for road purposes, and during the year ending December 31, 1918, a bulk allocation of 52,000,000 gallons was made to the Board. This was subsequently reduced to 47,000,000 gallons, which had been allocated by the Board amongst highway authorities and others for use under permits on highways of national importance. About 500 applications each half-year for petrol licences from highway authorities, war officers and others connected with road construction had been referred to the Board by the Petrol Control Department and the Priority Department of the Ministry of Munitions.

### Staff of 8,000 on Government Roads.

Special work undertaken for the Army Council, Admiralty, Munitions and Air Ministries, and Timber Supply Department has been continued, namely, the supervising and arranging for the construction and maintenance of new roads and improvement of roads for military purposes, and negotiating with highway authorities the amounts payable by the Army Council in respect of damage caused by extraordinary traffic. The total estimated cost of such work was £4,424,717, of which £2,228,300 was on public roads.

In connection with the special works undertaken for other Government departments mainly by direct labour, a temporary staff fluctuating in numbers between 7,000 and 8,000 was employed throughout the year under the direction of Mr. J. S. Killick, the county surveyor of Hertfordshire, previously the Board's assistant engineer, who is now acting manager and engineer in the absence in France of Brigadier-General H. P. Maybury, C.B. The thanks of the Board are extended to the County Councils of Durham and Essex for the continued loan of the services of Mr. A. E. Brookes, county surveyor of Durham, and Mr. A. J. Lyddon, assistant county surveyor of Essex, who have rendered valuable assistance as engineers-in-charge in connection with the special work.

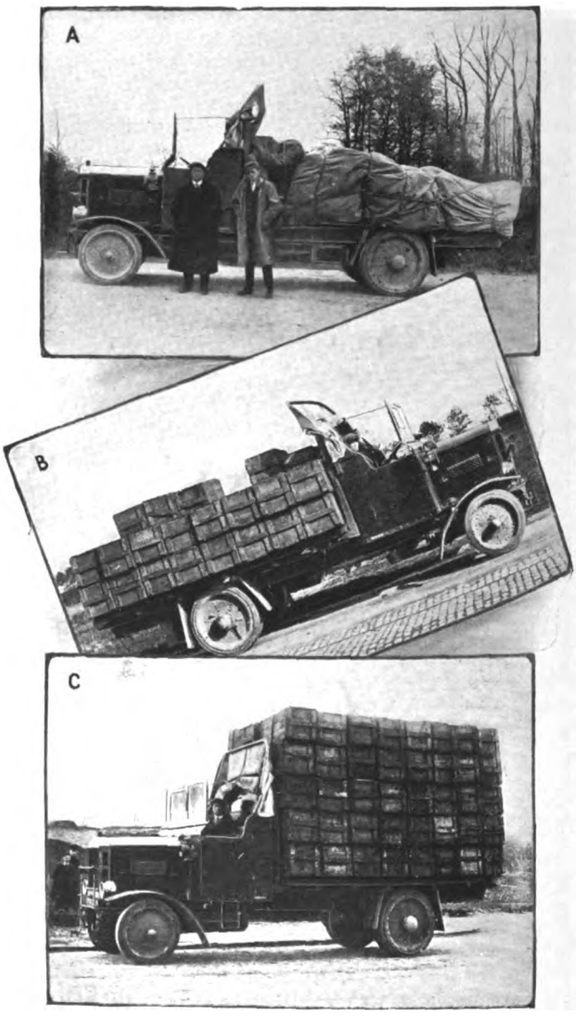
Besides Sir G. Gibb, the members of the Board are Sir J. H. A. Macdonald, Lord Montagu, Lord Pirrie, and Viscount St. Davids. On May 12 last Lord Montagu retired by rotation, and was reappointed by the Treasury for a period of ten years.

---

Mr. R. McKean Cant, advertising manager of the B. F. Goodrich Company, of 117, Golden Lane, London, E.C., has accepted the post of assistant sub-director of education in Salonica. The work is carried on by the University Committee of the Y.M.C.A. at the invitation of the military authorities, to assist soldiers in carrying on their studies. Mr. Cant is a Fellow of the Institute of Commerce, and a holder of the diploma in literature of the Heriot-Watt College, Edinburgh. He has had practical experience of teaching during the past few years as lecturer on advertising and salesmanship, etc., for the London County Council.

## IRISH USE OF A MAUDSLAY LORRY.

The accompanying illustrations of Maudslay lorries owned by the Station Cab Company, of Belfast, emphasise its usefulness at home under war conditions, and point to the ever-widening utility of such a vehicle and the influence it will wield in the post-war period on transport generally. Illustration A shows a Maudslay assisting in war work by carrying 5½ tons of flax seed from Wellington Bridge (15 miles south-west of Wexford) to Portadown. This seed was used to produce flax, which, after manufacture, is made up into aeroplane cloth for covering the wings of the machines which are doing such grand work on all battle fronts. The particulars



**Maudslay Lorry's Work In and Around Belfast.**

of the journey are interesting:—Left Belfast at noon on Wednesday, arrived back at Portadown on the Friday following, then delivered load at Rich Hill and returned to Belfast the same night. On a second run the trip was started on a Sunday morning, Wellington Bridge, a distance of about 225 miles, being reached the same night, after which the lorry returned to Belfast on Tuesday evening. Each of these trips totalled to a little over 450 miles, and in accordance with the Maudslay record each was completed without a hitch.

Illustration B shows a Maudslay lorry on its way to trawler station loaded with a hundred empty cases for fish. In the third illustration the same lorry is seen returning with a load of just over 6 tons of fish.

---

Another Electric for South Shields.—South Shields Council have two electric tipping wagons in use, and, subject to a satisfactory inspection and to the guarantees being satisfactory, the Council have asked Messrs. Orwell and Company, Ipswich, to supply a vehicle at an estimated cost of £1,045.

# MOTOR TRAFFIC.

## DUNLOP EDUCATION AND ENDOWMENT SCHEMES.

The conclusion of the first term of the Dunlop Rubber Company's educational scheme and the inauguration of a staff endowment scheme was celebrated on Friday, September 6, at the Birmingham Temperance Hall. Mr. J. V. Worthington, a director, presided, and was supported by the Lord Mayor of Birmingham and the principal members of the Dunlop staff.

Mr. S. C. Baisley, in explaining the schemes, said that the Dunlop education and endowment schemes were essentially encouragement schemes. They gave facilities for education and, as an inducement, provided continuous promotion and regular increases in salary, and the assurance of a satisfactory career, with the benefit of an endowment at the age of 55. Some of the company's work required men and women of high educational attainments. Every one of the executive directors of the company and most of the directors of the subsidiary companies had been promoted from the management. The endowment scheme was provided entirely at the expense of the company, the amount depending upon the length and form of service between the ages of 20 and 55, and was adjusted yearly.

In the educational scheme advantage was taken of the municipal educational institutions, and provision was made not only for intermediate and higher education, but also for those who required preparation for such work. All subjects, including training in commercial subjects, foreign languages, engineering and pure science were included in the system. Students were advised by the staff bureau as to the subjects which they should study. Although the scheme was inaugurated only in January last, yet, out of 200 students enrolled, 120 were prize winners. Some of the prizes would be accompanied by an immediate increase in salary, and in all cases individual success would be noted by the staff bureau in such a way as to ensure recognition when the opportunity for promotion occurred. The policy of the directors was to secure and retain the services of youths and girls of ability and to give them every facility and encouragement to advance. Their aim was efficiency, and the schemes were regarded by the directors as a matter of business. They also felt that by encouraging habits of study they were promoting the general welfare of members of the staff.

The Lord Mayor, in distributing the prizes, congratulated the company and the employees upon a scheme which he believed was of a pioneer character. It emphasised the personal interest which he thought ought to be taken by a great firm in the welfare of those who served it, and marked an advance in the relations between employees and employers. He hoped similar schemes would be adopted by other great concerns.

## MOTOR OMNIBUSES AT CHELMSFORD.

In a report to the Chelmsford Corporation with reference to the motor omnibus service provided by the National Steam Car Company, the Special Purposes Committee stated that they had had an interview with Mr. Banks regarding the licences granted by the Corporation authorising the company's omnibuses to ply for hire in the borough of Chelmsford and the routes used by the omnibuses, fares charged to passengers, and the time table of services. It was explained that as the Council granted the necessary licences to the company, the Council should exercise some general control over the omnibuses and the fares charged. The National Steam Car Company agreed that the company would in the future, before altering the time table, stopping places, or fares, submit particulars for the Council's information. Although the fares now charged appeared somewhat high in comparison with pre-war fares, the sub-committee was informed that the company, owing to the great increases in running expenses, etc., were not making the same profit as before the war.

The sub-committee also reported that they have considered and approved the stopping places to be observed by the new steam omnibus which the National Steam Car Company, Limited, propose to commence running in the borough. This new omnibus will run from the Shire Hall to various parts of the borough, and the sub-committee have approved a fixed fare of 1d. being charged by the company to all passengers using this omnibus between the Shire Hall and any part of the borough.

Mr. WALTER BOND of the St. Helens Cable and Rubber Company, Limited, has been appointed Chairman of the Solid Tyre Committee of the British Rubber Manufacturers' Association, subsequent to the retirement of Mr. W. H. Paule, of the Dunlop Rubber Company, Limited. He had previously filled the post of honorary technical secretary to the association.

## MOTOR VEHICLES FOR MUNICIPALITIES.

STRETFORD URBAN COUNCIL are using motor wagons.

THE PORT OF LONDON AUTHORITY are using an electric ambulance.

CALCUTTA MUNICIPAL COUNCIL have arranged for the purchase of a motor car.

BRADFORD GUARDIANS have decided to purchase a motor hearse at a cost of £295.

ESSEX STANDING JOINT COMMITTEE are purchasing another motor car for the use of the police.

ILFORD URBAN COUNCIL wish to purchase a second hand petrol lorry of about two tons capacity.

MANCHESTER CORPORATION GAS COMMITTEE are purchasing a Renault motor van from Mr. Gerald Dugdale for £225.

MANCHESTER CORPORATION HEALTH COMMITTEE propose to get a Ford car at a cost of £250 for the Drinkwater Park Hospital.

ELECTRICS FOR REFUSE COLLECTION.—Willesden Urban Council are considering the purchase of electric vehicles for the removal of house refuse.

WALSALL MOTOR OMNIBUSES.—Seven of the Walsall Corporation motor omnibuses and one transport lorry are to be enrolled in the Motor Volunteer Corps of the county of Stafford.

HALIFAX CORPORATION MOTORS.—A special committee has been appointed by the Halifax Corporation to consider the advisability of centralising the control of all motor vehicles belonging to the Corporation. The committee comprises a representative from each department using these vehicles.

## TWO NAPIER VANS.

The two Napier vans shown in the accompanying illustration form part of a fleet of Napier business vehicles in use by Messrs. Maple and Company, of Tottenham Court Road. This firm was one of the pioneers of motor transport, and their foresight has been of great service to the Government, as they are large suppliers of hospital appliances. Out of evil cometh good, and unquestionably

this war has proved the value of motor transport with a completeness which could not have been hoped for under any other circumstances. The demonstration thus afforded of the advantages of mechanical transport will certainly lead to an enormous development after the war.

ROAD MAINTENANCE IN BIRMINGHAM.—In his annual report, Mr. H. E. Stilgoe, city engineer and surveyor to Birmingham Corporation, states that despite the shortage of labour and materials the highways have been kept in a reasonable state of repair. Repairing macadamised streets cost £131 10s. 4d. per mile; granite pavements, £111 6s. 10d. per mile; wood pavements, £248 5s. 3d. per mile. The area of wood pavement under maintenance contract with the Improved Wood Pavement Company is 128,866 sq. yds. The amount paid during the past year for such maintenance was £5,118, being at the rate of 9·53d. per sq. yd. The approximate area of wood pavement maintained directly by the Corporation is 203,314 sq. yds., the cost of which during the year was £1,796, being at the rate of 2·12d. per sq. yd. The economical and sanitary benefits of tar spraying had become increasingly apparent. The cost of this work during the year was £17,112, being at the rate of 1·01d. per super yard.

Digitized by Google

# MOTOR TRAFFIC.

## MOTOR TRAFFIC NOTES.

NEW INDEX MARK FOR CHESTER.—The Local Government Board have assigned "MA" to the county of Chester as a new, and second, motor index mark.

SHEFFIELD CORPORATION propose contributing three guineas annually towards the expenses of the Electric Vehicle Committee of the Incorporated Municipal Electrical Association.

EXCESSIVE TRAFFIC.—The Road Board have agreed to contribute to the Willesden Urban District Council the sum of £1,044 towards the repair of Acton Lane, owing to the excessive traffic from the munition works in the district.

MEAT BY MOTOR.—Chelmsford Corporation have suggested to the Food Ministry that arrangements should be made for meat to be sent by road motor transport, with a view to expediting delivery and preventing waste of food.

LONDON COUNTY COUNCIL.—The report of the London County Council Fire Brigade shows that out of a total of 186 vehicles no fewer than 173 are motor driven. These comprise 87 fire engines, 80 escapes, and 6 long ladder vehicles.

INCREASING MILEAGE COSTS.—A statement prepared by the accountant of Willesden Urban District Council with reference to the cost per mile of the motor service for the year ended March 31 last shows a charge of 13·64d. per mile, as against 11·70d. per mile for the previous year.

gear should be adopted for use with the Orwell wagon. The committee acquiesced.

MANCHESTER-LIVERPOOL RETURN LOADS BUREAU.—Just over a year's experience of the return load system for motor vehicles running between Manchester, Liverpool, and other centres in East Lancashire has shown that it has filled a great want. The scheme is managed by the Chambers of Commerce of the two cities. The tonnage carried during the first six months was 2,225, while in the second half-yearly period ended in August last 11,632 tons of material were transported. The bureau was the first to be formed in this country.

HEAVY ROAD TRAFFIC.—At Perthshire Highland District Committee letters were read from the Marquis of Breadalbane as to damage to roads and bridges in the district by heavy timber haulage The surveyor reported that nearly all the main and secondary roads were affected, but the Road Control Board had decided that timber hauliers were to be relieved of all responsibility for damage to roads provided they complied with the regulations and went by routes laid down. Assistance for the extraordinary traffic would be given to local road authorities provided they did all in their power to maintain the roads in a fit condition.

HIGHWAY CONTROL.—The subjoined further statement with reference to highway control has been issued by the Council of the Institution of Municipal Engineers :—Following upon the resolution which was carried at the last meeting, copies of which were sent to

**A Fleet of Napier Lorries for the War Department.**

FREE AMBULANCE REGISTRATION.—The Magistrates' Committee of the Glasgow Corporation have reported in favour of granting an application of the St. Andrew Ambulance Association for the free motor registration of a new motor ambulance.

TIRE STANDARDISATION IN THE U.S.A.—As the result of negotiations with the American War Industries Board, the motor tire manufacturers in the United States have agreed to reduce the numbers of separate lines of tires from 287 to 32. This step is to be effected gradually by the end of November, 1920.

HISTORY OF WAR MOTOR TRANSPORT.—According to the *Commercial Motor*, Lieutenant N. Beveridge has been given a staff appointment at General Headquarters in France in order to prepare a history of motor transport in the war. His duties take him to every point of the front. When a corporal in the early period of the war he drove transport department and service vehicles for many months.

PERTH MOTOR OMNIBUSES.—A report presented to the Perth Town Council shows that the motor omnibuses account started the year with a debit balance of £1,135, to which has to be added the loss on the year's working of £60, and the hire purchase instalment, £480, making a total loss on the working of the omnibuses to Whit-Sunday, 1918, of £1,681. It is estimated that the loss during the current year will be £189.

ELECTRIC TIPPING GEAR.—Reporting to the Ilford Electricity Committee, the manager stated that he had inspected the electric tipping gear in use on the Orwell wagons, and considered it thoroughly satisfactory, and preferable to the unloading gear. The price quoted by the makers was £50, against £70 for the unloading gear, and he therefore suggested that the electric tipping

the departments concerned, it was decided to approach the Road Transport Board with a view to obtaining full representation on Divisional Road Transport Boards and Area Transport Committees. As matters are at present, county interests only are represented, and it is felt that borough, urban, and rural districts should have equal representation, having regard to the mileage of the highways which they control.

COKE FUEL FOR STEAM WAGONS.—A recent issue of the *Sentinel News*, the house journal of the "Sentinel" Wagon Works, Shrewsbury, says :—"We have consistently advocated the use of coke as a fuel in steam wagons. Our issue of February last contained an actual working record of a 6-ton Sentinel wagon which carried nearly 6½ tons at a penny a mile over a run of 21 hours, burning ordinary gas coke at 25s. a ton. With a properly designed steam wagon coke is the cleaner fuel, and it gets rid of the difficulties caused to owners of wagons requiring coal by the very necessary coal control regulation which compels the use of local coal, thus economising railway transport."

ROAD TRANSPORT ORDER.—The secretary of the Commercial Motor Users' Association has communicated with the Road Transport Board with reference to the position in which the numbers which have been issued by the Board, and which have to be displayed upon the vehicles, should be placed, and has received a reply from the secretary to the Board stating that so long as vehicles are legibly marked with the transport registration number the Board do not intend to insist that the number should be placed in any particular position. It is, however, suggested that the number should be marked on the near side of the vehicle following the name and address which is already in most cases thereon.

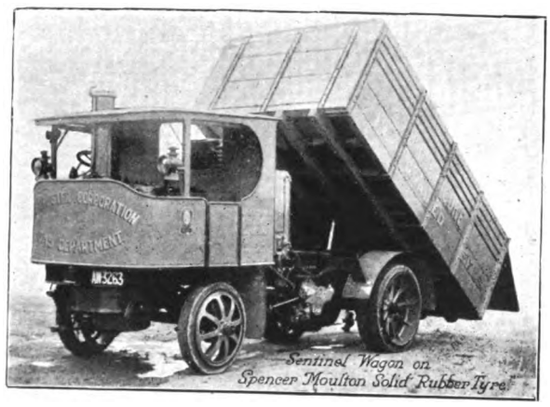
# TYRES FOR HARD WORK
## AND LONG WEAR



LAST month we reproduced on this page Three Illustrations of War-Time Wagons—Foden, Dennis, and Thornycroft—on Spencer-Moulton Solid Rubber Tyres. They were a selection from the many makes of noted motors doing good service on that famous brand of Tyres.

The adjoining photo-reproduction depicts one of the Manchester Corporation Gas Department's Sentinels, which have been renewed with Spencer-Moulton Tyres—the previous set having given satisfaction.

It is an interesting point that these Tyres are made by a firm with over 60 years' Reputation, and that the Company has supplied Tyres to Railway Companies for 46 years.

## A REMARKABLE ILLUSTRATION

THE adjoining print shows a wagon and load which have aroused no small interest among wagon-owners. *Motor Traction* stated :—

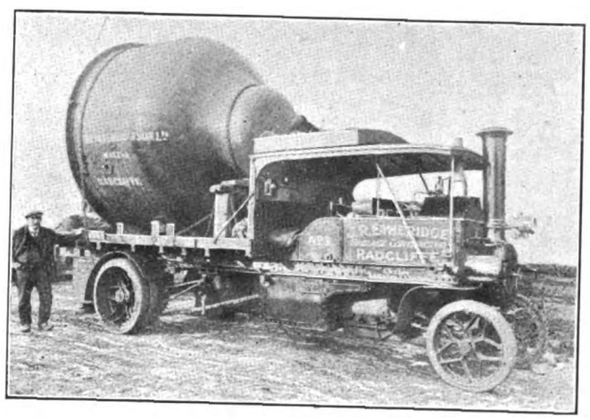
"It depicts a keir laden upon the 5-ton Foden wagon of Mr. J. R. Etheridge, of Radcliffe, Lancashire, who is one of the best known motor haulage contractors in the Palatinate. The keir in question measured 10 ft. 6 in. in diameter, and scaled 6½ tons, but with stores and accessories the load was raised to 7 tons.

"This hefty load was taken by road for two cogent reasons. The first was because it was too wide for the gauge clearance of the railway ; the second was that road haulage offered quick delivery. The keir was required for work of most vital importance—the manufacture of high explosives.

"Mr. Etheridge undertook to fulfil official desires. He received the consignment 7.15 one morning, and delivered it to destination some 70 miles away at 6 o'clock the evening of the same day, or less than 11 hours later—certainly a smart achievement.

"The trip was not devoid of interest. While passing through a North Cheshire town, Mr. Etheridge was pulled up by the man in blue for his licence. But he scored hands down, because he had a more powerful 'pass friend' than a mere licence, in the form of a warrant, authorising transport and delivery of this Munitions Class 'A' consignment.

"This steamer was shod with Spencer-Moulton solid tyres, with which Mr. Etheridge expresses entire satisfaction. Notwithstanding demands to handle weighty and massive loads, these tyres have exceeded their guaranteed mileage."



**Exceeded Guarantee Despite Overload.**
Keir 10½ ft. dia., weight 6½ tons, hauled 70 miles in 11 hours on Foden Wagon fitted with

# making the by-ways highways

EQUIPPING a vehicle with Avon Solids is equivalent to giving it a "portable permanent way," if the contradiction in terms is permissible. At all events, it is not only permissible but the mere truth to assert that Avon Tyres do make indifferent roads good and largely neutralise the damaging effects of bad roads both on vehicle and load.

¶ Rough riding, not mileage, wears out your chassis. Racking jolts and uneven pulling break the heart of engine and driver alike, bringing in their train attendant losses in the form of increased charges for petrol and repairs, damaged goods, delays, and so forth.

¶ Tyre resiliency is a more powerful factor in combating evils of this sort than most owners realise, and orders for solids are placed daily without due weight being given to it. With guarantees standardised and prices practically uniform, the two dominant considerations are resiliency and ultimate cost per mile, and we press for the first-named to be specially examined in the case of Avons, with full confidence that the second will prove the lowest you ever recorded.

¶ *Most solids to-day are either too hard or too soft—one fault is as bad as the other. We were never content to have a tyre merely "as good as most," and untiring research has given us to-day an Avon Solid that yields mileage in abundant measure and is all the time thoroughly efficient in resilience to help the engine, cushion the chassis, protect the load.*

## Consider the "Karrier"

If you have big loads to carry and heavy work to do – consider the "Karrier": its ball-bearing transmission, phosphor-bronze bushing, splining, fully-floating back axle, reduced unsprung weight, efficient springs, and its powerful 50 h.p. 4-cylinder engine – the lorry in which Quality is First and Foremost.

Get to know how many improvements and refinements are built into this lorry by reading our latest publication on the Live Axle Type "Karrier." Please ask us to post you a copy.

# A LORRY WILL SOLVE THE PROBLEM.

IT is stated that a railway wagon is in motion for three days only in every 100—not a very cheerful outlook for the firm that will need speedy deliveries of raw material and rapid disposal of output of its plant after the war

The heavy commercial vehicle will be the solution for many a firm—with its door to door delivery and the stuff to hand when and where it's wanted most.

And the after-the-war chassis will ride just as smoothly and freely on

**DUNLOP SOLID RUBBER TYRES**

as do thousands of heavy commercial vehicles and Army Transports in all parts of the world to-day.

The Shortage of Skilled Drivers

If you engage an inexperienced driver to run your lorry it is not improbable that he will one day throw in his clutch with all the vigour his inexperience prompts—strain the whole of your chassis—and do damage in your gear box that will take days to repair.

Make it impossible for him to do this by having the clutch lined with Ferodo fabric. It will then engage sweetly however violently applied—transmit maximum power from engine to back axle—never slip or seize. Ferodo fabric lasts much longer than leather or any imitations of Ferodo fabric, and will not burn out. It gives infinitely superior service at less cost.

# TRAMWAY TRACK CONSTRUCTION AND MAINTENANCE.

By R. BICKERSTAFFE HOLT,

Highways and Permanent Way Engineer, City of Leeds.

## CONTENTS:

FOREWORD.
What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water-gravel—Sand—Clinker-sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and Padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS.
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in setts—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

## WEEKLY LIST OF TENDERS INVITED.

### VICTORIAN STATE RAILWAYS.

The Agent-General for Victoria, Australia, invites tenders for the supply and delivery of the following: —

18 Steel Bogie Tyres, to Contract No. 24,401.

1,000 Steel Car and Wagon Tyres, to Contract No. 29,969.

Specification, conditions of contract, and forms of tender may be obtained by bona-fide tenderers at the offices of the Consulting Engineers, JOHN COATES & CO., LTD., 115, Victoria Street, London, S.W.1.

Tenders, accompanied by the preliminary deposit named in Conditions of Tendering, must be delivered to the Agent-General for Victoria, Melbourne Place, Strand, W.C.2, not later than 12 noon on Wednesday, October 30th, 1918, marked "Tender for Tyres."

The Government of Victoria does not bind itself to accept the lowest or any tender.

PETER MCBRIDE,
Agent-General for Victoria.

### WALSALL CORPORATION TRAMWAYS.

**Stores.**

The Corporation of Walsall invite tenders for the supply of the undermentioned Stores to the Tramways Department for the year 1919:

| | |
|---|---|
| Motor Grease. | Castings. |
| Motor Cylinder Oil. | Trolley Wheels. |
| Cleaning Material. | Cement etc., etc. |

Forms of tender and further information may be obtained at the Tramway Manager's Office, St. Paul's Buildings, The Bridge, Walsall.

Tenders, sealed and endorsed "Tender for Stores," are to be sent to the Town Clerk, Council House, Walsall, on or before Tuesday, November 5th.

Samples (which will not be paid for by the Corporation) are to be sent to St. Paul's Buildings, The Bridge, Walsall.

The Corporation do not bind themselves to accept the lowest or any tender, and they will not accept the tender of any firm or person paying to their workmen less than the standard rate of wages

R. L. HORSFIELD.
General Manager

St. Paul's Buildings,
The Bridge, Walsall.
October 14, 1918.

## POSITIONS VACANT.

### Shift Eng'neer.

Shift Engineer wanted, with previous experience in direct-current, three-wire and traction supplies, high-speed, direct-coupled steam sets. Experience with rotary converter equipments will be a recommendation. Wages £3 5s., plus 12½ per cent. per week of 56 hours. Certified undertaking.

Applications, giving experience, age, to be sent to the Engineer and Manager, Electricity Works, Lomax Street, Radcliffe, Lancashire.

### COUNTY BOROUGH OF HUDDERSFIELD.

**Appointment of Tramways Manager and Engineer.**

The Huddersfield Corporation invite applications for the post of General Manager and Engineer of their electric tramways undertaking.

The gentleman appointed must be a trained Engineer, having theoretical knowledge and practical experience of the duties of the position. Salary £600 per annum.

Particulars of the duties may be obtained on application to the Town Clerk.

Applications, in candidate's own handwriting, endorsed "Tramways Manager," with copies of three recent testimonials, must reach the undersigned not later than the 4th November, 1918.

Canvassing will be a disqualification.

J. HENRY FIELD, Town Clerk.

Town Hall, Huddersfield, 16th October, 1918.

### COUNTY BOROUGH OF WIGAN.

**Tramways Department.**

**Appointment of Rolling Stock and Works Superintendent.**

Applications are invited for the above appointment from persons having had experience in Tramway Engineering work. Preference will be given to applicants possessing a knowledge of the repair and maintenance of British Westinghouse Co., Ltd., and Dick Kerr and Co., Ltd., equipments.

Salary £250 per annum, rising by annual increments of £25 to £300. List of duties and conditions of service may be obtained on application to Mr. Frank Buckley, General Manager, Corporation Tramways, Market Place, Wigan.

Applications (together with not less than three copy testimonials), giving full particulars as to age, qualifications, past and present employment, and endorsed "Tramways Rolling Stock and Works Superintendent," must be sent to the undersigned not later than 10 a.m. on Saturday, 16th November, 1918.

W. H. TYRER, Town Clerk.

Town Clerk's Office, Wigan, 11th October, 1918.

### COUNTY BOROUGH OF WARRINGTON.

**Electricity Department.**

The Electricity and Tramways Committee of the County Borough of Warrington, invite applications for the post of Shift Engineer.

Experience in H.T. and L.T. systems necessary.

Salary £3 14s. 6d. per week, including bonus.

Forms of application and list of duties can be obtained from the undersigned.

Applications to reach me not later than first post on Tuesday, November 4th, 1918.

F. V. L. MATHIAS,
Borough Electrical and Tramways Engineer.

Howley, Warrington.

### Rolling Stock Superintendent.

Rolling Stock Superintendent wanted. Previous experience in upkeep and repair of electric cars essential and preferably with generating station experience. Commencing salary £2 15s., plus war bonus 25s., per week.—The Chatham and District Light Railways Co., Luton Road, Chatham.

### MANUFACTURING RIGHTS OF PATENTED SPECIALITIES.

Engineering firm with up-to-date plant and special facilities for turning out repetition work, are prepared to consider the manufacturing rights of patented specialities for sale amongst tramway and electrical undertakings. Box No. 58. THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## FURTHER DEMANDS FROM EMPLOYEES.

ALTHOUGH it was anticipated that the Unions representing tramway workers would shortly make further demands upon tramway employers, some surprise has been felt that fresh claims should be made at the present time. Tramway authorities have scarcely been able to ascertain exactly the effect of the last increase in wages; and, inasmuch as there has been very little if any increase in the cost of living since the last award, it is difficult to discover on what ground the additional demand is now made. As regards the claim for equal payments to men and women, the representatives of the employees appear to have overlooked the fact that a Committee appointed by Government is now considering it; and that it would certainly be better from all points of view to let this matter rest where it is until the Committee has reported. Both Corporation and Company tramways have already been placed in a serious position by previous increases in wages, and if they are to grant any further increases, it is clear that the burden will have to be borne by the public through an increase in fares. Machinery for securing increases in maxima fares has, however, been provided by Parliament in an Act passed in the last session, and if tramway authorities can deal with the wages question in a way that will be acceptable to the workers, it is not too much to hope that the other demands will be withdrawn. It is possible that the latter have been made without a thorough investigation of the difficulties that would be created by granting them. The representatives of the employees will, we think, be well advised not to press them, and to confine their present application to the question of a war wage. The stipulation as to payments for spread-over time would be impracticable, especially in the case of a large number of the smaller undertakings. In any case, such arrangements might very well be left for settlement to the Joint Industrial Council for the tramway industry which is now being organised. When the representatives of employers and employees have the opportunity of meeting together to discuss questions of working, it should be much easier for the workers to understand the difficulties which confront managers in connection with spread-over time. In view of the exigencies of the present period and of the uncertainty of future conditions, it would certainly be most inopportune to interfere with the existing arrangements.

## INCREASE OF FARES.

Worthing Town Council have expressed themselves in favour of permitting fares to be increased on the Broadwater motor omnibus route.

Ossett Town Council are protesting to the Yorkshire Electric Tramways Company against the abolition of the penny stages.

Sunderland Town Council have declined to modify their recent decision to increase the fares for previously penny stages to three-half-pence, by the introduction of penny fares for certain shorter stages.

York City Council have considered a report of the Electricity and Tramways Committee recommending that there should be an increase of tramway fares of 50 per cent. on pre-war rates, to take effect from December 1. After some discussion an amendment to refer the report back with reference to the establishment of a 1½d. fare was carried.

At Southend-on-Sea the Railway Travellers' Association have passed a resolution in favour of the old stages being reverted to, with a 50 per cent. increase in fares, in lieu of the present stages and fares. The General Council of Municipal Associations have decided to support the suggestion.

Johannesburg Municipal Council have instructed the Tramway and Lighting Committee to raise the tramway fares so as to secure a net return to the general fund of the Council of 10 per cent. on the capital employed in the tramway department, and simultaneously to introduce a graduated scale of discounts. The Committee have reported that they considered the best arrangement for carrying out the Council's instructions is the following:—The alteration of the present 1½d. stages into 2d. stages; with a graduated scale of discount of 20 per cent. on first stage tickets, 25 per cent. on second stage tickets, 30 per cent. on third stage tickets, and 35 per cent. on fourth stage tickets.

## L.C.C. TRAMWAY MATTERS.

The first meeting of the London County Council after the summer recess was held on Tuesday, when several reports were presented by the Highways Committee.

### TRAFFIC RECEIPTS.

A comparative statement was submitted showing that the traffic receipts during the eleven weeks ended October 2 amounted to £765,412, an increase of £129,998 over the corresponding period of the previous year. The passengers carried numbered 136,127,709, an increase of 8,782,748. The length of line open was 141·67 route miles, the same as a year ago.

### LEGAL PROCEEDINGS.

As a result of legal proceedings, one person was fined for obstructing cars, three persons for assaulting conductors, one person for assaulting an inspector, and two persons for avoiding payment of fares. Fines were imposed in two cases in respect of the breakdown of defective vehicles on tramway tracks. Seventeen persons were fined for spitting on tramway cars. A motorman, for stealing money from a tramway depot, was sentenced to three months' imprisonment in the second division.

### COLLECTION OF USED TICKETS.

The total weight of used tickets collected in ticket bags placed near the doors of cars running on two routes selected for the experiment during the twelve weeks ended September 14 was 750 lbs., equivalent approximately to 750,000 tickets. The total number of tickets issued on the two services in question during the time was approximately 8½ millions, so that rather less than 9 per cent. of the tickets were placed in the boxes. Bags have now been fitted on 650 cars and notices printed on the backs of the tickets requesting passengers to place them in the boxes. A considerable saving is anticipated as soon as the scheme is in operation throughout the whole of the system, which will probably be about the end of the present month.

### THE STRIKE IN AUGUST.

Alluding to the strike of tramway and omnibus employees which took place in August, the Highways Committee stated that the services on the Council tramways remained practically normal, only about 5 per cent. of the total number of motormen and conductors having withdrawn their services.

### TENDERS FOR TRAMWAY MATERIAL, ETC.

The invitation for tenders from selected firms for the supply of circuit breakers, insulator clips, insulating varnish, fingers, motor axle bearings, external bolster springs, driving wheel centres, and the execution of repairs to fare-bill plates were approved.

### WAR WAGES OF WOMEN IN THE TRAFFIC BRANCH.

The Highways Committee reported that the Council was not directly bound by the award of August 29 by the Committee on Production, granting to women aged 18 and over, whose terms of

Digitized by Google

employment include an undertaking that they should be paid the same rate as the grades of men whose places they filled, such an advance as would give 25s. a week over pre-war rates, and in the case of women not covered by the above an advance of 5s. a week subject to a maximum of 25s. a week; but that after full consideration they were strongly of opinion that the Council should apply the award forthwith to the women concerned. The Council agreed. The additional cost is estimated at £16,500 for the remainder of the current financial year, and £22,000 for the following year.

ADVERTISEMENT OF THE TRAMWAYS.

Mr. J. D. Gilbert, M.P., asked the Chairman of the Highways Committee: (1) Whether the Committee have considered as to stopping the waste of money in issuing high-priced advertisements in daily newspapers for the Council tramways; (2) whether the cars at the present time are not carrying more than their maximum traffic; and (3) what is the object of advertising for still further passengers?

Mr. G. H. Hume, Chairman of the Highways Committee), in reply, said that the Highways Committee was carrying out as far as practicable under existing abnormal circumstances the programme for publicity recommended by the Committee on Re-Organisation which was approved by the Council on February, 20, 1917. The Committee did not consider that there was any waste of public money in carrying out the Council's decision. If the hon. member had any recommendations to make they would be glad if he would come personally to the Committee. Many additional passengers could be carried by the Council cars at times other than the rush hours. In the returns of traffic it was shown that during the eleven weeks ended October 2nd, there was an increase of passengers compared with the same period last year of not less than 8¼ millios This increase was obtained notwithstanding the reduction in car mileage. Having regard to the vacant seating capacity at other than rush hours, a further increase in the total number of passengers might still be looked for. The Council would remember that there was another reason for advertising, because it was of great importance that the Council should be in a position to let London know what arrangements were being made.

## NEW CLAIMS FROM TRAMWAY UNIONS.

Meetings of representatives of tramway authorities have been held this week in London to consider the following communication, dated October 9th, from the National Transport Workers' Federation. Representatives of Tramway Companies met on Monday and representatives of Municipal Tramways on Friday, to consider the proposals at some length.

As the result of representations made to this Federation by the affiliated Unions catering for Tramway and Omnibus Workers, I am directed to make formal application to you for the following alterations in Wages and Working Conditions on behalf of all employees (other than skilled craftsmen), male and female, who are members of Unions affiliated to this Federation :—

1. That equal payments be made to women as to men in the tramway and motor omnibus undertakings in the United Kingdom.
2. That the position of youths between 18 and 21 years of age shall be maintained in accordance with the Award of March 8th, 1918.
3. (*a*) That the war wage at present paid to males and females 18 years and over shall be increased by such amounts as shall give 35s. per week war wage. Payments to be made on a basis of a week of six days or six shifts.
   (*b*) That youths and girls under 18 years of age shall be paid half the total war wage paid to the employees over 18 years of age, except where youths or girls are performing adults' work when they shall receive adults' pay.
   (*c*) That all spread-over time in excess of one hour within a duty shall be paid for as though worked.
   (*d*) That where the spread-over time of a duty exceeds ten hours and is under twelve hours, all time in excess of ten hours shall be paid for at the rate of time and a half.
   (*e*) That where the spread-over time of a duty exceeds twelve hours all time in excess of twelve hours shall be paid for at the rate of double-time.
5. That in the event of services being curtailed or reduced the full weekly payments in operation at the time of such curtailment or reduction shall continue to be paid in addition to the current war wage.
6. That this application is made on behalf of and is intended to include all employees (other than skilled craftsmen), male and female, whose Unions are affiliated to the National Transport Workers' Federation.

I shall be glad if this is given immediate consideration by your Association or Company, and on behalf of the Federation and the Unions concerned I have to say that we are willing to appoint representatives to a Conference to discuss a settlement of the above claim, or failing agreement, to submit the matter to the Ministry of Labour for arbitration before the Committee on Production. I am sending a copy of this letter to the Chief Industrial Commissioner. *Signed*—ROBERT WILLIAMS.

The list of Unions concerned is as follows :—Amalgamated Association of Tramway and Omnibus Workers, the London and Provincial Union of Licensed Vehicle Workers, National Union of Vehicle Workers, National Union of General Workers and the Dock, Wharf, Riverside and General Workers' Union.

## MISCELLANEOUS NEWS AND NOTES.

**The Key Industries Exhibition,** which is being held at Central Hall, Westminster, S.W., will remain open until October 24th.

**Bolton Tramway Renewal.**—The tracks in Chorley Old Road between Whitecroft Road and the terminus are to be relaid.

**Suspense Funds for War Bonds.**—The Wolverhampton Corporation has invested £10,000 out of the tramways suspense account in 5 per cent. National War Bonds.

**The Albion Clay Co., Ltd.,** in consequence of the Government having commandeered their offices in Victoria Street, Westminster, have removed to Museum Station Buildings, 133-136, High Holborn, W.C.1.

**Overcrowded Cars.**—At an inquest into the death of a girl who fell from a workman's car at Wigan, the Coronor remarked that no tramway car should carry 82 passengers when the seating capacity was 46.

**A Brake that Failed.**—Owing to the front brake failing to act, a Glasgow tramway car got beyond the control of the driver. Several passengers jumped off, and one or two sustained slight injuries. The car came to a standstill on a level.

**Motor Omnibuses for Barrow.**—The Town Council has instructed the Parliamentary Committee to consider the advisability of promoting a Bill in Parliament to secure powers to run motor omnibuses in the district.

**Transport of Wounded Soldiers in London.**—At the request of the British Red Cross Society, permission was given by the London County Council, in connection with trips for wounded soldiers, for the steamers used by the Society to use certain of the Council's steamboat piers during last summer andf or the provision of tramway accommodation at reduced fares.

**Ashton Tramways Project.**—Notice has been served on the Oldham, Ashton, and Hyde Electric Tramways Company requiring them to sell to the Ashton Corporation that part of their undertaking which is within the borough

**Temporary Extension at Newport.**—Newport Tramways Committee have recommended the Town Council to contribute £10,000 towards the cost of temporarily extending the Corporation road lines to the dry docks on sleepers, the Admiralty and dockowners to pay the balance.

**Industrial Reconstruction Council.**—A conference on "Women in Industry" will be held under the auspices of the Industrial Reconstruction Council on Tuesday, October 22, at 6 p.m., in the hall of the Institute of Journalists, 2 and 4, Tudor Street, London, E.C.4. The subject will be introduced by Miss Lilian Dawson, secretary of the Fabian Society Women's Group. No tickets will be necessary.

**Blackpool Tramway Purchase.**—The agreement for the purchase of the undertaking of the Blackpool and Fleetwood Tramroad Company by the Blackpool Corporation has been signed and sealed by both parties and awaits the approval of the shareholders and debenture holders of the Company. A meeting has been called for October 22nd. The purchase price to be paid by the Corporation is stated as £278,000, and shareholders will receive approximately £18 for each £10 share.

**An Unlighted Car.**—At Halifax a tramway motorman was fined 10s. for having his car unlighted in Godley Road at 8.45 p.m. It is stated that he had lost the trolley wheel, and did not possess a hand lamp. When the trolley came off it was caught on the overhead guard wires which were pulled down. Consequently, the current had to be cut off a section to avoid accident. The motorman was some distance from the nearest houses, and could not leave the car to try to borrow candles or lamps. He should have had two lamps on the car, but it was stated that there was a shortage.

**The Industrial League.**—The Executive Committee regret that the date for the annual general meeting and dinner has again had to be altered, but circumstances made it unavoidable. The date is now definitely fixed for October 30th. The annual meeting will take place at 5.45 p.m., at the Connaught Rooms, Great Queen Street, Kingsway, London, W.C., and will be followed by the dinner at 7 p.m. Mr. G. H. Roberts, M.P., Minister of Labour, will preside, and it is expected that other Cabinet Ministers and members of the War Cabinet will attend.

**Stoppage of Ipswich Tramways.**—There was a stoppage of the Ipswich tramways on Monday, due, says the *East Anglian Daily Times*, to the bearings of a large steam turbine at the power station seizing up, and the stoppage continued till 10 a.m. Two cars, sent out early in the morning for the workmen's service, were stopped shortly after 8 a.m. The turbine was the only one available for use at the time, the other being under repair, in consequence of the necessity of keeping the plant in good working order. In accordance with the standing orders of the Ministry of Munitions, the tramways supply had to be the first to suffer.

**Car Said to have Stopped with a Jerk.**—In the Dublin Recorder's Court, £15 15s. damages (on a claim for £50) were awarded against the Dublin United Tramways Company, on account of an accident alleged to be the result of the negligence of the defendants' servants. The evidence for the plaintiff was to the effect that he was in a car and had told the conductor where he wanted to stop. The car was passing the place and he got on to the platform. The conductor rang the bell and the car was pulled up with such a jerk that he was thrown against a brass bar and had his arm fractured. He was six weeks in hospital. The conductor, examined for the defence, said he did not know how the plaintiff got the injury.

Digitized by Google

**Decimal Coinage Inquiry.**—The Royal Commission on Decimal Coinage, which was appointed in August last, has held a preliminary meeting. Lord Emmott is Chairman of the Commission, and there are twenty-two other members.

**Railway Labour Outlook.**—A writer in the *Railway Review*, in an open letter to Mr. J. H. Thomas, M.P., Secretary of the National Union of Railwaymen, compliments him on the record of good work done and victory won for railway workers. He adds that it is slight, however, compared with the possibilities of the coming days, and refers to "the big offensive that is coming of the largest trade union in the world."

**Damages for Injuries through Collision.**—At Lambeth County Court, £175 damages, with costs, was awarded for injuries sustained in a collision between two tramway cars. The plaintiff was a munition worker, her average weekly wages for six months previous to the accident being £3 11s. 10d. She was on her way home from work when the two cars collided, throwing her off the seat. She sustained severe injuries, and the medical evidence was to the effect that it would be at least three months before she recovered. The liability of the London County Council was not disputed, but it was maintained that the claim was inflated.

## PERSONAL.

**Sir George Gibb,** owing to pressure of work in connection with his position as Chairman of the Road Board, has retired from the Committee on Production, and Sir Cyril Jackson, K.B.E., has been appointed Chairman of the Committee of Production.

**Mr. W. J. Steele,** permanent way engineer to the Newcastle-upon-Tyne Corporation Tramways, has been recommended for an increase in salary. Mr. Steele, who has £1,000 a year as city engineer, was entitled to an advance before he joined the Army, but at his own request a previous proposal to advance his salary was dropped.

**Mr. A. H. Pott,** M.Inst.C.E., M.I.E.E., has resigned the managership of the Metropolitan Electric and London United Tramways, Ltd., in order to take up a position under the Tramways (Board of Trade) Committee. The two Tramway Companies have, however, been able to retain Mr. Pott's services in a consultative capacity.

**Mr. C. J. Spencer,** who recently resigned his position as general manager of the Bradford Corporation Tramways, to accept an executive position with the London Underground group, has now been appointed manager of the Metropolitan Electric and London United Tramways, Ltd., to fill the vacancy created by Mr. Pott's resignation.

## FINANCIAL REPORTS AND MEETINGS.

**Lima Light, Power, and Tramways Company.**—A dividend of 1½ per cent. is announced.

**Shanghai Electric Construction Co., Ltd.**—An interim dividend has been declared at the rate of 5 per cent. actual, less tax.

**The General Electric Company, Ltd.,** announce that they have completed the purchase of the Erith Works and of the goodwill of the manufacturing business hitherto carried on by Messrs. Fraser and Chalmers, Ltd. Practically the whole of the personnel have transferred their services to the General Electric Company, who will carry on the business as a going concern, and under the title of Fraser and Chalmers Engineering Works (Proprietors, the General Electric Company, Ltd.)

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Oct. 16, amounted to £68,975, an increase of £13,460 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Oct. 16 (twenty-eight and a half weeks), the total receipts were £1,864,361, an increase of £271,371 on the corresponding period of 1917.

**Gloucester Light Railways.**—The report of the Gloucester Corporation Light Railways for the year ended March 31st, 1918, shows that the total income amounted to £22,960 (an increase of £3,168), and expenditure to £17,385 (an increase of £1,492). The gross profit on working was thus £5,575, an increase of £1,676. This sum was insufficient by £3,035 to meet the interest, sinking fund, and other charges, and the sum of £3,760, as in the previous year, was transferred from the City Fund account to meet the deficit. Traffic receipts per car mile were 9.73d., as against 7.36d. in the previous year, and expenditure 7.63d., an increase of 1.43d. The ratio of expenses fell from 80 per cent. to 76 per cent. The energy consumption per car mile was 90 units.

**Exeter Corporation Tramways.**—There was a net profit of £1,516 for the year ended March. The total passengers carried were 5,306,562, and the traffic receipts were £20,629, being £463 more than in the previous year. The mileage run was 414,006, being a decrease of 18,964, but 42,662 more passengers were carried. The total working expenses, exclusive of capital charges, were £14,742, an increase of £1,804. Of this, £795 was due to increase of wages. Mr. R. O. Baldwin, the general manager, expresses the opinion that the reserve fund should stand at least at £15,000, instead of £6,849 as at present, in view of the prospect when increased expenditure upon renewals have to be faced. It would be necessary immediately after the war to purchase four new cars at a cost of over £3,000.

**Liverpool Corporation Tramways.**—The Liverpool Tramways, Electric Power, and Lighting Committee, held its concluding meeting of the municipal year on Wednesday, when a statement was made by Alderman E. Russell Taylor (chairman) showing the remarkable expansion of business during the past nine months. Confronted, he said, with many obstacles, restricted by shortage of materials and deprived of a large percentage of employees who had joined H.M. Forces, the management had had to overcome difficulties hitherto unknown in municipal tramway life. The rolling stock, overhead equipment, track and service had been maintained in a manner which reflected credit upon those responsible. The traffic returns for the past nine months had exceeded all previous records as regarded total receipts, number of passengers carried, and car mile earnings. The receipts for 1918 were £705,816, compared with 1917, £603,319, an increase of £102,497; the passengers carried numbered 146,006,029, compared with 127,419,194, an increase of 18,586,835; the mileage was 9,176,861, compared with 9,414,628, a decrease of 237,767; while the earnings per mile were 1s. 6·46d., compared with 1s. 3·43d., an increase of 3·03d.

**Reading Corporation Tramways.**—The report for the year ended March 31st, 1918, shows that the revenue has considerably expanded, there being an increase in the total income of £11,205. The working expenses, however, increased by over £9,000, but the net profit at £8,400 was £2,700 higher. Of this sum, £4,400 has been placed to reserve and renewals account, and £400 was contributed to the borough fund. A comparison of the results for the last four years is appended.

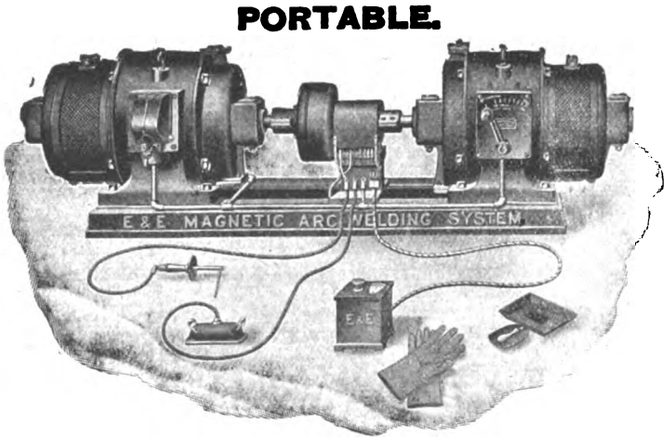
# ELECTRIC ARC WELDING
## MAGNETIC SYSTEM
### PORTABLE.



No Oxygen.
No Acetylene.
No Switchboards.
No Wasted Current.
No Failures.

As supplied to H.M. Dockyards, Tramways, Railways, Munition Factories, Etc., Etc., Etc.

NO WASTEFUL LINE RESISTANCE NECESSARY WITH THIS SYSTEM.
THE ONLY EFFICIENT SYSTEM OF ELECTRIC WELDING.

Write for descriptive booklet and full particulars.

THE EQUIPMENT AND ENGINEERING CO.

Telephone: City 1088 (2 lines).
2 and 3, Norfolk Street, Strand, LONDON, W.C.2.
Telegrams: "Kharparts, Estrand, London."

# TRAMWAY TRACK CONSTRUCTION AND MAINTENANCE.

By R. BICKERSTAFFE HOLT,

Highways and Permanent Way Engineer, City of Leeds.

## CONTENTS:

FOREWORD.
"What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water-gravel—Sand—Clinker-sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and Padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS.
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in setts—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings—Renewable plates—Switches—Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

## WEEKLY LIST OF TENDERS INVITED.

### VICTORIAN STATE RAILWAYS.

The Agent-General for Victoria, Australia, invites tenders for the supply and delivery of the following:—

18 Steel Bogie Tyres, to Contract No. 24,401.

1,000 Steel Car and Wagon Tyres, to Contract No. 29,969.

Specification, conditions of contract, and forms of tender may be obtained by bona-fide tenderers at the offices of the Consulting Engineers, JOHN COATES & CO., LTD., 115, Victoria Street, London, S.W.1.

Tenders, accompanied by the preliminary deposit named in Conditions of Tendering, must be delivered to the Agent-General for Victoria, Melbourne Place, Strand, W.C.2, not later than 12 noon on Wednesday, October 30th, 1918, marked "Tender for Tyres."

The Government of Victoria does not bind itself to accept the lowest or any tender.

PETER MCBRIDE,
Agent-General for Victoria.

## POSITIONS VACANT.

### BOROUGH OF ST. HELENS.

**Chief Electrical Engineer.**

Applications are invited for the post of Chief Electrical Engineer at a commencing salary of £650.

Applications, with full particulars as to age and qualifications, to be sent to Town Clerk, St. Helens, not later than Friday, November 8.

TOWN CLERK,
St. Helens.

### ROYAL BURGH OF STIRLING.

**Electrical Engineer.**

The Town Council of Stirling invite applications for the post of Electrical Engineer and Manager of the Electricity Department. Salary £300 per annum.

Applications, stating qualifications, to be lodged by November 4.

DAVID B. MORRIS,
Town Clerk.

Stirling,
October 22, 1918.

**Switchboard Attendant.**

Switchboard Attendant wanted, Lighting and Tramway Station. Possible advancement to shift engineer when proficient. Wages £3 7s. 6d. weekly.—Apply, WESTON-SUPER-MARE AND DISTRICT ELECTRIC SUPPLY CO., LTD., Locking Road, Weston-super-Mare.

## FOR SALE.

Brush Standard Single Tram Truck, fitted with Brush Equipment D.D., two controllers and two 800B (25 h.p. each) motors. Length of wheelbase 6 ft., gauge 4ft. 8½ ins. Condition as new. Price £300.—Apply GENERAL MANAGER, Gateshead & District Tramways Company, Tramway Depot, Gateshead.

### COUNTY BOROUGH OF HUDDERSFIELD.

**Appointment of Tramways Manager and Engineer.**

The Huddersfield Corporation invite applications for the post of General Manager and Engineer of their electric tramways undertaking.

The gentleman appointed must be a trained Engineer, having theoretical knowledge and practical experience of the duties of the position. Salary £600 per annum.

Particulars of the duties may be obtained on application to the Town Clerk.

Applications, in candidate's own handwriting, endorsed "Tramways Manager," with copies of three recent testimonials, must reach the undersigned not later than the 4th November, 1918.

Canvassing will be a disqualification.

J. HENRY FIELD, Town Clerk.

Town Hall, Huddersfield, 16th October, 1918.

## MANUFACTURING RIGHTS OF PATENTED SPECIALITIES.

Engineering firm with up-to-date plant and special facilities for turning out repetition work, are prepared to consider the manufacturing rights of patented specialities for sale amongst tramway and electrical undertakings. BOX No. 58, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## THE ADVERTISING OF THE LONDON COUNTY COUNCIL'S TRAMWAY SERVICE.

A FEW weeks ago we expressed the opinion that the uses of advertisement are in many respects not so well understood over here as they are in America. An incident which happened at the meeting of the London County Council last week seems to lend some support to that view. Several questions were put to the Chairman of the Highways Committee (Mr. G. H. Hume) the general effect of which was to suggest that the advertising of the Council's tramway services was largely a waste of money at the present time on account of the great increase in the passenger traffic on the cars. One of the queries was: "What is the object of advertising for still further passengers?" This appears to us to indicate much too narrow a conception of the reason for advertising the Council's tramway service. It is not a matter of merely advertising for passengers. If it were, we should still maintain that where a commodity is in demand up to the full extent of supply it is nevertheless advisable to continue to keep it prominently before the public notice. It is a risky thing for many a business enterprise to act upon the supposition that advertising can safely be dropped during a period of even exceptional prosperity. This is, perhaps, rather a departure from the subject, seeing that a passenger transport service is not on the same footing as many advertised commodities. It is always in evidence and there is always a certain demand for it. The point we wish to dwell upon is that the London County Council tramway system is one of several enterprises carrying on, whether under municipal or company direction, a great service for the public in the Metropolis, and that, apart altogether from the object, of course, quite a proper one, of attracting passengers, the public ought to be fully informed as to the facilities placed at their disposal. Excellent advertisements have been issued for some years past in connection with the associated electric railways, electric tramways and motor omnibus undertakings in the London area. The London County Council has also done well in this regard. We do not think it has erred at all on the side of excessive expenditure. In our opinion a policy of judicious advertising, which does not involve any unreasonable outlay of money, is in the interests alike of the Council's tramway system and of the people of London and the surrounding districts, and of the numerous visitors who are constantly staying in the Metropolis. We hope that no criticism, however well intentioned, will deter the Council from giving sufficient publicity to the service offered by its tramways.

## PRESENTATION TO MR. C. J. SPENCER.

Mr. C. J. Spencer, the retiring manager of the Bradford Corporation Tramways, and the newly appointed manager of the Metropolitan Electric and the London United Tramways, has received a farewell presentation from the members of the Bradford Tramways Committee. The presentation was made at a gathering at the Town Hall on Tuesday evening, when there were several speeches expressing warm appreciation for Mr. Spencer and his services as tramways manager for Bradford.

Alderman E. Priestley (chairman of the Tramways Committee), who presided, said that Mr. Spencer was taking a very responsible position in London, and he (Alderman Priestley) believed that there were even higher positions in store for him. It was under the chairmanship of Sir James Hill that the foundation of the Bradford Corporation tramways undertaking was laid, and he was ably assisted by Mr. Spencer.

Sir James Hill, Bart., M.P., said he had always felt that there was no tramways manager in the country equal to Mr. Spencer, although he did not know his successor. Mr. Spencer's departure was Bradford's loss, but he would leave with the best wishes of everybody in the city.

The Lord Mayor (Mr. H. H. Tetley) expressed the opinion that the choice of Mr. Spencer as tramways manager for Bradford had been amply justified by results.

Other speakers followed, including Councillor I. F. Akeroyd (vice-chairman of the Tramways Committee) and Mr. R. H. Wilkinson, the newly appointed tramways manager, who said that the tramway world looked upon Mr. Spencer as one of its leading lights.

Subsequently the presentation gift, a silver flower vase, was handed to the recipient by Alderman Priestley and duly acknowledged by Mr. Spencer, who, in reviewing the history of the Bradford undertaking, dated the beginning of its success from the time of the introduction of the covered top-decks, when the receipts in winter were almost equal to those of the summer months. He thought the public did not quite understand the magnitude of the undertaking. He added that in their new manager (Mr. Wilkinson) Bradford had one of the pioneers of goods traffic in this country. At present the lines were only occupied one-third of the time, and there was the opening for a great deal of goods carrying, which would be to the general benefit. A matter which was of the essence of success was the speed of the service and the ability to transport passengers to the outskirts in ten minutes or a quarter of an hour.

## REDUCTION OF SERVICES.

Paisley District Tramway Company's Sunday service now commences after mid-day.

Local miners having represented the inconvenience they would experience if the cars ceased running at 10 p.m. instead of 11, the Doncaster Tramways Committee have decided that no change be made at present.

At a meeting of the Swansea Tramways Committee Mr. D. James (general manager of the Swansea Improvements and Tramways Company) explained that it was impossible to keep the same number of cars running as in pre-war times.

At Leicester, the Tramways Committee propose that the service during the winter months shall cease at 10.15 p.m. instead of 10.30 p.m. A correspondent of the *Leicester Mail* suggests curtailment of the service in the early morning by about an hour, so as to make 6.30 the starting time.

Glasgow Corporation Tramways Department is reducing the car mileage in order to economise fuel. Last week the reduction amounted to 30,000 miles as compared with the corresponding week a year ago, when the car mileage was 508,519. In spite of the reduced service the receipts showed an increase of £1,333.

At Dublin it has been arranged that cars which formerly left the centre of the city for the suburbs at half-past eleven o'clock at night will in future start at eleven o'clock. It is stated that the theatres, music halls, and cinema houses have arranged their programmes to harmonise with the alteration of the tramway service.

**Passenger Barriers and Gangways.**—Portsmouth Tramways Committee has approved a scheme, submitted by Mr. W. R. Spaven (general manager), under which barriers and gangways are to be placed at certain centres, with a view to the better regulation of passengers' access to the cars.

## COAL SAVING BY DUNDEE TRAMWAYS.

The Dundee Corporation and Dundee, Broughty Ferry and District Tramways Company have come to an arrangement by which the Corporation is to supply the Company with electricity. The scheme, as explained by the Lord Provost (Sir William Don), will effect a united saving of 1,400 or 1,500 tons of coal per annum, which would be equal to about £1,600 or £1,800 in value. It was agreed that the Company should pay 1¼d. per unit for their electricity. At present the Corporation is paying 1·6d. per unit, and for the quantity of current which the Company requires the Corporation will get £900 per annum more than would otherwise have been received. It is provided that the Company close down their present power station at Monifieth; that the Corporation make the necessary machinery connections; that the agreement endure for a year; and that it be terminable by three months' notice from either side. Mr. G. Johnston (convener of the Tramways Committee) said he regarded the arrangement as a good bargain for both sides, and they were very much indebted to the Lord Provost for the action he had taken in regard to these negotiations.

## WALSALL CORPORATION AND MOTOR OMNIBUSES.

In the High Court on Monday, Justices Darling, Avory, and Salter granted the application of the Corporation of Walsall for the discharge of the rule nisi granted on June 4 calling upon the Corporation to show cause why a writ of mandamus should not issue to them to determine the application of the Birmingham and Midland Motor Omnibus Company (Limited) for licenses to run omnibuses within the Corporation's jurisdiction.

Mr. Barrington Ward appeared for the Corporation, and Mr. Tomlin, K.C., for the Company.

The Corporation supported their refusal to grant licenses mainly on the ground of congestion of traffic on the Birmingham Road, and the need for saving petrol and labour at the present time.

For the Company, it was contended that the Corporation had been influenced by the fact that the omnibuses competed with their tramways, and they were not entitled to take cognisance of that circumstance. In support of this contention it was alleged that during the time the omnibuses were run with the Corporation's permission the latter were paid £300 a year as compensation for loss of traffic to their tramways, and that the Corporation had expressed a willingness to enter into an arrangement if the Company would charge double fares and would not oppose a Corporation's bill. It was urged that, as to saving petrol, permission to use petrol for this purpose had been given by the Controller of Petrol Supplies, who was the proper authority to decide, while the assertion that the omnibuses damaged the roads was disposed of by the circumstance that the Corporation themselves ran similar vehicles on another route.

Mr. Justice Darling, in saying the rule should be discharged, stated that the Corporation were entitled to consider whether it was extravagant or injurious to run these omnibuses, and whether there should be only tramway cars running along the streets. His difficulty was to see what consideration they could act upon except such a consideration as that there were tramway cars already running along the streets, and that it was necessary in these times to economise petrol and labour.

Mr. Justice Avory said he was of the same opinion. He thought that there was a case for suspicion against the Corporation that they had considered things they were not entitled to consider, but it was nothing more than suspicion.

Mr. Justice Salter concurred.

The rule was accordingly discharged.

## MISCELLANEOUS NEWS AND NOTES.

**Dublin Wages Award.**—The arbitration on the claim of the employees of the Dublin United Tramways Company for increased wages, has resulted in an award of an increase of 5s. per week from September 1. This increase brings the men's wages to 23s. per week over pre-war rates.

**Free Passes for the Blind.**—The Belfast Tramways Committee, following an expression of opinion on the part of the City Council, is considering the conditions under which free passes may be issued to blind persons.

**Coal Economy at Birmingham.**—The efforts of the Birmingham Tramways Committee to economise with coal, include an appeal for the co-operation of the motor men, in view of the fact that an efficient driver can run his car on a much lower consumption of electric power by careful handling than otherwise.

**Riding on the Steps.**—When two cars collided at the join of a loop on a tramway line near Wrexham, two men who had been riding on the steps near the driver of one of the cars were pinned between the two cars. One man had a finger severed and other fingers of the same hand fractured; the other had a foot badly crushed.

**Sheffield Motor Omnibus Service.**—Stockbridge Urban Council have suggested that on busy days Deepcar be made the terminus of certain of the Sheffield Corporation motor omnibuses running on the Stockbridge route and thus afford Deepcar passengers a better opportunity of making use of the omnibuses at such times. Sheffield Corporation have agreed to accede to the request subject to the discretion of the general manager.

**Insurance of Tramway Property.**—In view of the advance in the cost of labour and material, and the difficulty of replacing buildings, machinery, etc., under present conditions, the insurance against damage by fire and hostile air-craft, of buildings, plant, stores, etc., in the tramways department of the London County Council has been increased by 50 per cent., at an additional cost of £2,200.

**Parcels on Tramways.**—Glasgow Tramways Committee have considered a recent suggestion of the Road Board that, in order to relieve traffic on railways and on petrol-driven vehicles, parcels may be conveyed on tramway cars. The Committee have recommended by a majority that an experiment be made in carrying parcels by special cars on one of the routes. The recommendation will come before the Town Council.

**War Wages for Learners of Driving.**—In order to attract learners for car driving on the London County Council Tramways, a war wage has been paid equal to that paid to motormen. Under the award of July 9 of the Committee on Production, an advance of 5s. a week war wages has been paid to motormen and the Council approved the action of the Highways Committee in making a similar advance to learners.

**Leeds Tramway Projects.**—The Leeds Tramways Committee have been considering projects for facilitating higher speeds and for a still better service throughout the entire system after the war. They have also had before them the question of transit to and from the districts in regard to which housing and town planning schemes are proposed, and plans were advanced for the extensions which are in contemplation.

**Breaking Lamps in a Car.**—On a charge, heard at Greenwich Police Court, of being drunk and disorderly and wilfully breaking two electric lamps in a tramway car, value 5s., it was stated that the accused got on a seat and began singing, waving his hands about, and so broke the lamps. Accused admitted being drunk, but said the lamps were broken by accident. A fine of 40s. and costs was imposed, with the addition of 5s. damages.

**Bills on Car Windows.**—A correspondent of the Liverpool *Evening Express* protests against what he describes as "the thoughtless practice (particularly during these short days of daylight) of posting bills, notices, etc., on the windows of cars on a level with the heads of the passengers seated inside, which completely obstructs the view of those who wish to try and locate their whereabouts at night by looking through the windows."

**Damages for Personal Injury.**—Damages of £150 on a claim of £300 were awarded in the Edinburgh Court of Session against the Corporation of Glasgow in respect of personal injuries received through a tramway car being suddenly started while the claimant was stepping onto it at a stopping place. For the defence it was contended that the claimant got on the step and afterwards tried to alight from the car while it was in motion.

**Glasgow Rolling Stock.**—Glasgow Corporation Tramways now have 824 top-covered cars, 30 single-deck bogie cars, and one training car. Seven converted horse cars are still in use, making up the total to 862 cars. Vestibules have been fitted to 386 cars. The average number of cars in use daily (14-hour day) is 685. The total cost of inspection and repair of cars at the depots and car works during the last financial year was £69,731, and a further sum of £27,908 was charged against revenue to meet depreciation. The Corporation owns 98·25 miles of route, and has running powers over seven furlongs of line in Paisley. Practically all of the route is double track.

**Killed by a Collision.**—As a result of a collision between two tramway cars, at Coventry, a passenger was thrown against a broken window and so seriously injured in the throat that death took place soon afterwards. At the inquest the jury found that the driver of one of the cars was to blame in leaving undone what he ought to have done, with the result that the death was caused; and that the driver of the other car was also to blame for leaving his points without receiving his signal. The Coroner said the verdict amounted to one of manslaughter against the first mentioned driver whom he committed for trial at the Assizes. He told the other driver he had broken the tramway rules.

**Surplus War Motors.**—The disposal after the war of the vast number of motor vehicles in military service is now under the consideration of one of the Reconstruction Committees, and an early decision of the problem is anticipated. A number of difficult questions have first to be settled. Machines are in all stages of repair or disrepair, and it has to be determined whether the vehicles are to be sold in their present condition or made good before sale. If the latter, it must be decided whether the original manufacturers or the State, are to carry out the repairs. Another important question is whether the machines will be sold for private use or retained by the State for road transport purposes to supplement railway services.

**Edinburgh Tramway Fares.**—Edinburgh Tramway's Committee are actively engaged in preparation for the taking over of the working of the tramways when the lease of the Edinburgh and District Tramways Company expires on June 30 next. The subject of fares was discussed at a meeting of the Committee on Wednesday, and the manager (Mr. R. S. Pilcher) was instructed to report on the whole question at an early date, taking into consideration a motion by Councillor M'Laren suggesting the adoption of a universal fare for all continuous journeys of any distance with transfers in certain cases. On the motion of Convener Harrison, the Committee also instructed the manager to prepare detailed arrangements for the taking over of the tramways and the establishment of a tramways department with the necessary staff.

Digitized by Google

**Combined Tire Purchase.**—At a meeting of Hull Tramways Committee, the city engineer reported that the engineer of Doncaster Corporation Tramways had approached him with reference to jointly ordering a supply of tires—the Hull and Doncaster Tramways being the only two using a centre groove rail. While the tires would not be required in the immediate future, the city engineer thought it would be advisable to place an order for a further 200 tires. He had obtained a quotation of £47 10s. per ton which compared with £45 5s. quoted in 1917. The Committee decided to adopt the suggestion of the city engineer.

**Obstacles to Queues.**—At Liverpool, Alderman E. Russell Taylor (chairman of the Tramways Committee) has stated that the question of instituting a number of queues at the Pierhead and other principal city stopping places has not been lost sight of. But until the Pierhead terminus is reconstructed such a system is impossible. Until there are further facilities for carrying the people from the city in addition to those existing, queues at the town stations are impracticable, as they would not only interfere with but cause serious obstruction to the other traffic. At Nottingham, Councillor R. H. Swain (chairman of the Tramways Committee) said it was difficult to carry out the queue system owing to the distance of the tramway lines from the kerb.

**Coal Saving Bonus.**—The London County Council recently approved a scheme for the distribution of a coal saving bonus to drivers and conductors on their tramways. During the past quarter encouraging results have been obtained. Car miles run between June 27 and September 25 were 12,110,824. Based on 1917-18 figures of 2.270 direct current units per car mile, the consumption of units would have been 27,491,570. The actual units consumed from June 27 to September 25 were 26,142,671. This showed a saving in units of 1,348,899. The average price paid for fuel was 36s. 4½d. per ton, and the cost of fuel per direct current unit was equal to ·5744d. The total saving, therefore, was 1,348,899 units at ·5744d., or a total of £3,288 7s. 4d., half of which sum has been distributed in accordance with the scheme. The attention of drivers and conductors has been called to the fact that the saving in coal for the first quarter being slightly under 5 per cent., a much greater saving and consequently greater bonus can be obtained by further perseverance and care. This example of the L.C.C., says the *Morning Post*, might with advantage be followed by all large tramway systems throughout the country.

## PERSONAL.

**Councillor J. Timpson** (chairman of the Portsmouth Tramways Committee) is Mayor-elect of Portsmouth.

**Mr. A. E. Collins** has been appointed as the representative of the Institution of Municipal and County Engineers on the Electric Vehicle Committee.

**Mr. F. Newey,** acting electrical engineer to the Swindon Corporation Tramways, is to receive salary at the rate of £275 a year, from the date of the retirement of Mr. A. Dimmack, the late electrical manager.

**Capt. F. G. Bristow,** general secretary of the Motor Transport Employers' Federation, has been nominated by the Federation to serve on the London Advisory Committee established in connection with the national system of employment exchanges. The nomination has been made on the invitation of the Ministry of Labour.

**Second Lieut. E. C. Bracey,** of the South Staffordshire Regiment, was killed in action at the age of 33. He had served in the Army before the war, and was recalled to the Colours in August, 1914, being at that time a conductor on the Dudley, Stourbridge and District Tramways. He had left the Army as a corporal, but was promoted to the rank of sergeant on rejoining. He had over three years' service in France, and received the Mons Ribbon. After a period in the O.T.C., he was gazetted 2nd Lieut. in January, 1918, and left for France in July. He leaves a young widow to mourn his loss.

## MR. E. CURWEN.

We record with deep regret the death of Mr. Maskell E. Curwen, European manager of The J. G. Brill Company, which occurred at Philadelphia on October 1, from pneumonia, after a short illness. Mr. Curwen joined the staff of The J. G. Brill Company more than twenty-five years ago, and has been European manager for more than twenty years, with offices in London and Paris. Educated at the Episcopal Academy, Philadelphia, his first years in the car and truck industry gained him an intimacy with the details of manufacture and a practical knowledge of the tramway and railway field, especially of British and Continental practice, which, with his natural capacity for adapting himself to conditions as he found them, made him of value to the foreign customers of his company. His assistance in the early days of electric traction in this country will be specially remembered by many of our readers.

He was widely known and esteemed for his upright character, lovable nature and innate refinement, and his loss is deeply felt by a wide circle of friends on both sides of the Atlantic and by his business associates.

Thirteen years ago Mr. Curwen married the daughter of Charles H. Clark, of New York; his brothers are Samuel M. Curwen, George F. Curwen, and John Curwen. Mr. Curwen was a member of the American Society in London and of the American Club in Paris.

## FINANCIAL REPORTS AND MEETINGS.

**Barsi Light Railway Co., Ltd.**—A dividend of 6 per cent. has been declared. There has been placed to reserve £1,035 and £11,202 has been carried forward.

**Reading Corporation Tramways.**—In our issue of last week the amount contributed to the borough fund for the year ended March, 31, 1918, was incorrectly given as £400. This should have been £4,000, as stated in the analysis.

**Salford Corporation Tramways.**—For the year ended March 31 during which period over sixty-five million passengers were carried by the cars, an increase of 6,260,000 compared with the preceding year, the total receipts amounted to £348,008, a gross increase of £67,842.

**Launceston (Tasmania) Council Tramways.**—The report for the year 1916-17 showed revenue £23,138 and working expenses £13,751. The previous year's figures were £21,372 and £13,315. There was a surplus of £631 as against a previous deficit of £45.

**Durban Corporation Tramways.**—The report for the year ended July 31, 1917, states that the revenue has been £159,254 and the working expenses £99,558. After deducting interest on capital and contributions to sinking and renewals fund there is a net profit of £21,239, and £20,400 has been paid to the borough fund in aid of rates.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Oct. 23, amounted to £63,493, an increase of £9,513 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Oct. 23 (twenty-nine and a half weeks), the total receipts were £1,927,915, an increase of £280,945 on the corresponding period of 1917.

**South Shields Corporation Motor Omnibuses.**—The annual report of the South Shields Corporation tramways manager (Mr. J. C. Whiteley) states that the omnibus service has been curtailed somewhat by a trouble that has occurred with the batteries, but that, although the financial result is not so good as in the case of tramway cars, the convenience to people of the district in which they run, and the fact that they are acting as feeders to the whole system, warrant the continuance of the service for the time being.

**Leeds Corporation Tramways.**—A statement of the working during the half-year ended September 30, has been submitted to the Tramways Committee. The total receipts for the half-year were £357,832, or an increase of £60,965 compared with the corresponding half of last year—or more than 20 per cent. It must not, says the *Yorkshire Post*, be assumed that this big sum represents additional net profit, because of the larger sums which have had to go in payment of wages and towards the extra cost of materials The result is, however, very satisfactory, considering that no fewer than 2,709,202 fewer passengers were carried, and that the cars have run 144,287 miles less, while the receipts per car mile have advanced by nearly 25 per cent. Comparative figures for the half years ended September 30, 1918 and September 30, 1917, are as follows: Receipts, £357,832, £296,867; miles run 4,729,542, 4,873,829; passengers carried, 59,014,784, 61,723,986; receipts per mile 18·158d., 14·518d.; average fare paid per passenger, 1.434d. 1·133d.; population served 542,000, 542,000; number of times population carried, 108.88, 113.8; average number of cars, 219, 238.

## CONTRACTS AND ORDERS.

**Barnes Urban Council** have provisionally accepted a tender for a 500 k.v.a. rotary converter with transformers and switchgear for £3,685 from the British Thomson-Houston Co., Ltd.

**Bolton Town Council** have accepted a tender from Hadfields, Ltd., for the supply of points and crossings for the tramways.

**Southend-on-Sea** Town Council have accepted a tender for one mile 600 yards of trolley wire for the tramways at 1s. 5d¼. per lb. from the British Insulated and Helsby Cables, Ltd.

**DICK, KERR & Co.,**
**Limited,**
**ABCHURCH YARD, CANNON STREET,**
**LONDON, E.C.,**
**ENGINEERS & CONTRACTORS.**

**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad.**

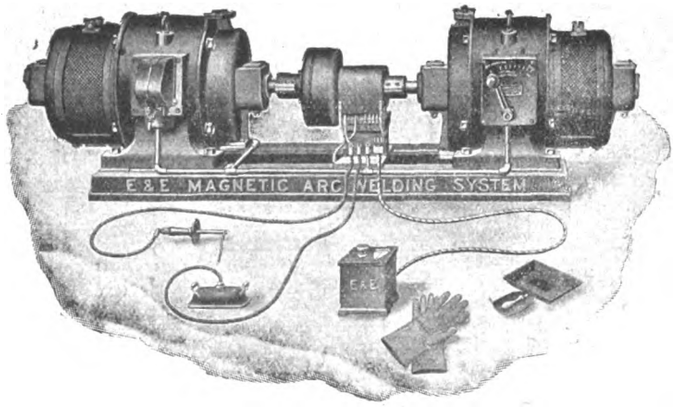
# ELECTRIC ARC WELDING
## MAGNETIC SYSTEM
### PORTABLE.

No Oxygen.
No Acetylene.
No Switchboards.
No Wasted Current.
No Failures.



As supplied to
H.M. Dockyards,
Tramways, Railways,
Munition Factories,
Etc., Etc., Etc.

NO WASTEFUL LINE RESISTANCE NECESSARY WITH THIS SYSTEM.
THE ONLY EFFICIENT SYSTEM OF ELECTRIC WELDING.

Write for descriptive booklet and full particulars.

## TENDERS INVITED.

### BRADFORD CORPORATION TRAMWAYS.

#### GENERAL STORES.

The Tramways Committee of the Bradford Corporation are prepared to receive Tenders for the supply and delivery of the undermentioned Articles, in bulk or as required, during the year ending 31st December, 1919:-

Schedule No.

1. Bolts and Nuts, Screws, Nails, Washers, Hack Saw Blades, Pipes and Fittings and Sundry Ironmongery.
2. Files.
3. Lamp Fittings.
4. Insulating Material, India Tapes and Sand Bags.
5. Iron, Malleable Iron and Steel Castings.
6. Phosphor Bronze, Gun-Metal, and Brass Castings, Controller Contacts and Drivers' Alarm Bells.
7. Insulated Bolts and Strains.
8. Iron and Steel Bars and Steel Sheets.
9. Oils and Grease.
10. Paints and Shellac.
11. Spirits, Acids, Drysaltery and Disinfecting Fluid.
12. Paint and Cleaning Brushes.
13. Waste, Sponges, Washleathers, Soap and Cleaning Cloths.
14. Transfers.
15. Glass.
16. Steel Pinions.
17. India Rubber, Vulcanite Fibre and Insulating Paper.
18. Timber.

Schedule and Conditions of Tender may be had on application to Mr. R. H. Wilkinson, Tramways General Manager, 7, Hall Ings, Bradford, where samples can be inspected.

The Contracts will be let subject to the Fair Contracts Clauses of the Corporation.

Tenders, endorsed "Tender for Stores," to be sent to me not later than Saturday, 23rd November, 1918.

The lowest or any tender will not necessarily be accepted.

Town Hall, Bradford, 21st October, 1918.

FREDERICK STEVENS, Town Clerk.

### COUNTY BOROUGH OF WARRINGTON.

#### Electricity Department.

The Electricity and Tramways Committee invite tenders for Underfeed Mechanical Stokers.

Specification and Form of Tender may be obtained from the undersigned on payment of one guinea, which will be returned on receipt of a bona fide tender.

Five shillings will be charged for extra copies of the specification.

Tenders, addressed to the "Chairman of the Electricity and Tramways Committee, Town Hall, Warrington," must be sealed with wax and endorsed "Tender for Underfeed Mechanical Stokers," and delivered not later than noon on Tuesday, November 19, 1918.

The lowest or any tender will not necessarily be accepted.

F. V. L. MATHIAS, Borough Electrical and Tramways Engineer.

Howley, Warrington.

## POSITIONS VACANT.

### BOROUGH OF ST. HELENS.

#### Chief Electrical Engineer.

Applications are invited for the post of Chief Electrical Engineer at a commencing salary of £650.

Applications, with full particulars as to age and qualifications, to be sent to Town Clerk, St. Helens, not later than Friday, November 8.

TOWN CLERK, St. Helens.

### ROYAL BURGH OF STIRLING.

#### Electrical Engineer.

The Town Council of Stirling invite applications for the post of Electrical Engineer and Manager of the Electricity Department. Salary £300 per annum.

Applications, stating qualifications, to be lodged by November 4.

DAVID B. MORRIS, Town Clerk.

Stirling, October 22, 1918.

## DANGER OF SHORT COAL SUPPLY.

IT is somewhat surprising to learn that the authorities are allowing only very small stocks of coal to be held even by some of the most important undertakings. In the case of one large city tramway there was on hand recently not more than two days' supply, and there was imminent danger that both the tramway and electric light and power services of a great industrial area might be entirely suspended. A slight delay in transport might have left the undertaking entirely without coal. As a result not only would the general public have been seriously inconvenienced, but, which is of more importance, the munition work over a large area would have practically stopped. It would seem as though the authorities responsible for this condition of affairs were not acquainted with the vital importance of electric power and transport to a great industrial community, and were inclined to treat it as a matter of little more importance than the supply to an ordinary manufacturer. Although the anxiety experienced by those responsible for the undertaking in question was laid before the authorities, no relief from what is an intolerable state of affairs could be obtained. The coal is available, and, with suitable arrangements, there seems to be no reason why a supply sufficient to guard against any sudden stoppage cannot be provided for tramway undertakings which are making every effort to reduce their consumption, and do not require to have the necessity for economy enforced upon them by inadequate stocks. The immense services which tramways have performed in the transportation of munition workers ought by this time to be well enough understood by the authorities, and in large munition centres every effort should be made to assist managers in maintaining a sufficient supply of coal for the necessary services. We believe this aspect of the matter is being strongly represented to the officials responsible, and it may be hoped that arrangements will shortly be made so that any danger of stoppage may be avoided. Tramway committees and companies are working under such great difficulties in these days that nothing that can be done by Government departments to aid in ensuring the mainteance of services ought to be neglected.

## LONDON UNITED TRAMWAYS' BILL.

The London United Tramways are seeking powers to enable the undertaking to be carried on without loss. A Bill promoted with this view was before a Select Committee of the House of Lords this week. The system includes fifty miles of line in western and south-western districts of the Metropolitan area.

For the Company, Mr. Honoratus Lloyd, K.C., stated that they had no money to pay dividends on ordinary or preference shares, no money to pay debenture interest, a receiver in possession, and no money to carry out renewals. It was proposed to jettison £1,500,000 of capital, and to provide £400,000 for reconstruction, besides providing a reserve for renewals. The Company were asking for a definite tenure of occupancy (postponing the dates of the earliest acquisition by local authorities to 1950), for the abolition of certain abnormal fares (one being 3 1-3 miles for a penny at Acton and Ealing), and for powers to revise fares and to carry out financial organisation and reconstruction. No new work would be carried out until after the war. Of the twenty-four local authorities through whose districts the tramways passed only three, said counsel, were opposing—Acton, Hammersmith, and Ealing, where the fares were abnormally low and quite unprofitable.

Mr. J. Devonshire, managing director of the Company, said the future financial stability of their scheme depended on their being authorised to charge 1d. per mile for ordinary passengers. The Company must have an income if it was to carry on and he saw no alternative to raising the fares. They were only asking for what all other tramways were getting, and what was the model standard charge.

Mr. A. L. Barber (secretary of the Company) said the additional fares would provide a net revenue of about £100,000.

Mr. Wedderburn, K.C., and Mr. Talbot, K.C., the former for the Middlesex County Council and the latter for the Surrey County Council, supported the Bill as a fair and equitable measure, and Mr. Freeman, K.C., and Mr. Page, appearing for Acton and Hammersmith respectively, opposed the proposed increase of fares.

The Bill was allowed to proceed.

## L.C.C. TRAMWAY MATTERS.

At the meeting of the London County Council on Tuesday, the Highways Committee submitted reports dealing with the following matters :—

PURCHASE OF STORES, EQUIPMENT, ETC.—The Council agreed to the recommendation of the Highways Committee that the practice of inviting tenders continue in abeyance until March 31, 1919; that the Committee be authorised to obtain, otherwise than by advertisement, and to accept tenders or quotations for tramway stores and equipment to the value, in respect of any purchase, of £250 : and that the Committee be authorised to delegate to the general manager of the tramways department authority to accept tenders or quotations for tramway stores and equipment to the value in respect of any purchase of £100 The same arrangements have been in operation for about six months, and the Committee reported that they have proved satisfactory, and that there does not appear to be any prospect at present of a diminution of the difficulties in obtaining supplies. The arrangements were made in consequence of a letter from the Tramways (Board of Trade) Committee, urging that their regulations for inviting tenders should be temporarily discontinued to enable orders for materials to be placed where delivery could best be made.

THROUGH RUNNING WITH WEST HAM.—Arrangements have been concluded with the West Ham Corporation as regards overlapping workmen's fares, subject to an undertaking that the fares may be revised or withdrawn at one month's notice by any of the parties concerned, as follows :—The basis for 2d. return fares to be that already in operation on the Council's system, viz., four sections as against three for ordinary passengers ; as regards 3d. return fares the existing fares not to be extended beyond the county boundary, but overlapping stages of approximately the same length as those in London to be introduced ; the 4d. stages to be a combination of two 2d. stages and a maximum workmen's fare of 5d. return to be arranged.

CLAIMS.—In respect of accidents in connection with the working of the tramways, the Highways Committee reported that they had settled 937 claims against the Council, amounting in all to about £6,744 6s. 10d. In twelve other cases a verdict was given against the Council, involving the payment of sums amounting to £957 7s. 3d. Six actions resulted in the Council's favour and two were withdrawn. In satisfaction of claims made by the Council in respect of damage to tramway property settlements had been approved involving an amount of £624 15s. 2d.

ALTERATIONS TO COAL SHOOTS.—Arrangements have been made with Messrs. Babcock and Wilcox, Ltd., for the supply, delivery and maintenance at £1,296 (after deduction of £136 for 15-in. diameter pipes, to be supplied by the Council ) of the material required for alterations to coal shoots for eight boilers in connection with the burning of coke at the power station, and for dismantling existing material and erecting new material on a time basis of nett flat cost plus 25 per cent. The Highways Committee have also approved of the subletting by the company to Messrs. Pierson and Company of the steel breeches shoots.

CARS LOANED TO BEXLEY COUNCIL.—The settlement at £439 19s. 7d. was approved of the payment to be made by the Bexley

Digitized by Google

Urban District Council in respect of five class E1 cars loaned to it in 1915, and six class B cars are to be loaned to it on similar terms.

COAL FOR GREENWICH POWER STATION.—About 24,800 tons of coal and 4,000 tons of coke have been purchased during the quarter ended September 30, for use at Greenwich power station, at a cost of about £58,300.

Mr. G. H. Hume, Chairman of the Highways Committee, in reply to a question by Mr. J. D. Gilbert, M.P., said that between 5 p.m. and 8 p.m., 331 cars and 70 trailers left the Westminster end of Victoria Embankment for termini in South London. The busiest hour was between 6 p.m. and 7 p.m., during which 114 cars and 24 trailers departed for points in South London.

In reply to a suggestion of Mr. Gilbert that the northern single deck cars should be reversed at the Embankment entrance to the subway in order to save delaying other services, Mr. Hume said that the single deck cars were reversed at the Westminster station on the Embankment in order to meet the requirements of the very large number of passengers travelling too and from that point. The up main line cars are practically unaffected by the single deck cars turning at Westminster, but the large numbers of passengers during the busy periods caused delay to cars proceeding towards South London. If the single deck cars were reversed at the entrance to the subway at Waterloo Bridge, the convenience which the service affords would be remarkably reduced.

## MISCELLANEOUS NEWS AND NOTES.

**Two Fines for Spitting** in tramway cars, amounting to 15s. in each case, were imposed at Lambeth Police Court, on summonses by the London County Council.

**Sheep Killed on a Tramway.**—Several sheep, part of a herd, which was being driven to a local butcher's, ran in front of a tramway car at Uxbridge, and five were killed.

**Parcel Service at Preston.**—The Tramways Committee, who recently resolved to discontinue the parcels delivery on the tramway cars, have now decided to proceed with the service.

**Moonlight Chart.**—We have received from Messrs. C. A. Vandervell and Company their convenient moonlight chart for November, which has been compiled by Mr. A. H. Midgley, the chief engineer,

**London Cars for Sheffield.**—With the approval of the Tramways (Board of Trade) Committee, arrangements have been sanctioned by the London County Council for the sale to Sheffield Corporation of ten cars at £550 each.

**Post War Priority.**—Dr. Addison recently stated in reply to a Parliamentary question that the Government has appointed a standing council upon post war priority to consider all questions in connection with priority and the allocation of materials and machinery where shortage is anticipated.

**The Minister of Labour** (Mr. G. H. Roberts, M.P.), speaking at the opening of a new employment exchange for the building trades in London last week, said that unless the relations between employer and employed were sweetened recovery and expansion of trade after the war would be impossible.

**Institution of Electrical Engineers.**—The opening meeting of the session will be held at the Institution of Civil Engineers, Great George Street, S.W., on Thursday, November 7, at 6 p.m., when Mr. L. B. Atkinson will deliver the Kelvin lecture on "The Dynamical Theory of the Electric Engine."

**Gratuities for Extra Work.**—Leeds Tramways Committee propose, subject to the approval of the City Council, to grant to the conductors a gratuity in recognition of the extra work thrown upon them at the inauguration of the new system of fares. The old stocks of tickets were being used up, and were, in consequence, sold for more than their face value. The issue of penny tickets for 1½d., and so on, complicated the work.

**The Collection of Fares on Entrance** on the Bradford tramway cars is the subject of a letter in the *Yorkshire Observer*. The writer suggests that considerable delay in the filling, and, consequently, to the starting of the cars, is caused, owing to upper-deck passengers requiring change. The remedy which he proposes is that a rule should be made that no change be given to intending upper-deck passengers, who, if they have not the exact fare ready, must go in the saloon.

**Seats for Drivers in Italy.**—The Italian Ministry of Industry has ordered that seats shall be provided for tramway conductors and drivers and that plans shall be submitted from tramway companies with a view to the equipment of cars being adapted to being driven whilst the driver is sitting. Experiments made by the management of the municipal tramways in Rome go to show that such an arrangement is practicable, and cars are now equipped with seats. It is pointed out that the seating of drivers would tend to decrease the number of accidents which arise owing to tiredness and consequent inattention on the part of drivers.

**L.C.C. Employees and War Comrades.**—The London County Council Tramways (Employees) Old Comrades' Association is raising a fund for the purpose of welcoming home employees returning from naval or military service. In furtherance of this object a concert was held at the Borough Hall, Deptford, recently, in connection with the New Cross depot. Mr. A. L. C. Fell (general manager of the L.C.C. tramways) presided, supported by the Mayors of Deptford, Greenwich, Woolwich, Lewisham, Camberwell, Southwark, and Bermondsey, Mr. C. W. Bowerman, M.P., Major J. T. Prestige, L.C.C., and Mr. J. K. Bruce (traffic manager.)

**The Kearney High-Speed Railway** is the title of a pamphlet reprinted from the Transactions of the Society of Engineers (Incorporated). It is of interest, as containing a report of a lecture on the subject indicated given by Mr. E. W. Chalmers Kearney at a meeting of the Society and of the discussion which ensued

**Bradford Women Employees Wages.**—By an award of the Committee on Production which has just been made the women employees of the Bradford Corporation Tramways Department are to be given an advance of 2s. per week. This is the result of the representation of the Bradford Corporation War Wages Committee to the Committee on Production for their interpretation of certain points in dispute. The interpretation is, says the *Yorkshire Observer*, that women are only entitled to 2s., plus the 3s. received last June, and has given much disappointment to the women. The award raises their pay to 18s. above pre-war rates, whereas they contend that they ought to receive at least 21s.

**Reckless Driving at Glasgow.**—Mr. James Dalrymple, general manager of Glasgow Corporation Tramways Department, has addressed a further notice to drivers in the Corporation service on the subject of reckless driving. The notice repeats the official warning given in April last. "I regret to say," Mr. Dalrymple states, "that the response to the appeal has not been satisfactory, and many cases of reckless driving are still taking place, notably on sections where the permanent way is in very bad order." The Chief Constable, it is added, has not yet ordered any prosecutions but complaints are so numerous, and in many cases so well founded, that he will be compelled to take action immediately

**The Channel Tunnel.**—Sir Arthur Fell, chairman of the House of Commons Tunnel Committee, proposes at an early day to submit the following motion:—"That in the opinion of this House the construction of the Channel tunnel should be undertaken at the earliest moment after peace, to cement the friendship of the Allies in Western Europe, to improve their means of communication, and to promote their mutual commerce; that a statement by the Government of this country that they will join with the French Government in supporting the proposal will give greater confidence to the Allies during the war and strengthen their position in the negotiations for peace, and that the time has arrived to make such a statement."

**Hooton Light Railway Order.**—The Board of Trade has confirmed the grant by the Light Railway Commissioners of an order for a light railway in Cheshire to be known as "the Hooton Light Railways Order." An estimated expenditure of £75,000 was proposed and the promoters asked for powers for passenger as well as merchandise traffic. Mr. Herbert Levenstein and Sir H. D. McGowan are the first directors of the company. Two lines are authorised. One will be about two furlongs, 6-5 chains in length, commencing in the parish of Little Sutton by a junction with the joint railway of the London and North Western and Great Western Companies (Hooton and Helsby branch), and terminating in the parish of Overpool by a junction with the joint railway. The other will be about one mile, two furlongs, nine chains, commencing in the parish of Little Sutton, and terminating in the parish of Netherpool. The gauge will be standard and the motive power will be steam or other motive power approved by the Board of Trade.

**Corporation's Claim Fails.**—The Bradford Corporation failed in an action at the Bradford County Court for the recovery of £48 15s. 10d., damages caused to a car by alleged negligence of the driver of a motor wagon and trailer. A counter claim for £3 16s. 6d. was allowed. It was stated by the driver of the car that he was driving at a speed of about nine or ten miles an hour when the accident happened. There were no street lamps lit at the time. He saw the trailer when he was about five or six yards away from it. He at once put on all his four emergency brakes, and the car pulled up at once after striking the trailer. The danger lamp on the trailer was not lit, and on feeling it he found it was cold. He denied that he was travelling at an excessive speed. For the defence evidence was given by several witnesses to the effect that the car was being driven at an exceptionally high speed. The judge came to the conclusion that the car was being driven too rapidly having regard to the conditions, and that the driver failed to put on the brakes with sufficient promptitude to prevent the collision.

**Uniform Fare Suggested.**—In connection with his suggestion of a uniform fare for the Edinburgh tramways, which is being considered by the Tramways Committee, Councillor M'Laren has issued a memorandum on the proposal to members of the Committee. He points out that in the United States an average fare in cities of 2½d. is charged for any distance with transfers. In cities like New York and Chicago a distance of 20 miles can be travelled for this sum. Several Canadian cities have also adopted the system with certain modifications. In Winnipeg tickets are sold—one for 2½d. and six for 1s. 0½d., available any time, others for restricted times at cheaper rates, the average fare being a little less than 2d. The balance-sheet of the Edinburgh District Tramways Company for 1913 showed a profit of £26,577, the average fare working out at 1·102d. An average of six tickets for 6½d. on the same basis of passengers carried would give a profit of £21,474, but as a single ticket would have been 1½d. the profit would have been much larger. In 1917 the profit was £35,219, and the average fare 1·269d. Under the system suggested the profit would have been £13,924, but then, again, as a single fare would have been 1½d., the gross profit would have been as large as that shown in the balance-sheet. At present the increased tramway charges caused by the war are largely paid by suburban residents. As regards the housing problem the adoption of the average fare would, Councillor M'Laren contends, effect a radical improvement.

Digitized by Google

**Claim against Glasgow Corporation.**—A claim in the Court of Session against the Corporation of Glasgow for £1,500 damages in respect of personal injuries sustained through being knocked down by a tramway car, was settled on the terms that the claimant should receive £750 and expenses. It was contended that he was partly crushed under the car, which was stopped, and that before he could be rescued it was restarted, and he was dragged under the car and again crushed. The defence denied fault, and pleaded contributory negligence.

**War Fares Suggestions.**—The London United Tramways, Ltd., are applying to the Board of Trade under the Statutory Undertakings (Temporary Increase of Charges) Act for permission for the duration of the war to charge fares at the rate of a penny per mile for ordinary passengers and a halfpenny per mile for passengers of the working class, with a minimum of 1d. The Town Councils of Wimbledon and Kingston and the Surbiton Urban Council are urging the Board that in no case should the fares be advanced by more than 50 per cent. It is stated that under the new proposal the fares for certain distances would be doubled or trebled. The Brentford Urban Council is also opposed to the application and is seeking the co-operation of other local authorities.

**Staff Lectures.**—At the first meeting of the fourth series of Operating Department efficiency meetings in connection with the London Underground Railways and London General Omnibus Co., Ltd. group, held at the L.G.O.C. Training School, Chelsea, Mr. H. E. Blain (operating manager) presided over an attendance of about 250 members of the administrative and control staffs. A cinema lecture on "Some Topical Camera Productions in connection with the Underground Railways and L.G.O.C." was given by Capt. A. Rozier (superintendent of employment and training, L.G.O.C.) The lecturer had gathered together some exceedingly interestin illustrations both of past transit facilities and of present developments in the London area. The films and slides shown included an excellent new film of a trip on the District Railway showing some fine pictures of the Lots Road Power Station, and a series of slides on road locomotives, showing types of vehicles from 1770 to the present date, which pictured graphically the evolution of traction and its application to passenger and goods transport. Other topics illustrated were the conversion of a 'bus from petrol to gas fuel and an instructive series showing the latest developments in the training of 'bus employees in first aid to the injured, the slides showing improvised splints and bandages which can be made up from the tools and equipment carried on a 'bus. The November meeting will discuss "'Bus Maintenance."

## DEATH OF CAPT. DUNSFORD.

The announcement of the death of Capt. Reginald Martin Dunsford, R.C.A., only son of Alderman F. A. Dunsford (chairman of the Southampton Tramways Committee), will be received with keen regret by his father's many friends. The circumstances are rendered the more sad by the fact that the late Captain Dunsford, after seeing a great deal of active service abroad, came home on leave, and shortly afterwards was laid aside by influenza, after which pneumonia supervened, to which he succumbed on October 18,. He was accorded a full military funeral, and a very large number of representatives of the public bodies in the town were present at the grave side. The numerous wreaths included one from the Southampton Tramways Committee and one from the Southampton Corporation Tramways Employees. The deceased officer had not been long married.

## PERSONAL.

**Sir William Plender** has been appointed Honorary Financial Adviser to the Board of Trade.

**Mr. W. B. Smith,** of Greenock, has been appointed manager of the Paisley Corporation electricity department.

**Mr. W. H. Ellis,** manager of Chester Corporation tramways, has been granted an increase of £50 per annum in salary from October 25, with a further increase of £50 on October 25, 1919, in addition to war bonus.

**Mr. H. Ingham,** assistant engineer to the Mexborough and Swinton Tramways Company, has received a presentation from the staff and employees on leaving to take up an appointment with the Rotherham Corporation.

**Mr. Henry Cassell,** a discharged soldier, now employed as a driver on the Sheffield Corporation tramways, has been awarded the Royal Humane Society's certificate. On August 20, he dived into the canal at Rotherham and rescued a boy, restoring him to consciousness by means of artificial respiration.

**Sergt. Defer,** a conductor attached to the New Cross depot of the London County Council Tramways, has received the D.C.M. The distinction was presented to him by the Mayor of Deptford at a concert, organised by the L.C.C. Tramways (Employees) Old Comrades Association.

**Alderman J. R. Wilson,** who was recently invited to become Lord Mayor of Manchester, but declined, has been entertained at dinner by the Manchester Tramways Committee. He is Chairman of the Traffic Congestion and Improvements Committee, and is also a director of the Manchester Ship Canal.

**Lance-Corporal Ernest Lapidge,** West Yorkshire Regiment, has saved a comrade's life by volunteering for a blood transfusion operation, in which a pint of blood was taken out of his right arm. He was formerly a tramway driver employed by the Sheffield Corporation. He has been in hospital for six months, and it was whilst a patient there that he volunteered for this operation.

**Mr. E. H. Bond** has been confirmed by the Town Council in his appointment as general manager of the Dover Corporation tramways. The chairman of the Tramways Committee (Councillor Barwick) said that Mr. Bond's services had been found very satisfactory. Although the service run was 12 per cent. less than last year and 25 per cent. less than in 1916, the number of passengers carried this year was larger than in either of those two years. The Committee accordingly made Mr. Bond's appointment permanent, at a salary of £300 per annum.

The death is announced at the age of 55 of **Mr. J. O. Callender,** of Callender's Cable and Construction Co., Ltd.

The death has occurred at King's Lynn at the age of 61, of **Mr. J. J. Petrie,** traffic manager of the Midland and Great Northern Joint Railway.

**Sec-Lieut. G. Barnett,** of the West Riding Regiment, who has been killed in action, was formerly chief cashier of the Huddersfield Corporation Tramways.

The death has been recorded of **Mr. Samuel Charles Burleigh,** at the age of sixty-nine, who had formerly been engineer to the South London Tramways, the Isle of Man Tramways, Southampton Waterworks and other home and continental undertakings.

## FINANCIAL REPORTS AND MEETINGS.

**British Columbia Electric Railway Co., Ltd.**—A 5 per cent. dividend has been declared on the cumulative perpetual preference stock.

**Calcutta Tramways Co.**—The interim dividend on the ordinary shares is at the rate of 2½ per cent. (2s. 6d. per share), free of tax.

**Babcock and Wilcox, Ltd.**—An interim dividend on the ordinary shares for the half year is announced at the rate of 12 per cent. per annum, free of tax.

**City of Buenos Ayres Tramways.**—Dividend of 1s. 3d. per share (being at the rate of 5 per cent. per annum), less tax, has been declared for the three months ended September 30, the same as a year ago.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Oct. 30 amounted to £63,237, an increase of £10,898 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Oct. 30 (thirty and a half weeks), the total receipts were £1,991,157, an increase of £291,847 on the corresponding period of 1917.

**New South Wales Government Railways and Tramways.**—The annual report for the year ended June 30, includes statistics as to tramways as follows:—Earnings £1,992,641, decrease £15,898; working expenses £1,603,260, decrease £88,107; interest on capital cost £348,546, increase £13,185; passengers 255,740,808, decrease 39,562,902; car mileage 21,762,244, decrease 3,599,748; mileage of lines open 225½, increase 1¼; percentage working expenses to earnings, 80·46, decrease 3·75.

**York Corporation Tramways.**—The accounts for the year ended March 31 show that the tramways income (apart from omnibuses) amounted to £42,041, or 11·7d. per car mile, as against £37,636, or 10·91d. per car mile in the preceding year. The revenue from omnibuses also showed an increase, being £3,180, or 9·32d. per car mile, compared with £2·560, or 7·98d. per car mile. The following is a comparison of the car mileage in the two years 1916-17 and 1917-18: Omnibuses, 76,993, 81,843; cars, 826,283, 862,530. The revenue showed an increase of just over £5,000 on the preceding year. There was an increase in the expenditure which amounted to £38,449, as against £30,938, chief items being wages of motormen and conductors, £2,342; general repairs and maintenance, £2,000; and electrical power, £1,394.

## CONTRACTS AND ORDERS.

**Bradford Electricity Committee** has accepted the tender of the British Westinghouse Company for two 1,500 k.w. rotary converters for Bolton Road Works.

**Southend Corporation Tramways Committee** propose to apply a balance of £1,255 to the credit of the motor omnibus account to the purchase of an electric wagon.

**The Health, Streets and Highways Committee of Taunton** are considering the advisability of applying to the Local Government Board for sanction to borrow £1,300 for the purchase of an electric vehicle

**DICK, KERR & Co.,**
**Limited,**
**ABCHURCH YARD, CANNON STREET, LONDON, E.C.,**
**ENGINEERS & CONTRACTORS.**

**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad.**

SATURDAY, NOVEMBER 9, 1918.

## SHEFFIELD TRAMWAYS GOODS SERVICE.

THE decision of the Select Committee of the House of Lords in regard to clauses of the Sheffield Corporation (Consolidation) Bill, providing for the transport of goods by means of the tramways, will cause much dissatisfaction not only in Sheffield, but to all those who wish to increase the utility of tramways. Apparently the Committee remain in the pre-war stage of economics. Vested interests are to be protected ; whatever advantages new projects promise, they are not to be tolerated if competition which they may create is likely to be inimical to existing undertakings. It is not clear exactly how far the Committee were influenced by the opposition put forward by several railway companies and by an association representing cartage contractors ; but there is little doubt that without such opposition Sheffield Corporation would have obtained the right to use its own tramways to transport goods on its own cars, through its own streets, and those of adjacent authorities. What justification there can be in the difficult economic conditions that must continue for many years after the war for hampering the legitimate development of a great public service such as a tramway undertaking, or for depriving the nation of the benefit to be derived from that development, it is difficult to discover. It cannot be contended that the use of tramways for goods traffic is in any way detrimental. Numerous instances prove the contrary. Even the Select Committee evidently see no objection to the principle for they have passed the Bill as far as it relates to the carrying of parcels, while disallowing "animals, goods, and minerals." With a period of reconstruction in front of British manufacturers, the fullest facilities for transportation are necessary if they are to secure the delivery of material and despatch the finished article in the shortest time. Undoubtedly tramways ought to be utilised for this purpose, especially in great industrial areas such as that of which Sheffield is the centre. Neighbouring towns require to be linked up together by a continuous system of tramway traction. Yet the Select Committee has disapproved of a clause providing for the linking up of the tramways of Sheffield with those of other localities. Sheffield Corporation will not, we hope, take this rebuff as final, and they may look for support from other Corporations owning tramways. Bodies like the Association of Municipal Corporations, or the Municipal Tramways Association, should make their influence felt in a matter which is of importance to every town in which there is a tramway system which can be utilised to meet local transport requirements. With such influence at work there should be found means at no distant date of reversing the decision.

## TRAMWAYS (BOARD OF TRADE) COMMITTEE.

(To the Editor of THE TRAMWAY AND RAILWAY WORLD.)

Sir,—It was announced a few days ago that Mr. A. H. Pott, late Engineer and Manager of the London United Tramways Company, had been appointed to an important position under the above Committee.

It will be remembered that when the President of the Board of Trade originally proposed to appoint a Tramways Controller, in the person of Mr. James Devonshire, Managing Director of the London United Tramways Company, the Municipalities, having regard to the magnitude of their interests, as compared with Company interests, were immediately up in arms, and strong representation were made to Sir Albert Stanley on the subject. Eventually a compromise was reached, whereby the present Committee was set up, consisting of Municipal and Company Representatives, with Mr. James Devonshire as Chairman.

Even this arrangement was looked upon with some suspicion, but it was felt that the Municipal Representatives might at least be strong enough to safeguard Municipal interests, but the recent appointment makes one wonder whether this is so. In any case, the whole business looks like a job. The London United Tramways Company is in the hands of a Receiver. The Directors promote a Bill in Parliament to enable a financial reconstruction. Their Manager and Engineer is superseded—he is now given a job under the Tramways (Board of Trade) Committee. There are sinister rumours that Mr. Pott was appointed only by the casting vote of the Chairman (Mr. James Devonshire), who, as already stated, is also Managing Director of the London United Tramways, and, further, that at least two of the Municipal Representatives recorded their votes in favour of the appointment, although I am glad to know that three others strenuously opposed it.

It will be interesting to know whether the appointment has to be confirmed by the President of the Board of Trade. If this be the case, it behoves the Municipalities to consider what action they will take, for it looks as though the Tramway Industry of the country is to be controlled by company interests and company officials. In the meantime, the Executive Council of the Municipal Tramways Association should demand some explanation of the action of the two gentlemen who are supposed to represent them on the Tramways (Board of Trade) Committee.

4th November, 1918. TRAMWAY MANAGER.

## SUGGESTIONS FOR RURAL TRANSPORT.

In the course of his inaugural address as President of the Institution of Civil Engineers, Sir John A. F. Aspinall, the General Manager of the Lancashire and Yorkshire Railway, indicated several directions in which improvement is required in order to increase the economy of railway transport. A most important question in his view is the increase of the structure gauge, which limits the loading gauge and therefore the external dimensions of the wagons that can be employed. On British railways he stated that there are no fewer than 66 different loading gauges applicable to 150 sections of lines, all of which have to be taken into consideration in connection with the forwarding of rolling stock ; and of about 100 large and small separate companies with a track of 4 ft. 8½ ins. gauge. The maximum number which can accept loads of one of the largest loading gauges is 18. The structure gauge at present is also the main difficulty in the way of the standardisation of rolling stock, including locomotives. As regards future railway construction, he pointed out that many hundreds of miles of 60-centimetre gauge lines have been laid by the British in France, and he suggested that when these are brought home they might be used for agricultural lines, built in the most economical way without the restrictions of existing light railway or tramway legislation.

**Price of Tires.**—The makers of tires for tramway cars have decided, in consequence of recent increases in wages and in the cost of coal, to advance the price of driving tires £1 per ton, and that of pony tires £1 10s. per ton as from October 1.

**Workmen's Cars for Workmen.**—The West Hartlepool Trade Union Council are asking that workmen's cars shall be used for workmen only. It is complained that it is almost an impossibility to get inside the cars, and that the men—probably leaving their work overheated—have to get on the unprotected top of the cars in all weathers.

## PARCEL TRAFFIC AT SHEFFIELD.

SELECT COMMITTEE OF THE HOUSE OF LORDS CURTAILS CORPORATION'S BILL.

The Sheffield Corporation (Consolidation) Bill, which has been before a Select Committee of the House of Lords, contained clauses with a view to obtaining the right to convey various kinds of goods on the Corporation tramways. The Select Committee has struck out clauses which provided for the carriage of "animals, goods, and minerals," and for the joining up of outside tramway systems, and allowed only the word "parcels" to remain in the clause relating to carrying.

Mr. Wedderburn, K.C., for the Corporation, urged that Sheffield tramways should be made as efficient as tramways in other cities, where the carrying of parcels and goods had proved remunerative and useful. The only opposition (counsel remarked) came from parcel carriers and the railway companies, and arose on the question of competition.

Mr. A. R. Fearnley, general manager of the Sheffield Corporation tramways and motors, stated that there had been a great public demand that the tramways should be utilised for the conveyance and delivery of parcels and goods, the present facilities being very inadequate and inconvenient for traders and public business purposes, as well as for private residents. He was satisfied that the goods traffic would cover the cost of the undertaking, but the main object of the Corporation was to supply a public need. The services for passengers would not be interfered with by the carriage of goods, which would be dealt with through central depots.

In reply to Mr. Honoratus Lloyd, K.C., for the Great Central Railway, who quoted from a Board of Trade Return, dated 1914, showing that the total receipts by all the tramways having the power to carry "goods" up to that date was £1,159, and for parcels £38,230, witness said he was surprised the figures quoted were so small.

Mr. Jeeves (for the promoters) said the figures were probably net receipts.

Witness said he did not think it untimely for Sheffield to apply for these powers while a Parliamentary Committee was considering the whole question of transport.

Alderman C. F. Spencer (chairman of the Halifax Tramways Committee) and chairman of the Leeds Fireclay Company, gave evidence of the large use made of the Leeds tramways for the carriage of fireclay, the estimate for this year being 50,000 tons. Leeds manufacturers, witness said, greatly appreciated the tramways service for the conveyance of minerals and other goods. The Leeds system was opening the eyes of municipalities to the advantages of the system.

Other opposition to the carrying clauses of the Bill came from the Midland Railway, the London and North Western Railway, and the Horse and Motor Owners' Association.

The Bill was modified by the Select Committee as stated above.

## MISCELLANEOUS NEWS AND NOTES.

**Collision at a Loop.**—A collision between two of the Lanarkshire Tramways Company's cars resulted in more or less serious injuries to 16 persons. The accident was caused by one of the cars rushing through the loop line before the other car had negotiated the loop. The front platforms of both cars were smashed and the windows damaged.

**The "Tramways and Light Railways Association Journal"** for October contains the final report of the Committee on Relations between employers and employed, and important correspondence that has passed between the Association and the Institution of Electrical Engineers in regard to electric power supply and electrical trades after the war.

**The "Safety First" Movement** is to be applied to other industries as well as to locomotion, through the agency of the newly formed British Industrial "Safety First" Association, which include representatives of employers and employees. Inquiries as to membership should be addressed to the hon. secretary, Mr. H. E. Blain, at 31, Westminster Broadway, London, S.W.1.

**Women Employees in Italy.**—The rules of the Italian Ministry of Industry regarding the employment of women in tramway services fix eighteen and twenty years as the minimum age for conductors and drivers respectively. The employment of women during the night hours is prohibited, and the provision of shelters, apart from those used by the men employees, is compulsory.

**Post-War Priority Council.**—The War Cabinet recently set up a Cabinet Committee to deal with post-war priority questions. This Committee consists of General Smuts, the President of the Board of Trade, the Minister of Labour, the Minister of Shipping, the Minister of Munitions, and the Minister of Reconstruction, and the Secretary is Colonel Byrne, C.M.G., 11, Pall Mall, London, S.W. A Standing Council on Post-War Priority has been appointed to assist the Cabinet Committee, and is now at work. The Council has already had before it a survey of the existing stocks of the more important raw materials, and is giving urgent consideration to the question of releasing such materials from any form of control at the earliest possible moment. It is the intention of the Council to consult the trade bodies concerned with regard to any matters affecting the industries they represent, and, by taking them into their confidence, to make the utmost possible use of their organisations in any allocation of materials which may be found to be necessary.

**"Safety First" Neglected.**—The Glasgow Sheriff Court found in favour of the Glasgow Corporation in an action brought to recover £300 damages in respect of personal injuries sustained through being knocked down by a tramway car. The Judge came to the conclusion that the plaintiff's injuries were caused by her own negligence owing to the fact that she did not look to see the state of the traffic before she began to cross the street.

**South Shields Motor Omnibuses.**—Allusion was made in a paragraph in our issue of October 26 to the trouble that had occurred with the batteries with which these vehicles are equipped. It should be added that the batteries were changed some time ago, and that they have since run fairly satisfactorily. As feeders to the tramway system the omnibuses have proved exceedingly useful, and as they provide an extension of the tramway service they are a great public convenience.

**London County Council Expenditure.**—Expenditure not exceeding £2,000 for the horsing of tower wagons for the twelve months commencing May 1, 1918, has been sanctioned. Expenditure has also been sanctioned for (1) Rewinding of armatures for electric cars, £5,350; (2) purchase of articles for tramway maintenance purposes and the execution of small works and repairs, £78,796 8s. 7d.; (3) purchase of track rails, £2,500; (4) repair of cable, £450; (5) purchase of metals, £2,808 5s. 8d.

**Tramway Workers' Demands.**—Representatives of tramway employers have met representatives of the National Transport Workers' Federation and discussed the new claims recently put forward by the latter, which were given in our issue of October 19. As a result the Federation has withdrawn for a time certain demands, including those dealing with spread-over times. The request for increased wages is to be referred to the Committee on Production. Several conferences of tramway authorities in regard to the matter have been held.

**Metropolitan Tramway Managers' Association.**—A meeting of the members of this association was held at the Municipal and County Club, 2, Whitehall Court, Whitehall, S.W. recently; there were present:—Messrs. Ullmann (East Ham), Hammond (Metropolitan Electric), Harvey (Ilford), Murray (Walthamstow), Williams (Erith), Bruce (London County Council), Mason (South Metropolitan), Mackinnon (London United) and Goodyer (Croydon). Messrs Ullmann, Hammond and Goodyer, were respectively re-elected chairman, vice-chairman and hon. secretary.

**Extension Wanted at Edinburgh.**—Edinburgh Town Council has received a communication from the County Council of East Lothian regarding (1) the desirability of more convenient transit facilities between the County and Edinburgh; (2) the formation of a new route from near Wallyford to the South Side of Edinburgh; and (3) the question of the extension of tramway facilities, and suggesting a meeting between representatives of the Midlothian County Council and the Corporation on the subject.

**For Tramway Cars** and other passenger transport vehicles, Triplex safety glass claims merits which entitle it to careful attention as being an unsplinterable glass. It is described on the cover pages of an acceptable publication, issued by the Triplex Safety Glass Company, Ltd. This takes the form of a Triplex complimentary edition of the London Time Table and Red Rail Guide, containing particulars of train services arranged for the most part in alphabetical order, with tabular details regarding the Metropolitan area.

**Misunderstanding Causes Strike.**—There was a short strike on the part of the employees on the Lincoln Corporation tramways owing to a misunderstanding as to the date from which the recent increase of wages should commence. This had escaped adjustment at the stipulated time owing to the absence of the general manager and electricity engineer (Mr. S. Clegg). The representatives of the employees had an interview with Alderman W. S. White (chairman of the Electricity and Tramways Committee), and the misunderstanding was quickly set right, the service being resumed after a suspension of about two hours.

**Parcels Carrying at Glasgow.**—A proposal of the Tramways Committee to carry parcels on the tramways, and the suggestion of the general manager (Mr. J. Dalrymple) that an experiment might be made on the route to Uddingston, was the subject of some discussion at the Glasgow Corporation. Councillor Montgomery (convener of the Tramways Committee) stated that the general manager was extremely anxious that the experiment should be tried. It was not proposed to carry parcels on the ordinary cars or by means of a trailer. It was proposed to have a special car for the purpose. On a motion to disapprove of the experiment there was an equality of votes—30 in favour of the experiment and 30 against. The Lord Provost gave his casting vote in favour of the experiment, which will therefore be made.

**Judgment for Bristol Company.**—Judgment was given in the Bristol County Court for the Bristol Tramways and Carriage Company in an action brought to recover damages alleged to have been caused through being thrown from a tramway car. The Judge said he could not say he was satisfied that it had been proved to him that negligence on the part of the company was the cause of the accident. He drew attention to the fact that the car did not stop at the stopping-place, and though that did not entitle plaintiff to damages, he had considered whether he should mark his sense of that negligence by depriving the company of costs. Perhaps, as plaintiff had sustained serious injuries, the company would not ask for costs. For the company it was stated that they would not. His Honour then entered judgment for the defendants, without costs. On behalf of the plaintiff a retrial was suggested. An application to this end was allowed to stand over, as was the question of costs.

**Car Collides with Charabanc.**—In the Edinburgh Court of Sessions, an action by the Autocar Bus Company, Ltd., Dunfermline against the Dunfermline and District Tramway Company, Ltd., for £70, in respect of damage done to a motor charabanc by a tramway car, was decided in favour of the tramway company. The motor charabanc was being towed westward by a motor omnibus, and seeing a tramway car approaching to the eastwards, the driver of the omnibus drew in to the left in order to stop and allow the car to pass. While the charabanc was stopped clear of the rails it was not sufficiently clear to allow the car to pass. The result was that the car collided with the charabanc and damaged it.

**Yorkshire Tramway Managers' Association.**—At a meeting recently at Leeds tramway offices, the following members were present:—Messrs. W. E. Nicoll (Barnsley), A. Daggett (Leeds), J. W. Galloway (Halifax), G. H. Browne (Mexboro' and Swinton), S. W. A. Sturman (Sheffield), H. L. White (Grimsby), R. H. Wilkinson (Huddersfield) W. J. McCombe (Hull), R. L. Acland (Chesterfield ) E. Cordukes (Scarborough), J. B. Hamilton (Leeds), E. A. Paris (Yorkshire Woollen District), C. J. Spencer (Bradford), W. McGibbon (Ossett), E. S. Rayner (Doncaster). A number of interesting matters were discussed such as uniform clothing for linesmen, the right of employees to wear union badges, reinstatement of discharged soldiers, etc.

## PERSONAL.

**Mr. Cyril Tomlinson** has been added to the directorate of the Norwich Electric Tramways Company.

**Mr. W. Y. Anderson** has been appointed commercial engineer of the City of Birmingham Electric Supply Department.

**Mr. T. R. Whitehead,** general manager and engineer of the Coventry Corporation Tramways, has been granted an increase of salary from £700 to £800 per annum.

**Mr. C. J. Spencer,** late tramways manager for Bradford, has received a farewell presentation from the employees of the Corporation tramways department, at a gathering at the depot, presided over by Mr. J. W. Dawson (assistant electrical engineer). The gifts, which included a clock, bronzes and an illuminated address, were handed to the recipient by Mr. T. Stirk (traffic superintendent). Speeches expressing high appreciation for Mr. Spencer were made by Alderman E. Priestley (chairman of the Tramways Committee), Councillor I. F. Akeroyd (deputy-chairman), Mr. H. Kershaw (Tramway and Vehicle Workers' Association), and Mr. W. Wood (engineering shop steward). In his response Mr. Spencer said that for twenty years they had been creating and working a machine which made it possible for people to get out from slum areas into the fresh air. That machine had undoubtedly given the things it was intended to give. One of the first effects had been a lowering of the death-rate. They might all feel proud that they had been able to make Bradford life happier and better.

The death at Clapham at the age of 78 is announced of **Mr. Victor Gerard,** who was for many years continental traffic manager to the London, Brighton and South Coast Railway. He retired in 1898, owing to ill-health, after nearly forty years' service with the Company.

The death at his residence near Bolton at the age of 81, is announced of **Mr. Edward Bennis,** founder and managing director of Edward Bennis and Co., Ltd. He was born in Limerick in 1838, and educated at the Quaker College at Newtown, Waterford. A few years after entering business he retired on a competency. Subsequently he re-entered commercial life and invented a self cleansing furnace for boilers, ultimately establishing works at Bolton, from which several important improvements were turned out. The business developed largely and there are now branch establishments or concessionaires in most countries.

## FINANCIAL.

**Siemens Brothers and Co., Ltd.**—An interim dividend at the rate of 10 per cent. per annum, free of tax, is announced.

**Bruce, Peebles and Co., Ltd.**—A dividend is announced at the rate of 7½ per cent. per annum, less income tax, on the cumulative participating preference shares, for the half year ended June 30.

**The A.E.G. of Berlin.**—The directors estimate that the profits for the year 1917-18 will be sufficient to enable the company to pay a dividend of 14 per cent. For the previous year 12 per cent. was paid.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Nov. 6 amounted to £62,480, an increase of £8,362 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Nov. 6 (thirty one and a half weeks) the total receipts were £2,053,641, an increase of £300,213 on the, corresponding period of 1917.

**Hurst, Nelson & Co., Ltd.**—The report for the year to July 31 states that there was a net profit of £56,763. A dividend of 10 per cent. on the ordinary shares, or a bonus of 5 per cent., free of tax, is recommended, with the placing of £20,000 to general reserve (making £90,000 in all), and the reserving of £12,000 for payment of half-yearly dividend on preference shares in May and an interim dividend at the rate of 5 per cent., free of tax, on the ordinary shares and the carrying forward of £20,843.

**Dunlop Rubber Co., Ltd.**—A circular issued by the Secretary of the Dunlop Rubber Co., Ltd., states that the issue of the report and balance-sheet for the year ended August 31, must be considerably delayed, owing to the continued depletion of the staff and the great increase in business (amounting practically to 50 per cent.). The directors, being of opinion that a further distribution to the ordinary shareholders should be made now, have declared an interim dividend for the half year ended last August of 1s. 6d. per share on the ordinary shares.

**Wallasey Corporation Tramways.**—The accounts for the year ended March 31 show a traffic revenue of £82,024, which, with £450 received from advertisements and sundry small sources of income, gave a total revenue of £82,562. Traffic accounts amounted to £20,697, including £15,240 for wages. General expenses totalled £6,625 and repairs and maintenance £7,664. The cost of current at 1s. 4d. per B.T. unit was £11,935. War service allowances accounted for £2,040, and war bonuses to employees for £4,830. The total of working expenses was £54,397. There was a balance carried to net revenue account of £28,164, out of which contributions were made to interest on loans and sinking and reserve funds, and £11,000 was allocated to the borough fund in aid of the rates, being the largest amount yet available for that purpose, as compared with any previous year.

**Bradford Corporation Tramways.**—A statement has been submitted to the Bradford Tramways Committee as to the six months from April 1 to September 30, in comparison with the results of the corresponding period of the year preceding. The receipts were £243,280, as compared with £203,592, an increase of £39,688, which is largely accounted for by the fact that during four months increased fares have been charged. Owing to various circumstances the number of car miles run has fallen from 2,858,344 to 2,573,434, a decrease of 284,910. The number of passengers carried has also dropped from 42,893,176 to 40,136,206, a decrease of 2,756,970. The receipts per car mile have risen from 16d. to 21·18d. Wages have risen to £114,072, as compared with £90,695. The allowances paid to dependents of sailors and soldiers, which are included in the wage totals, were £15,218, as against £9,943.

**Dick, Kerr and Co., Ltd.**—The report for the twelve months ended June 30, 1918, shows that the company has again had a prosperous year. The dividend of 10 per cent. is maintained on the ordinary shares, and a balance of £37,860 is carried forward, which is somewhat larger than the amount brought forward last year. As in each of the previous three years, a sum of £25,000 has been set aside to supplement the special reserve for contingencies. The net profit at £87,916 is lower than in the previous year, but the difference may be accounted for by the higher allowance made for excess profit tax. The total sum available is £123,989, which has been allocated as set out in the table below, in which a comparison is given with the results of the four preceding years:—

| | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ | £ |
| Net profits .. .. | 87,916 | 95,465 | 71,740 | 46,959 | 44,761 |
| Balance from last year | 36,073 | 20,397 | 18,347 | 25,526 | 10,325 |
| | 123,989 | 115,862 | 90,087 | 72,485 | 55,086 |
| Debenture interest & trustees' fees .. | 9,829 | 10,188 | 10,490 | 10,538 | 10,961 |
| Premium on debenture stock redeemed | 300 | 300 | 300 | 300 | 300 |
| Dividend on 6 per cent. pref. shares.. | 21,000 | 18,300 | 18,300 | 18,300 | 18,300 |
| Dividend on ordinary shares .. .. | 30,000 (10%) | 26,000 (10%) | 15,600 (6%) | — | — |
| Reserve against contingencies .. .. | 25,000 | 25,000 | 25,000 | 25,000 | — |
| Balance carried forward .. .. .. | 37,860 | 36,073 | 20,397 | 18,346 | 25,525 |

Although the amount of excess profit levy under the Munitions of War Act has not been finally settled, the directors believe that the reserves which they have made in the accounts for extra depreciation, special taxation, etc., are sufficient. All the works have been fully occupied during the year, although in the case of the United Electric Car Company a considerable portion of the time has been occupied in extensions and alterations necessary to produce important work of a nature specially suited to that establishment.

Urban District Council in respect of five class E1 cars loaned to it in 1915, and six class B cars are to be loaned to it on similar terms.

COAL FOR GREENWICH POWER STATION.—About 24,800 tons of coal and 4,000 tons of coke have been purchased during the quarter ended September 30, for use at Greenwich power station, at a cost of about £58,300.

Mr. G. H. Hume, Chairman of the Highways Committee, in reply to a question by Mr. J. D. Gilbert, M.P., said that between 5 p.m. and 8 p.m., 331 cars and 70 trailers left the Westminster end of Victoria Embankment for termini in South London. The busiest hour was between 6 p.m. and 7 p.m., during which 114 cars and 24 trailers departed for points in South London.

In reply to a suggestion of Mr. Gilbert that the northern single deck cars should be reversed at the Embankment entrance to the subway in order to save delaying other services, Mr. Hume said that the single deck cars were reversed at the Westminster station on the Embankment in order to meet the requirements of the very large number of passengers travelling too and from that point. The up main line cars are practically unaffected by the single deck cars turning at Westminster, but the large numbers of passengers during the busy periods caused delay to cars proceeding towards South London. If the single deck cars were reversed at the entrance to the subway at Waterloo Bridge, the convenience which the service affords would be remarkably reduced.

## MISCELLANEOUS NEWS AND NOTES.

**Two Fines for Spitting** in tramway cars, amounting to 15s. in each case, were imposed at Lambeth Police Court, on summonses by the London County Council.

**Sheep Killed on a Tramway.**—Several sheep, part of a herd, which was being driven to a local butcher's, ran in front of a tramway car at Uxbridge, and five were killed.

**Parcel Service at Preston.**—The Tramways Committee, who recently resolved to discontinue the parcels delivery on the tramway cars, have now decided to proceed with the service.

**Moonlight Chart.**—We have received from Messrs. C. A. Vandervell and Company their convenient moonlight chart for November, which has been compiled by Mr. A. H. Midgley, the chief engineer.

**London Cars for Sheffield.**—With the approval of the Tramways (Board of Trade) Committee, arrangements have been sanctioned by the London County Council for the sale to Sheffield Corporation of ten cars at £550 each.

**Post War Priority.**—Dr. Addison recently stated in reply to a Parliamentary question that the Government has appointed a standing council upon post war priority to consider all questions in connection with priority and the allocation of materials and machinery where shortage is anticipated.

**The Minister of Labour** (Mr. G. H. Roberts, M.P.), speaking at the opening of a new employment exchange for the building trades in London last week, said that unless the relations between employer and employed were sweetened recovery and expansion of trade after the war would be impossible.

**Institution of Electrical Engineers.**—The opening meeting of the session will be held at the Institution of Civil Engineers, Great George Street, S.W., on Thursday, November 7, at 6 p.m., when Mr. L. B. Atkinson will deliver the Kelvin lecture on "The Dynamical Theory of the Electric Engine."

**Gratuities for Extra Work.**—Leeds Tramways Committee propose, subject to the approval of the City Council, to grant to the conductors a gratuity in recognition of the extra work thrown upon them at the inauguration of the new system of fares. The old stocks of tickets were being used up, and were, in consequence, sold for more than their face value. The issue of penny tickets for 1½d., and so on, complicated the work.

**The Collection of Fares on Entrance** on the Bradford tramway cars is the subject of a letter in the *Yorkshire Observer*. The writer suggests that considerable delay in the filling, and, consequently, to the starting of the cars, is caused, owing to upper-deck passengers requiring change. The remedy which he proposes is that a rule should be made that no change be given to intending upper-deck passengers, who, if they have not the exact fare ready, must go in the saloon.

**Seats for Drivers in Italy.**—The Italian Ministry of Industry has ordered that seats shall be provided for tramway conductors and drivers and that plans shall be submitted from tramway companies with a view to the equipment of cars being adapted to being driven whilst the driver is sitting. Experiments made by the management of the municipal tramways in Rome go to show that such an arrangement is practicable, and cars are now equipped with seats. It is pointed out that the seating of drivers would tend to decrease the number of accidents which arise owing to tiredness and consequent inattention on the part of drivers.

**L.C.C. Employees and War Comrades.**—The London County Council Tramways (Employees) Old Comrades' Association is raising a fund for the purpose of welcoming home employees returning from naval or military service. In furtherance of this object a concert was held at the Borough Hall, Deptford, recently, in connection with the New Cross depot. Mr. A. L. C. Fell (general manager of the L.C.C. tramways) presided, supported by the Mayors of Deptford, Greenwich, Woolwich, Lewisham, Camberwell, Southwark, and Bermondsey, Mr. C. W. Bowerman, M.P., Major J. T. Prestige, L.C.C., and Mr. J. K. Bruce (traffic manager.)

**The Kearney High-Speed Railway** is the title of a pamphlet reprinted from the Transactions of the Society of Engineers (Incorporated). It is of interest, as containing a report of a lecture on the subject indicated given by Mr. E. W. Chalmers Kearney at a meeting of the Society and of the discussion which ensued

**Bradford Women Employees Wages.**—By an award of the Committee on Production which has just been made the women employees of the Bradford Corporation Tramways Department are to be given an advance of 2s. per week. This is the result of the representation of the Bradford Corporation War Wages Committee to the Committee on Production for their interpretation of certain points in dispute. The interpretation is, says the *Yorkshire Observer*, that women are only entitled to 2s., plus the 3s. received last June, and has given much disappointment to the women. The award raises their pay to 18s. above pre-war rates, whereas they contend that they ought to receive at least 21s.

**Reckless Driving at Glasgow.**—Mr. James Dalrymple, general manager of Glasgow Corporation Tramways Department, has addressed a further notice to drivers in the Corporation service on the subject of reckless driving. The notice repeats the official warning given in April last. "I regret to say," Mr. Dalrymple states, "that the response to the appeal has not been satisfactory, and many cases of reckless driving are still taking place, notably on sections where the permanent way is in very bad order." The Chief Constable, it is added, has not yet ordered any prosecutions but complaints are so numerous, and in many cases so well founded, that he will be compelled to take action immediately

**The Channel Tunnel.**—Sir Arthur Fell, chairman of the House of Commons Tunnel Committee, proposes at an early day to submit the following motion: —"That in the opinion of this House the construction of the Channel tunnel should be undertaken at the earliest moment after peace, to cement the friendship of the Allies in Western Europe, to improve their means of communication, and to promote their mutual commerce; that a statement by the Government of this country that they will join with the French Government in supporting the proposal will give greater confidence to the Allies during the war and strengthen their position in the negotiations for peace, and that the time has arrived to make such a statement."

**Hooton Light Railway Order.**—The Board of Trade has confirmed the grant by the Light Railway Commissioners of an order for a light railway in Cheshire to be known as "the Hooton Light Railways Order." An estimated expenditure of £75,000 was proposed and the promoters asked for powers for passenger as well as merchandise traffic. Mr. Herbert Levenstein and Sir H. D. McGowan are the first directors of the company. Two lines are authorised. One will be about two furlongs, 6·5 chains in length, commencing in the parish of Little Sutton by a junction with the joint railway of the London and North Western and Great Western Companies (Hooton and Helsby branch), and terminating in the parish of Overpool by a junction with the joint railway. The other will be about one mile, two furlongs, nine chains, commencing in the parish of Little Sutton, and terminating in the parish of Netherpool. The gauge will be standard and the motive power will be steam or other motive power approved by the Board of Trade.

**Corporation's Claim Fails.**—The Bradford Corporation failed in an action at the Bradford County Court for the recovery of £48 15s. 10d., damages caused to a car by alleged negligence of the driver of a motor wagon and trailer. A counter claim for £3 16s. 6d. was allowed. It was stated by the driver of the car that he was driving at a speed of about nine or ten miles an hour when the accident happened. There were no street lamps lit at the time. He saw the trailer when he was about five or six yards away from it. He at once put on all his four emergency brakes, and the car pulled up at once after striking the trailer. The danger lamp on the trailer was not lit, and on feeling it he found it was cold. He denied that he was travelling at an excessive speed. For the defence evidence was given by several witnesses to the effect that the car was being driven at an exceptionally high speed. The judge came to the conclusion that the car was being driven too rapidly having regard to the conditions, and that the driver failed to put on the brakes with sufficient promptitude to prevent the collision.

**Uniform Fare Suggested.**—In connection with his suggestion of a uniform fare for the Edinburgh tramways, which is being considered by the Tramways Committee, Councillor M'Laren has issued a memorandum on the proposal to members of the Committee. He points out that in the United States an average fare in cities of 2½d. is charged for any distance with transfers. In cities like New York and Chicago a distance of 20 miles can be travelled for this sum. Several Canadian cities have also adopted the system with certain modifications. In Winnipeg tickets are sold—one for 2½d. and six for 1s. 0½d., available any time, others for restricted times at cheaper rates, the average fare being a little less than 2d. The balance-sheet of the Edinburgh District Tramways Company for 1913 showed a profit of £26,577, the average fare working out at 1·102d. An average of six tickets for 6½d. on the same basis of passengers carried would give a profit of £21,474, but as a single ticket would have been 1½d. the profit would have been much larger. In 1917 the profit was £35,219, and the average fare 1·269d. Under the system suggested the profit would have been £13,924, but then, again, as a single fare would have been 1½d., the gross profit would have been as large as that shown in the balance-sheet. At present the increased tramway charges caused by the war are largely paid by suburban residents. As regards the housing problem the adoption of the average fare would, Councillor M'Laren contends, effect a radical improvement.

Digitized by Google

**Claim against Glasgow Corporation.**—A claim in the Court of Session against the Corporation of Glasgow for £1,500 damages in respect of personal injuries sustained through being knocked down by a tramway car, was settled on the terms that the claimant should receive £750 and expenses. It was contended that he was partly crushed under the car, which was stopped, and that before he could be rescued it was restarted, and he was dragged under the car and again crushed. The defence denied fault, and pleaded contributory negligence.

**War Fares Suggestions.**—The London United Tramways, Ltd., are applying to the Board of Trade under the Statutory Undertakings (Temporary Increase of Charges) Act for permission for the duration of the war to charge fares at the rate of a penny per mile for ordinary passengers and a halfpenny per mile for passengers of the working class, with a minimum of 1d. The Town Councils of Wimbledon and Kingston and the Surbiton Urban Council are urging the Board that in no case should the fares be advanced by more than 50 per cent. It is stated that under the new proposal the fares for certain distances would be doubled or trebled. The Brentford Urban Council is also opposed to the application and is seeking the co-operation of other local authorities.

**Staff Lectures.**—At the first meeting of the fourth series of Operating Department efficiency meetings in connection with the London Underground Railways and London General Omnibus Co., Ltd. group, held at the L.G.O.C. Training School, Chelsea, Mr. H. E. Blain (operating manager) presided over an attendance of about 250 members of the administrative and control staffs. A cinema lecture on "Some Topical Camera Productions in connection with the Underground Railways and L.G.O.C." was given by Capt. A. Rozier (superintendent of employment and training, L.G.O.C.) The lecturer had gathered together some exceedingly interestin illustrations both of past transit facilities and of present developments in the London area. The films and slides shown included an excellent new film of a trip on the District Railway showing some fine pictures of the Lots Road Power Station, and a series of slides on road locomotives, showing types of vehicles from 1770 to the present date, which pictured graphically the evolution of traction and its application to passenger and goods transport. Other topics illustrated were the conversion of a 'bus from petrol to gas fuel and an instructive series showing the latest developments in the training of 'bus employees in first aid to the injured, the slides showing improvised splints and bandages which can be made up from the tools and equipment carried on a 'bus. The November meeting will discuss "'Bus Maintenance."

## DEATH OF CAPT. DUNSFORD.

The announcement of the death of Capt. Reginald Martin Dunsford, R.C.A., only son of Alderman F. A. Dunsford (chairman of the Southampton Tramways Committee), will be received with keen regret by his father's many friends. The circumstances are rendered the more sad by the fact that the late Captain Dunsford, after seeing a great deal of active service abroad, came home on leave, and shortly afterwards was laid aside by influenza, after which pneumonia supervened, to which he succumbed on October 18,. He was accorded a full military funeral, and a very large number of representatives of the public bodies in the town were present at the grave side. The numerous wreaths included one from the Southampton Tramways Committee and one from the Southampton Corporation Tramways Employees. The deceased officer had not been long married.

## PERSONAL.

**Sir William Plender** has been appointed Honorary Financial Adviser to the Board of Trade.

**Mr. W. B. Smith,** of Greenock, has been appointed manager of the Paisley Corporation electricity department.

**Mr. W. H. Ellis,** manager of Chester Corporation tramways, has been granted an increase of £50 per annum in salary from October 25, with a further increase of £50 on October 25, 1919, in addition to war bonus.

**Mr. H. Ingham,** assistant engineer to the Mexborough and Swinton Tramways Company, has received a presentation from the staff and employees on leaving to take up an appointment with the Rotherham Corporation.

**Mr. Henry Cassell,** a discharged soldier, now employed as a driver on the Sheffield Corporation tramways, has been awarded the Royal Humane Society's certificate. On August 20, he dived into the canal at Rotherham and rescued a boy, restoring him to consciousness by means of artificial respiration.

**Sergt. Defer,** a conductor attached to the New Cross depot of the London County Council Tramways, has received the D.C.M. The distinction was presented to him by the Mayor of Deptford at a concert, organised by the L.C.C. Tramways (Employees) Old Comrades Association.

**Alderman J. R. Wilson,** who was recently invited to become Lord Mayor of Manchester, but declined, has been entertained at dinner by the Manchester Tramways Committee. He is Chairman of the Traffic Congestion and Improvements Committee, and is also a director of the Manchester Ship Canal.

**Lance-Corporal Ernest Lapidge,** West Yorkshire Regiment, has saved a comrade's life by volunteering for a blood transfusion operation, in which a pint of blood was taken out of his right arm. He was formerly a tramway driver employed by the Sheffield Corporation. He has been in hospital for six months, and it was whilst a patient there that he volunteered for this operation.

**Mr. E. H. Bond** has been confirmed by the Town Council in his appointment as general manager of the Dover Corporation tramways. The chairman of the Tramways Committee (Councillor Barwick) said that Mr. Bond's services had been found very satisfactory. Although the service run was 12 per cent. less than last year and 25 per cent. less than in 1916, the number of passengers carried this year was larger than in either of those two years. The Committee accordingly made Mr. Bond's appointment permanent, at a salary of £300 per annum.

The death is announced at the age of 55 of **Mr. J. O. Callender,** of Callender's Cable and Construction Co., Ltd.

The death has occurred at King's Lynn at the age of 61, of **Mr. J. J. Petrie,** traffic manager of the Midland and Great Northern Joint Railway.

**Sec-Lieut. G. Barnett,** of the West Riding Regiment, who has been killed in action, was formerly chief cashier of the Huddersfield Corporation Tramways.

The death has been recorded of **Mr. Samuel Charles Burleigh,** at the age of sixty-nine, who had formerly been engineer to the South London Tramways, the Isle of Man Tramways, Southampton Waterworks and other home and continental undertakings.

## FINANCIAL REPORTS AND MEETINGS.

**British Columbia Electric Railway Co., Ltd.**—A 5 per cent. dividend has been declared on the cumulative perpetual preference stock.

**Calcutta Tramways Co.**—The interim dividend on the ordinary shares is at the rate of 2½ per cent. (2s. 6d. per share), free of tax.

**Babcock and Wilcox, Ltd.**—An interim dividend on the ordinary shares for the half year is announced at the rate of 12 per cent. per annum, free of tax.

**City of Buenos Ayres Tramways.**—Dividend of 1s. 3d. per share (being at the rate of 5 per cent. per annum), less tax, has been declared for the three months ended September 30, the same as a year ago.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Oct. 30 amounted to £63,237, an increase of £10,898 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Oct. 30 (thirty and a half weeks), the total receipts were £1,991,157, an increase of £291,847 on the corresponding period of 1917.

**New South Wales Government Railways and Tramways.**—The annual report for the year ended June 30, includes statistics as to tramways as follows:—Earnings £1,992,641, decrease £15,898; working expenses £1,603,260, decrease £88,107; interest on capital cost £348,546, increase £13,185; passengers 255,740,808, decrease 39,562,902; car mileage 21,762,244, decrease 3,599,748; mileage of lines open 225½, increase 1¼; percentage working expenses to earnings, 80·46, decrease 3·75.

**York Corporation Tramways.**—The accounts for the year ended March 31 show that the tramways income (apart from omnibuses) amounted to £42,041, or 11·7d. per car mile, as against £37,636, or 10·91d. per car mile in the preceding year. The revenue from omnibuses also showed an increase, being £3,180, or 9·32d. per car mile, compared with £2·560, or 7·98d. per car mile. The following is a comparison of the car mileage in the two years 1916-17 and 1917-18: Omnibuses, 76,993, 81,843; cars, 826,283, 862,530. The revenue showed an increase of just over £5,000 on the preceding year. There was an increase in the expenditure which amounted to £38,449, as against £30,938, chief items being wages of motormen and conductors, £2,342; general repairs and maintenance, £2,000; and electrical power, £1,394.

## CONTRACTS AND ORDERS.

**Bradford Electricity Committee** has accepted the tender of the British Westinghouse Company for two 1,500 k.w. rotary converters for Bolton Road Works.

**Southend Corporation Tramways Committee** propose to apply a balance of £1,255 to the credit of the motor omnibus account to the purchase of an electric wagon.

**The Health, Streets and Highways Committee of Taunton** are considering the advisability of applying to the Local Government Board for sanction to borrow £1,300 for the purchase of an electric vehicle

**DICK, KERR & Co.,**
**Limited,**
**ABCHURCH YARD, CANNON STREET, LONDON, E.C.,**
**ENGINEERS & CONTRACTORS.**

**Complete Equipment**
**TRAMWAYS & LIGHT RAILWAYS**
**at home and abroad.**

## SHEFFIELD TRAMWAYS GOODS SERVICE.

THE decision of the Select Committee of the House of Lords in regard to clauses of the Sheffield Corporation (Consolidation) Bill, providing for the transport of goods by means of the tramways, will cause much dissatisfaction not only in Sheffield, but to all those who wish to increase the utility of tramways. Apparently the Committee remain in the pre-war stage of economics. Vested interests are to be protected ; whatever advantages new projects promise, they are not to be tolerated if competition which they may create is likely to be inimical to existing undertakings. It is not clear exactly how far the Committee were influenced by the opposition put forward by several railway companies and by an association representing cartage contractors ; but there is little doubt that without such opposition Sheffield Corporation would have obtained the right to use its own tramways to transport goods on its own cars, through its own streets, and those of adjacent authorities. What justification there can be in the difficult economic conditions that must continue for many years after the war for hampering the legitimate development of a great public service such as a tramway undertaking, or for depriving the nation of the benefit to be derived from that development, it is difficult to discover. It cannot be contended that the use of tramways for goods traffic is in any way detrimental. Numerous instances prove the contrary. Even the Select Committee evidently see no objection to the principle for they have passed the Bill as far as it relates to the carrying of parcels, while disallowing "animals, goods, and minerals." With a period of reconstruction in front of British manufacturers, the fullest facilities for transportation are necessary if they are to secure the delivery of material and despatch the finished article in the shortest time. Undoubtedly tramways ought to be utilised for this purpose, especially in great industrial areas such as that of which Sheffield is the centre. Neighbouring towns require to be linked up together by a continuous system of tramway traction. Yet the Select Committee has disapproved of a clause providing for the linking up of the tramways of Sheffield with those of other localities. Sheffield Corporation will not, we hope, take this rebuff as final, and they may look for support from other Corporations owning tramways. Bodies like the Association of Municipal Corporations, or the Municipal Tramways Association, should make their influence felt in a matter which is of importance to every town in which there is a tramway system which can be utilised to meet local transport requirements. With such influence at work there should be found means at no distant date of reversing the decision.

## TRAMWAYS (BOARD OF TRADE) COMMITTEE.

(To the Editor of THE TRAMWAY AND RAILWAY WORLD.)

Sir,—It was announced a few days ago that Mr. A. H. Pott, late Engineer and Manager of the London United Tramways Company, had been appointed to an important position under the above Committee.

It will be remembered that when the President of the Board of Trade originally proposed to appoint a Tramways Controller, in the person of Mr. James Devonshire, Managing Director of the London United Tramways Company, the Municipalities, having regard to the magnitude of their interests, as compared with Company interests, were immediately up in arms, and strong representation were made to Sir Albert Stanley on the subject. Eventually a compromise was reached, whereby the present Committee was set up, consisting of Municipal and Company Representatives, with Mr. James Devonshire as Chairman.

Even this arrangement was looked upon with some suspicion, but it was felt that the Municipal Representatives might at least be strong enough to safeguard Municipal interests, but the recent appointment makes one wonder whether this is so. In any case, the whole business looks like a job. The London United Tramways Company is in the hands of a Receiver. The Directors promote a Bill in Parliament to enable a financial reconstruction. Their Manager and Engineer is superseded—he is now given a job under the Tramways (Board of Trade) Committee. There are sinister rumours that Mr. Pott was appointed only by the casting vote of the Chairman (Mr. James Devonshire), who, as already stated, is also Managing Director of the London United Tramways, and, further, that at least two of the Municipal Representatives recorded their votes in favour of the appointment, although I am glad to know that three others strenuously opposed it.

It will be interesting to know whether the appointment has to be confirmed by the President of the Board of Trade. If this be the case, it behoves the Municipalities to consider what action they will take, for it looks as though the Tramway Industry of the country is to be controlled by company interests and company officials. In the meantime, the Executive Council of the Municipal Tramways Association should demand some explanation of the action of the two gentlemen who are supposed to represent them on the Tramways (Board of Trade) Committee.

4th November, 1918. TRAMWAY MANAGER.

## SUGGESTIONS FOR RURAL TRANSPORT.

In the course of his inaugural address as President of the Institution of Civil Engineers, Sir John A. F. Aspinall, the General Manager of the Lancashire and Yorkshire Railway, indicated several directions in which improvement is required in order to increase the economy of railway transport. A most important question in his view is the increase of the structure gauge, which limits the loading gauge and therefore the external dimensions of the wagons that can be employed. On British railways he stated that there are no fewer than 66 different loading gauges applicable to 150 sections of lines, all of which have to be taken into consideration in connection with the forwarding of rolling stock ; and of about 100 large and small separate companies with a track of 4 ft. 8½ ins. gauge. The maximum number which can accept loads of one of the largest loading gauges is 18. The structure gauge at present is also the main difficulty in the way of the standardisation of rolling stock, including locomotives. As regards future railway construction, he pointed out that many hundreds of miles of 60-centimetre gauge lines have been laid by the British in France, and he suggested that when these are brought home they might be used for agricultural lines, built in the most economical way without the restrictions of existing light railway or tramway legislation.

**Price of Tires.**—The makers of tires for tramway cars have decided, in consequence of recent increases in wages and in the cost of coal, to advance the price of driving tires £1 per ton, and that of pony tires £1 10s. per ton as from October 1.

**Workmen's Cars for Workmen.**—The West Hartlepool Trade Union Council are asking that workmen's cars shall be used for workmen only. It is complained that it is almost an impossibility to get inside the cars, and that the men—probably leaving their work overheated—have to get on the unprotected top of the cars in all weathers.

## PARCEL TRAFFIC AT SHEFFIELD.

SELECT COMMITTEE OF THE HOUSE OF LORDS CURTAILS CORPORATION'S BILL.

The Sheffield Corporation (Consolidation) Bill, which has been before a Select Committee of the House of Lords, contained clauses with a view to obtaining the right to convey various kinds of goods on the Corporation tramways. The Select Committee has struck out clauses which provided for the carriage of "animals, goods, and minerals," and for the joining up of outside tramway systems, and allowed only the word "parcels" to remain in the clause relating to carrying.

Mr. Wedderburn, K.C., for the Corporation, urged that Sheffield tramways should be made as efficient as tramways in other cities, where the carrying of parcels and goods had proved remunerative and useful. The only opposition (counsel remarked) came from parcel carriers and the railway companies, and arose on the question of competition.

Mr. A. R. Fearnley, general manager of the Sheffield Corporation tramways and motors, stated that there had been a great public demand that the tramways should be utilised for the conveyance and delivery of parcels and goods, the present facilities being very inadequate and inconvenient for traders and public business purposes, as well as for private residents. He was satisfied that the goods traffic would cover the cost of the undertaking, but the main object of the Corporation was to supply a public need. The services for passengers would not be interfered with by the carriage of goods, which would be dealt with through central depots.

In reply to Mr. Honoratus Lloyd, K.C., for the Great Central Railway, who quoted from a Board of Trade Return, dated 1914, showing that the total receipts by all the tramways having the power to carry "goods" up to that date was £1,159, and for parcels £38,230, witness said he was surprised the figures quoted were so small.

Mr. Jeeves (for the promoters) said the figures were probably net receipts.

Witness said he did not think it untimely for Sheffield to apply for these powers while a Parliamentary Committee was considering the whole question of transport.

Alderman C. F. Spencer (chairman of the Halifax Tramways Committee) and chairman of the Leeds Fireclay Company, gave evidence of the large use made of the Leeds tramways for the carriage of fireclay, the estimate for this year being 50,000 tons. Leeds manufacturers, witness said, greatly appreciated the tramways service for the conveyance of minerals and other goods. The Leeds system was opening the eyes of municipalities to the advantages of the system.

Other opposition to the carrying clauses of the Bill came from the Midland Railway, the London and North Western Railway, and the Horse and Motor Owners' Association.

The Bill was modified by the Select Committee as stated above.

## MISCELLANEOUS NEWS AND NOTES.

**Collision at a Loop.**—A collision between two of the Lanarkshire Tramways Company's cars resulted in more or less serious injuries to 16 persons. The accident was caused by one of the cars rushing through the loop line before the other car had negotiated the loop. The front platforms of both cars were smashed and the windows damaged.

**The "Tramways and Light Railways Association Journal"** for October contains the final report of the Committee on Relations between employers and employed, and important correspondence that has passed between the Association and the Institution of Electrical Engineers in regard to electric power supply and electrical trades after the war.

**The "Safety First" Movement** is to be applied to other industries as well as to locomotion, through the agency of the newly formed British Industrial "Safety First" Association, which include representatives of employers and employees. Inquiries as to membership should be addressed to the hon. secretary, Mr. H. E. Blain, at 31, Westminster Broadway, London, S.W.1.

**Women Employees in Italy.**—The rules of the Italian Ministry of Industry regarding the employment of women in tramway services fix eighteen and twenty years as the minimum age for conductors and drivers respectively. The employment of women during the night hours is prohibited, and the provision of shelters, apart from those used by the men employees, is compulsory.

**Post-War Priority Council.**—The War Cabinet recently set up a Cabinet Committee to deal with post-war priority questions. This Committee consists of General Smuts, the President of the Board of Trade, the Minister of Labour, the Minister of Shipping, the Minister of Munitions, and the Minister of Reconstruction, and the Secretary is Colonel Byrne, C.M.G., 11, Pall Mall, London, S.W. A Standing Council on Post-War Priority has been appointed to assist the Cabinet Committee, and is now at work. The Council has already had before it a survey of the existing stocks of the more important raw materials, and is giving urgent consideration to the question of releasing such materials from any form of control at the earliest possible moment. It is the intention of the Council to consult the trade bodies concerned with regard to any matters affecting the industries they represent, and, by taking them into their confidence, to make the utmost possible use of their organisations in any allocation of materials which may be found to be necessary.

**"Safety First" Neglected.**—The Glasgow Sheriff Court found in favour of the Glasgow Corporation in an action brought to recover £300 damages in respect of personal injuries sustained through being knocked down by a tramway car. The Judge came to the conclusion that the plaintiff's injuries were caused by her own negligence owing to the fact that she did not look to see the state of the traffic before she began to cross the street.

**South Shields Motor Omnibuses.**—Allusion was made in a paragraph in our issue of October 26 to the trouble that had occurred with the batteries with which these vehicles are equipped. It should be added that the batteries were changed some time ago, and that they have since run fairly satisfactorily. As feeders to the tramway system the omnibuses have proved exceedingly useful, and as they provide an extension of the tramway service they are a great public convenience.

**London County Council Expenditure.**—Expenditure not exceeding £2,000 for the horsing of tower wagons for the twelve months commencing May 1, 1918, has been sanctioned. Expenditure has also been sanctioned for (1) Rewinding of armatures for electric cars, £5,350; (2) purchase of articles for tramway maintenance purposes and the execution of small works and repairs, £78,796 8s. 7d.; (3) purchase of track rails, £2,500; (4) repair of cable, £450; (5) purchase of metals, £2,808 5s. 8d.

**Tramway Workers' Demands.**—Representatives of tramway employers have met representatives of the National Transport Workers' Federation and discussed the new claims recently put forward by the latter, which were given in our issue of October 19. As a result the Federation has withdrawn for a time certain demands, including those dealing with spread-over times. The request for increased wages is to be referred to the Committee on Production. Several conferences of tramway authorities in regard to the matter have been held.

**Metropolitan Tramway Managers' Association.**—A meeting of the members of this association was held at the Municipal and County Club, 2, Whitehall Court, Whitehall, S.W. recently; there were present:—Messrs. Ullmann (East Ham), Hammond (Metropolitan Electric), Harvey (Ilford), Murray (Walthamstow), Williams (Erith), Bruce (London County Council), Mason (South Metropolitan), Mackinnon (London United) and Goodyer (Croydon). Messrs Ullmann, Hammond and Goodyer, were respectively re-elected chairman, vice-chairman and hon. secretary.

**Extension Wanted at Edinburgh.**—Edinburgh Town Council has received a communication from the County Council of East Lothian regarding (1) the desirability of more convenient transit facilities between the County and Edinburgh; (2) the formation of a new route from near Wallyford to the South Side of Edinburgh; and (3) the question of the extension of tramway facilities, and suggesting a meeting between representatives of the Midlothian County Council and the Corporation on the subject.

**For Tramway Cars** and other passenger transport vehicles, Triplex safety glass claims merits which entitle it to careful attention as being an unsplinterable glass. It is described on the cover pages of an acceptable publication, issued by the Triplex Safety Glass Company, Ltd. This takes the form of a Triplex complimentary edition of the London Time Table and Red Rail Guide, containing particulars of train services arranged for the most part in alphabetical order, with tabular details regarding the Metropolitan area.

**Misunderstanding Causes Strike.**—There was a short strike on the part of the employees on the Lincoln Corporation tramways owing to a misunderstanding as to the date from which the recent increase of wages should commence. This had escaped adjustment at the stipulated time owing to the absence of the general manager and electricity engineer (Mr. S. Clegg). The representatives of the employees had an interview with Alderman W. S. White (chairman of the Electricity and Tramways Committee), and the misunderstanding was quickly set right, the service being resumed after a suspension of about two hours.

**Parcels Carrying at Glasgow.**—A proposal of the Tramways Committee to carry parcels on the tramways, and the suggestion of the general manager (Mr. J. Dalrymple) that an experiment might be made on the route to Uddingston, was the subject of some discussion at the Glasgow Corporation. Councillor Montgomery (convener of the Tramways Committee) stated that the general manager was extremely anxious that the experiment should be tried. It was not proposed to carry parcels on the ordinary cars or by means of a trailer. It was proposed to have a special car for the purpose. On a motion to disapprove of the experiment there was an equality of votes—30 in favour of the experiment and 30 against. The Lord Provost gave his casting vote in favour of the experiment, which will therefore be made.

**Judgment for Bristol Company.**—Judgment was given in the Bristol County Court for the Bristol Tramways and Carriage Company in an action brought to recover damages alleged to have been caused through being thrown from a tramway car. The Judge said he could not say he was satisfied that it had been proved to him that negligence on the part of the company was the cause of the accident. He drew attention to the fact that the car did not stop at the stopping-place, and though that did not entitle plaintiff to damages, he had considered whether he should mark his sense of that negligence by depriving the company of costs. Perhaps, as plaintiff had sustained serious injuries, the company would not ask for costs. For the company it was stated that they would not. His Honour then entered judgment for the defendants, without costs. On behalf of the plaintiff a retrial was suggested. An application to this end was allowed to stand over, as was the question of costs.

Digitized by Google

**Car Collides with Charabanc.**—In the Edinburgh Court of Sessions, an action by the Autocar Bus Company, Ltd., Dunfermline against the Dunfermline and District Tramway Company, Ltd., for £70, in respect of damage done to a motor charabanc by a tramway car, was decided in favour of the tramway company. The motor charabanc was being towed westward by a motor omnibus, and seeing a tramway car approaching to the eastwards, the driver of the omnibus drew in to the left in order to stop and allow the car to pass. While the charabanc was stopped clear of the rails it was not sufficiently clear to allow the car to pass. The result was that the car collided with the charabanc and damaged it.

**Yorkshire Tramway Managers' Association.**—At a meeting recently at Leeds tramway offices, the following members were present:—Messrs. W. E. Nicoll (Barnsley), A. Daggett (Leeds), J. W. Galloway (Halifax), G. H. Browne (Mexboro' and Swinton), S. W. A. Sturman (Sheffield), H. L. White (Grimsby), R. H. Wilkinson (Huddersfield) W. J. McCombe (Hull), R. L. Acland (Chesterfield ) E. Cordukes (Scarborough), J. B. Hamilton (Leeds), E. A. Paris (Yorkshire Woollen District), C. J. Spencer (Bradford), W. McGibbon (Ossett), E. S. Rayner (Doncaster). A number of interesting matters were discussed such as uniform clothing for linesmen, the right of employees to wear union badges, reinstatement of discharged soldiers, etc.

## PERSONAL.

**Mr. Cyril Tomlinson** has been added to the directorate of the Norwich Electric Tramways Company.

**Mr. W. Y. Anderson** has been appointed commercial engineer of the City of Birmingham Electric Supply Department.

**Mr. T. R. Whitehead,** general manager and engineer of the Coventry Corporation Tramways, has been granted an increase of salary from £700 to £800 per annum.

**Mr. C. J. Spencer,** late tramways manager for Bradford, has received a farewell presentation from the employees of the Corporation tramways department, at a gathering at the depot, presided over by Mr. J. W. Dawson (assistant electrical engineer). The gifts, which included a clock, bronzes and an illuminated address, were handed to the recipient by Mr. T. Stirk (traffic superintendent). Speeches expressing high appreciation for Mr. Spencer were made by Alderman E. Priestley (chairman of the Tramways Committee), Councillor I. F. Akeroyd (deputy-chairman), Mr. H. Kershaw (Tramway and Vehicle Workers' Association), and Mr. W. Wood (engineering shop steward). In his response Mr. Spencer said that for twenty years they had been creating and working a machine which made it possible for people to get out from slum areas into the fresh air. That machine had undoubtedly given the things it was intended to give. One of the first effects had been a lowering of the death-rate. They might all feel proud that they had been able to make Bradford life happier and better.

The death at Clapham at the age of 78 is announced of **Mr. Victor Gerard**, who was for many years continental traffic manager to the London, Brighton and South Coast Railway. He retired in 1898, owing to ill-health, after nearly forty years' service with the Company.

The death at his residence near Bolton at the age of 81, is announced of **Mr. Edward Bennis**, founder and managing director of Edward Bennis and Co., Ltd. He was born in Limerick in 1838, and educated at the Quaker College at Newtown, Waterford. A few years after entering business he retired on a competency. Subsequently he re-entered commercial life and invented a self cleansing furnace for boilers, ultimately establishing works at Bolton, from which several important improvements were turned out. The business developed largely and there are now branch establishments or concessionaires in most countries.

## FINANCIAL.

**Siemens Brothers and Co., Ltd.**—An interim dividend at the rate of 10 per cent. per annum, free of tax, is announced.

**Bruce, Peebles and Co., Ltd.**—A dividend is announced at the rate of 7½ per cent. per annum, less income tax, on the cumulative participating preference shares, for the half year ended June 30.

**The A.E.G. of Berlin.**—The directors estimate that the profits for the year 1917-18 will be sufficient to enable the company to pay a dividend of 14 per cent. For the previous year 12 per cent. was paid.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Nov. 6 amounted to £62,480, an increase of £8,362 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Nov. 6 (thirty one and a half weeks) the total receipts were £2,053,641, an increase of £300,213 on the corresponding period of 1917.

**Hurst, Nelson & Co., Ltd.**—The report for the year to July 31 states that there was a net profit of £56,763. A dividend of 10 per cent. on the ordinary shares, or a bonus of 5 per cent., free of tax, is recommended, with the placing of £20,000 to general reserve (making £90,000 in all), and the reserving of £12,000 for payment of half-yearly dividend on preference shares in May and an interim dividend at the rate of 5 per cent., free of tax, on the ordinary shares and the carrying forward of £20,843.

**Dunlop Rubber Co., Ltd.**—A circular issued by the Secretary of the Dunlop Rubber Co., Ltd., states that the issue of the report and balance-sheet for the year ended August 31, must be considerably delayed, owing to the continued depletion of the staff and the great increase in business (amounting practically to 50 per cent.). The directors, being of opinion that a further distribution to the ordinary shareholders should be made now, have declared an interim dividend for the half year ended last August of 1s. 6d. per share on the ordinary shares.

**Wallasey Corporation Tramways.**—The accounts for the year ended March 31 show a traffic revenue of £82,024, which, with £450 received from advertisements and sundry small sources of income, gave a total revenue of £82,562. Traffic accounts amounted to £20,697, including £15,240 for wages. General expenses totalled £6,625 and repairs and maintenance £7,664. The cost of current at 1s. 4d. per B.T. unit was £11,935. War service allowances accounted for £2,040, and war bonuses to employees for £4,830. The total of working expenses was £54,397. There was a balance carried to net revenue account of £28,164, out of which contributions were made to interest on loans and sinking and reserve funds, and £11,000 was allocated to the borough fund in aid of the rates, being the largest amount yet available for that purpose, as compared with any previous year.

**Bradford Corporation Tramways.**—A statement has been submitted to the Bradford Tramways Committee as to the six months from April 1 to September 30, in comparison with the results of the corresponding period of the year preceding. The receipts were £243,280, as compared with £203,592, an increase of £39,688, which is largely accounted for by the fact that during four months increased fares have been charged. Owing to various circumstances the number of car miles run has fallen from 2,858,344 to 2,573,434, a decrease of 284,910. The number of passengers carried has also dropped from 42,893,176 to 40,136,206, a decrease of 2,756,970. The receipts per car mile have risen from 16d. to 21·18d. Wages have risen to £114,072, as compared with £90,695. The allowances paid to dependents of sailors and soldiers, which are included in the wage totals, were £15,218, as against £9,943.

**Dick, Kerr and Co., Ltd.**—The report for the twelve months ended June 30, 1918, shows that the company has again had a prosperous year. The dividend of 10 per cent. is maintained on the ordinary shares, and a balance of £37,860 is carried forward, which is somewhat larger than the amount brought forward last year. As in each of the previous three years, a sum of £25,000 has been set aside to supplement the special reserve for contingencies. The net profit at £87,916 is lower than in the previous year, but the difference may be accounted for by the higher allowance made for excess profit tax. The total sum available is £123,989, which has been allocated as set out in the table below, in which a comparison is given with the results of the four preceding years :—

| | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ | £ |
| Net profits .. .. | 87,916 | 95,465 | 71,740 | 46,959 | 44,761 |
| Balance from last year | 36,073 | 20,397 | 18,347 | 25,526 | 10,325 |
| | 123,989 | 115,862 | 90,087 | 72,485 | 55,086 |
| Debenture interest & trustees' fees .. | 9,829 | 10,188 | 10,490 | 10,538 | 10,961 |
| Premium on debenture stock redeemed | 300 | 300 | 300 | 300 | 300 |
| Dividend on 6 per cent. pref. shares.. | 21,000 | 18,300 | 18,300 | 18,300 | 18,300 |
| Dividend on ordinary shares .. .. | 30,000 (10%) | 26,000 (10%) | 15,600 (6%) | — | — |
| Reserve against contingencies .. .. | 25,000 | 25,000 | 25,000 | 25,000 | — |
| Balance carried forward .. .. .. | 37,860 | 36,073 | 20,397 | 18,346 | 25,525 |

Although the amount of excess profit levy under the Munitions of War Act has not been finally settled, the directors believe that the reserves which they have made in the accounts for extra depreciation, special taxation, etc., are sufficient. All the works have been fully occupied during the year, although in the case of the United Electric Car Company a considerable portion of the time has been occupied in extensions and alterations necessary to produce important work of a nature specially suited to that establishment.

## Important Announcement

The whole of the shares of THERMIT LIMITED are owned by

NOBEL'S EXPLOSIVES CO. LTD.

THERMIT, LIMITED, originally established in 1904, are the owners of the Alumino-Thermic Process Patents, and are in no way connected with any other firm or firms adopting somewhat similar titles.

REG. TRADE MARK.

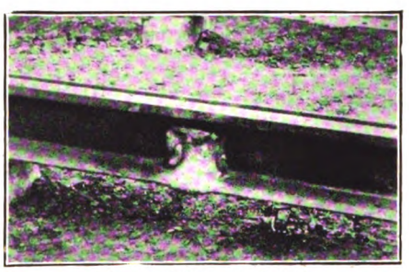
*Entirely British owned and managed*

**We are the Pioneers in THERMIT Welding in the U.K. We guarantee all joints made with our THERMIT by our trained men. We not only** weld new rails on new and reconstruction work, but we are now able to place at your disposal a satisfactory process for welding joints on existing track.

# OUR THERMIT JOINTS

Will reduce your maintenance costs and add years to the life of your rails and track.
Ensure a permanently smooth rolling surface and prevent any knocking noise such as is caused by cars passing over uneven joints.
Give a perfect and permanent electrical conductivity without the use of bonds.

Rail Welding



Finished Thermit Joint

**THERMIT joints have stood the test of many years' traffic on most of the leading tramway systems of the U.K. and the Colonies.**

*Our knowledge and experience are at your disposal*

# TRAMWAY FOUNDATIONS

Doncaster Corporation Tramways. Borough Surveyor: F. O. Kirby, Esq., A.M.I.C.E.
Foundations repaired and strengthened by reinforcing with B.R.C. Fabric.

THE first essential of a good tramway track is a good foundation. Concrete reinforced with B.R.C. Fabric provides a perfect resilient foundation in any class of ground. The Fabric makes the concrete several times as strong, and prevents cracking and disintegration. Where B.R.C. Fabric is used, the maintenance charges on bad ground are reduced to the same figure as on perfect ground.

The British Reinforced Concrete Engineering Co., Ltd., Head Office: 1, Dickinson Street, Manchester Works: Trafford Park, Manchester

# THE PARAGON EARTH CONE

is the safest, surest and most reliable. Careful tests have proved that its geometrical form provides a good contact. Will carry heavy currents for short periods without overheating. THE PARAGON EARTH CONE is made of pure copper—perforated—and filled with charcoal. This attracts the moisture and ensures a certain contact. Suitable for Electric Railways, Tramways, Telegraph, Telephone, Electric Light, Power, Lightning Conductors, etc.

# THE AUTOBUS IN THE TRAMWAY WORLD.

**Motor Traffic Section.**

When "The Tramway and Railway World" was founded in 1892, motor traction was, of course, scarcely dreamt of, but the avowed object of the paper was to encourage all new methods that gave promise of usefulness.

In pursuance of that policy the progress of motor traction received early attention. Commenting on the historic motor parade to Brighton in 1896, "The Tramway and Railway World" predicted that

> "It would give a prodigious impulse to transport both by road and rail."

Within a decade this prophecy was abundantly fulfilled and so much space had been devoted to the new industry that in 1906 a special

## MOTOR TRAFFIC SECTION

was added. Every illustrated issue thus contains a section devoted especially to motor cars for Public Service, and includes articles on current topics, illustrated descriptions of new types of vehicles and accessories, and the latest news.

**Public Service Motor Cars.**

The importance of this section will be gathered from the fact that an increasing number of the leading municipal authorities, railway and transport companies, now own and operate large fleets of motor vehicles, including omnibuses, chars-a-bancs, motor lorries for the transport of goods, parcel delivery vans, tower wagons, motor street sweepers, and a variety of other types.

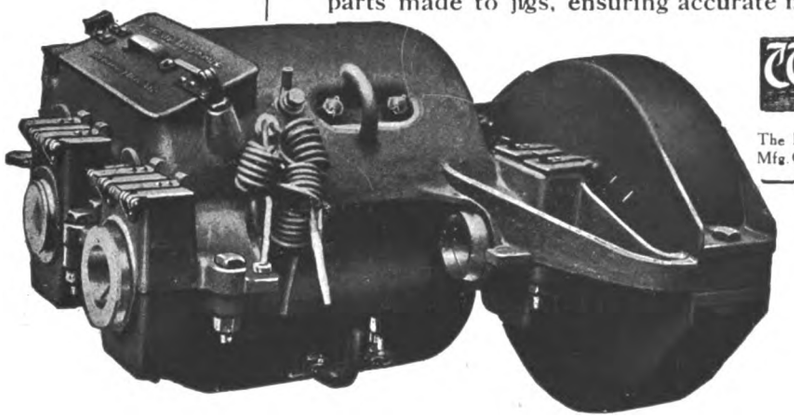
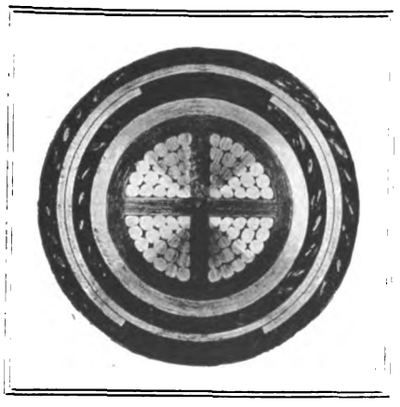
## Over 4500 Westinghouse
# Tramway Motors

have been supplied to the London County Council and the Glasgow Corporation. These motors are famous for their efficiency and low maintenance costs. All renewable parts made to jigs, ensuring accurate fitting of spare parts.



Westinghouse
Manchester

The British Westinghouse Electric and Mfg. Co Ltd., Trafford Park, Manchester



*·075 sq. in. Cable, Class 202, Paper Insulated, Lead Covered, Served, Steel Tape Armoured and Served.*

# HENLEY CABLES

EVERY year we manufacture tens of thousands of miles of small electric wire insulated with Vulcanised India Rubber, in addition to Paper insulated Mains.

WE have separate factories (at North Woolwich and Gravesend, England), each devoting its energies to one type.

YOU should ask us to quote for your requirements in *any* size or type of Electric Cables for use under any working condition.

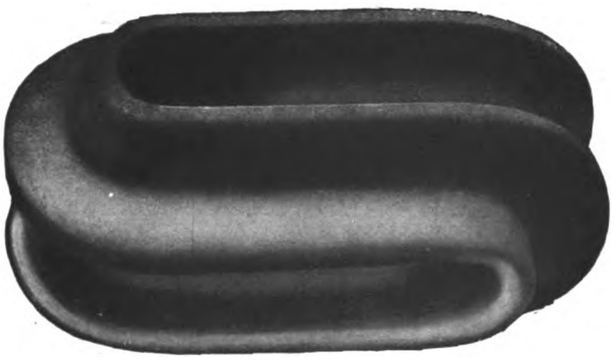
# PRESCOT INSULATORS



Regd. No. 639667/14.

These Insulators are insulators all through and do not depend on the attractive green glaze for their insulating qualities.

They are designed to maintain their alignment when erected, and their mechanical and electrical factors of safety are high.

**The following are particulars of the sizes stocked:**

| | D 4411 | D 4412 |
|---|---|---|
| Working Load ... ... ... | 500 lbs. | 2,500 lbs. |
| Breaking Load ... ... ... | 2,000 lbs. | 10,000 lbs. |
| Flash over Voltage (dry) ... ... | 20,000 A.C. | 30,000 A.C. |
| Flash over Voltage (wet) ... ... | 2,000 A.C. | 10,000 A.C. |

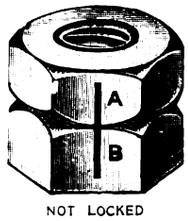
# BASIC ENGINEERING PRINCIPLES

## Certainty Simplicity Economy

# VISLOK

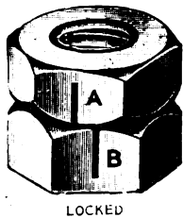
## the Reliable Safety Lock Nut undeniably based on these Principles

**Certainty** Completely eliminates the cause of Nuts dropping off instead of merely attempting to nullify the effect of Vibration. Automatically locks by taking up all slack between its own and the Bolt threads. Automatically adapts itself to varying thicknesses of the Bolt. The working Load pressures increase the Lock. Two sections hydraulically forced together—inseparable.



NOT LOCKED

**Simplicity** Like an ordinary Nut is "put on" "taken off" "Locked" and "Unlocked" by any Standard Spanner. Can be locked in any unsupported position. Will not slack back. Can be operated by anyone. Prevents accidents to Life and Property. Saves Labour and Material.



LOCKED

**Economy** Will last as long as an ordinary nut. Does not damage the Bolt threads, nor bruise its own threads. No previous preparation of Bolt required. Does not require special Bolts. Can be repeatedly re-used. No separate parts. No periodical inspections or tightenings. Properly fixed as per instructions Vislok remains firm for all time.

Please ask for our "Nutology" brochure, proving how and why VISLOK DEFIES VIBRATION, and

# Brill "Radiax" Truck.

NO sub-truck. This in itself distinguishes the Brill "Radiax" from other Radial Axle Trucks. At one stroke we dispose of the dead weight and complication of a sub-truck to carry the motor and brake gear. In the Brill "Radiax" the motor casing is utilised to connect the axle to the motor suspension, which is bolted to the transverse member swinging on a king bolt. In this way we secure simplicity and fewer number of working parts. Another outstanding feature of the design is the very simple method in which we attain return of the axles to parallel after leaving a curve. On straight track, the truck frame is resting on the two pins at the base of each swing-link mounted in the yokes. On a curve, the angle of the link causes the frame to bear on one pin. The superimposed car body weight is thus resting on one pin, and an immediate and powerful tendency is set up due to this weight to return the other pin to its groove. Thus the body weight is acting as an automatic factor in securing car stability. This simple, but effective device, permits a free radial movement, and at the same time preventing any cornerwise swinging of the car body. The brake gear has been given special attention, and is operated from the same transverse swinging member, hence the wheels and axles, the motor, and the brake gear swing or radiate as one unit. This "Radiax" Truck is operating in Great Britain with the greatest success. Details gladly sent.

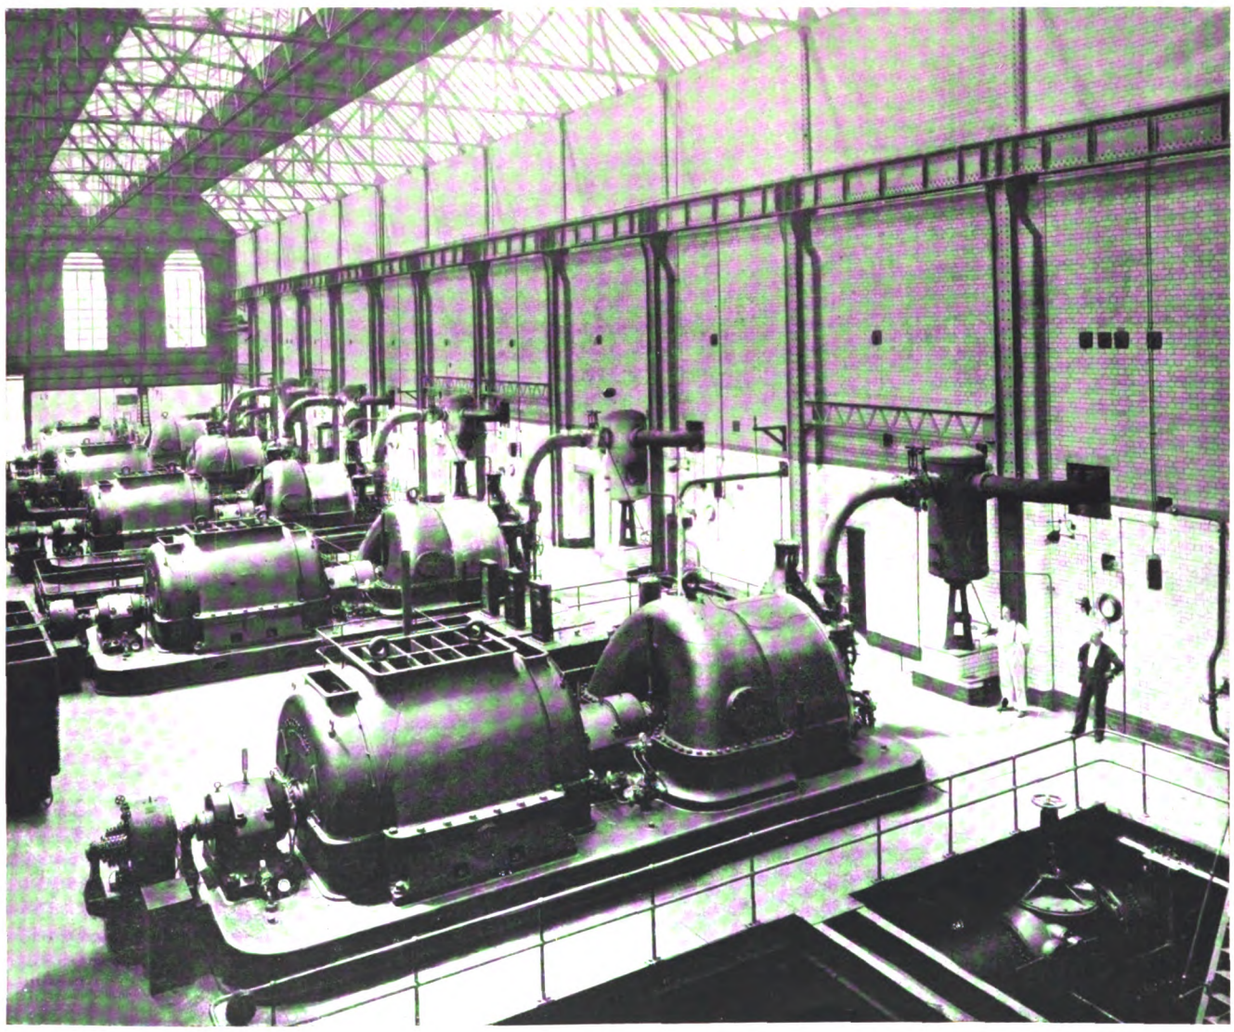
THE Tramway & Railway World
WITH MOTOR TRAFFIC SECTION

Founded 1892. LONDON, NOVEMBER 14, 1918. VOL. XLIV.

# THREE YEARS OF ELECTRIC TRACTION ON THE SOUTH WESTERN RAILWAY.

At the end of October occurred the third anniversary of the beginning of regular service by electric traction on the London and South Western Railway between Waterloo terminus and Wimbledon, via East Putney. Early in the following year the service was extended to the Kingston and Richmond loop and the Shepperton branch, and before the end of that year electric trains were running to Hounslow, Hampton Court, and Claygate, completing the whole of the scheme that was then in hand, comprising 47 route miles. A great improvement was at once made in the service. Stops at stations were cut down, and this, coupled with rapid acceleration and higher maximum speed than had been given by the steam trains, reduced the schedule time appreciably. The intervals between trains were also shortened, and a ten-minutes' service of electric trains was run on the Kingston loop, which is one of the most important of the suburban services. The company have made good use of new opportunities, and the public have been quick to appreciate the improvement, with the result that traffic has largely increased. Although the exact figures have not been divulged, it is known that the directors are well satisfied with the equipment and the results that have been obtained.



Engine Room of London and South Western Railway Electric Power Station.

Digitized by Google

A full description of the installation was given just after the opening of the first section in our issue of November, 1915. This included illustrations of the interior of the power-station, in which not all of the power units were then completed. The engine-room as it now appears is illustrated in the accompanying photograph, for which we are indebted to Messrs. Dick, Kerr and Company, the contractors for the turbo-alternators, which comprise six main sets of 5,000 KW. capacity each. The interior, of which a portion is shown in the photograph, measures 257 ft. long by 55 ft. wide. The main generators run at 1,500 revolutions per minute, and produce three-phase alternating current at 25 cycles at a pressure of 11,000 volts.

There are also three auxiliary sets, consisting of Parsons' turbines driving Dick-Kerr direct current generators through reduction gearing. These turbines run at 5,000 revolutions per minute, and the generators at 575. The output of each unit is 400 KW. at 220 volts. The turbines are of the high pressure impulse type, and run at 1,500 revolutions with a pressure of 200 lb. per square inch, the steam being superheated at 200 deg. Fahr.

The main alternators are connected to the turbines by flexible couplings, and are rated at 5,555 KVA. They yield three-phase current at a pressure of from 11,000 to 11,500 volts. Each machine has its own exciter mounted on the end of the shaft, and is of the totally enclosed chimney ventilated type. The steam pipes are arranged on the unit system, a group of boilers supplying each main turbine, but the boilers and turbines can be opened out to a 14-in. common main in order to give greater flexibility in working. The steam is taken from each boiler by a 7-in. pipe, and these pipes lead into a 10-in. main. Condensed steam is removed by separators.

The power-station adjoins the main line at Durnsford Road, Wimbledon, and immediately adjacent are extensive car sheds and repair shops. The site is well situated for the distribution of electricity to the suburban lines. For condensing purposes water is taken from the River Wandle, which is near at hand, and as the ground slopes gradually towards the power-house and the river, it was possible to arrange for the discharge of coal from the railway wagons directly into the bunkers of the boiler-house.

The electrical equipment of the rolling stock, which has given very satisfactory service, was provided by the British Westinghouse Electric and Manufacturing Company. The trains are made up of three coach units, consisting of two motor coaches with a trailer coach close coupled between them. Each train is equipped for multiple unit working, and the individual three coach units, which form convenient and handy units for traffic, are intended to be permanently coupled. The three-coach train weighs 94 tons empty, and seats 190 passengers. It is equipped with four 275-H.P. motors, running at 500 revolutions per minute. The motors are arranged in pairs on the bogies underneath the driving compartments at the opposite ends of the unit.

**London and South Western Railway Electric Power Station, Trains, and Train Sheds.**

The successful operation of the electric trains during the past three years, the great addition to the capacity of the railway, and the immense gain in public convenience and comfort form convincing demonstrations of the great advantages of electric traction in railway service. The results obtained have not been without influence in official quarters where the desirability of applying electricity to railway operation as soon as possible is, it is understood, now fully recognised. Progress in this direction has been lamentably slow, but there is now a good prospect that electrification will be undertaken on a large scale.

# CENTRAL ARGENTINE RAILWAY ELECTRIFICATION.

(*Continued.*)

### Condensing Plant.

The condensing water is taken from a pump house on the River Lujan through two 27-in. diameter pipes about 500 yards long, and is discharged into a small creek somewhat nearer the power station, called the Rio Rosquetes. The condenser shells are cast iron and the tube plates are rolled brass 1⅛ in. thick. The tubes are ¾ in. external diameter and are solid-drawn copper of No. 18 S.W.G. Aluminium blocks are fixed in the water chambers in metallic contact with the tube plates. The air and water extraction pumps, together with their driving motor, are mounted on one bedplate.

The circulating water-pump bodies are of cast iron and the impellers are of gun-metal. The circulating water-pump motors are housed in a steel-framed, corrugated iron-sheeted house, erected on a wooden jetty projecting from the bank of the river. The site of the jetty was dredged before the wooden jetty piles were driven and each pump is mounted in a tank, so that its centre line is approximately at high water level. The suction pipe is carried to such a depth as to ensure its being submerged in all states of the river. One side of the jetty consists of two screens of expanded metal, arranged so that one screen at a time can be raised for cleaning. Flexible couplings are provided between the motors and the pumps to allow for settlement and straining of the jetty.

In addition to the main circulating-pump motors the jetty carries a centrifugal pump capable of delivering 300 gallons per minute against a head of either 20 or 95 ft. This supplies water through a 6-in. diameter pipe, either to the purified water reservoir or direct to the storage tanks in the pump house. Two motor-driven air exhausters are also located in the pump house, each capable of producing in three minutes a vacuum of 20 in. in any one of the main pumps, including its suction pipe and discharge pipe up to the discharge valve.

The main pump motors are started by means of oil-immersed auto-starters, consisting of two separate single-phase transformers and the starting switch. Each motor is connected by a separate cable to one of the unit distribution boards in the power house.

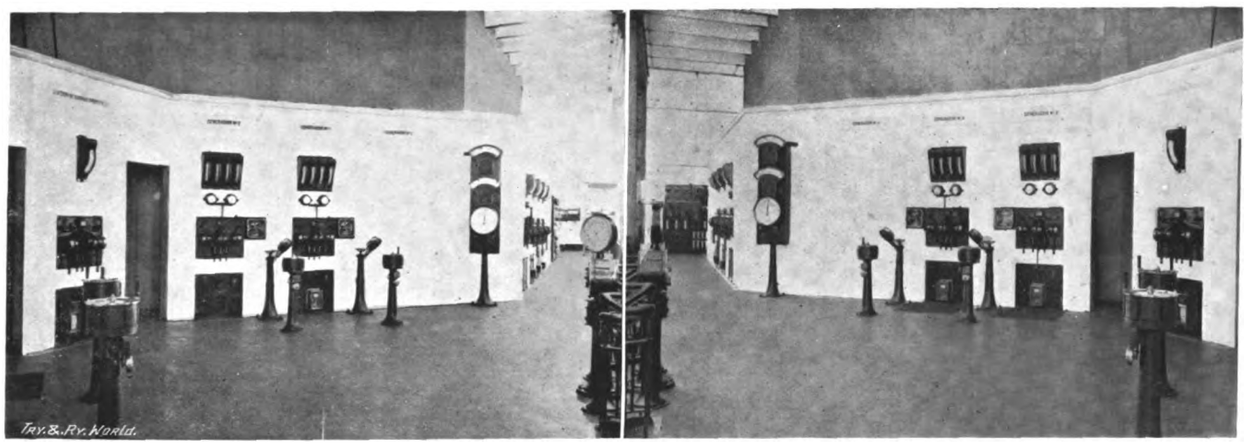
Owing to the swampy nature of the ground between the river and the station, it was not possible to lay the circulating water pipes direct in a trench. Instead they were erected on cross bearers carried by pairs of wooden piles driven down to the tosca. The cables are carried on angle irons supported from the cross timbers. Where the inlet pipes cross the Rio Rosquetes they are carried on a steel girder bridge. The pipes are of steel and are lapped with tarred Hessian tape.

### Power Station Switchgear.

All main switching is carried out at 20,000 volts. The main switchgear is located in a bay on the side of the engine room opposite to the pump house and boiler house, the operating gallery being raised about 4 ft. above the engine room floor so that the operator has a good view of all the machines. The generator panels, which are in the middle of the gallery, are set round a recess so that all the instruments and gear can be seen from one position (Figs. 8 and 9). The station transformer and feeder panels stand on either side of the generator panels parallel to the axis of the engine room.

Each operating panel consists of two cast-iron plates built into a wall of moulded concrete, 11 ft. high, faced with glazed tiles; this wall is set forward 3 ft. from the main panels and at the back carries the auxiliary wiring which is run as vulcanised indiarubber cable on porcelain racks. In the case of the generator panels the instruments (of the edgewise pattern and comprising an ammeter, voltmeter, power-factor meter, and indicating wattmeter) are mounted on the wall above the upper cast-iron plate. Below them are the red and green indicating lamps, which show whether the oil switch is closed or open. The upper cast-iron plate carries the oil switch operating handle, and, interlocked with it, the handles controlling the cable and busbar isolating switches. Below the oil switch lever are the automatic trip coils, and above it the time limit fuses. The voltage regulator is mounted on the wall to the left of the plate. The bottom plate carries the integrating wattmeter, the exciter field switch, the governor control switch, and the change-over switches for the voltage regulator and the ammeter.

In front of each generator panel is a pedestal carrying the exciter ammeter and the handwheel (Figs. 8 and 9) which operates the exciter field rheostat, mounted on an intermediate floor in the basement. A second pedestal carries the transmitter of an electrically-operated telegraph by means of which the switchboard attendant can communicate with the driver when synchronising. Similar instruments mounted at the front of the gallery give communication with the boiler house.



**Figs. 8 and 9.—Generator Panels of Main Switchboard.**

Digitized by Google

The main panels are formed of moulded concrete cubicles 5 ft. wide; the main wall is 9 in. thick, and the sides of the cells are 4 in. thick. Intermediate floors, 4 in. thick, separate each cubicle into five storeys, which (starting from the bottom) are occupied as follows:—(*a*) Potential transformers (Fig. 10); (*b*) cable isolating switches and current transformers; (*c*) oil switch (Fig. 11); (*d*) busbar isolating switches;

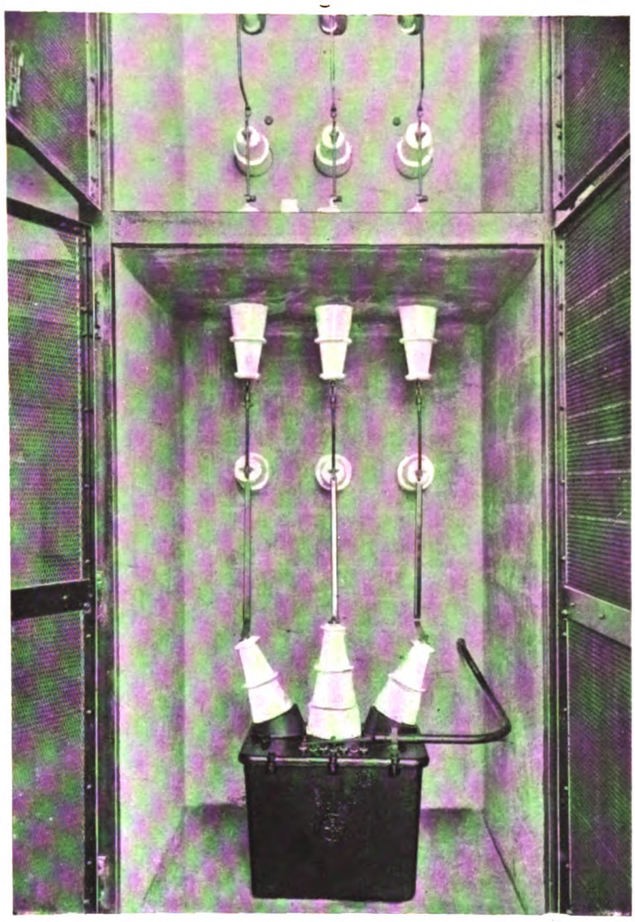


Fig. 10.—Switchgear Cubicle with Potential Transformer.

(*e*) busbars. The different compartments are protected by screens of expanded metal, interlocked with the isolating switches, so that they can be opened only when these switches are open. The whole structure was moulded in position, the holes for the apparatus being cored out so that no cutting of the work was required. Porcelain only is used for insulation and in general connections are made with bare copper, a minimum spacing of 15 in. between phases and to earth being adopted; where there is risk of conducting fumes causing short circuits the leads are covered with porcelain tubes. Small wiring in the cells is kept down to a minimum, and is run as rubber-covered cable on porcelain cleats.

The three phases of each high tension switch are contained in one tank, which is built up of wrought-iron plates, with special stiffening channels to take care of the maximum pressure generated in the tank when the switch opens on a fault. A vent pipe leads from the top of the tank to the outside of the switch cubicle to carry off any gases that may form. The leads to the switch terminals are introduced into the tank through cast-iron "U" bends filled up solid with compound. Provision has had to be made for the expansion of this compound in hot weather, otherwise the bends or porcelains are liable to crack.

The current transformers are compound-filled and ironclad. They are of two types, one suitable for mounting against a wall, the other passing through the floors between the compartments of the panels. The use of the latter saves floor insulators and economises space. On the generator panels current transformers are provided for the instruments, the protective devices and the voltage regulators.

The potential transformers are oil-immersed and self-cooled. Isolating switches and fuses are installed between them and the cable terminals, so that a faulty transformer can be isolated from the rest of the switch gear.

Permanent testing busbars are provided in the generator panels, connection to the main switch being made by removable jumpers. A water resistance was provided for taking the load of a generator under test; it consisted of three sets of wooden tanks mounted on insulators and with a partition down the middle. The water passes up one compartment and down the other, leaving the tank at the end at which it entered. The dimensions of each tank are:—Length of water column, 6 ft.; width, two columns each 9 in. wide; depth, 1 ft. 6 in. The leads are attached to plates slung from a carriage which can be moved along the tank to regulate the load on the generator. During the tests

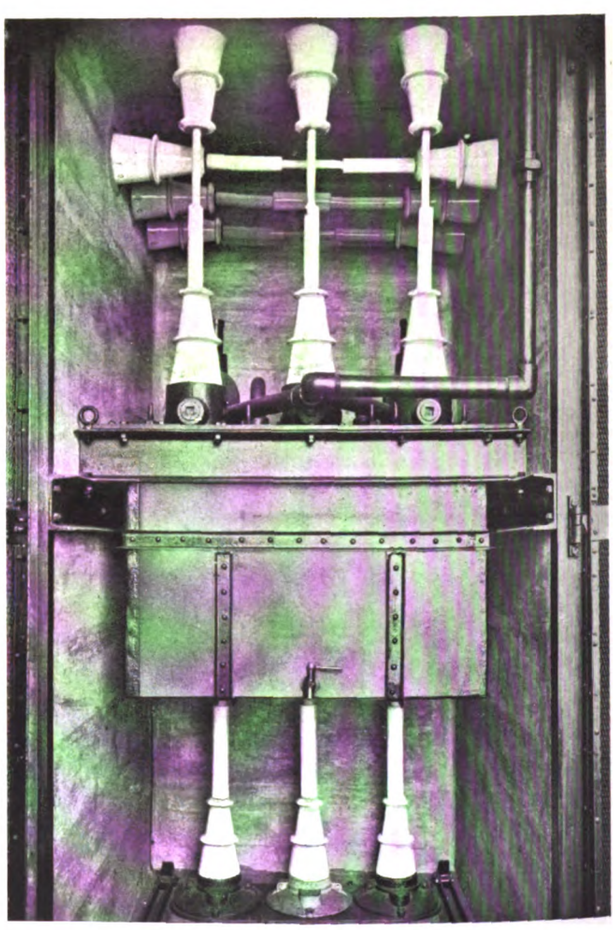

Fig. 11.—Switchgear Cubicle with Oil Switch.

on the machines, considerable difficulty was experienced in preventing the sides of the tanks from charring, and ultimately concrete tanks were constructed.

The unit distribution boards are built up of enamelled slate panels and have the busbars mounted in front; porcelain handle fuses connect the busbars to studs which pass through the slate to the motor leads at the back. The oil switch controlling the feeder cable

Digitized by Google

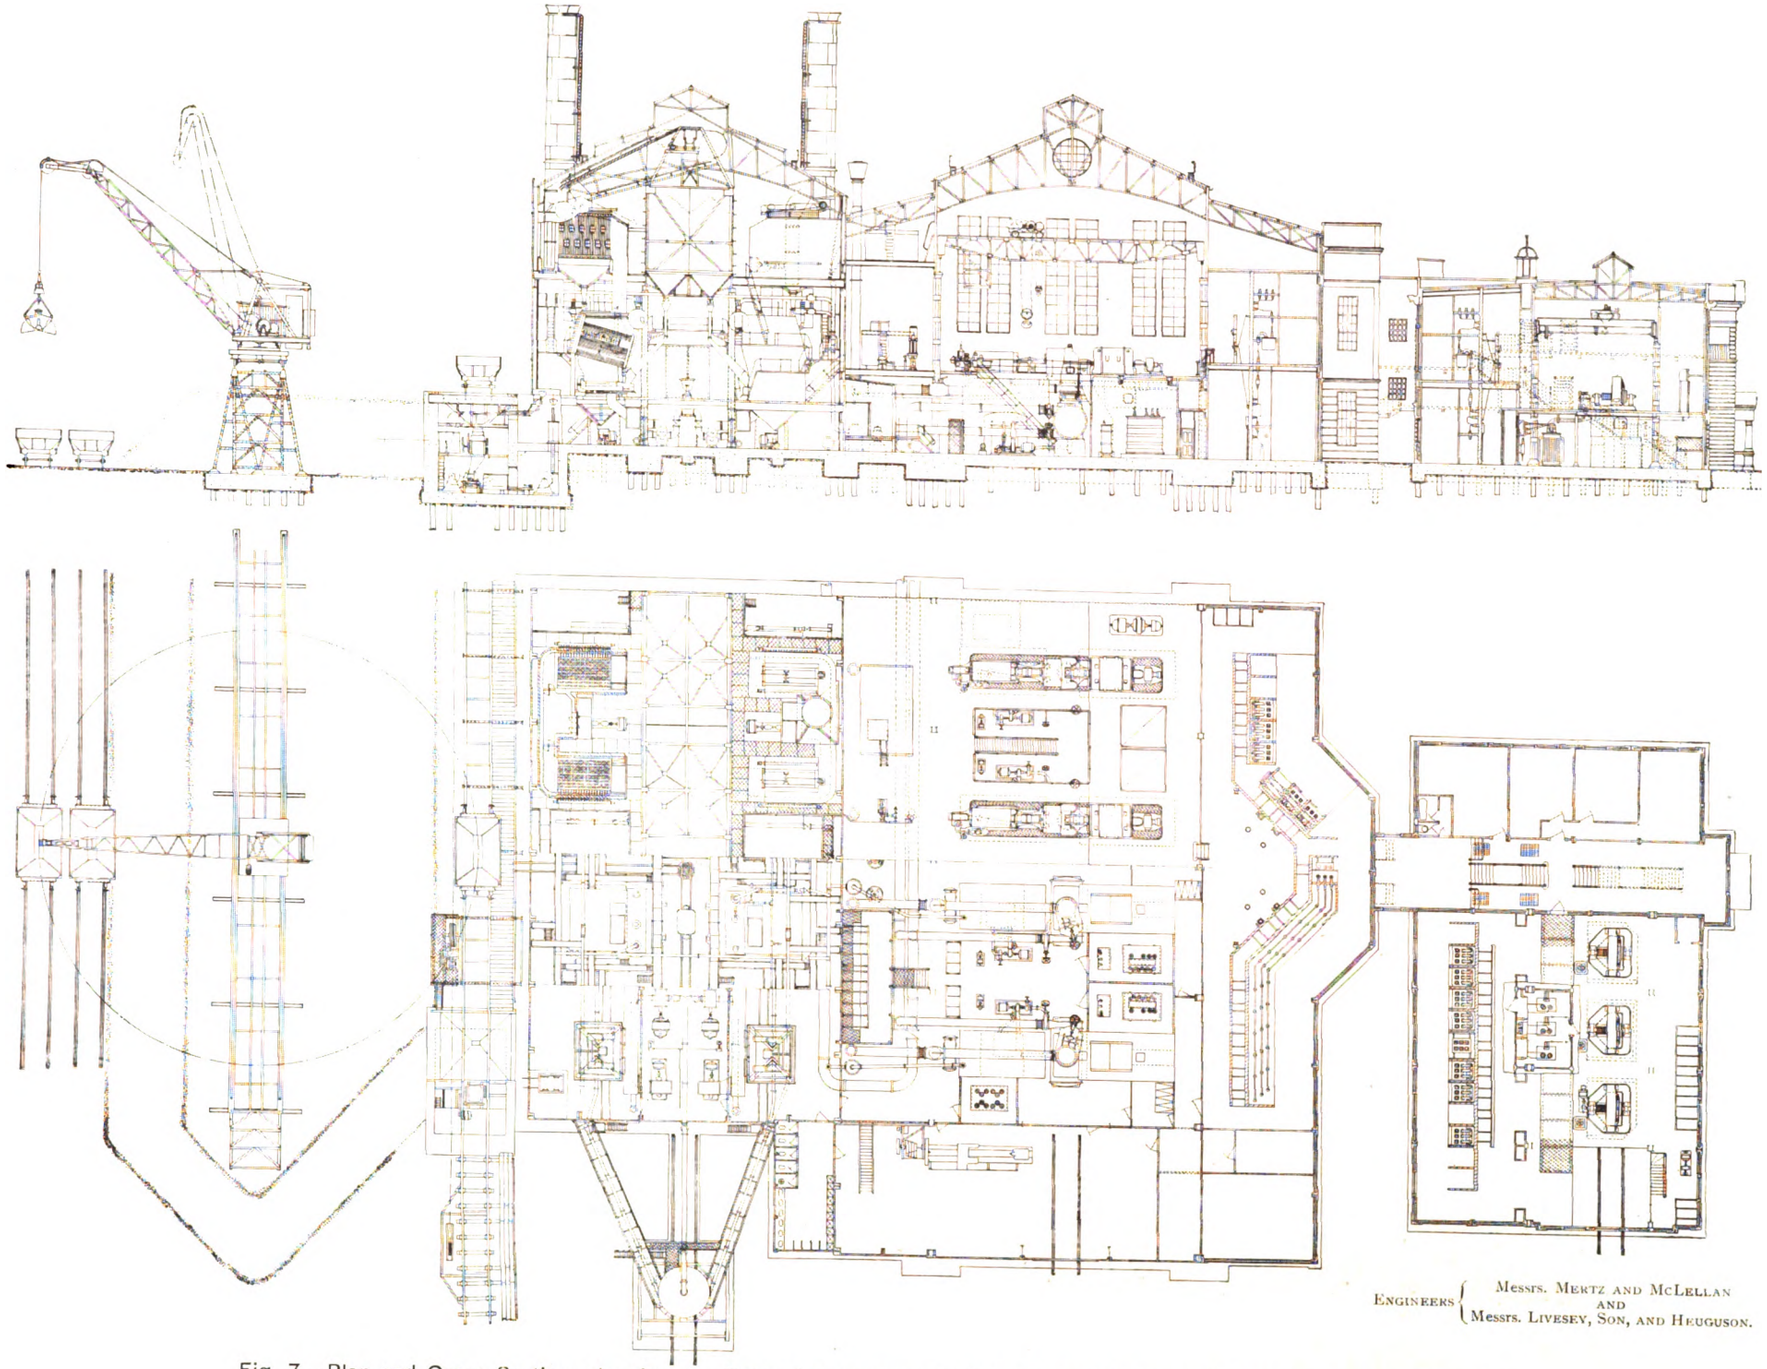

Fig. 7.—Plan and Cross Section, showing the General Arrangement of the Power Station and Coal and Ash Handling Plant at San Fernando, Central Argentine Railway.

Digitized by Google

Digitized by Google

from the unit transformer is mounted at the back of the panel along with the current transformers for the trip coils and instruments. Busbar isolating switches are mounted on the front of the incoming feeder panel.

The main motor distribution board is of slate panels similar to the unit distribution board. It is surrounded with expanded metal to prevent articles from falling on it from the engine room floor above.

Feeders are run from the station distribution board to the station auxiliaries and also to the unit distribution boards, so that the latter can be made alive when a supply is not available from the unit transformers, e.g., when starting up or shutting down a generator. In order to avoid any risk of paralleling a generator out of phase through its unit transformer the switches on the two feeders to each unit distribution board (viz., from the unit transformer and the station distribution board) are interlocked, so that only one can be closed at once. They are also so arranged that the change-over from one supply to the other can be so quickly effected while the auxiliary plant is running, that there is no appreciable drop in the speed of the motors.

At each end of the switchboard gallery is installed a 110-volt d.c. board to control the supply from the lighting motor-generators to the lighting circuits and the batteries. Two 250-ampere-hour Tudor batteries provide current for the indicating lamps on the main switchboard, the trip coils of feeders, electric telegraphs and a stand-by to the lighting system. The end cells of each battery are cut in or out of circuit by a solenoid-operated remote-controlled regulating switch.

The switchgear in the jetty pump house consists of seven ironclad switch panels.

The protective gear used for all high pressure apparatus in the power station and on the system is of the Merz-Price type. Low tension panels with oil switches are equipped with overload trip coils and time-limit fuses.

## Cables.

When the scheme was under consideration the split conductor system of feeder protection had not been sufficiently tried out to justify its adoption in foreign work of such importance. Accordingly the high-tension transmission system consists of 20,000-volt underground feeders, with three simple cores, and of pilot cables for the protective devices. A system of telephone cables was also installed. Two high-tension cables are laid through the streets from the power station to the nearest point of the electrified railway track. Then they run, one on each side of the line, to Olivos sub-station, the western one being looped into Victoria power and lighting sub-station. A third feeder is taken from the power station to Olivos along the track *via* Anchorena. Two feeders run from Olivos sub-station to Palermo sub-station and two from Palermo sub-station to Retiro power and lighting sub-station.

The high-tension cables (Fig. 12) are ·1 sq. in. in section, 3-core, paper-insulated, lead-covered, single-wire-armoured; the pilot cables for the protective gear are ·005 sq. in. in section, 3-core, paper-insulated, lead-covered, single-wire-armoured; the telephone cables are 8-pair, dry-core, air-spaced, paper-insulated, lead-covered, single-wire-armoured, and suitable for the use of superimposed circuits where necessary. Both below and on top of the armour all cables are served with specially compounded waterproof preservative coverings.

In general the three types of cables are laid in the same trench at a distance of about 1 in. from each other. Above the high-tension cable and about 4 in. from it is laid a creosoted plank, 8 in. by 2 in., to protect the cables in case of future excavations. The high-tension cables were shipped on drums in lengths of 100 metres. On the Company's land the cable trenches were kept as far away as possible from the rails, the depth of the trench being at least 1 metre. Where an embankment extended to the boundary fence the trench was taken down till undisturbed ground was reached. Where the cables cross bridges they are supported on cast-iron racks attached to the structure. Sheet steel

**Fig. 12.—Sections of High and Low Tension Cables.**

covers are fixed over the troughs to shield them from the direct rays of the sun.

The feeder from the power station to Olivos *via* Anchorena is taken across the Canal San Fernando, which is navigable for barges and small boats, in a concrete tunnel driven under in the bed of the canal. The internal diameter of the tunnel is 3 ft. and of the shafts 4 ft.

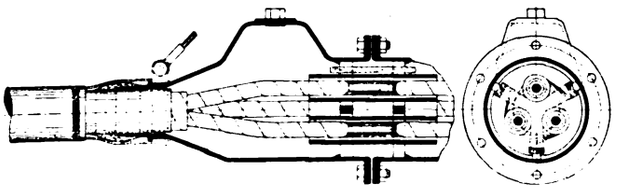

**Fig. 13.—Joint on 20,000-Volt Cable.**

All joints in the high-tension cables were made in gun-metal sleeves (Fig. 13) wiped to the lead of the cable, the sleeves themselves being surrounded by a creosoted wooden box with an iron cover. The sleeves were filled with compound, great care being taken to avoid producing cavities in the filling. Wherever the armouring is interrupted the joint is spanned by a copper bond of ·05 sq. in. section. After laying and

Digitized by Google

jointing, the high-tension cables were tested by applying for 15 minutes a pressure of 40,000 volts between any core and the lead and between any two cores.

The direct-current feeders from the sub-station to the track and the jumpers spanning gaps in the conductor rail are of 1 sq. in. section, paper-insulated, vulcanised-bitumen-sheathed, taped and braided. They are laid solid in Key's fibre conduit filled with Trinidad bitumen. The conduits are $4\frac{3}{8}$ in. external diameter and about 5 ft. long, the joints between conduits being made by fibre sleeves. The cables are supported in the conduits by fibre bridges. A creosoted plank is laid over the conduits.

The telephone system installed in connection with the electrification works provides communication between the power station and the sub-stations, the car sheds and the signal cabins in the electrified area. Twenty-two wire exchanges of the Sterling automatic type are installed at Victoria and at the power station.

### Traction Sub-Stations.

The line at present electrified is served by three traction sub-stations situated respectively as follows :—

San Fernando sub-station about $1\frac{1}{2}$ miles from the outer end of the line.

Olivos sub-station about midway along the line.

Palermo sub-station about $2\frac{1}{2}$ miles from the city terminus. (Between Palermo and the terminus four tracks are equipped electrically.)

The buildings are all of the same general design, being steel-framed structures walled with brick covered with armoured cement plaster. The floors and roof are concrete reinforced with Clinton fabric, the roofs being flashed with $\frac{3}{4}$ in. of rock asphalt. Palermo sub-station is surrounded by a public park, and the Government consequently called for a more ornate structure than was required for the others. Provision is made at the sub-stations for housing the attendants.

Each building is divided into three main aisles, the centre one containing the rotary converters and transformers, and the side ones containing the high-tension and direct-current switch gear respectively. There is a loading bay at one end into which a siding comes, so that railway trucks can be brought under the overhead crane which traverses the whole building. Provision is made for extension of the building at the end away from the loading bay when it is necessary to instal further converter sets. The basement contains the main transformers, the potential and current transformers, the high and low tension feeders, rotary field rheostats, and battery. On the first floor are situated the rotaries, the 800-volt switchgear, a motor generator, and, on a raised gallery, the high tension operating gear.

The high-tension gear is similar to that in the power station; the busbars are sectioned and interconnected by an oil-sectioning switch, the two halves of the bars being fed by different cables.

The direct-current switchboard is built up of panels supported on a pipe framework. A single-pole circuit-breaker with overload and reverse current tripping coils, and a knife switch which isolates the circuit-breaker from the busbars, are mounted on a marble panel at a height of about 8 ft. from the floor (Fig. 14). Marble partitions between adjacent panels form separate cubicles, and prevent the arc from a breaker which opens on a fault from travelling to adjoining switches. The switches are operated through wooden rods and porcelain insulators by handles which project through cast-iron panels mounted about 14 inches in front of the marble slab. In this way all live metal in front of the board is placed out of reach of a person standing on the floor. The generator panels carry handwheels for operating the rotary field rheostats which are mounted in the basement directly below the board. Differential relays are provided to prevent a circuit-breaker being closed when the polarity of its rotary is reversed. These operate in conjunction with indicating lamps, which light up in such circumstances.

In the table below particulars are given of the principal plant in the traction sub-stations. The

Details of Plant in Traction Sub-Stations.

| | |
|---|---|
| Number of rotary converter sets at present installed... | In sub-station at Canal San Fernando, 3.<br>Do. Olivos, 3.<br>Do. Palermo, 3. |
| Type of rotary converters ... ... | British Thomson-Houston Company's compound-wound; commutating pole; six-phase diametrically connected. |
| Output of rotary converters ... | 1,000 KW. at 800 volts, normal rating; 1,500 KW. for two hours; 2,000 KW. for ten minutes; 3,000 KW. momentarily. |
| Type of rotary converter transformers ... ... | British Westinghouse Company's; single-phase; oil-immersed; naturally-cooled. |
| Capacity of transformers ... ... | 375 KVA. |
| Type and capacity of station transformers ... ... | British Westinghouse Company's; three single-phase; oil-immersed; naturally-cooled; each of 20 KVA. capacity; ratio of transformation 20,000 to 440 volts. |
| Type and capacity of station lighting transformer ... | British Westinghouse Company's; one single-phase; oil-immersed; naturally-cooled; 10 KVA. capacity; ratio of transformation 440 to 110 volts. |
| Type and capacity of motor generator | British Thomson-Houston Company's; 5 KW. capacity; a.c. voltage 440; d.c. voltage 110. |
| Type and capacity of air compressor | Alley and McLellan; 39 cub. ft. of free air per minute at a pressure of 60 lb. per sq. in. |
| Type and capacity of ventilating fans | Blackman; 25,000 cub. ft. of air per minute. |
| Type and size of secondary battery | Tudor Accumulator Company's; 50 ampere-hours. |

rotary converters (Fig. 14) are self-synchronising, and are started from tappings on the low-tension side of the transformers by an oil immersed controller. Provision is made for coupling negative boosters to the ends of the shafts when the traffic increases to such an extent that the drop in the track rails becomes higher than desirable.

Special precautions have been taken to reduce to a minimum the flashing over which is liable to be caused by heavy short circuits on the track. With this object the commutator cones have been covered with projecting fibre sleeves, and all the metal near the commutators has been painted with a composition made up of half gold size and half linseed oil. In addition screens are fixed between the brush-holders to prevent flashing from entering the armature. By these and other means the number of flash-overs was reduced from an average of six per month during the first six months of operation to an average of two per month for succeeding months.

The transformers are mesh connected on the high-tension side, with tappings on the high-tension side to compensate for variations in the supply voltage, and on the low-tension side for starting. The tanks are $\frac{3}{4}$ in. boiler plate, with external tubes to provide increased cooling surface. They are arranged so that when the core has been lifted by the overhead crane it can be set down on a drip tray for examination. The chambers are ventilated by ducts carried up to the roof to Barrol ventilators; cooling air is drawn from outside the station by motor-driven fans, and passed round the foundations of the converters into the transformer chambers through an expanded-metal opening in the door.

The auxiliary equipment of each sub-station includes a bank of three single-phase transformers, which gives a supply to the motor-generator, air compressor used

Digitized by Google

for cleaning purposes, ventilating fans, and the lighting transformer. The motor-generator gives a direct-current supply at 110 volts for charging the battery used for the tripping and indicating circuits and emergency lighting.

### Negative Busbar Pilots.

In Canal sub-station a panel is installed carrying two centre zero voltmeters connected to pilot wires running to the negative busbars of the three sub-stations. A permanent deflection of one of the pointers indicates to the sub-station attendant that there is a difference of potential between the busbars in two adjoining sub-stations, and that one sub-station is "motoring" the other. He can then instruct one of the sub-stations to raise or lower its voltage of supply till it is taking its proper share of the load and the transference of current ceases.

### Power and Lighting Equipment.

Two sub-stations are provided in the electrified section to give a supply for general purposes, one situated at the Retiro terminus and the other at the Victoria workshops. The former is designed to deal with the power and lighting requirements of the terminal station, train yard and offices, and to give a supply for pumping and for operating the compressors of the pneumatic signalling system; the latter supplies power and light to the workshops, locomotive sheds, car sheds, and repair shops at Victoria Station. Details of the principal apparatus are set out below.

Retiro sub-station has a frontage on the Paseo de Julio, and the external elevation has been designed to be in keeping with its location; internally the design is similar to that of the traction sub-stations.

Space is reserved in the station for three traction rotary converters which will be installed when the goods traffic in the yard and at the docks is handled electrically. The high-tension switchgear is similar to that in the traction sub-stations; the direct-current board consists of slate panels supported on a pipe framework. Battery charging boosters are mounted on the bedplate of the motor-generators and direct-coupled to the armature shafts. A battery-regulating switch of the single-sided remote-control type is installed to control the end cells of the lighting battery.

The Victoria sub-station (Fig. 15) is a small building containing two banks of transformers, with the necessary high-tension switchgear and low-tension panels. The high-tension switchgear is of the standard type; the low-tension board consists of slate panels mounted on pipe framework with expanded metal screens enclosing the back of each panel. The low-tension feeders are run from the sub-station as overhead lines.

The lighting of wayside stations along the electrified track is taken from the third rail, the circuits being arranged to take four 200-volt lamps in series. At Parque and Tigre vulcanised-bitumen-sheathed, paper-insulated cables of ·1 sq. in. section are taken from the third rail and track rails respectively. Elsewhere the lighting wires are taken from the board in the sectioning "casilla," a small brick chamber in which the

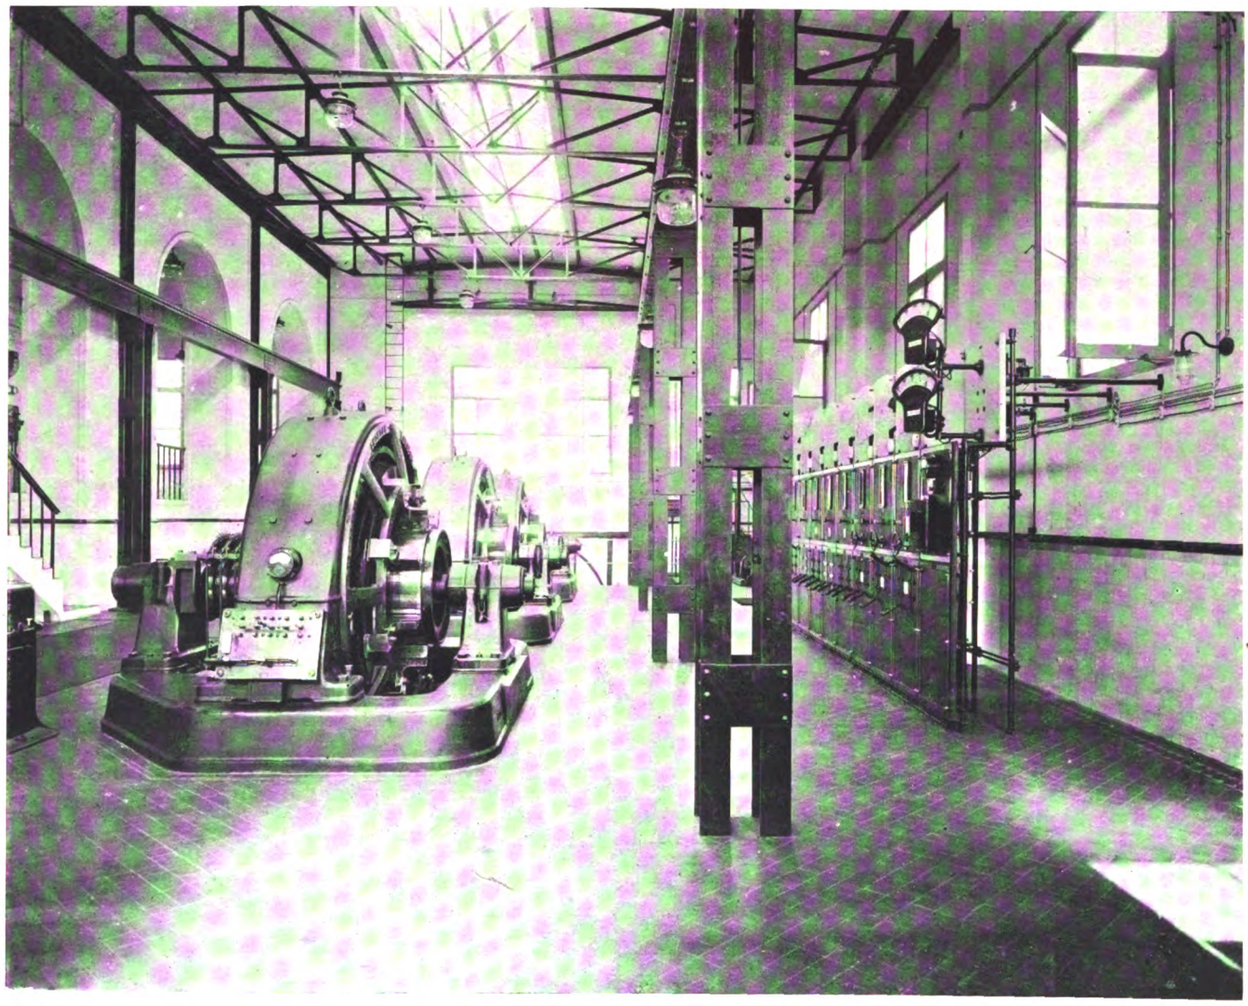

Fig. 14.—Interior of Palermo Sub-station.

Digitized by Google

track sectioning switches are housed. The main lighting panel is of slate, and carries a single-pole knife switch operated by a handle which projects through the panel, a fuse, and a voltmeter. The circuits are controlled by double-pole knifeblade switches, each circuit being protected by a double-pole fuse.

## ROLLING STOCK.

As the passenger service on the lines to be electrified is frequent and suburban only, the rolling stock equipment was naturally laid out on the multiple-unit system (Fig. 16). The stock ordered was as follows :—

55 motor coaches each equipped with two motors.
12 motor coaches each equipped with four motors.
50 trailer coaches.

All the coaches are of the saloon type, with cross seats (Figs. 17 and 18).

There are two classes of seating accommodation on the suburban trains in Buenos Aires, first and second, but the distribution of passengers between them differs from that obtaining in this country, inasmuch as the ratio of higher to lower class tickets sold is of the order of 1·4 to 1. Consequently a larger proportion of first-class coaches is required, and the numbers ordered for the electric service were :—

First-class.—52 motor, 37 trailer coaches.
Second-class.—15 motor, 13 trailer coaches.

All the coaches equipped with four motors are first-class coaches. These will be used for hauling trains made up of a motor coach at each end, and between them six first-class trailer coaches taken from the old steam stock and equipped only with control wiring to allow of the train being operated from either end by one man. These trains will be used on days of specially heavy traffic, the principal of which is Tigre regatta day, when 9,000 people have been moved by steam trains from Tigre in two hours.

The limiting features in designing the coaches were :—

(a) The high standard of comfort to which suburban passengers in Buenos Aires are accustomed.
(b) The provision of vestibule connections between coaches.
(c) The existence of low platforms necessitating steps up into the coaches.
(d) The provision of a driving compartment at each end of every coach.
(e) The use of vacuum brakes.

As is particularly desirable in a hot climate, the coaches are large and airy, the capacious loading gauge adopted by the broad gauge lines in the Argentine allowing more latitude in this respect there than in this country. The height from floor to centre line of the semi-elliptical ceilings of the saloons is 8 ft. $7\frac{1}{8}$ in., and the width between pillars is 9 ft. $7\frac{1}{2}$ in. Eight 6 in. ventilators are fitted in the roof, and four 38 in. fans are installed in the first-class coaches. The lower side lights slide upwards, and all windows are provided with upper and lower louvred shutters in place of blinds to keep out the sunlight. The shutters are covered with fine mesh copper wire gauze to prevent the entrance of mosquitoes (Fig. 18).

The minimum space which must be provided for each seated passenger is definitely set out in the Government regulations, the requirements being that the distance between seats set *vis-a-vis* shall not be less than $15\frac{3}{4}$ in., and that the length of seat shall be at least $18\frac{1}{8}$ in. and $15\frac{3}{4}$ in. per passenger in first and second-class coaches respectively. Further, the gangway between seats shall be not less than $21\frac{5}{8}$ in. wide.

Besides the provision of two classes of accommodation, the Government regulations call for at least one w.c. compartment on every local train. Space had also to be reserved in a certain number of coaches for compartments for the use of the postal service and for luggage. These requirements were met by providing a w.c. compartment in each first-class motor coach and postal, luggage, and w.c. compartments in the second-class motor and trailer coaches. Before the service started the Government, however, agreed to the removal of the w.c. compartments from the first-class coaches.

The height above rail level of the platforms on the Tigre line varies from about 6 in. to 20 in. The height above rail level of the motor coach floor is 4 ft. 2 in., and the Government regulations call for three intermediate steps. A door is provided at each end of the coach, and also one in the middle. The latter is double, the doorway being five feet wide, and intended to take two persons abreast, the streams being separated by the central door-post. As the doors have to be set back from the side line of the coach, it was not possible to arrange the sills to run beneath the body sides from headstock to headstock, or even between bolsters. In the case of the motor coaches (Fig. 17), the main longitudinals are therefore spaced at a width of 7 ft., and consist of built-up fish-bellied steel girders 2 ft. 6 in. deep in the centre, with holes cut out of the web for lightness and to facilitate access to the electrical

Digitized by Google

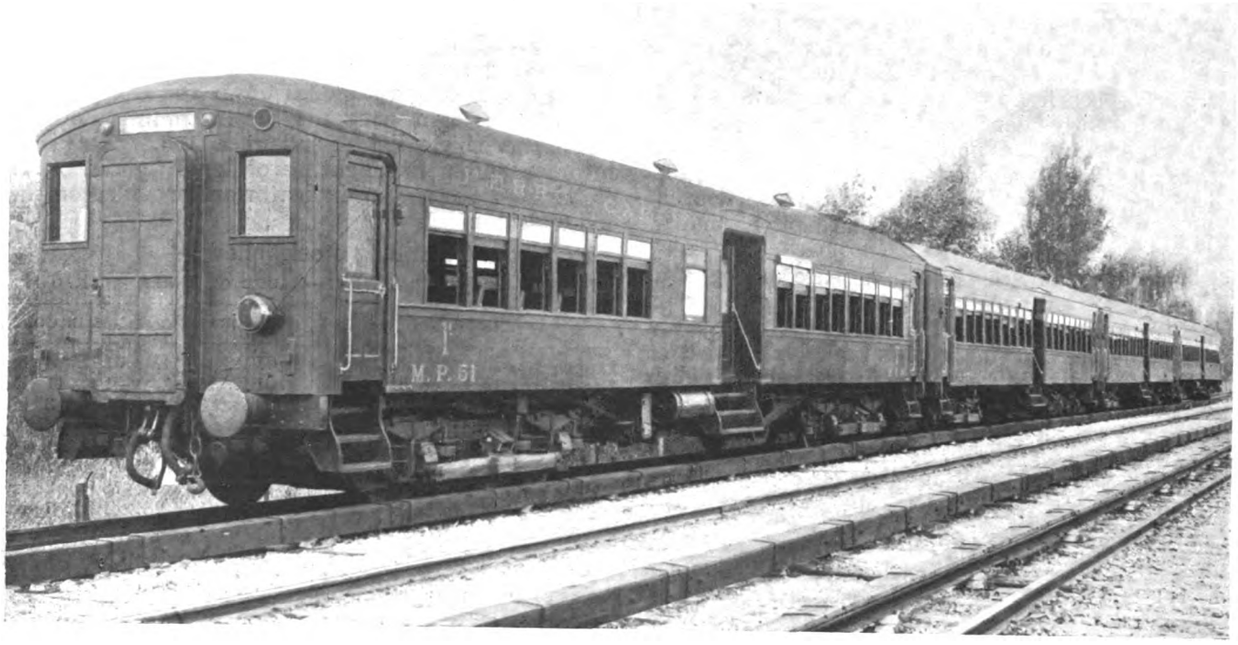

Fig. 16.—Multiple Unit 4-Coach Train—Central Argentine Railway.

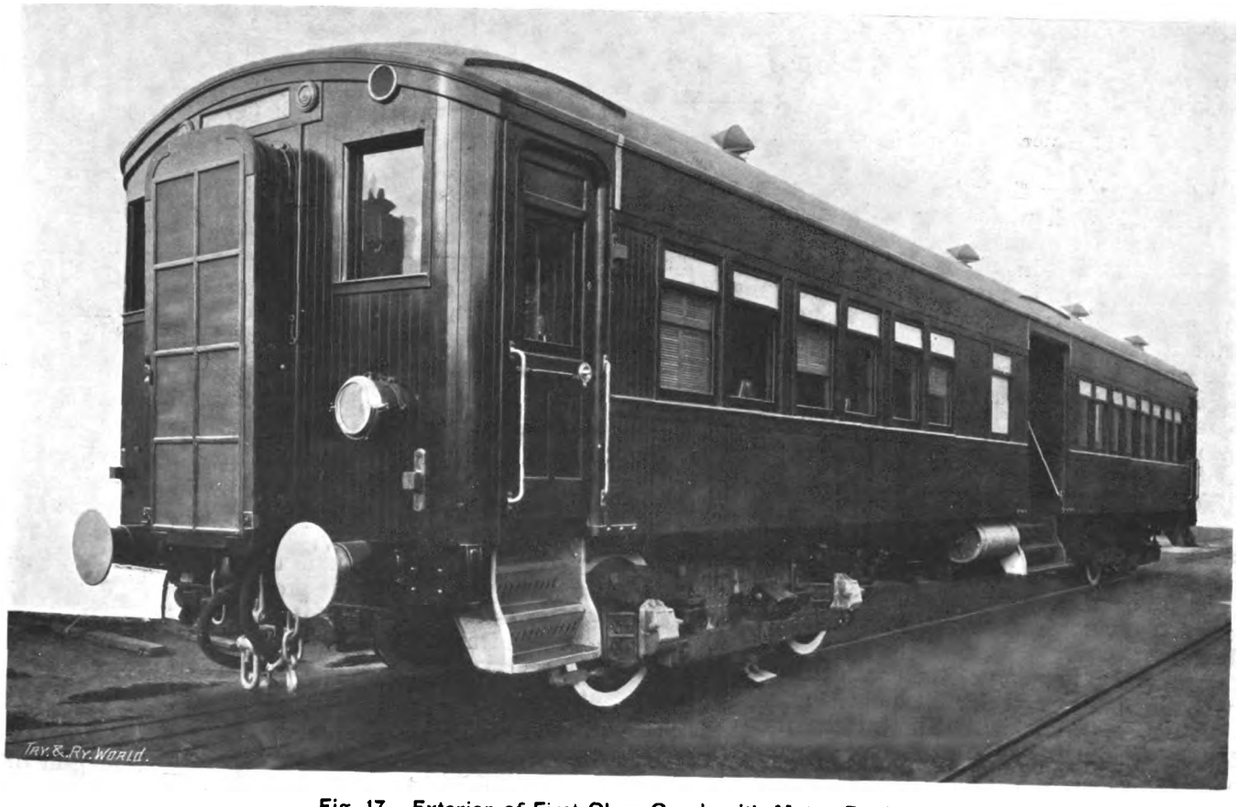

Fig. 17.—Exterior of First Class Coach with Motor Bogies.

Digitized by Google

equipment. These main longitudinals run from headstock to headstock; they support the angle bar sills, which are interrupted to clear the footsteps by means of pressed steel brackets. The main members of the trailer underframes, which are of the Livesey-Gould type, are two 12-in. channels spaced 3 ft. apart, and running from headstock to headstock; they are stiffened with king and queen trusses, and support the body sills by means of transverse cantilevers.

The motor coach floors are of steel plates $\frac{7}{64}$ in. thick stiffened with indentations; the plates are covered with "Induroleum," a non-inflammable composition which was laid at the builder's works, the whole underframe being shipped in one piece with the floor in position. The trailer coach floors are pitch pine in two layers $\frac{3}{4}$ in. thick.

The end vestibules of the coaches are arranged to serve either as entrance ways for passengers or as driving compartments for the motormen. They are 4 ft. wide and contain the driver's brake valve, master controller and hand-brake wheel. As the English rule of the road is observed on the railways in Buenos Aires, and the wayside platforms are not of the "island" type on the Central Argentine Railway's suburban lines, the driving position must be on the left-hand side

**Fig. 18.—Interior of First Class Coach.**

of the train in order that the motorman may see the guard's signals without leaving his position; accordingly the brake and master controllers are mounted on the near (or left-hand) side of the vestibule; the hand brake, which is normally operated only when entering termini, is reached by walking across the vestibule. Duplicate doors are provided so that when the vestibule is used for passengers the electrical gear is all closed off; when used as a driving compartment the step-well is covered by a $\frac{5}{16}$ in. thick chequered fall-plate hinged to the door closing the opening in the side of the coach. A removable circular seat of the "music stool" type is carried by the fall-plate, the end of the leg being placed in a hole in the plate.

In the motor coaches the vestibule also contains the panels carrying the switches for auxiliaries, e.g., lighting, control circuits, brake circuits, relays, &c., and also sundry tools, viz., short circuiting bar, hammer, pliers, rubber gloves, &c.

The concealed framing of the coaches is pitch pine; all exposed framing and the finish of the outside and of the vestibules are of teak. The interior finish of the first-class coaches is light wainscot oak and of the second-class coaches pitch pine. The ceiling sheets are white millboard on red deal matchboarding. The reversible seats in the first-class coaches are upholstered in leather; the fixed seats in the second-class coaches are framed with pitch pine slats. The roof sticks are ash or elm with ten carlines of 3 in. by 2 in. angle bar, and the roof boarding is red deal covered with canvas. The sides and ceilings were shipped in two sections; the ends of the coaches and the partitions were shipped whole, all being packed in zinc-lined cases.

The coaches were lighted by three two-light fittings, with Holophane glass globes down the centre of the ceiling, and eight pendants down the sides of each saloon. A single light pendant is fixed above each entrance and a headlight, two signal lights, and an illuminated destination indicator are provided on each end of each coach.

Details of the rolling stock follow:—

| WEIGHT OF ROLLING STOCK (EMPTY). | 2-Motor Coaches. | 4-Motor Coaches. | Trailer. |
|---|---|---|---|
| Coach body, underframe, and bogies ... ... ... ... | 39·0 tons | 40·5 tons | 33·2 tons |
| Electrical equipment ... ... | 11·5 ,, | 20·5 ,, | 1·3 ,, |
| Total weight ... ... | 50·5 ,, | 61·0 ,, | 34·5 ,, |
| Weight per passenger seat ... | 0·74 ton | 0·84 ton | 0·58 ton |

The design of the trailer cars has been slightly modified in the case of subsequent deliveries, the spacing of the body partitions and the detail of the bogie being made similar to those of the motor coaches.

## BRAKE EQUIPMENT.

The service duty required the provision of a pump for each two-motor equipment capable of exhausting 50 cubic feet of free air per minute; under working conditions of joint and valve leakage this equipment produces a 20 in. vacuum in the train system within 22 seconds after complete destruction. The brake equipment is laid out to provide a braking force of 105 per cent. and 95 per cent. of the tare weight of the motor and trailer coaches respectively. The two brake cylinders on each motor coach are 24 in. in diameter, and the capacity of each is augmented by a vacuum reservoir. In the four-motor coaches space could not be reserved for the reservoirs beneath the underframe, so they were slung between the roof and ceiling in the centre vestibule. The operating gear consists of a

Digitized by Google

partial rapid-acting valve, an emergency valve, and the driver's brake valve and controller. A Simplex gauge shows the pressure in the train pipe and a vacuum horn is connected to the system to take the place of the whistle or bell used for signalling purposes on steam lines.

### Motor Bogies.

A view of the motor bogie is given in Fig. 19. The side frames are built up of $\frac{5}{8}$ in. plate reinforced at the top by angles and at the bottom between wheel centres by channels. The headstocks are 10 in. bulb angles and the central cross member consists of two channels, 15 in. deep, superposed on two 6 in. channels, the latter forming a step or ledge $4\frac{1}{2}$ in. wide beneath the suspension springs of the motors. Diagonal stiffness is ensured by the insertion of upper, lower and intermediate sets of horizontal gusset plates riveted to the central cross member and to the channel and angle-bar stiffeners of the side frames. The connection of the headstocks to the side frames is made through corner gussets and wrappers. The bolster is built of two 10 in. channels with top and bottom cover plates $\frac{7}{16}$ in. thick. The bolster springs are of helical form with inner and outer coils 12 in. diameter outside. The centre pivots and side bearings are of cast steel. The horns of the side frames are reinforced with plates $\frac{7}{8}$ in. thick, applied externally. The horn blocks are of cast steel and are fitted with gun-metal wearing strips extending over the face and edges. The axle boxes are of cast steel, fitted with gun-metal bearings lined with white metal and with malleable iron centre-bearing keys. Each box is cast with a wing bracket at one side to take the end of the collector shoe beam. The bearing springs are of the laminated type with solid eyes; the hangers are fitted with auxiliary india-rubber springs of the oval concentric type.

The brake heads are of cast steel, each fitted with a cast-iron shoe which is secured in place by a tapered key of the standard form, with the addition of a tail piece extended downwards so as to be readily accessible from the car shed pits.

The arrangement of the brake rigging ensures uniform force being exerted on all blocks with pressures evenly distributed without any tendency to cross-bind or produce torsional stresses in the levers. The leverage of this rigging is 8 to 1. In order to provide automatic compensation for wear of the brake blocks, three sets of six coaches each were fitted with three different types of slack adjuster—the Monarch, Hills', and the nut and ratchet type. The latter consists of a tubular nut fitted in the main pull rod and rotated by a pawl and ratchet; the box which carries the pawl is formed with a segment of a toothed mitre wheel, which gears with a similar portion carried on a vertical stud attached to the crosshead at the end of the pull rod. The periphery of the second mitre wheel is anchored to the underframe by means of pitch chains which thus cause it to rotate in response to the travel of the pull rod. The range of the gear is sufficient to allow the brake piston to make a full stroke when operating through a badly adjusted brake rigging, and thus to gather the slack till the normal condition is reached. When the brake is released the pawl will cause a partial rotation of the nut whenever the working stroke is sufficient to turn the mitre gears through an angle of 60 deg.

The collector gear consists of an under-running shoe (Figs. 20 and 25), which makes contact with the under surface of a channel-shaped conductor rail. The shoe casting is carried on an oak beam fixed to lugs on the axle-boxes. The collecting skate has two motions:—

(*a*) An up-and-down movement to follow the level of the conductor rail: this is controlled by helical springs on a horizontal axle passing through the block to which the skate is bolted.

(*b*) A sideways movement to allow for the end play of the axle-boxes and want of alignment of the rail; this is controlled by leaf springs bearing on the suspension links of the skate.

The difference in the heights of the top of the skate in its extreme positions is $2\frac{1}{2}$ in.; its horizontal movement is 3 in. The average upward pressure of the skate is 28 lb. The shoe body and suspension links (Fig. 20) are cast steel, machined to gauge; the skate is cast iron and is designed to break when it strikes an obstacle. If desired the skate can be locked down in such a position that it clears the conductor rail altogether, thus enabling the equipment of a coach to be isolated. Skates run about 130,000 miles before becoming worn out.

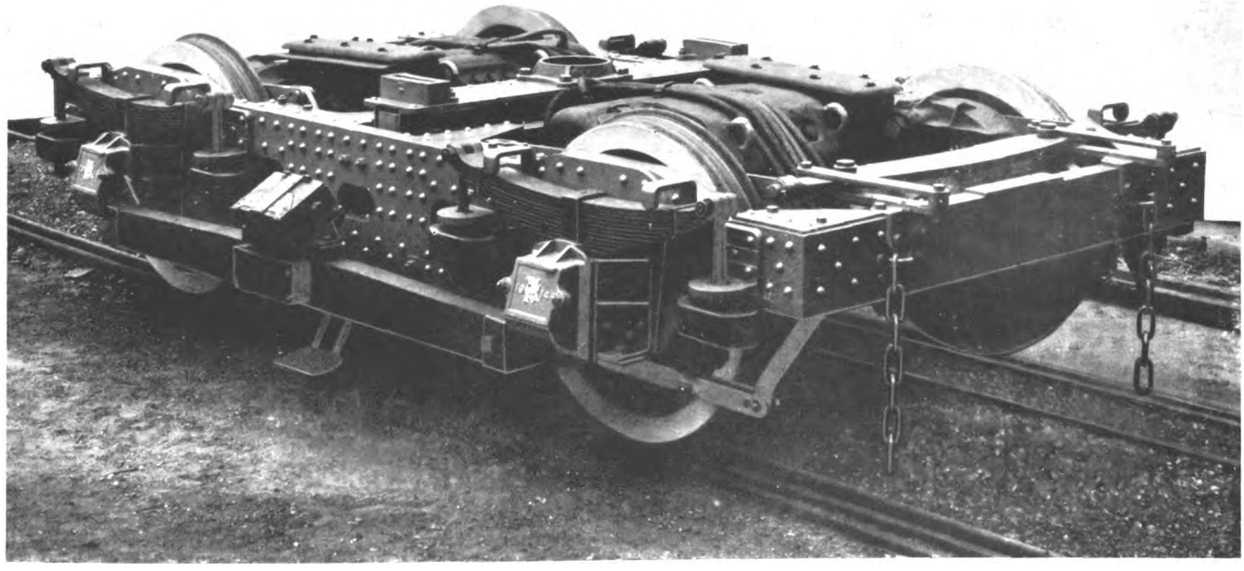

**Fig. 19.—View of Motor Bogie Carrying Two Motors.**

Digitized by Google

### Electrical Equipment of Trains.

The average distance between stations on the Tigre (Victoria) route is 1⅓ miles; the present timing of electric trains which stop at all intermediate stations is 47 minutes, giving a scheduled speed of 22½ miles per hour. This can be increased to 25 miles per hour when desired without overloading the equipment. As the average length of run is comparatively great and as there are no severe gradients on the line, it was not necessary to utilise the whole of the weight of the motor coaches for adhesion by gearing a motor to each axle. Consequently a two-motor equipment was adopted, each motor dealing with a load of about 45 tons. With the width between wheels available on the broad gauge (5 ft. 6 in.) it was possible to design a motor (Fig. 21) of ample capacity without interfering with the normal proportions of its various parts. In addition to the stopping service the trains are also required to make express or semi-express runs, stopping only at one or two intermediate stations and performing the journey at a scheduled speed of 37½ miles per hour. This condition is provided for by reducing the excitation of the main fields by 50 per cent. in one step. Details of the electrical equipment of the coaches are given below :—

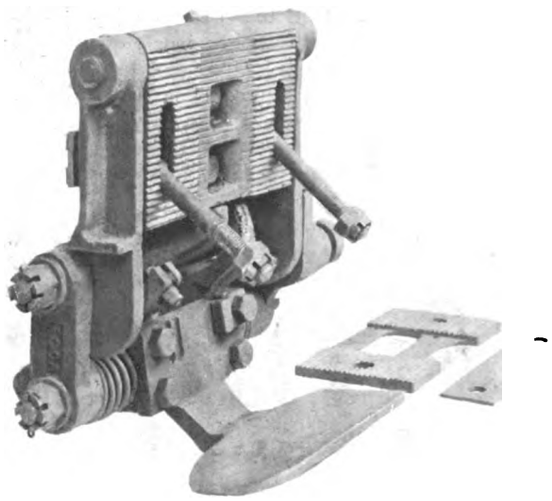

Fig. 20.—Collector Shoe and Suspension Links.

| ,, gear wheel ... ... | 70 teeth; width of face 5¼ in. Cast-steel hub with oil tempered forged steel rim shrunk on. |
| Wheel diameter ... ... ... | 3 ft. 6 in. |

The two motors (Fig. 19) mounted on each motor bogie are arranged for nose suspension from the bogie transom, the suspension nose being cushioned by springs against both upward and downward movement; they drive the axles through single pinions and gears with a gear reduction of 70:22. The clearance between the lowest point of the cast-iron gear case and rail level is 4½ in. The suspension bearings on the axle are fitted with gun-metal linings, the length of axle between bearings being protected by a housing to exclude dust. The armature bearings are gun-metal lined with white metal. Both sets of bearings are lubricated with oil and waste.

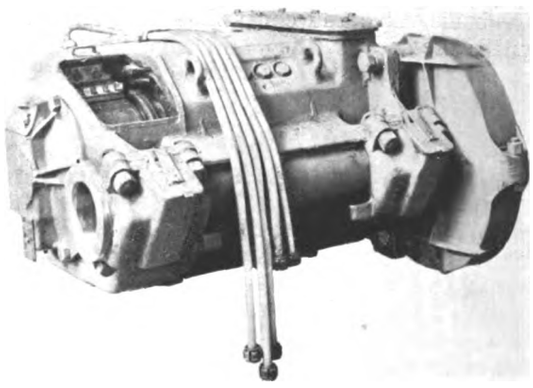

Fig. 21.—The Motor.

The motor carcase is a single steel casting, with machined seats for the four main and four commutating poles. Provision for ventilation is made in the form of a rectangular opening of 160 sq. in. at the pinion end, arranged to take a flexible duct communicating with the interior of the coach, through which the air can be drawn if it is found that there is too much dust in the air taken direct from beneath the coach. The air entering this opening passes to the commutator end between the fields and over the surface of the armature; it then returns through ducts in the core and is expelled through openings in the upper part of the end shield by a fan fixed on the armature shaft. All other openings in the carcase are fitted with watertight covers.

The armature core stampings are mounted direct on the shaft and can be kept solidly together when being pressed off by bolts passed through some of the ventilation ducts. The armature coils are made up of flat strips, insulated from each other with mica, bound together with tape, and insulated from the core with pressed mica. The field coils are copper strip, the main coils being wound on the flat and the commutating coils on edge. The two brush holders each carry four carbon brushes, the pressure on which is adjusted to 4½ lb. Each holder is carried off two porcelain insulators, the stud insulation being mica.

Fig. 22.—Contactor Interlocks.

The motors are built and insulated for a working pressure of 800 volts and the control system provides for operating with two motors in series, and in parallel with tapped field. The control at starting is automatic, the rate of cutting out series resistance being determined by a "notching" relay, which allows the contactors to close in the proper order as the main current falls to a predetermined value. The main contactors are wound

Digitized by Google

to operate with any line voltage from 480 to 850. They are 15 in number and are mounted in a sheet steel box with the front covers hinged to swing open for inspection. The interlocks (Fig. 22) which made the combinations required for the successive control steps are mounted on spindles at the back of and are operated by the contactor arms. The main resistances are cast-iron grids insulated with mica and mounted in frames carried from the underframe members by insulated bolts and bobbins. The main circuit breaker, which can be set or tripped from the driver's cab, and the reversers are mounted in watertight sheet steel boxes. All cables beneath the coaches are carried in solid drawn steel conduit, screwed into the cases containing the apparatus; where breaks are required in the cable junction boxes are provided. The conduit was erected in this country and shipped in position on the underframe, the cables being pulled in during the re-erection of the coaches in Buenos Aires.

The leads, which run from end to end of the train, are three in number:—

(*a*) The train line, a single-core cable.
(*b*) The pump line, a twin-core cable, one core being the full speed and the other the half-speed lead for the pump motor.
(*c*) The control line, a bundle of seven cables coupling up controllers, circuit breakers, etc.

These leads bifurcate at the end of each coach and terminate in sockets attached to the headstock. Connection between coaches is made by removable jumpers and plugs.

The vacuum pump and motor are mounted in a framework slung to the underframe. The pump is a single-acting two-cylinder machine coupled to the motor through a helical spring coupling. It is geared down 4 : 1 by a chain inside the pump casing. The motor is of 3½ H.P. capacity, series wound. A series resistance, which can be short-circuited, permits it to be run at two speeds, one approximately double the other. Normally the motor is run at half speed to maintain the vacuum against leaks and the use of the vacuum horn; when the driver's brake-handle is put into the "release" position, the brake controller cuts out the resistance and the motor runs at full speed till the required vacuum is obtained, whereupon the brake handle is put to the "running" position, thus inserting the resistance again into the circuit. There are four positions of the driver's brake handle:—

| | | |
|---|---|---|
| 1. Neutral position | ... | Motor stopped; train and pump pipes not connected together. |
| 2. Release position | ... | Motor running full speed; train and pump pipes connected through full gate in driver's valve. |
| 3. Running position | ... | Motor running half speed; train and pump pipes connected through half gate in driver's valve. |
| 4. Application position | ... | Motor running half speed; train pipe full open to atmosphere; pump pipe blanked off. |

The "dead man" device on the controller consists of a pilot valve operated by a knob on the main handle. When the knob is released this valve admits air to the emergency valve, which is thus actuated, and opens the train pipe to atmosphere, blanking off the pump pipe.

## Car Sheds.

For the reception of the electric rolling stock the company built a new car shed at Victoria. This shed (Fig. 23) is 230 yards long and contains 10 tracks. The rails are raised from the floor on longitudinal concrete supports, so that the equipment underneath the coaches is easily got at. Power for moving the coaches in the shed is supplied from overhead trolley wires carrying little carriages from which hang cables that can be plugged into the train line sockets on the coaches. An existing shed was adapted as a repair shop by raising the roof and installing 20-ton travelling cranes.

The routine maintenance of the stock consists of a nightly inspection and a shed day once a fortnight. It is intended to give a heavy overhaul when cars come in for wheel turning, which will be for the motor coaches after running 60,000 to 80,000 miles, and for the trailer coaches after 100,000 miles. The shed and repair shop staff consists of two shifts each of 31 men,

**Fig. 23.—Interior of Victoria Car Shed.**

with seven other men employed in the shops during the day only, and three rolling stock examiners who are stationed at Retiro.

## Electrical Equipment of Track.

The electrical equipment of the track, the details of which are stated below, comprised the bonding of the track rails, the erection, bonding, and protection of the conductor rails, the laying of interconnecting cables across gaps in the conductor rail, and the provision of switchgear for dividing up the track into short electrical sections.

### Details of Electrical Equipment of Track.

| | | |
|---|---|---|
| *Conductor Rail.* | | |
| Make ... ... | ... | North Eastern Steel Company's high conductivity steel. |
| Weight per yard | ... | 86 lb. |
| Length of rail ... | ... | 33 ft. |
| Composition ... | ... | Carbon 0·03 per cent.<br>Silicon, nil.<br>Sulphur, 0·05 per cent.<br>Phosphorus, 0·06 per cent.<br>Manganese, 0·36 per cent. |
| Electrical resistance | ... | 6·7 times that of copper of equal volume. |
| Ramps ... ... | ... | Shaw's cast steel. |
| *Insulators.* | | |
| Type ... ... | ... | Doulton's single shed round porcelain. |
| Caps and clips | ... | Malleable cast iron. |

### Sundry Works.

In connection with the electrification scheme, a number of works were carried out which represent important betterments of the track. Thus the whole of the route has been fenced with wire netting. On a length of about a mile near Tigre which was frequently flooded, the track has been raised above flood level. There are 75 level crossings on the route, and in order to prevent people and animals from straying on the

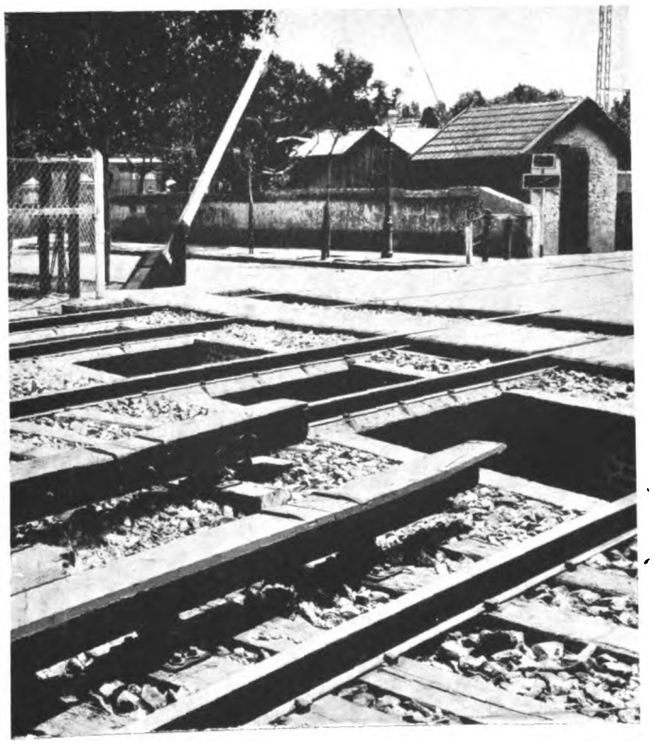

**Fig. 24.—A Level Crossing with Cattle Guard.**

line at these places special "cattle guards" were installed. A cattle guard (Fig. 24) consists of a trench dug across the tracks parallel to the road with brick retaining walls and concrete invert. The depth varies, the standard being about 7 ft.; the width is 6 ft. 6 in. The track rails are carried across on wooden beams, having the upper corners chamfered off to reduce the foothold. The fences are carried up to the trench, and a footway with a locked gate is provided for the use of the maintanance gangs.

Other incidental improvements were the provision under every rail of four sleepers of extra length to carry the insulators, and the installation of new track fishplates.

### Track Bonding.

The track rails are used throughout for the return circuit of the traction current; they weigh 85 lb. per yard, and are partly 40 and partly 33 feet long. The joints were bonded with two copper bonds of the ribbon type with solid heads, giving a total cross section of $\frac{1}{3}$ sq. in. of copper, and making the ratio of conductivities of six feet of rail, including and excluding a bonded joint, about 3 to 5. To reduce the risk of loss by theft the bonds are fixed under the fishplates. This involved the provision of new fishplates with sufficient clearance for the bond between the plate and the web of the rail. The bond holes were drilled with ratchet drills without interfering with traffic, and the bonds were fixed by hand-operated screw compressors. A few pin type stranded bonds were used at special work of manganese steel, the bond holes being drilled at the maker's works and painted with spirit varnish to prevent rusting. The two rails of each track are cross-connected every 100 yards with stranded copper bonds carried in wooden troughs fixed to the sleepers. Adjacent tracks are cross-bonded every 100 yards.

In the Retiro terminus the rails are used for track circuiting with alternating current. To permit of using the same rails as a path for the traction current impedance bonds are placed at the ends of the track-circuiting sections, these bonds consisting of heavy choke coils contained in oil-filled cast-iron cases which are placed between the sleepers. Where crossings occur only one rail of each track is used for the traction current.

The routine maintenance of the bonding consists of the removal of the fishplates and an examination for broken strands. This work is organised to extend over twelve months. In addition, resistance measurements of the joints are taken every six months by means of an Evershed and Vignoles bond tester.

### The Conductor Rail.

Trespassing on the railway tracks is much more prevalent in the Argentine than in this country, so any form of conductor rail adopted must be particularly well protected from the risk of people touching it. It was felt that the common form of flat-bottomed rail with side boards attached to it was too exposed on the top to be safely used, and it was not possible to provide top cover or adopt the American type of under-running rail on account of the limited space available between the structure and load gauges. The form of rail shown in Fig. 25 was ultimately selected as occupying the minimum space consistent with proper clearance, and as permitting of a very complete insulating covering. The rail was rolled without difficulty in high-conducting steel, and can be handled without any tendency to distortion. To save space in shipping, two rails were nested together, oak distance pieces being put between them and bolts being passed through the fishbolt holes. Before leaving the works the rails were dipped hot in bitumastic solution to prevent rusting; when the service started up a special skate

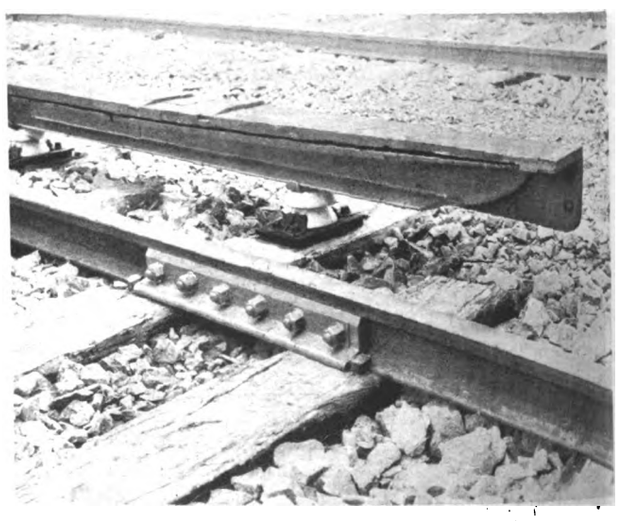

**Fig. 26.—Conductor Rail Ramp.**

with scraping edges was fixed to the collector shoe gear on a coach which was hauled up and down by a steam locomotive till the contact surface of the rail was clean; hand scrapers were also used.

The fishplates are single, and applied to the back of the rail, the boltheads being countersunk in the head to leave a free passage for the toe of the skate. Two bonds with solid plug heads are fixed under the fish-

Digitized by Google

plate, giving a cross section of ·33 sq. in. of copper at each joint. Where gaps occur the rails finish off with cast-steel ramps 5 ft. long, shaped to guide the skate into position without jarring (Fig. 26).

The rails and ramps are covered with a protection of creosoted wood boards built up in the shops and fixed in position on the ground by hammering over the ends of steel strips to embrace the edges of the top table and foot of the rail. The protection has proved very efficient, no case of fatal injury from shock having occurred up to date, though barefooted boys have been seen to run about over the rail and men have used it as a barrow plank.

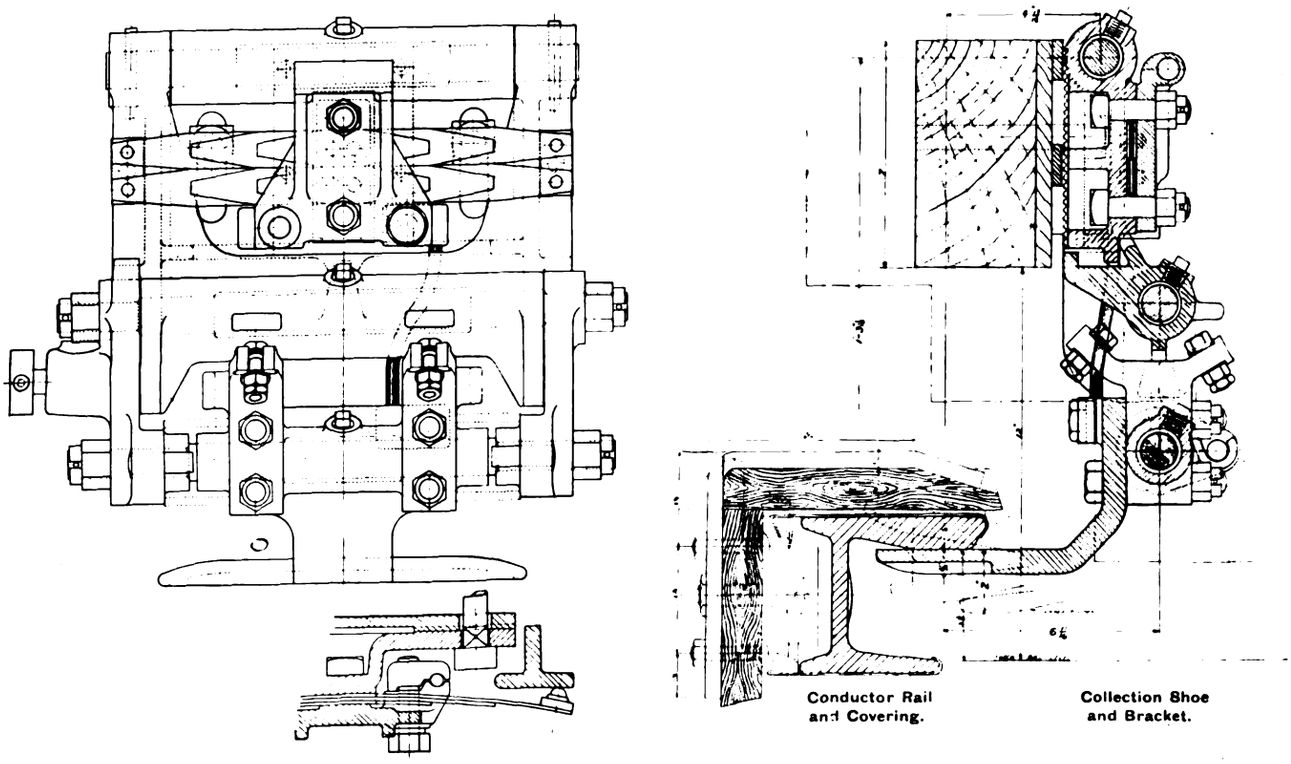

**Fig. 25.—Collecting Shoe and Conductor Rail with Protecting Covering.**

The rail is carried on malleable iron castings cemented into porcelain insulators which stand on the ends of specially long sleepers, and are fixed to them by malleable iron clips. The sleepers are of Argentine hardwoods, which are very difficult to drill and cut. They are not finished very square, and in order to provide a flat soft bearing, and to allow for the running rail sinking into the sleepers, packing pieces are placed below the insulators consisting of creosoted pine boards ½ in. and ¼ in. thick. The insulation of the rail is very good, the usual weekly figure for leakage from the 50 miles erected being between 1·0 and 1·5 amperes.

**Fig. 27.—Conductor Rail Anchor.**

To prevent creepage, every length of conductor rail is anchored (Fig. 27), and no length exceeds half a mile. The anchors are of three types:—

(*a*) Insulated links attached to a plate either fixed in a block of concrete or fastened down to a sleeper; these are used on long lengths of rail. (Fig. 27.)

(*b*) Clips on the foot of the rail which bear against the cap of a special insulator; these are used on lengths of rail up to 700 yards.

(*c*) Clips on the rail which engage the lug on a standard insulator; these are used for anchoring one or two rail lengths.

Where the rail is cut to leave room for expansion (say ¼ mile from an anchor) a short length of rail is mounted behind the gap and bonded to the main rails with stranded bonds.

### Track Cables.

When a conductor rail continuity cable crosses under the track it is carried in a cast-iron trough bolted to an old sleeper. At cattle guards the cables are carried in iron troughs supported by old rails.

All positive cables finish in terminal pillars consisting of cast-iron bends into which a fibre sleeve is slipped, the cable being threaded through and the core being sweated into a gun-metal cap resting on a porcelain insulator fitted into the top of the bend. The cap has bolted to it a terminal plate with sockets for stranded bonds which make connection with the conductor rail. The cap and terminal are surrounded by a potware cover which prevents a person walking past from coming accidentally in contact with live metal.

### Track Sectioning.

The conductor rail is so divided into sections by switches mounted in signal cabins that the signalman can quickly isolate any faulty section, leaving the rest

Digitized by Google

of the system unaffected. The sections are also so arranged that in case of, say, a derailment at one place any route which would be available for self-propelled trains is also available for the electric trains. Provision is made for paralleling the "up" and "down" conductor rails in order to make full use of their combined conductivity. A view of a cabin sectioning board is shown in Fig. 28. The sectioning switches are normally of the 1,000-ampere quick-break knife type; inter-connecting switches and those feeding the tracks in Retiro terminus are automatic circuit breakers. Emergency switches are provided at the crossovers

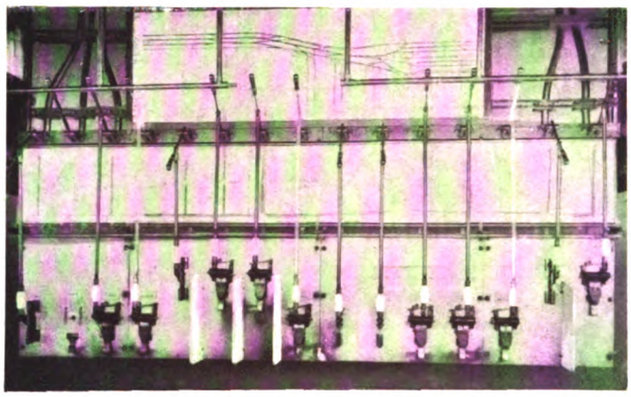

Fig. 28.—Sectioning Board in Signal Cabin.

at wayside stations to allow of trains discharging passengers and setting back to the other line when a fault occurs beyond the platform in a section containing several stations. Sidings and the platform lines at Retiro are controlled by switches mounted in cast-iron boxes, with a danger signal showing when the switch is closed.

### Track Maintenance.

A complete outfit of insulated tools is provided to permit the maintenance gangs to change insulators and pack sleepers without having to make the conductor rail dead. The list includes:—

Rubber gloves.
Rubber mats.
Augers insulated with rubber tube.
Spanners insulated with rubber tube.
Spades insulated with rubber tube.
Wooden covers to go over the conductor rails, when the protection is removed.
Earthing bar for connecting the third rail to the track rail.

The electrical equipment of the track is maintained by seven gangs of five men each; one of these men is charge-hand, and another is an examiner who goes over his section every day and reports matters requiring attention.

### Operation.

In the first twelve months the mileages run were:—Motor coach miles, 1,782,000 and trailer coach miles, 1,353,000.

The total number of times the supply to the conductor rail was interrupted was:—Under one minute, 66; over one minute, 42.

The total number of trains run was 41,706, and the total amount by which all trains were late arriving at the termini was 817 minutes. The percentage of trains arriving late was 0·213 per cent., of which 0·129 per cent. were over five minutes late. These figures include delays caused by late running of other trains.

As may be judged from these figures, the initial difficulties and maintenance troubles have been few and of minor importance, and the whole system is giving results commensurate with the care devoted to the design, manufacture, and erection of the plant.

## SOME TRAMWAY REPAIR TROUBLES.

By G. Basil Barham and G. W. Stubbings.

The demands of the army have caused serious depletion of the repair staffs of many tramway undertakings. This state of affairs, serious in itself, is not assisted by the fact that in these undertakings many of the best and the more intelligent of the drivers have been withdrawn for military service. The loss of these men and their replacement by men of little previous experience and, frequently, inferior intelligence, has not tended to minimise trouble and break down. In these circumstances only the more serious troubles receive thorough attention at once, and unless a car is quite useless, attempts are usually made to effect a temporary repair that will enable the car to remain in service for at least the rest of the day. Many men now having charge of the repair department of tramway undertakings are quite new to the work and are unaccustomed to the faults and many causes of break down of car equipments. There are also not a few engineers whose training has been received in stations dealing with a lighting and power load only who now are responsible for the engineering side of tramway undertakings, and consequently have to advise upon, and often to supervise, repair work. Although continuity of service with a tramway system is not as essential, nor failure as serious, as with a lighting system, it is nevertheless of great importance. Moreover, the possibility of break down of cars, exposed as they are to the severest weather conditions and careless handling, is enormously greater than in the case of central station machinery. It is therefore hoped that these notes will be of service to those in charge of tramway repair work.

Insulation tests are always worth the time spent upon them. If periodically carried out, many an incipient fault will be detected and can be repaired there and then. The most convenient instrument for insulation tests is a direct reading set, such as the Megger, but if such a set is not available, useful results can be obtained with an ordinary voltmeter taking current either from the lighting or the traction systems. Regular maintenance work will also go far to eliminate the possibility of break down. For this reason the cleaning and blowing out of armature tunnels and brush parts, and the careful examination of all contacts that can become loose in normal working should be regular and as frequent as is found possible.

Economy in the shape of poor quality accessories, such as brushes, grease, and oil, will be a disastrous policy. The saving in money will be comparatively small, while the possibility of trouble will be very much increased. These materials should be of the highest grade possible.

The usual result of an earth on an armature is to cause the circuit breaker to blow after replacement. With series parallel control this, however, is not immediately the case. For instance, if the earth is on the motor that electrically is nearest to the rail, the effect of the earth will be to short circuit this motor whilst the controller is on the series notches. When, however, the handle is moved to the parallel position, the circuit breaker or fuse will blow immediately. If the earth is on the nearest motor armature to the line, the effect of such earth will be to short circuit both motors. When the controller is put on the first series notch, there will accordingly be no tendency of the car to start, and as the handle is moved to the second or third position the current will build up sufficiently to open the circuit breaker. The effect of faults to earth on the field coils are varied. If the fault is on the last coils of the nearer motor to the line, the car may start

Digitized by Google

off in the series position, notwithstanding the second motor is short circuited. In the parallel position both motors will work. If the earth be on the first coils of this motor, a weakening of the field will result and, although there may be a feeble tendency to start, the weak field will cause a sufficient rush of current to open the circuit breaker. An earth on the last field coils of the motor furthest from the line will cause this motor to spark badly on the parallel notches, although the car will probably start. A fault on the first field coils of this motor will not prevent the car starting on the series notches, but the circuit breaker will blow immediately the parallel position is reached.

A few words may be said concerning the necessity of periodically overhauling the circuit breakers on cars. These circuit breakers fulfil a very important function, and if they are defective will cause the feeder breaker at the power station to open for a bad car fault with the result that a section is temporarily dead. Cases have been known in which an incompetent driver has failed to notice anything wrong with his car, notwithstanding the feeder breaker has opened some four or five times. Not only has this fault to be localised by the linesmen, but the damage done to the motor or wiring by the excessive currents is most serious. Circuit breakers on cars should therefore have systematic attention, and in view of the severity of the conditions under which they work no breaker should remain in service more than two years without a thorough overhaul. Many breakers in use have a toggle mechanism by which a laminated brush is pressed firmly against the contacts, the handle being locked by taking the toggle slightly over its dead centre. If the adjustment of the stop for the on position be altered by wear or hammering, a very large difference in the tripping current of the breaker will result. For this reason all circuit breakers of this type should be fitted with an adjustable stop, and they should be calibrated for tripping current. Most power-stations containing a battery are furnished with a milking booster, and such booster will give just sufficient current for the testing and calibration of the usual types of car circuit breaker.

The brush gear is a frequent source of trouble, especially if of inferior design and fitted with defective springs. Inferior brushes will not only wear unduly, but will frequently give out grease when warm, with the result that they become sticky in the brush holder. This not only gives rise to sparking, but the consequent over-heating may cause the tension spring to break. Good brushes and well-designed holders will save trouble.

Trouble will also be caused by an accumulation of carbon dust and oil at the bearing end of the commutator. This mixture has a relatively high electrical conductivity and will soon cause arcing to shaft and frame. Cleanliness will be a complete cure for this trouble. Dirt and grease will often cause a flash over at high speeds with some traction motors, and the only remedy is to keep the commutator as clean as possible.

Sparking is sometimes caused by a weakening of the field due to layers of the coils becoming short circuited. This fault is difficult to detect, the only sure test being an approximate determination of the ohmic resistance. Occasionally a magnet coil will be wrongly connected in the stop, so that it acts in opposition to the general magnetic flow. This will give rise to excessive sparking.

New brushes require to be fitted with care as, unless the bedding is accurate, chattering will result with consequent increased wear and sparking. High mica is another frequent cause of sparking, the root of this trouble appearing to be the hardness of the mica. This trouble can be cured temporarily by scouring the surface of the commutator with sand paper applied on a wooden block shaped to the proper curve. The better and the permanent way of dealing with high mica is to undercut it about $\frac{1}{32}$ in. below the surface of the phosphor bronze. The cuts should not be too deep or trouble will be caused by armature coils being short circuited by the cuts becoming filled with oily carbon dust.

Blackening or pitting of certain commutator bars whilst the remainder of the commutator remains in comparatively good condition usually denotes either an open circuit or a high resistance contact in the armature. Motors which run very hot are likely to have the connection of the armature coil to the commutator bar unsweated ; or, if these contacts are made by means of screws or by being clinched into slots, high resistance contacts are always likely.

A further frequent cause of trouble is an open circuit in one of the main cables to the motors. This is immediately detected by the fact that the car will not start on the series notches and when the controller handle is moved to the parallel position will run on one motor only. If a car refuses to start till full series position is attained, probably the open circuit is on the controller connection. In this case an attempt should be made to start the car from the rear controller. If this can be done the fault will be immediately located. Wrong connections in the controllers may cause the car to jump on some notches, while bad contact at the controller fingers will also give rise to trouble. Defective controllers can always be detected by the above method of trying the other one. If the car works well on either controller, the motors and their connecting cables are obviously in good condition. On the other hand, should the car refuse to work on either controller, as it is unlikely that each controller will have a similar defect, the trouble is almost certainly in the motors or some other part of the electrical equipment.

## A "SAFETY FIRST" MOVEMENT FOR INDUSTRY.

As a sequel to the conference held in London in June, at which it was decided to conduct throughout the country a campaign for the prevention of industrial accidents, an influential organisation has been formed comprising representatives of the Admiralty, Board of Trade, Home Office, Local Government Board and Ministry of Labour, and of leaders of industry and labour. Its title is the British Industrial "Safety First" Association. Its first meeting was held at the Mansion House on October 31, when Lord Leverhulme occupied the chair, and was elected president. The vice-presidents include the Presidents of the Local Government Board and the Board of Trade, the Ministers of Labour and of Food, the Under Secretary of State for the Home Department, Lord Aberconway, Rt. Hon. T. Richards, M.P. (South Wales Miners' Federation), Mr. W. A. Appleton (General Federation of Trades Unions), Lt.-Col. G. Harland Bowden, M.P., Sir Vincent Caillard (Vickers, Ltd.), Mr. C. T. Cramp (president, National Union of Railwaymen), Sir Kenneth Crossley (Crossley Bros., Ltd.), Mr. R. Dennison (Iron and Steel Trades' Confederation), Mr. C. Duncan, M.P. (Workers' Union), Sir John Jackson, Mr. W. Joynson-Hicks, M.P., Mr. E. Manville (president, Association of Chambers of Commerce of the United Kingdom), Major-Genl. the Hon. Sir Newton Moore, K.C.M.G., M.P., Sir Hallewel Rogers, G.B.E. (chairman, Birmingham Small Arms Co., Ltd.), Mr. H. B. Underdown (president, Association of British Motor and Allied Manufacturers, Ltd.), and Mr. Robert Young (general secretary, Amalgamated Society of Engineers). The hon. treasurer is Sir R. V. Vassar-Smith, Bart., D.L.

Briefly stated, the aim of the Association is the formation in every industry of a "Safety First" Committee, comprising representatives of employers and employees, and of Committees in the leading firms to investigate the causes of accidents peculiar to the particular industry, and to discover and apply effective measures and safeguards to prevent the recurrence of similar accidents. As numerous avoidable accidents are due to thoughtlessness on the part of the employees, a comprehensive educational campaign is proposed to be conducted from headquarters, and members of the Association will receive regular supplies of posters and literature designed to point out the known causes of avoidable injuries. Applications for membership of the British Industrial "Safety First" Association should be addressed to the hon. secretary, *pro tem.*, Mr. H. E. Blain, at the temporary offices of the Association, 31, Westminster Broadway, London, S.W.1.

THE
# Tramway and Railway World

FOUNDED IN 1892 AND PUBLISHED BY
THE TRAMWAY AND RAILWAY WORLD PUBLISHING COMPANY, LIMITED,
AMBERLEY HOUSE, NORFOLK STREET, LONDON, W.C.2

**SUBSCRIPTION RATES**

THE TRAMWAY AND RAILWAY WORLD can be obtained, post free, at the following rates:

**FOR THE UNITED KINGDOM—Twenty-five Shillings per annum.**
**FOR ALL PLACES ABROAD—Thirty Shillings per annum.**
**Single Copies—One Shilling (Postage, 2 pence—Abroad, 5 pence).**
**All back numbers—Two Shillings.**

THE ANNUAL SUBSCRIPTION INCLUDES 64 ISSUES, OF WHICH 12 ARE ILLUSTRATED NUMBERS.

In consequence of the restrictions on the use of paper, readers will be unable to obtain copies of THE TRAMWAY AND RAILWAY WORLD unless a definite order be given in advance. Those who order copies in this way from newsagents and experience any difficulty in obtaining them should communicate with us.

THE EDITORIAL AND PUBLISHING OFFICES OF

*Telegraphic Address:* "TRAMIGRO, ESTRAND, LONDON."

LONDON, NOVEMBER 14, 1918.

**Central Argentine Electrification.**

The description of the electrification of the suburban lines of the Central Argentine Railway, which is concluded in this issue, brings out several points of special interest. The undertaking is the first conversion in South America of an extensive steam railway system (amounting in this instance to 100 miles of track) to electric propulsion. On the technical side, the main departure from arrangements with which we are familiar in this country is that the three-phase current is not generated at the pressure used for transmission but at a much lower voltage, and that by step-up transformers the tension is raised to 20,000 volts. By this method, well enough known in the United States, the problem of generator insulation is simplified. Apart from the use of step-up transformers, and from the fact that the working pressure on the conductor rail is somewhat higher than that generally used here, and so calling for efficient protection of the third rail, the general scheme is in essence similar to that with which we are familiar in this country. It is a scheme which has been well tried, and has proved its efficiency and economy for suburban services. Coming to another point of view, it is highly gratifying that the whole of the plant, steam and electric, has been designed by British engineers, and has been provided by British manufacturers. The importance of cultivating opportunities in the great and rapidly-developing countries of South America has frequently been pressed on British firms, and here there is an example of what can be done. There is an expectation of considerable developments in railway electrification in South America, and the initial success which our engineers, manufacturers and contractors have obtained ought to lead on to more. There can be no doubt that the Central Argentine installation will work excellently well, and it has already proved useful as an object lesson and missioner to other railways in South America. The fact also that our manufacturers are thus able to go afield should prove, if any proof is necessary, to English railway companies the capacity of our home producers to supply all that is necessary for the great schemes of British railway electrification which are now being discussed. Already such schemes are in the minds of Government departments, and something definite in the direction of a beginning of development has been indicated in reports by official committees on electric power supply. In the period of upheaval which has accompanied and will continue after the war much may be accomplished which at other times would seem impossible. It behoves the Government to take prompt action to further a general scheme of British railway electrification on all routes where it would be advantageous. This would be an essential part of any great development of electric power supply such as has been recommended. To enable the British industries concerned to make ready for the rapid execution of the work, the Government in conjunction with the railway companies ought to be maturing a scheme. Let it not be hindered by dilly-dallying over questions of the future relations of the railways and the State. These can wait. What is wanted for the immediate needs of the great industrial development necessary after the war is a general adoption of electric power for railways — and for other things. Many changes are needful, but none more so than cheap and abundant electric supply for traction and other purposes.

Digitized by Google

**London Tramway and Housing Requirements.**

Elsewhere in this issue will be found the observations on the subject of locomotion in the report presented to the London County Council by the Housing of the Working Classes Committee in relation to housing after the war. To overrate the importance of traffic facilities in connection with the proposed expenditure of a sum approaching three and a half millions sterling for the provision of housing accommodation would be impossible. On that account therefore it is necessary that the question of locomotion should be dealt with by experts. There are, however, no indications that such a desideratum has been complied with. Before the committee compiled their report the Council authorised the attendance of the chairman and vice-chairman of the Highways Committee at any conferences with other authorities in Greater London in connection with the housing question. Such procedure is decidedly belated, and is likely to give rise to misunderstandings when the consideration of traffic facilities comes before the conferences. Unless there are suitable means of communication, either existing or planned, housing projects are likely to make little progress. The time for the addition of representatives of the Highways Committee to the Housing Committee was before the latter proceeded to prepare the report to which reference has already been made, and the delegates ought to have been accompanied by the general manager of the tramways undertaking. If that course had been adopted it is improbable that the report would have contained the assertion that "for journeys exceeding seven or eight miles the railway, because of its speed, must remain the principal means of locomotion." From a traffic point of view that statement is clearly open to criticism. In support of it the report adds :—"Thus the journey by railway between West Croydon and Victoria occupies about 37 minutes, but by tramway car (including a change) it would occupy about 63 minutes." We may add that the distance by car is about 9½ miles, as compared to 10½ by electric railway, and that the car time might be reduced by several minutes if there was through running at the London boundary. Through running, however, cannot be instituted until Croydon Corporation make their track fit for the heavy London cars. Whether that will be done when it needs relaying is a question as yet undecided, but it is the only course that will remove the congestion at the changing point. Even from a pleasure point of view, on Sundays and holidays the traffic is heavy enough to deserve through facilities. It is by means of through running also that greatly increased traffic will be available, and considerable building land be opened up about the County Council's tramways and those of the London United Company near the London boundary at Tooting, the railway in this district running only to London Bridge. Fortunately the company obtained, with the support of the London County Council Tramways management, the necessary powers for through running and trailers shortly before the war. When circumstances permit the necessary arrangements to be made, we are convinced that in Mr. C. J. Spencer, one of the pioneers of through running, and now at the head of the London United Tramways, Mr. Fell will find an experienced supporter of his policy of extending the usefulness of the tramways by means of through running and trailers. It is in the various localities south of the Thames that the Housing Committee expect to find the sites for the greater part of such building operations as are possible within the County of London, but their report lamentably fails to note that in many districts their own tramways are conveniently situated for extensions both within and without the boundaries. A journey time of 50 minutes for 7½ miles is accomplished upon a number of existing routes, and with the adoption of fewer stops at rush periods, and sanction of increased speed on suitable sections, there is no reason why some reduction of the running time should not be effected. The price of land for housing is likely to be prohibitive in the vicinity of railways. Moreover, extension of tramways can be more easily secured than of railways. Indeed it may be affirmed that with one or two exceptions railway construction is physically impossible within an area of fifteen miles south of Charing Cross. It follows, therefore, that tramway extensions will be the only means of affording relief on an adequate scale to the existing and overburdened travelling facilities.

## ELECTRICAL EQUIPMENT OF KEADBY BRIDGE.

A bridge over the Trent at Keadby, 14 miles north of Gainsborough, on the Great Central Railway, was opened in May, 1916. This bridge, of far more than ordinary interest, forms part of an elaborate deviation and widening scheme, and is known technically as a "Combined Railway and Highway Scherzer Rolling Lift Bridge," and has replaced the old swing bridge which carried the railway for nearly 60 years, whilst it also bears a public highway.

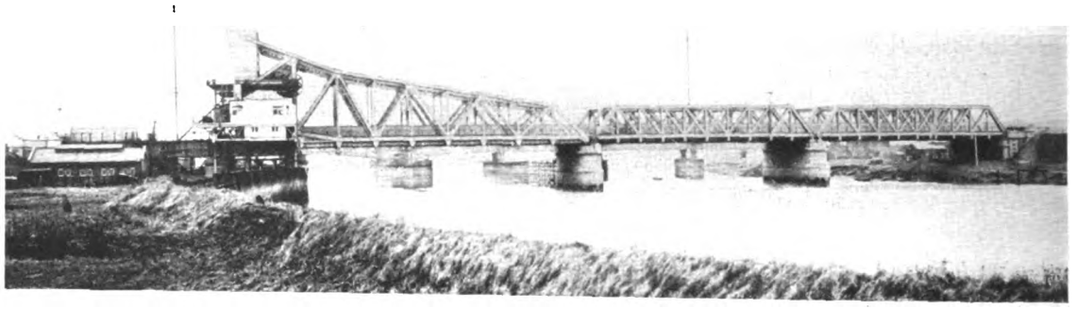

Fig. 1.—General View of Keadby Bridge from East Bank.

Its most remarkable feature is the rolling-lift opening span, which weighs over 2,900 tons, and is the largest in Great Britain, if not in the world.

When the question of the improvement of the railway line first came under consideration there was a strong desire that the span of the new bridge should be very much greater than that of the old structure, and that ample facilities for traffic across the river should be provided. The Scherzer system recommended itself not only as a complete structure entirely suitable to the special needs of the situation, but for the ease with which it could be built without interference with the traffic on the Trent.

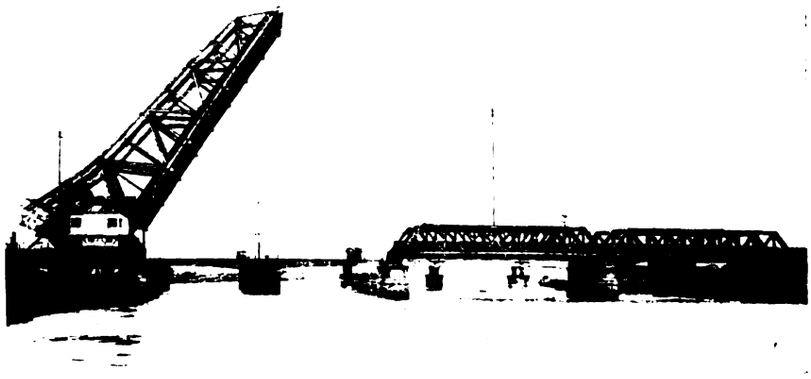

Fig. 2.—Roller Span Lifted.

The old swing bridge provided two navigable channels, each 60 feet in width, whereas the lifting span of the new bridge gives a clear waterway 150 feet wide, equal to the two openings of the old bridge, including the central dolphin and piers. The roller-lift principle enabled the constructional steelwork of the opening span to be built in a vertical position, leaving the river between the abutment and the pier in the river free for the passage of river craft.

The provision of a public roadway, parallel to the railway, together with new road approaches on both sides of the river, constitutes an inestimable advantage to the public. The old bridge was a railway bridge pure and simple, and there were no facilities for the crossing of the river within a distance of 15 miles.

The new bridge, as shown in Fig. 1, consists of five spans of the following dimensions :—Two fixed river spans of 135 ft. each ; a lifting span of 160 ft. giving, as already mentioned, a clear waterway of 150 ft. ; a track span of 40 ft. on which the lifting span rolls ; and an approach span of 70 ft. on the east bank of the river.

The bridge has a width of 53 ft. 6 in. between the centres of the outside girders, of which 29 ft. 3 in. is occupied by the railway and 24 ft. 3 in. by the roadway. Each span consists of three main girders, the central one dividing the roadway from the railway.

The three main girders of the track span form a path on which the lifting span rolls, and together have to sustain the weight of the lifting span.

The lifting span consists of three main trusses spaced at the same distance apart as the main girders in the fixed spans, and is counter-weighted at the rear end in order to secure balance at all angles of lift. The counterweight consists of a rectangular steel shell extending across the full width of the bridge (Fig. 5) and is heavily braced internally by lattice frames and strengthening girders. Its internal capacity is 24,780 cubic ft., and it contains 1,800 tons of concrete.

On either side of the lifting span heavy frames are built up alongside the track girders and anchored down to the supporting piers of the bridge. At their upper extremity these frames carry horizontal girders, to which are bolted the main operating tracks. The clearance between these frames allows the span to move freely as the bridge is raised or lowered.

The position of the racks coincides with the centre of the rolling circle of which the segmental girders form part, and the rotation of the pinions attached to the gudgeon pins of the moving leaf, as they travel horizontally along the racks, rolls the leaf backwards or forwards, so opening or closing the bridge. A horizontal platform at the level of the fixed racks is constructed on the leaf itself, and on this platform the lifting machinery is accommodated.

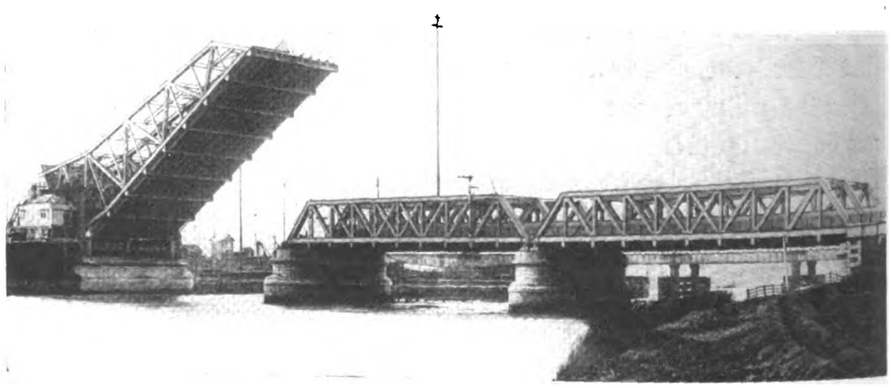

Fig. 3.—Showing Roller Lift Span being Lowered.

### Generator Equipment.

Owing to the absence of power in the neighbourhood, a special plant for the generation of current was installed consisting of two 70-B.H.P. 4-cylinder petrol engines, running at 700 revolutions per minute and direct-coupled to two B.T.H. direct-current 6-pole shunt-wound generators of 50 KW. capacity at 220 volts. A storage battery of 128 cells is provided, capable of supplying the motors with current for about 30 operations of the bridge before recharging

Digitized by Google

is necessary. The arrangement of the generating plant and switchboard is shown in Fig. 6.

ELECTRICAL CONTROL EQUIPMENT.

The whole of the operations involved in the lifting and lowering of the moving leaf are normally controlled by electrical equipment designed and installed by the British Thomson-Houston Company, Limited, of Rugby.

The moving leaf is worked by means of two direct-current 115-H.P. 220-volt motors, having a normal full load speed of 380 revolutions per minute and an overload capacity of 100 per cent. These motors are

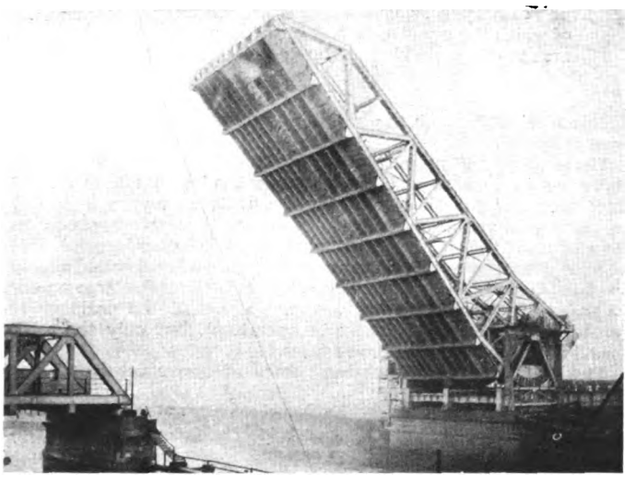

**Fig. 4.—View of Roller Lift Span Raised.**

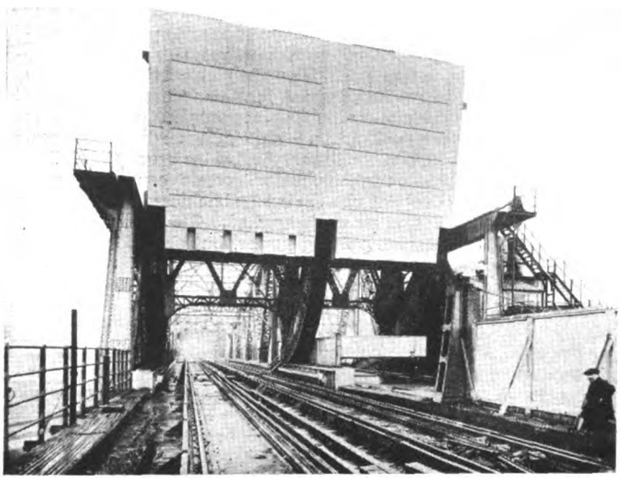

**Fig. 5.—End View of Lift Span, showing Counterweight and Roller Paths.**

compound wound with shunt starting fields, and are carried on the leaf itself; they are coupled back to back and arranged so as to work either singly or in parallel.

The method of control is such that by operating suitable switches either of the two motors can be used independently of the other and all safeguards apply to either arrangement; thus in the event of the breakdown of one machine it is possible to use the other under all but the most abnormal conditions.

The driving power is transmitted through independent trains of gearing to the main pinions on each side of the moving leaf. The angle of maximum elevation of the bridge when fully open is 81° 51′,

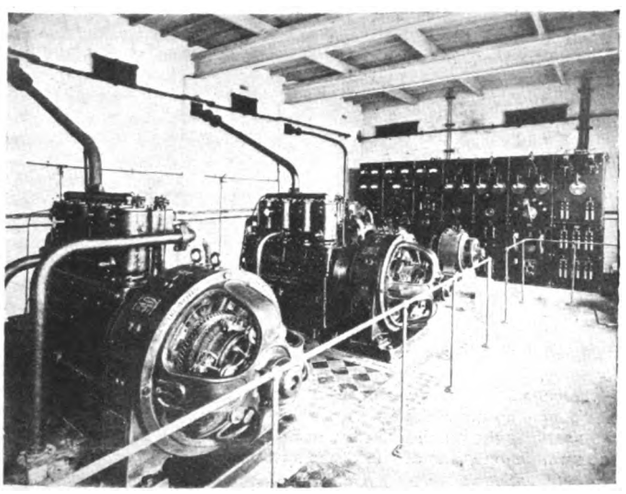

**Fig. 6.—Interior of Power House, showing B.T.-H. Generators and Switchgear.**

**Fig. 7.—Interior of Operator's Cabin, showing Master Controller in Background.**

and the time taken to open or close it electrically is less than two minutes.

Owing to the very exacting weather conditions to be met, and to the fact that it is essential to interlock the railway signal system with the operating gear for the bridge leaf, the control gear is somewhat complicated. In a bridge of this description it is essential that the interlocking arrangements shall obviate all possibility of either rail or road traffic using the bridge in any position but completely down. Further, it is essential that all safety devices shall be operated in such a manner that they act automatically in the event of failure of the power supply.

Arrangements are made so that when a circuit breaker opens, either in the operating cabin or in the main machinery house, all brakes are applied automatically.

The conditions to be met in the actual operation of the bridge leaf itself are very stringent. The leaf must be under the full control of the operator at all times and in all wind conditions, and it must be possible for an unskilled operator to open or close the bridge without causing any damage. The system of control adopted enables these conditions to be met quite easily in spite of the great mass of moving elements.

LOWERING THE BRIDGE.

The method of control adopted when lowering the bridge comprises series resistance control for the greater portion of the travel and diverter control with limited power for the last few feet of the travel. For this purpose limit switches are arranged in such a manner that at a pre-determined angle of the bridge when lowering, certain contractors are opened, thereby inserting series resistance in the armature circuit of the driving motors, while at the same time a diverter circuit is made to give a positive slow speed, practically independent of the load on the machines. At a slightly later period of the travel another limit switch operates, cutting off power entirely and causing the bridge to stop a few feet away from the ground level. The operator can then, by means of a special pedal switch equipment, inch the bridge down under diverter control with a limited amount of power; the provision of an oil buffer ensures that the leaf can be brought to the fully closed position without a perceptible jar. Further provision is made so that, by moving the controller handle at the same time as operating the pedal, it is possible to vary the amount of braking effect given by a special motor-operated brake, thus giving a variation in speed corresponding to the limited power already mentioned.

Digitized by Google

The braking arrangements are very complete and comprise two sets of brakes operated by a direct-current 1-H.P. 220-volt series wound motor, and two sets of solenoid brakes operating on drums geared to the driving motor shafts. All brakes are arranged to set automatically in the event of voltage failure irrespective of the position of the controller handle.

### Raising the Bridge.

The method of control for raising the bridge is similar to that already described for lowering, except that no diverter control is provided; this is unnecessary, as the bridge is not usually opened to the full extent of its lift, and consequently the amount of over-run allowed is much in excess of that actually required.

There is one important factor in connection with the lifting, however, which has to be taken care of, namely, the effect of wind pressure. Under certain conditions a strong wind will actually run the bridge backwards, and special limit switches are arranged so that when this happens all brakes are applied when the bridge reaches a predetermined angle. This safeguard also comes into operation when starting to lower the bridge from the fully open position. This is essential, as under certain conditions a strong wind may take control and run the bridge backwards when the brakes are released, and before power is applied. This can be stopped, of course, by the operator applying power, but should he lose control and allow the bridge to continue to coast, the matter is automatically taken care of when the predetermined angle previously mentioned is reached.

### Contactor Gear.

The contactor equipment for the control of the bridge movements is located in the machinery house. It consists of a panel for each separate motor, containing the various line and resistance contactors, overload relay and isolating main switch and fuses. This panel is controlled by a special controller comprising two parts, the first operating the contactor gear which makes the connections for raising and lowering the bridge, and the second varying the amount of resistance in series with the motor operating the brakes. Thus, by moving the controller handle, it is possible first of all to free the solenoid brakes, and then to vary the effect of the motor brakes from maximum near the off position to zero when the first power position is reached. A coasting point is provided between the last braking position and the first power notch so that, if desired, wind pressure can be used to lift the bridge, the motor and solenoid brakes being brought into action when it is desired to stop.

With the controller is incorporated a special locking magnet, operated from the signal circuits, which ensures that the controller handle cannot be moved to open the bridge until the signals are set to "danger." Further, the signals cannot be set clear until the bridge is in the fully closed position. A special motor is used in connection with the locking bolts between the rails on the moving leaf and those on the fixed span. These rails are locked in the down position by means of steel bolts controlled from the signal cabin. The bridge itself is locked in the down position by two heavy forged steel bolts worked electrically by means of a direct-current 1½-H.P. 110-volt series wound motor operated from the control cabin. These steel bolts engage with castings anchored to the pier, and arrangements are made so that it is impossible to operate the contactors for lifting until these bolts are withdrawn; the bolts cannot be closed when lowering until the bridge is right down and control has been cut off from the contactor panel.

Provision is made for reversing the motors by means of a special reverser situated on the moving leaf, and the special limit switches referred to in the foregoing description are operated by means of sprocket gearing which is driven from the main motor shaft. These limit switches are situated in the machinery house on the moving leaf.

Electrically operated gates, opened and shut by a direct-current 4½-H.P. 220-volt compound wound motor, are provided for the protection of the railway traffic. These gates are interlocked with the railway signals which, in turn, are interlocked with the control gear on the bridge.

This bridge was built to the designs and under the supervision of J. B. Ball, Esq., M.I.C.E., chief engineer of the Great Central Railway, by Sir Wm. Arrol and Company, Limited, of Glasgow; the electrical equipment was supplied by the British Thomson-Houston Company, of Rugby.

**Review of the Foreign Press.**—The War Office is now issuing fortnightly the Economic and the Reconstruction Supplements to the "Daily Review of the Foreign Press." The price of these supplements is 6d. The Economic Supplement deals with trade and commerce, railways and shipping, banking and finance, labour conditions, social and economic policy, and legislation, etc. The Reconstruction Supplement describes the measures being taken or suggested in Germany and elsewhere in connection with the return of peace conditions. These publications are issued by His Majesty's Stationery Office, and can be purchased through any bookseller or directly from H.M. Stationery Office.

## HOUSING AND TRAFFIC IN THE LONDON AREA.

In a report from the Committee of the London County Council on the Housing of the Working Classes, an interesting survey of the subject is given, with special reference to the difficulties that will arise after the war. The present total of workmen's traffic in London and neighbourhood can only be approximately estimated. The number of passengers with workmen's tickets on the railways in 1913 (the only year for which the information is given in the Railway Returns) was as follows:—

| | |
|---|---|
| London local railways ... ... ... | 71,045,319 |
| Trunk railways serving London, 138,658,643; of which the number carried in the London area would probably amount to ... ... | 100,000,000 |
| Total (say) ... ... ... | 171,000,000 |

This total of 171,000,000 a year is equivalent to about 560,000 passengers a day.

The number of passengers at workmen's fares carried on the tramways in London and the neighbourhood is not known; but from the figures available for the Council's tramways it appears to amount to about 10 per cent. of the total tramway passengers. On this basis the number of passengers carried at workmen's fares on all the tramways in London and the neighbourhood would amount to about 80,000,000 a year. This does not include the large number of passengers carried on the workmen's cars at the ordinary 1d. (or ½d. fares, when these were in operation), but only those who travel at less than the ordinary fares.

The total traffic at workmen's fares as above estimated is as follows:—

| | Number of passengers at Workmen's Fares. Year 1918. | Average daily number (approximate). |
|---|---|---|
| Railways ... ... | 171,000,000 ... | 560,000 |
| Tramways ... ... | 80,000,000 ... | 260,000 |
| | 251,000,000 | 820,000 |

This means that about 410,000 persons of the working class travelled twice daily at reduced workmen's fares, of which the railways carried more than two-thirds.

The usefulness of the facilities depends on the fares charged, the hours during which the trains or trams run, and the frequency and speed of the service. The present position of such facilities is briefly stated in the following particulars.

### Railways.

As regards the 2d. and 4d. workmen's fares on the various London railways, the former is the fare which is most important from the housing point of view, and the latter the fare beyond which only a comparatively small proportion of persons of the working classes can be expected to go.

It is pointed out that the 2d. (return) workmen's fares extend beyond the county on some lines, namely, to Canning Town, Plaistow, Stratford, Walthamstow, Enfield, and Golder's Green. The 4d. (return) fare limit is a considerable distance beyond the county boundary at practically all points on the north. On the south side of the Thames, the 2d. limit is much more limited, while the 4d. limit does not cover a considerable part of Woolwich and Lewisham.

As regards hours of service on the trunk railways, the trains arriving at the termini up to 8 a.m. are usually workmen's trains, with the exception of the Great Eastern and Great Northern Railways, on which the workmen's trains cease earlier and are in some cases followed by "cheap" trains. On the North London Railway, all trains arriving at Broad Street up to 8 a.m. are workmen's trains; on the District, Metropolitan and the Central London Railways, workmen's tickets are issued up to 7.30 a.m., while on the other tube railways workmen's tickets are issued up to 8 a.m., so that, for example, from Golder's Green a workman may travel for a fare of 2d. return by a train which arrives at Charing Cross (6·2 miles) at about 8.20 a.m. The number of workmen's trains on the trunk lines serving the north and west of London is small as compared with the number on some of the other systems.

### Tramways.

The question of cheap traffic facilities on the tramways is simplified by the facts that the whole of the tramways in the County of London are under one authority and that common regulations apply throughout. Until May, 1918, there was a uniform workmen's fare of 1d. single, 2d. return, on all routes except that to Woolwich, where the 2d. (return) ended at Blackwall Lane, the fare having been 4d. return between Abbey Wood and Waterloo Bridge. Since May, 1918, these fare ratings have been suspended. The single fare for a journey over four consecutive sections on one car is now 1d., and the return fare over the same sections 2d. The average distance covered by the 1d. workmen's fare is 2·4 miles, and by the 2d. return fare 4·8 miles. Return tickets are issued at 3d. for any distance on one car, with transfers as previously given for 2d. return. The division of the Woolwich route is retained, so that passengers formerly paying 2d. now pay 3d., and those

Digitized by Google

formerly paying 4d. now pay 6d. All cars up to 8 a.m. (time of arrival at the inner termini) are workmen's cars, and all cars outwards up to 7.30 a.m. (time of departure).

On the tramway systems in extra-London there are considerable workmen's fares facilities. On the Metropolitan Electric system on the north, and the London United Tramways on the west, the workmen's fares on the routes were as a rule 2d. return. In the autumn of 1917, however, the fares on the Metropolitan Electric tramways were revised, and the workmen's fares of 2d. increased to 3d. in many cases, and to 4d. in a few cases. The London United Tramways Company seeks power by a Bill in the session of 1918 to increase its statutory limit for workmen's fares to ½d. a mile. Between the London and the extra-London tramway systems there is little co-operation in regard to such facilities, and where there are through services the workmen's fares remain the sum of the two independent workmen's rates.

While further co-operation in this respect between the systems is very desirable, it must be borne in mind that for journeys exceeding seven or eight miles, the railway, because of its speed, must remain the principal means of locomotion. Thus, the journey by railway between West Croydon and Victoria occupies about 37 minutes, but by tram (including a change) it would occupy about 63 minutes.

### Omnibuses.

There are no workmen's fares on omnibuses, and hitherto the omnibus companies have made no move in the direction of giving workmen's fares. The hours at which the omnibus services commence, too, render them of little service for workmen's morning traffic. Few of the services commence before 7 a.m. (time of departure from the outer termini).

From the extent and arrangement of the motor omnibus services, the institution of workmen's fares on services at suitable hours would be of considerable advantage from the housing point of view. Before the war, the route length of the motor omnibus services in London and the neighbourhood exceeded the route length of the tramways; they serve many districts not served by tramways, particularly the central and western districts of the county; and they form in many cases connecting links with the railways, both of the outlying districts and at the London termini. They would in such cases form a useful auxiliary to the railway and tramway workmen's services.

### General.

The increase in wages and other expenses of railways and tramways which has already taken place and which is likely to continue, at any rate to some extent, after the war, may affect the question of cheap locomotion for persons of the working class. Not only is the question of further improvement in such facilities now in abeyance but already some increases, and proposals for increases, in workmen's fares have been made, and there is no indication that these are to be limited to the period of the war. In one case, that of the London United Tramways, the proposal is that the increase is not to come into effect until six months after the termination of the war.

It is stated that as a result of the recent award by the Committee on Production, of £1 a week increase on pre-war wages to tramway workers, a conference of tramway employers and representatives of trade unions, has, by resolution, requested the Chief Industrial Commissioner to obtain from the War Cabinet an undertaking that the Government will take immediate steps to authorise the increase of the present maximum fares on tramways. It does not follow that any such increase would apply to workmen's fares, but their position is likely to be prejudicially affected by the increase of the ordinary fares. On the railways, whether under Government control or otherwise, workmen's fares have remained unchanged.

Other things being equal, any increase in fares must favour residence in the more central districts as compared with the outlying districts, and so operate to increase further the high rents in the central districts. Any increase in workmen's fares in the future is therefore likely to affect seriously the housing question in London.

### Sites for Housing.

In dealing with the selection of land as suitable for the provision of new housing accommodation several considerations of broad policy must be carefully borne in mind. One which perhaps governs all the others, is that any sites considered should be in localities from which there is sufficient rapid and cheap means of locomotion, either existing at present or easily capable of being provided by the improvement of the present facilities. It appears that substantially, beyond the six-mile radius from the centre, tramways cease to afford the most satisfactory means of rapid communication, and that beyond this radius the time factor operates against the dispersal of population by this means of locomotion. For the necessary facilities for the greater distances, recourse must be had mainly to the railways. While the 2d. return fare on the northern side of the river extends to places beyond the county boundary on the east and northern portions and far beyond in the case of Enfield, on the southern side of the river the limit of 2d. fare on railways is very restricted and does not include more than approximately one-sixth of the county south of the river.

## LONDON UNITED TRAMWAYS.

### BETTER DAYS IN PROSPECT.

A new era in the history of the London United Tramways will take its beginning from the present time. In the end of October a Bill of the utmost importance for the tramway company and the public whom they serve was passed by a committee of the House of Lords, and as it has already received the sanction of the House of Commons, it will probably have become law by the time this issue is published. The measure is designed to put an end once and for all to the troubles of the company and their undertaking, and to set them on the high road of efficiency and prosperity. To understand the situation, and to realise fully what the intention of the Bill is, it is desirable to take a glance over the chequered career of the company.

### HISTORICAL.

In the year 1881 the West Metropolitan Tramway Company was promoted to construct a system of horse tramways from Hammersmith Broadway to Kew Bridge, and from Shepherd's Bush to Kew Bridge and Acton, a total distance of 7½ miles. The undertaking did not flourish, and in 1894 it was acquired by the group of capitalists and engineers at the head of the Bristol tramway system. The lines were relaid, new cars obtained, and the horse car service was improved. The name of the company was changed to the London United Tramways, Limited, and the present system was planned and gradually realised. The Bristol group, at whose head was the late Sir George White, had prophetic views, and were cognisant of the developments in electric traction which were taking place in the United States and were beginning in England. In or about 1895 Sir (then Mr.) Clifton Robinson began his historic campaign among the local authorities and the public of the western outskirts of London in favour of electric traction on the overhead wire system. It was an uphill fight, for the prejudice against overhead wires was so intense as to be almost unbelievable nowadays. Even well-intentioned members of the London County Council attacked the company for desiring to shut out the sunlight from London streets by their hideous wires. To overcome this unintelligent opposition much persistent and energetic propaganda work in various novel ways, including publication of special local newspapers, was carried out, and apparently endless negotiations with local authorities occupied two or three years. The amount of local interest was enormous, and the subject was made a test one at the municipal elections. At length, in 1898, the company succeeded in getting a Bill through Parliament authorising the conversion of the horse lines to electric traction. The first electric cars taking energy from overhead wires began running in April, 1901, and they proved a valuable object lesson. This achievement would have been attained earlier, but the powers obtained were hung up for two years owing to the Kew Observatory difficulty. The authorities of that institution contended that leakage of current from the tramway rails would affect magnetic observations at Kew. The objection was at last got over by the tramway company paying the cost of the removal of the Observatory to another part of the country far from electric or other disturbances.

From time to time the company obtained powers for extensions of the system both on the Middlesex and Surrey sides of the Thames, and the lines linked together a large number of towns and villages, bringing a vast convenience to the population. The opposition of local authorities, however, was sometimes bought off at very high prices, as the company were obliged to undertake expensive road widenings and wood paving in places where otherwise such innovations would not have been dreamed of. Thus the capital account of the company went up in an alarming way. The power-station erected at Chiswick was regarded as the last word in plant and equipment, and tracks and cars were of the most approved types of the time. In April, 1903, the important extension to Hampton Court was opened, and three years later the Surrey lines came into operation. Because of events some of the authorised rural extensions have never been constructed.

### FINANCIAL.

The fares charged were fixed by statute, so far as maxima were concerned, and on the average the highest rate which the company could charge was about a halfpenny per mile. In some places it was a penny for three miles. In the earlier years of electric traction on the system, when only the best paying routes were open, and when the cost of maintenance was naturally low, the company prospered. For the year 1903 the dividend on the ordinary shares was 8 per cent.; for 1904 it was 6 per cent.; but for 1905 it fell to 3 per cent. Just after this the control of the company passed from the Bristol group to the London underground railways group, and this was followed by interchange of traffic arrangements with the underground railways. For 1906 the dividend was 3 per cent., for 1907 2 per cent., and for 1908 it fell to zero. The serious falling off in receipts beginning in 1906 was partly due to the coming into existence of motor omnibus competition and partly to the development of electric traction on railways. The call for maintenance and renewals of the tramways and their equipment also became acute.

Digitized by Google

In the report of the directors for 1908 the auditors noted that no allowance had been made for depreciation. The capital of the company at this time included nearly £1,000,000 spent on road widenings, capitalised wayleaves, and other outlays necessary to get the consents of the local authorities. It was recorded that some 30 local authorities had to be negotiated with.

For 1909 no dividend was paid on the ordinary shares, and even the preference shares had to go without. The latter fact arose from the policy then adopted of utilising all available surplus either for immediate repairs or for forming a fund for future maintenance. In 1910 Sir Clifton Robinson retired from the managing directorship of the company, and undertook commercial missions for the underground railways group in the Far East and in America. In the latter part of the same year he died suddenly in an electric tramway car in New York. He was succeeded in the post of managing director by Mr. (now Sir) A. H. Stanley.

In succeeding years such profits as the undertaking made were regularly set aside for repairs and renewals. These funds, however, were not sufficient for the purpose, as was proved by the lamentable state into which the tracks in many places fell. For 1913, however, a dividend of 1 per cent. was paid on the preference shares, and for 1914, ½ per cent. Then the war conditions came on. No dividend was paid for 1915, and for 1916 conditions grew still worse, and there was an adverse balance of over £2,000. The directors announced that it was expected that for 1917 the results would be still less favourable, and in view of the fact also that a large sum would be required for the purpose of placing the undertaking in a proper condition of repair, proceedings were commenced by a debenture stock-holder for the appointment of a receiver pending the preparation of a scheme for the reorganisation of the company's capital.

This announcement was the forerunner of the scheme which is authorised by the Bill which the company have obtained this year. In June, 1917, a receiver was appointed, and negotiations were set on foot for the reconstruction of the company's capital and the rehabilitation of the tramway undertaking. These resulted in a provisional arrangement under the terms of which, subject to Parliamentary sanction being obtained, both the loan and share capital would be substantially reduced, and funds would be provided for the reconstruction and renewal of the tramways.

The last balance sheet of the company shows that the authorised capital was £2,500,000, divided equally into cumulative preference shares and ordinary shares. The issued capital was £1,250,000 of cumulative preference shares and £1,000,000 of ordinary shares. The loans, including debenture stock and debentures, amounted to £1,750,000. The total was thus £4,000,000, and as the system extends to about 100 miles measured as single track, the capitalisation was equal to £40,000 per single-track mile. Considering that much of the route is in regions of comparatively light traffic, it is not surprising that with the low fares charged it became impossible to pay dividends.

### L.C.C AND CHISWICK POWER-STATION.

Before going on to refer to the company's Parliamentary Bill of this year, the interesting episode should be mentioned of the purchase by the London County Council of the Hammersmith lines, this being the part of the company's undertaking which is situated within the county of London. This embraced 5½ miles of route. Arbitration, litigation, and negotiation went on for two or three years, and the final settlement was only reached at the end of 1917. In the course of the proceedings it was laid down—much to the chagrin of the County Council—that the latter, in making the purchase of the lines under the compulsory powers of the Tramways Act of 1870, must buy also the Chiswick power-station of the company. The terms finally agreed to were that the Council should pay £235,000 for the tramways, the power-station, car depot, and offices at Chiswick, the completion of the purchase to be postponed till the end of the war. On the completion of the purchase there are to be mutual running powers between the Council and the company. Prior to the settlement the Council had advanced £64,000 to the company for the reconstruction of the Hammersmith lines. This payment is in addition to the purchase price. The Council also pay £22,000 of costs, bringing their total outlay up to £321,000, or equal to about £58,000 per mile of route—practically all double track. The company will take all the electricity they require from the Chelsea station of the underground railways. Their Surrey lines are already supplied from that source.

### THE COMPANY'S BILL.

The Bill which the company have this year obtained from Parliament seems well adapted to clear away troubles. While its financial provisions are so reasonable that finally there was very little opposition to it, the preamble gives a succinct account of the circumstances dealt with. The right of compulsory purchase by the local authorities arises in the case of various portions of the undertaking at different dates, the earliest in 1924. The terms as to payment are as regards certain portions of the undertaking those prescribed by Section 43 of the Tramways Act, 1870, and as regards the remainder they are the fair market value as a going concern. Certain of the authorised tolls and charges do not afford adequate remuneration to the company. Principally on this account, and because of the increase in working expenses, the company were unable to pay the 1917 interest on their mortgage debenture stock. Partly owing to the financial difficulties of the company, and partly owing to the scarcity of labour and materials during the war, the condition of the tramways and the rolling stock has become impaired. In the circumstances it would be impracticable for the company to raise the capital for restoring the undertaking.

The Bill accordingly provides in the first place that the power of purchase by any local authority shall not be exercisable before the year 1950, and that the terms will then be those prescribed by Section 43 of the Tramways Act. In regard to fares, these are fixed at a maximum of a penny a mile, the change to come into effect six months after the end of the war. The routes are to be divided into half-mile stages. In no case are the company to be bound to charge less than a penny. Power is given to the Board of Trade, subject to the maximum provided, to alter the fares if sufficient cause is shown to a referee.

In regard to the financial provisions, the company are to apply for the sanction of the High Court to a scheme to reduce the capital to £1,000,000 of mortgage debenture stock, £963,000 of 5 per cent. preference shares or stock, and £660,000 of ordinary shares or stock—total, £2,623,000. Of the mortgage debenture stock, £142,000 will be reserved for issue as and when required. For five years after the war the dividend on the preference shares in respect of any year shall only be payable out of the revenue for that year. The dividend on the mortgage debenture stock will be limited to 4 per cent. per annum. Arrears of dividend on the existing cumulative preference shares will be cancelled. The right to issue further capital is retained. The company are as soon as possible to put their undertaking into good condition and repair. Until the company have expended on reconstruction or set aside for that purpose sums amounting to £400,000, they shall not declare or pay any dividend on their preference or ordinary shares. The company are to apply towards the reconstruction the £235,000 to be paid under the agreement with the London County Council for the purchase by the latter of the Hammersmith lines and Chiswick depot. (The agreement is scheduled to the Bill.) The company are also to use for the reconstruction their surplus accumulated revenue amounting to £60,000.

From January 1, 1919, the revenue of the company, so far as available, is to be applied, after paying debenture and other interest, in paying to a special reserve fund for five years from January 1, 1919, £60,000 a year; for four years from January 1, 1924, £40,000 a year; and for every year from January 1, 1928, £30,000. A deficiency in any one year need not be made up in the next. Any money over may go in preference and ordinary dividends. The special reserve fund is to be applicable only to reconstruction, but no part of it is to be so used until the company have expended on reconstruction the whole of the previously mentioned £400,000.

It will thus be seen that the scheme is a very complete one. For meeting the cost of reconstruction there is the nest-egg of the purchase money from the County Council to begin with, and as something approaching a million and a half is written off the capital, it will be the easier for the company to accumulate money out of revenue for reconstruction work. The new manager of the company, Mr. C. J. Spencer, late of Bradford Tramways, should have a busy and interesting time, and one giving large scope for his abilities.

## UNIFORM FARE SUGGESTED FOR EDINBURGH.

In connection with his suggestion of a uniform fare for the Edinburgh tramways, which is being considered by the Tramways Committee, Councillor M'Laren has issued a memorandum on the proposal to members of the Committee. He points out that in the United States an average fare in cities of 2½d. is charged for any distance with transfers. In cities like New York and Chicago a distance of 20 miles can be travelled for this sum. Several Canadian cities have also adopted the system with certain modifications. In Winnipeg tickets are sold—one for 2½d. and six for 1s. 0½d., available any time, others for restricted times at cheaper rates, the average fare being a little less than 2d. The balance-sheet of the Edinburgh District Tramways Company for 1913 showed a profit of £26,577, the average fare working out at 1·102d. An average of six tickets for 6½d. on the same basis of passengers carried would give a profit of £21,474, but as a single ticket would have been 1½d. the profit would have been much larger. In 1917 the profit was £35,219, and the average fare 1·269d. Under the system suggested the profit would have been £13,024 but then, again, as a single fare would have been 1½d., the gross profit would have been as large as that shown in the balance-sheet. At present the increased tramway charges caused by the war are largely paid by suburban residents. As regards the housing problem the adoption of the average fare would, Councillor M'Laren contends, effect a radical improvement.

**The Kearney High-Speed Railway** is the title of a pamphlet reprinted from the Transactions of the Society of Engineers (Incorporated). It is of interest, as containing a report of a lecture on the subject indicated given by Mr. E. W. Chalmers Kearney at a meeting of the Society and of the discussion which ensued.

## POST-WAR POSITION OF ELECTRIC POWER SUPPLY.

### MR. HATTON'S PAPER READ AT THE MUNICIPAL TRAMWAY ASSOCIATION'S CONFERENCE.

By A. Horsburgh Campbell, M.Inst.C.E.
*(City and Tramway Engineer to the City of Edinburgh.)*

It was with much regret that the writer was unable to avail himself of the invitation with which he was honoured to attend the annual conference of the Municipal Tramways Association at Leicester. He looks forward to future conferences when the Edinburgh Corporation will have entered into the realm of actual operation of their tramways system. Meantime, he desires to offer the following contribution to the debate on Mr. Hatton's paper.

The paper raises at least two points in which the City of Edinburgh has at the present time, and in early anticipation, a special and peculiar interest. These are central generation from super-power stations and the relations of the electric supply department to tramway traction.

On the first point—that of super-power production—the tramway world has a prime concern, and therefore the paper is most opportune, and may be helpful. It is interesting to note that taking some 82 or thereby of the municipal tramway systems, there are only 13 systems, or, roughly, one-sixth, which have their own separate generation of power; the remaining five-sixths purchasing their power from the electric undertaking of the city or town.

The comparisons for cost of current separately generated, and purchased are :—

1. Separately generated from (which necessarily is exclusive of capital cost) ... ... ... ... ... 0·41d. to 1·21d. per unit.
   Or say from ... ... ... ... ¾d. to 1¼d. per unit.
2. Purchased from the electric undertaking from (exclusive of capital costs again) ... ... ... 0·54d. to 1·20d. per unit.
   Or say from ... ... ... ½d. to 1¼d. per unit.
3. If capital costs be included these charges become ... ... ... 0·84d. to 1·62d. per unit.
   Or say from ... ... ... ¾d. to 1⅝d. per unit.

It thus appears that the difference between the working costs of separate generation and that of purchase is so minor as to be practically negligible, but if the capital costs be added to the works cost, the scale must turn substantially in favour of combined generation of power, for light as well as for traction. The wisdom of the practice which has grown up in the preponderance (viz., as 5 to 1) of the joint station whereby the current is purchased by the tramway department, seems thus amply demonstrated.

This, however, is but a step along the path of the greater combination proposed in the recent report which has been issued on electric power production from super-stations, set down at or near the pitheads.

With the economic motive inspiring this great centralisation no fault can be found; with the resultant effect upon municipal tramway interests (representing probably the largest individual users of current) much concern must be felt. It therefore behoves the tramway authorities to take at this early stage, not only a watchful but a very active interest in this movement to ensure that the potential economies from central or super-power generation will be reflected in the tramway interest by correspondingly reduced charges for current supplied. It may be said that the unity of the present arrangement, which makes the tramway department merely subjective to the electric light department renders separate action unnecessary, and that the interests of the tramways will be fully conserved by their manufacturers or purveyors of current, in the electric department.

I do not so view the relations of the two departments of the municipality. The tramways are far too important to suffer their interests in this economic evolution, to be absorbed or wholly merged in and by the electric light department. And when it is remembered that the proposals as sketched in the report are as yet too vague to show the effect of this titanic development in electric power production, it would be well for the tramway interest to exert and assert its own separate influence in the thorough and exhaustive examination of the proposals, and in securing that the result shall be to the decided betterment of the tramway world. Unless the great consumers of current rise to the opportunity now offered, there is danger that the public interest, represented by the municipalities, may fail to reap their rightful share of the economy latent in the conception of the report, which in its national effect must be of immense importance, vital indeed to the industrial and transport interests of the country.

The second point—that of the relations of consumer to producer—touched upon by the author of the paper on page 2, is important, and in prospect of the developments above referred to, acquires more than local interest; for if this movement for super-power generation materialises, it will involve a complete recast of the relations and charges which now exist. Locally, to the City of Edinburgh it possesses under the existing condition a more than ordinary interest. The many points that arise, and the factors that come into play for skilled determination of the purchase price for electric current are of paramount importance to the new tramway era dawning in the Scottish capital. But it is rather with the general than the local application that the conference is concerned, and here we are driven back to the point the writer has sought to make in the foregoing observations, that a careful study will become necessary on the part of tramway experts and their committees of the questions and factors that should fairly regulate the price of current under the new era of electric generation on that "super-scale" foreshadowed by the reports of the Reconstruction Committee.

For help and enlightenment upon those points, the writer would refer the conference to that most valuable paper by Mr. Yerbury, and the exhaustive debate on this subject, published in the proceedings of the Institution of Electrical Engineers, Vol. 44, Session 1909–10.

With all deference to the author in his very natural claim for the Durham coal fields as the fitting place for a first super-power station, may I—animated by like feeling of local patriotism—direct attention to the superlative claims of the Lothians coal fields, which under prevailing conditions in their relation to the Scottish metropolis, offer an ideal area, and unique opportunity for pioneer effort in the economic production of power on the "super scale." The City of Edinburgh has anticipated such a development in the excellent site secured on the immediate confines of the coalfields of Midlothian and of the city itself, for the erection of a Central—super-power—Station. All that is wanting is the release of war-time restrictions for progress to be made, and the developments of the Forth and the Lothians' area offer a fit field for this pioneer enterprise.

## STAFF EFFICIENCY MEETINGS.

At the first meeting of the fourth series of Operating Department efficiency meetings in connection with the London Underground Railways and London General Omnibus Company, Limited, group, held at the L.G.O.C. Training School, Chelsea, Mr. H. E. Blain (operating manager) presided over an attendance of about 250 members of the administrative and control staffs. A cinema lecture entitled "Some Topical Camera Productions in connection with the Underground Railway and L.G.O.C." was given by Capt. A. Rozier (superintendent of employment and training, L.G.O.C.). The lecturer had gathered together some exceedingly interesting illustrations both of past transit facilities and of present developments in the London area. The films and slides included an excellent new film of a trip on the District Railway showing some fine pictures of the Lots Road Power Station, and a series of slides on road locomotives, showing types of vehicles from 1770 to the present date, which pictured graphically the evolution of traction and its application to passenger and goods transport. Other topics illustrated were the conversion of an omnibus from petrol to gas fuel and an instructive series showing the latest developments in the training of omnibus employees in first aid to the injured, the slides depicting improvised splints and bandages which can be made up from the tools and equipment carried on an omnibus. The November meeting has for its subject "Omnibus Maintenance."

## SERVICE LORRIES FOR DISPOSAL.

In connection with the difficulty experienced by local authorities in maintaining their transport services, the Director-General of National Salvage notifies that he has given the matter consideration and hopes shortly to be in a position to offer a number of 3-ton covered petrol lorries for sale or hire to local authorities. The vehicles have been used by the War Department and cannot be guaranteed, but it is expected that they will be serviceable to local authorities. On hearing from Councils he will place their names on his list and inform them when he has vehicles suitable for their inspection.

**Coal Saving Bonus.**—The London County Council recently approved a scheme for the distribution of a coal saving bonus to drivers and conductors on their tramways. During the past quarter encouraging results have been obtained. The saving represented £3,288 7s. 4d., half of which sum has been distributed in accordance with the scheme. The attention of drivers and conductors has been called to the fact that the saving in coal for the first quarter being slightly under 5 per cent., a much greater saving and consequently greater bonus can be obtained by further perseverance and care.

**Reinforced Concrete Freight Car.**—The Board of Trade Journal gives currency to a report that a contract has been let in the United States for the building of a reinforced concrete gondola freight car, which will be completed in 60 days. The car is to have a capacity of 100,000 lbs. and a length of 40 ft. It will cost several hundred dollars less than wooden and steel cars of the same type, and will require only 6,000 lbs. of steel in its construction as compared with 32,000 lbs. for the ordinary steel cars.

## BLACKPOOL TRAMWAYS UNIFICATION.

A Report by Mr. Charles Furness,
*Borough Electrical Engineer and Tramways General Manager.*

The proposed unification of the several tramway systems of Blackpool is the subject of a report which has been recently prepared for the Blackpool Corporation by Mr. C. Furness, borough electrical engineer and tramways general manager. The report is of so much interest and importance, not only to the local authority concerned but to all those who realise how necessary is the connecting up of adjacent tramway systems, that we give it in full.

Preliminary Report on the Proposed Unification of

| | |
|---|---|
| Blackpool Corporation Tramways ... | 21½ miles single track. |
| Blackpool and Fleetwood Tramways... | 15 ,, ,, |
| Blackpool, St. Annes, and Lytham Tramways ... ... ... ... | 11½ ,, ,, |
| Total miles single track ... | 48 |

"The prosperity of Greater Blackpool in the future will in no small measure depend upon the transportation facilities provided by the Corporation in enabling its residents and visitors to travel with ease and comfort to and from any part of the borough over the municipalised tramways of the Blackpool and Fleetwood Tramroad Company, and the Blackpool, St. Annes, and Lytham Tramways.

"Discontinuity of a tramway service by reason of parochial or municipal boundaries is probably one of the most unfortunate things you can have in connection with transportation. At the present time the three tramway systems operating within the borough are restricted in their administrative and effective usefulness to the general travelling public by a lack of co-ordination in their independent services, and passengers desiring a rapid and easy means of travel between the boundaries of Lytham, St. Annes, Blackpool, and Fleetwood, are obliged to travel over three separate and independent tramway systems.

"Doubtless in the early days of tramways it was felt too speculative a business for municipalities and public authorities to venture upon, and hence the majority of pioneer tramway systems in this country were promoted and operated by private companies, whose first interest was the earning of substantial dividends rather than the public convenience in easy and cheap passenger transport facilities. However, with the advent of the electric traction motor, municipalities (and amongst them Blackpool) were quick to realise the possibilities of electric traction, and undoubtedly the purchase of the original conduit tramway system from the Blackpool Electric Tramway Company in 1892, and its conversion to overhead traction, was the beginning of the great transportation business on this coast, which has since grown to over 30 million passengers per annum on the three local systems.

"During the past 15 years the number of passengers carried over these tramways has increased three-fold, and I estimate with a unified system under the Corporation the tramway traffic between Fleetwood and Lytham will grow even more rapidly. A very moderate estimate of the traffic over the joint tramways under the administration of the Blackpool Corporation in the near future, say within six years of joint operation, will be in the neighbourhood of 55 million passengers per annum, with a total revenue of £340,000.

"The linking up of the three tramway systems under one administrative body will enable the Tramways Committee to give more efficient and frequent services to all parts of the district.

"The tramway undertaking of the Blackpool and Fleetwood Tramroad Company will come into the scheme of unification in the near future, and it now only remains for the amalgamation of the urban districts of St. Annes-on-Sea and Lytham to enable the Corporation to treat for the purchase of the Blackpool, St. Annes, and Lytham Tramways, which they will be able to do in the year 1921, under Section 43 of the Tramways Act, 1870, which reads as follows:

> "Where the promoters of a tramway in any district are not the local authority, the local authority, if, by resolution passed at a special meeting of the members constituting such local authority, they so decide, may within six months after the expiration of a period of 21 years from the time when such promoters were empowered to construct such tramways, and within six months after the expiration of every subsequent period of seven years, etc., etc., require such promoters to sell, and thereupon such promoters shall sell to them their undertaking, or so much of the same as is within such district, upon terms of paying the 'then value' (exclusive of any allowance for past or future profits of the undertaking, or any compensation for compulsory sale or other consideration whatsoever) of the tramway, and all lands, buildings, works, materials, and plant of the promoters, suitable to and used by them for the purposes of their undertaking within such district, etc.

"Note 1.—On a sale to the local authority the local authority becomes entitled to the exclusive use of the tramway, not by transference from the Company, but by virtue of the statute alone, and the statute converts what was a terminable right in the company into a permanent right in the local authority.

"Note 2.—To the company the value of these powers while they can be exercised is great, but the value of them as a saleable article at the times when they can be compelled to sell them to a local authority under Section 43 is nil, inasmuch as on such sale they terminate automatically so far as the company are concerned.

"The capital expenditure on the tramways undertaking of the Corporation for the year ending March 31st, 1918, amounted to £317,000, and with the additional capital commitments of £270,000 for the property of the Blackpool and Fleetwood Tramroad Company, and the prospective purchase at its material value of the tramways of the Blackpool, St. Annes, and Lytham Company in the year 1921, together with the developments proposed in connection with our own tramways, viz., the extension of the promenade track southwards to link up with the St. Annes lines at Squire's Gate; the extension of the New Road route to Hoo Hill; the linking up of the Fleetwood lines at the Gynn; the provision of new car repairing and engineering workshops and administrative offices at Rigby Road and the purchase of new rolling stock, etc., will bring up the capital expenditure of the tramways for the operation of a unified system to approximately £800,000 within six years of the scheme receiving the sanction of the Board of Trade.

"A new tramways depot, with car repairing workshops and engineering plant of modern construction, will be required, and I have made a preliminary survey of Rigby Road Highway Yard, and consider this site an ideal one for an up-to-date central tramways department capable of dealing with the transportation business of the borough and district for the next 20 years, and recommend that at least four acres be rented or sold to the Tramways Committee for the purposes of this development.

"At this stage I do not consider it desirable to give full details making up this estimated capital figure of £800,000, as the property of the Blackpool, St. Annes, and Lytham Tramways Company has yet to be valued, but I have made ample provision for covering the 'then value,' which is exclusive of any allowance for past or future

Comparison showing Increase in Traffic Receipts and Passengers Carried on Three Tramway Systems—Period 15 Years.

| System. | Passengers Carried. | | | | Gross Receipts. | | |
|---|---|---|---|---|---|---|---|
| | 1902–3 | 1917 | Increase | Ratio of Increase | 1902–3 | 1917 | Increase |
| Blackpool Corporation ... ... | 5,809,190 | 17,810,538 | 12,001,348 | 3 | £41,818 | £96,224 | £54,406 |
| Blackpool, St. Annes, and Lytham | 1,236,230 | 5,207,967 | 3,971,737 | 4 | £13,531 | £42,962 | £29,431 |
| Blackpool and Fleetwood ... ... | 2,049,677 | 4,000,000 | 1,950,323 | 2 | £30,474 | £44,531 | £14,057 |
| Totals ... ... | 9,095,097 | 27,018,505 | 17,923,408 | 3 | £85,823 | £183,717 | £97,894 |

Blackpool Corporation Tramways.

Gross receipts for the year ending March 31st, 1918 ... £119,339
Passengers carried for the year ending March 31st, 1918 22½ millions.

Estimated gross receipts for the year ending March 31st, 1919 ... ... ... ... ... ... ... £145,000

Digitized by Google

profits, the result being that the amount ultimately to be paid in compensation will be measured by what it would cost at the date of sale in the year 1921 to construct the tramway lines, subject to a proper deduction in respect of depreciation, but with no allowance for the rights, powers, and privileges of the company.

"The estimated result of the sixth year of operation after the scheme of unification has been completed is as follows :—

| | |
|---|---|
| "TRAMWAYS. | |
| "Total receipts from all sources ... ... ... | £340,000 |
| "Total expenditure ... ... ... ... ... | 208,000 |
| | £132,000 |
| "Interest and Sinking Fund on estimated capital expenditure of £800,000 ... ... ... ... | 72,000 |
| "Net surplus ... ... ... | £60,000 |

"The possibilities of new traffic developing over the tramways between Fleetwood and Lytham, over lines having a total of 48 single track miles, will be very great, with the boom of building which is almost certain to follow after this world war has been successfully concluded.

"At the present time, owing to the restrictions under the 'Defence of the Realm Act,' the borough of Blackpool, which normally increases its residential character by the addition of 560 new houses per annum, has now a lee-way of some 3,000 houses to erect within its old borders, and with the extension of the borough north to the boundary of Fleetwood, and to the south by the amalgamation of the urban districts of St. Annes and Lytham, the influx of new residents and visitors will create demands for transportation which will test the Corporation resources to their utmost, and it is therefore necessary that your Tramways Committee be authorised to make every preparation to meet the growing traffics which are bound to follow on the future development of Greater Blackpool."

## FURTHER DEMANDS FROM TRAMWAY WORKERS.

AN APPEAL TO BE MADE TO THE COMMITTEE ON PRODUCTION.

Notwithstanding recent awards in their favour, tramway employees are still dissatisfied with their conditions of pay and work. About the middle of last month the various Corporations and companies owning tramway undertakings received a communication from the National Transport Workers' Federation (signed by Mr. Robert Williams, the secretary) as follows :—

"As the result of representations made to this Federation by the affiliated unions catering for tramway and omnibus workers, I am directed to make formal application to you for the following alterations in wages and working conditions on behalf of all employees (other than skilled craftsmen), male and female, who are members of unions affiliated to this Federation :—

1. That equal payments be made to women as to men in the tramway and motor omnibus undertakings in the United Kingdom.
2. That the position of youths between 18 and 21 years of age shall be maintained in accordance with the award of March 8, 1918.
3. (*a*) That the war wage at present paid to males and females 18 years and over shall be increased by such amounts as shall give 35s. per week war wage. Payments to be made on a basis of a week of six days or six shifts.
   (*b*) That youths and girls under 18 years of age shall be paid half the total war wage paid to the employees over 18 years of age, except where youths or girls are performing adults' work, when they shall receive adults' pay.
4. (*a*) That all spread-over time in excess of one hour within a duty shall be paid for as though worked.
   (*b*) That where the spread-over time of a duty exceeds ten hours and is under twelve hours, all time in excess of ten hours shall be paid for at the rate of time and a half.
   (*c*) That where the spread-over time of a duty exceeds twelve hours, all time in excess of twelve hours shall be paid for at the rate of double time.
5. That in the event of services being curtailed or reduced, the full weekly payments in operation at the time of such curtailment or reduction shall continue to be paid in addition to the current war wage.
6. That this application is made on behalf of and is intended to include all employees (other than skilled craftsmen), male and female, whose unions are affiliated to the National Transport Workers' Federation.

"I shall be glad if this is given immediate consideration by your association or company, and on behalf of the Federation and the unions concerned I have to say that we are willing to appoint representatives to a conference to discuss a settlement of the above claim, or, failing agreement, to submit the matter to the Ministry of Labour for arbitration before the Committee on Production. I am sending a copy of this letter to the Chief Industrial Commissioner."

The list of unions concerned is as follows :—Amalgamated Association of Tramway and Omnibus Workers, London and Provincial Union of Licensed Vehicle Workers, National Union of Vehicle Workers, National Union of General Workers, and Dock, Wharf, Riverside, and General Workers' Union.

Representatives of the Municipal Tramways Association and the Tramways and Light Railways Association subsequently met the representatives of the unions, when the latter agreed to postpone the demands, other than those relating to wages, but insisted on immediate attention to the latter.

As the employers felt unable to make any offer in addition to the large increases granted so recently as July last, the unions propose to appeal to the Committee on Production.

## FINANCIAL REPORTS AND MEETINGS.

**John I. Thornycroft and Company, Limited.**—The report for the year ended July 31, 1917, states that the available balance, after deduction of debenture interest and interim dividends, is £102,337. The following dividends have since been paid :—3 per cent. on preference shares for six months to June 30, 1917; final dividend of 10 per cent. on ordinary shares, leaving £81,547. The directors transfer to reserve £50,000, contribute to benevolent fund £5,000, and leave to be carried forward £26,547.

**Silverton Tramway Company.**—The report for the year ended June 30 states that revenue shows a decrease of £29,025 and expenditure a decrease of £25,421, compared with the previous year. Profit and loss account shows :—Balance from working account, £67,315; interest on investments, £4,431; refund Federal Income Tax Commissioner, £2,559; transfer from No. 2 reserve fund, £9,084; total £83,389. This was absorbed in payment of dividends, £75,000 interest added to No. 2 reserve fund, £4,431; and depreciation, £3,956.

**Gloucester Corporation Light Railways.**—A statement of the operating expenditure and income for the year ended March 31, prepared by the general manager and engineer (Mr. F. H. Corson), shows a revenue totalling £22,960, including £22,153 for traffic receipts. Operating expenses amounted to £17,385, leaving a gross profit of £5,575. Statistical information includes the following :—Population served, 53,972; passengers carried, 4,134,262; car miles, 546,172; percentage of operating expenses to receipts, 76; average operating expenses per car-mile, excluding power cost, 6·48d.; including power cost, 7·63d.

**Camps Bay Tramways.**—The report of the Cape Town Consolidated Tramways and Land Company, Limited, for the year ended December 31, 1917, shows a debit balance of £539, against £631 in the previous year. No dividends have been declared by the subsidiary companies. The Camps Bay tramways realised a profit of £3,018 against £2,225 in the previous year. The number of passengers carried showed an increase of 207,236, and the receipts an increase of £3,794, but the cost of operation was £3,001 more. The Cape Town Corporation have completed improvements and other works at Camps Bay which have added to its attractions and increased the number of passengers.

**Birmingham Small Arms Company, Limited.**—Final dividends on the "A" preference shares at the rate of 5 per cent., on the "B" preference shares at the rate of 6 per cent. (both less income tax), and on the ordinary shares of 5 per cent., together with a bonus of 2s. per share, free of income tax, have been declared. At the annual meeting Sir Hallewell Rogers (chairman of the company), referring to the problem of the utilisation of their facilities after the war, stated that, in association with the Metropolitan Carriage Wagon and Finance Company, they were actively interesting themselves in a line of manufacture forming a "key industry" for which in the past manufacturers had almost been entirely dependent upon importation from other countries.

**Exeter Corporation Tramways.**—There was a net profit of £1,516 for the year ended March. The total passengers carried were 5,306,562, and the traffic receipts were £20,629, being £463 more than in the previous year. The mileage run was 414,096, being a decrease of 18,964, but 42,662 more passengers were carried. The total working expenses, exclusive of capital charges, were £14,742, an increase of £1,804. Of this, £795 was due to increase of wages. Mr. R. O. Baldwin, the general manager, expresses the opinion that the reserve fund should stand at least at £15,000, instead of £6,849 as at present, in view of the prospect when increased expenditure upon renewals have to be faced. It would be necessary immediately after the war to purchase four new cars at a cost of over £3,000.

**Liverpool Corporation Tramways.**—At Liverpool Tramways, Electric Power, and Lighting Committee a statement was made by Alderman E. Russell Taylor (chairman) showing the remarkable expansion of business during the nine months to October. Confronted, he said, with many obstacles, restricted by shortage of materials and deprived of a large percentage of employees who had joined H.M. Forces, the management had had to overcome difficulties hitherto unknown in municipal tramway life. The rolling

Digitized by Google

stock, overhead equipment, track and service had been maintained in a manner which reflected credit upon those responsible. The traffic returns for the nine months had exceeded all previous records as regarded total receipts, number of passengers carried, and car-mile earnings. The receipts for 1918 were £705,816, compared with 1917, £603,319, an increase of £102,497; the passengers carried numbered 146,006,029, compared with 127,419,194, an increase of 18,586,835; the mileage was 9,176,861, compared with 9,414,628 a decrease of 237,767; the earnings per mile were 1s. 6·46d., compared with 1s. 3·43d., an increase of 3·03d.

**Dick, Kerr and Company, Limited.**—The report for the twelve months ended June 30, 1918, shows that this company's prosperity has continued in a way that shareholders should find highly satisfactory. A dividend of 10 per cent. per annum is recommended on the ordinary shares, and £37,860 is carried forward. A year ago the dividend was at the same rate, and £36,073 was carried forward. As in the two preceding years, a sum of £25,000 has been set aside to supplement the special reserve for contingencies. The profits amounted to £87,916, and including the amount brought forward there is a total sum available of £123,989, which has been allocated as set out in the table below, in which a comparison is given with the results of the four preceding years :—

| | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ | £ |
| Net profits ... ... ... | 87,916 | 95,465 | 71,740 | 46,959 | 44,761 |

Although the amount of excess profit levy under the Munitions of War Act has not been finally settled, the directors believe that the reserves which they have made in the accounts for extra depreciation, special taxation, etc., are sufficient. All the works have been fully occupied during the year, although in the case of the United Electric Car Company a considerable portion of the time has been occupied in extensions and alterations necessary to produce important work of a nature specially suited to that establishment.

**Reading Corporation Tramways.**—The report for the year ended March 31 shows that the revenue has considerably expanded, there being an increase in the total income of £11,205. The working expenses increased by over £9,000, but the net profit at £8,400 was £2,700 higher. Of this sum, £4,400 has been placed to reserve and renewals account, and £4,000 was contributed to the borough fund. A comparison of the results for the last four years is appended :—

**Leeds Corporation Tramways.**—A statement of the working during the half year ended September 30, has been submitted to the Tramways Committee. The total receipts for the half year were £357,832, or an increase of £60,965 compared with the corresponding half of last year—or more than 20 per cent. It must not, says the *Yorkshire Post*, be assumed that this big sum represents additional net profit, because of the larger sums which have had to go in payment of wages and towards the extra cost of materials. The result is, however, very satisfactory, considering that no fewer than 2,709,202 fewer passengers were carried, and that the cars have run 144,287 miles less, while the receipts per car-mile have advanced by nearly 25 per cent. Comparative figures for the half years ended September 30, 1918, and September 30, 1917, are as follows: Receipts, £357,832, £296,867; miles run 4,729,542, 4,873,829; passengers carried, 59,014,784, 61,723,986; receipts per mile 18·158d., 14·518d.; average fare paid per passenger, 1·434d., 1·133d.; population served 542,000, 542,000; number of times population carried, 108·88, 113·8; average number of cars, 219, 238.

## DIVIDENDS.

LIMA LIGHT, POWER, AND TRAMWAYS COMPANY.—A dividend of 1½ per cent. is announced.

SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LIMITED.—An interim dividend has been declared at the rate of 5 per cent. actual, less tax.

BRISBANE ELECTRIC TRAMWAYS INVESTMENT COMPANY, LIMITED.—An interim dividend of 4s. per share, free of tax, has been declared on the ordinary shares.

BARSI LIGHT RAILWAY COMPANY, LIMITED.—A dividend of 6 per cent. has been declared. There has been placed to reserve £1,035 and £11,202 has been carried forward.

BRITISH EMPIRE TRUST COMPANY, LIMITED.—A dividend has been declared on the 5 per cent. cumulative perpetual preference shares for the half year ended October 15, at the rate of 5 per cent. per annum.

LAUNCESTON (TASMANIA) COUNCIL TRAMWAYS.—The report for the year 1916-17 showed revenue £23,138 and working expenses £13,751. The previous year's figures were £21,372 and £13,315. There was a surplus of £631 as against a previous deficit of £45.

SALFORD CORPORATION TRAMWAYS.—For the year ended March 31, during which period over sixty-five million passengers were carried by the cars, an increase of 6,260,000 compared with the preceding year, the total receipts amounted to £348,008, a gross increase of £67,842.

DUMBARTON BURGH AND COUNTY TRAMWAYS.—A dividend of 5 per cent. (1s. per share), less income tax, on the ordinary shares for the year is announced. £6,000 has been placed to reserve, £1,770 to sinking fund for redemption of debenture stock and £2,333 carried forward.

CHEMINS DE FER ECONOMIQUES, BRUSSELS, which controls a system of 172·6 km. in Italy, as well as one of 32·4 km. in Brussels, and participates in many European street railways, has reported a net profit for 1917 of Fr.1,210,534 and has paid a dividend of 5 per cent.

DURBAN CORPORATION TRAMWAYS.—The report for the year ended July 31, 1917, states that the revenue has been £159,254 and the working expenses £99,558. After deducting interest on capital and contributions to sinking and renewals fund there is a net profit of £21,239, and £20,400 has been paid to the borough fund in aid of rates.

**Parcels Carrying at Glasgow.**—A recent suggestion of the Road Board that, in order to relieve traffic on railways and on petrol-driven vehicles, parcels might be conveyed on tramway cars has been considered by the Glasgow Tramways Committee. The committee recommended by a majority that an experiment be made in carrying parcels by special cars on one of the routes. On the recommendation coming before the Town Council, some discussion took place. Councillor Montgomery (convener of the Tramways Committee) stated that the general manager (Mr. J. Dalrymple) was very anxious that the experiment should be tried. On a motion to disapprove the experiment the voting was equal, 30 on each side. The Lord Provost then gave his casting vote in its favour. It will accordingly be tried.

**United States Tramway Fares.**—The National War Labour Board has increased by about 40 per cent. the wages paid to the tramway employees. An increase in fares must therefore be made, or a large number of street railways will fail to meet expenses. The award of the National Labour Board entails an increase of about £20,000,000 a year in the wages of street railway employees, and it is estimated that this amount will absorb all the net income and over 50 per cent. of the amount now paid for fixed charges.

**The General Electric Company, Limited,** has announced that they have completed the purchase of the Erith Works and of the goodwill of the manufacturing business hitherto carried on by Messrs. Fraser and Chalmers, Limited. Practically the whole of the personnel have transferred their services to the General Electric Company, who will carry on the business as a going concern, and under the title of Fraser and Chalmers Engineering Works (Proprietors, the General Electric Company, Limited).

## MR. R. H. WILKINSON APPOINTED BRADFORD CORPORATION TRAMWAY MANAGER.

Mr. R. H. Wilkinson, late tramways manager and engineer of Huddersfield Corporation, has been appointed general manager of the Bradford Corporation Tramways, at a salary of £800 per annum. Mr. Wilkinson, who has been at Huddersfield for 14 years, was previously manager of the Oldham Corporation Tramways for four years, and had two years' service in the Liverpool Tramways department. His experience has covered mechanical, electrical, and marine engineering. Mr. Wilkinson was one of the pioneers of goods traffic on tramways in this country.

## PRESENTATION TO MR. C. J. SPENCER.

Mr. C. J. Spencer, the retiring manager of the Bradford Corporation Tramways, and the newly-appointed manager of the Metropolitan Electric and the London United Tramways, received a farewell presentation from the members of the Bradford Tramways Committee. The presentation was made at a gathering at which there were several speeches expressing warm appreciation for Mr. Spencer and his services as tramways manager for Bradford.

Alderman E. Priestley (chairman of the Tramways Committee), who presided, said that Mr. Spencer was taking a very responsible position in London, and he (Alderman Priestley) believed that there were even higher positions in store for him. It was under the chairmanship of Sir James Hill that the foundation of the Bradford Corporation Tramways undertaking was laid, and he was ably assisted by Mr. Spencer.

Sir James Hill, Bart., M.P., said he had always felt that there was no tramways manager in the country equal to Mr. Spencer, although he did not know his successor. Mr. Spencer's departure was Bradford's loss, but he would leave with the best wishes of everybody in the city.

The Lord Mayor (Mr. H. H. Tetley) expressed the opinion that the choice of Mr. Spencer as tramways manager for Bradford had been amply justified by results.

Other speakers followed, including Councillor I. F. Akeroyd (vice-chairman of the Tramways Committee) and Mr. R. H. Wilkinson, the newly-appointed tramways manager, who said that the tramway world looked upon Mr. Spencer as one of its leading lights.

Subsequently the presentation gift, a silver flower vase, was handed to the recipient by Alderman Priestley, and duly acknowledged by Mr. Spencer.

## PERSONAL.

**Sir Cyril Jackson, K.B.E.,** has been appointed chairman of the Committee on Production.

**Sergt. T. Dean,** formerly a driver on the Leeds Corporation Tramways, has been awarded the Military Medal.

**Mr. J. Dobson,** manager of the Barrow-in-Furness Tramways, has been appointed manager of Gravesend Tramways.

**Councillor J. Timpson** (chairman of the Portsmouth Tramways Committee) has been appointed Mayor of Portsmouth.

**Mr. G. E. Cooper,** general manager of the Wagon Finance Corporation, Limited, has been appointed managing director.

**Mr. A. B. Slater,** manager of Burton-on-Trent Corporation Tramways, has been granted an increase in salary of £50 and war bonus.

**Mr. T. A. Kingham** has been appointed acting borough electrical engineer of Kingston-upon-Thames, at a salary of £400 per annum.

**Mr. J. R. Groves,** manager of the Gravesend and Northfleet Tramways, has been transferred to a similar position at Barrow-in-Furness.

**Mr. A. E. Collins** has been appointed as the representative of the Institution of Municipal and County Engineers on the Electric Vehicle Committee.

**Sir George Gibb,** owing to pressure of work in connection with his position as chairman of the Road Board, has retired from the Committee on Production.

**Lieut. L. F. Burgess,** of the staff of the British Westinghouse Electrical and Manufacturing Company (Australia), has been awarded the Military Cross.

**Mr. R. L. McCullough,** the late manager of the Carlisle Tramways Company, has been presented by the employees with a piece of silver plate suitably inscribed.

**Professor W. E. Dalby, F.R.S.,** has been appointed on the expert sub-committee of the Gas Traction Committee in place of the late Professor Bertram Hopkinson.

**Mr. J. W. E. Brown,** first engineering assistant to the borough electrical engineer of Burnley, has been appointed engineer and surveyor to the Failsworth (Manchester) Urban Council.

**Mr. J. F. Magoris,** acting electrical engineer of Hull Corporation, has been granted an increase in salary from £425 to £700 while carrying out the duties of Mr. H. Bell, who is absent on military service.

**Mr. W. P. Durtnall, R.N.V.R.,** has been granted a temporary commission as staff captain in the R.A.F., and is engaged in the technical department of the chief electrical engineer of the Air Ministry.

**Mr. F. Newey,** acting electrical engineer to the Swindon Corporation Tramways, is to receive salary at the rate of £275 a year from the date of the retirement of Mr. A. Dimmack, the late electrical engineer.

**Mr. A. B. Berriman,** chief engineer of the Daimler Company, has been appointed by the Minister of Munitions to be Deputy Controller of the Technical Department of the Department of Aircraft Production, in succession to the late Professor Bertram Hopkinson.

**Mr. J. E. Edgcome,** borough electrical engineer of Kingston-upon-Thames, who has accepted an appointment as secretary of the Tungsten Lamp Association, has been voted the sum of £500 for his special work in connection with the Kingston power-station.

**Second-Lieut. A. W. Godber, R.F.A.,** who has been wounded in action, was for fifteen years in the Nottingham Corporation Tramways offices. He enlisted at the outbreak of the war, and served for two and a half years in the Egyptian campaign. He recently received his commission.

**Mr. A. H. Pott, M.Inst.C.E., M.I.E.E.,** has resigned the managership of the Metropolitan Electric Tramways, Limited, and London United Tramways, Limited, in order to take up a position under the Tramways (Board of Trade) Committee. The two tramway companies have retained Mr. Pott's services in a consultative capacity.

**Mr. W. J. Steele,** permanent way engineer to the Newcastle-upon-Tyne Corporation Tramways, has been recommended for an increase in salary. Mr. Steele, who has £1,000 a year as city engineer, was entitled to an advance before he joined the army, but at his own request a previous proposal to advance his salary was dropped.

**Mr. C. J. Spencer,** who recently resigned the general managership of the Bradford Corporation Tramways to accept an executive position with the London Underground group, has now been appointed manager of the Metropolitan Electric Tramways, Limited, and London United Tramways, Limited. He entered upon his new duties on November 1.

**Second Lieut. J. A. Higgins, R.F.A.,** who was recently wounded in France, and has had to have his left leg amputated from above the knee, is the eldest son of Mr. J. P. Higgins, general manager of the Midland Rubber Company, Limited, Birmingham, and prior to joining the army was a member of the staff of that company. He joined the R.F.A. in September, 1916, receiving his commission in June, 1917, and going to France in September of that year. He was twenty years of age in February.

## OBITUARY.

### MR. M. E. CURWEN.

We record with deep regret the death of Mr. Maskell E. Curwen, European manager of the J. G. Brill Company, which occurred at Philadelphia on October 1, from pneumonia, after a short illness. Mr. Curwen joined the staff of the J. G. Brill Company more than twenty-five years ago, and has been European manager for more than twenty years with offices in London and Paris. Educated at the Episcopal Academy, Philadelphia, his first years in the car and truck industry gained him an intimacy with the details of manufacture and a practical knowledge of the tramway and railway field, especially of British and Continental practice, which, with his natural capacity for adapting himself to conditions as he found them, made him of value to the foreign customers of his company. His assistance in the early days of electric traction in this country will be specially remembered by many of our readers. He was widely known and esteemed for his upright character, lovable nature, and innate refinement, and his loss is deeply felt by a wide circle of friends on both sides of the Atlantic and by his business associates. Thirteen years ago Mr. Curwen married the daughter of Mr. Charles H. Clark, of New York. His brothers are Messrs. Samuel M. Curwen, George F. Curwen, and John Curwen. Mr. Curwen was a member of the American Society in London and of the American Club in Paris.

The death has occurred from wounds received in action in France of **Second-Lieut. J. Lever, M.C.,** who was formerly a conductor on the South Lancashire Tramways.

The death is recorded of **Mr. W. Clacy May,** who has been acting manager of the Great Eastern Railway in the absence of Mr. H. W. Thornton, general manager. Mr. May had previously been chief traffic manager and goods superintendent.

**Second Lieut. E. C. Bracey,** of the South Staffordshire Regiment, was killed in action at the age of 33. He had served in the army before the war, and was recalled to the colours in August, 1914, being at that time a conductor on the Dudley, Stourbridge and District Tramways. He had left the army as a corporal, but was promoted to the rank of sergeant on rejoining. He had over three years' service in France, and received the Mons Ribbon After a period in the O.T.C., he was gazetted Second Lieutenant in January, 1918, and left for France in July. He leaves a young widow to mourn his loss.

# TRAMWAY AND LIGHT RAILWAY NOTES.

## BRADFORD.

ACCIDENT CLAIMS.

The claims for compensation arising out of the serious tramway accident at Allerton, a few months ago, have all been settled by the Bradford Tramways Committee. There were altogether 22 claims, and the total amount of the allowances was £1,236 14s., giving an average of between £56 and £57 per claim. Congratulations on the successful completion of their task were extended to the chairman (Alderman E. Priestley), the vice-chairman (Councillor I. F. Akeroyd), the deputy town clerk (Mr. N. L. Fleming), and the late general manager (Mr. C. J. Spencer).

## COVENTRY.

KILLED BY A COLLISION.

As a result of a collision between two tramway cars at Coventry, a passenger was thrown against a broken window and so seriously injured in the throat that death took place soon afterwards. At the inquest the jury found that the driver of one of the cars was to blame in leaving undone what he ought to have done, with the result that the death was caused; and that the driver of the other car was also to blame for leaving his points without receiving his signal. The coroner said the verdict amounted to one of manslaughter against the first-mentioned driver, whom he committed for trial at the assizes. He told the other driver he had broken the tramway rules.

## DUBLIN.

WAGES AWARD—LAST CARS—FRACTURED ARM.

The arbitration on the claim of the employees of the Dublin United Tramways Company for increased wages has resulted in an award of an increase of 5s. per week from September 1. This increase brings the men's wages to 23s. per week over pre-war rates. Cars which formerly left the centre of Dublin for the suburbs at half-past eleven o'clock at night, now start at eleven o'clock. It is stated that the theatres, music halls, and cinema houses have arranged their programmes to harmonise with the alteration of the tramway service. In the Dublin Recorder's Court £15 15s. damages were awarded against the Dublin United Tramways Company on a claim for £50 in respect of a fractured arm, said to have been caused by a car being pulled up with a jerk.

## DUNDEE.

The Dundee Corporation is to supply the Dundee, Broughty Ferry and District Tramways Company with electricity. The arrangements will effect a saving of 1,400 or 1,500 tons of coal per annum. It has been agreed that the company shall pay 1¼d. per unit for their electricity. At present the Corporation is paying 1·6d. per unit, and for the quantity of current which the company requires the Corporation will get £900 per annum more than would otherwise have been received. It is provided that the company close down their power-station, that the Corporation make the necessary connections, that the agreement endure for a year, and that it be terminable by three months' notice from either side.

## EDINBURGH.

CORPORATION'S TRAMWAY PREPARATIONS.

Edinburgh Tramways Committee are actively engaged in preparation for the working of the tramways when the lease of the Edinburgh and District Tramways Company expires on June 30. The manager (Mr. R. S. Pilcher) has been instructed to report on the question of fares at an early date, taking into consideration a suggestion for the adoption of a universal fare for all continuous journeys of any distance with transfers in certain cases. Detailed arrangements are also being made for the taking over of the tramways and the establishment of a tramways department with the necessary staff. The committee have recommended the Corporation to join the Municipal Tramways Association.

## GLASGOW.

ROLLING STOCK—REDUCTION IN MILEAGE.

Glasgow Corporation Tramways now have 824 top-covered cars, 30 single-deck bogie cars, and one training car. Seven converted horse cars are still in use, making up the total to 862 cars. Vestibules have been fitted to 386 cars. The average number of cars in use daily (14-hour day) is 685. The total cost of inspection and repair of cars at the depots and car works during the last financial year was £69,731, and a further sum of £27,908 was charged against revenue to meet depreciation. The Tramways Committee is reducing the car mileage in order to economise fuel. In a recent week the reduction amounted to 30,000 miles as compared with the corresponding week a year ago, when the car mileage was 508,519. In spite of the reduced service the receipts showed an increase of £1,333.

## LEEDS.

TRAMWAY PROJECTS—PARCELS SERVICE.

Leeds Tramways Committee are considering projects for facilitating higher speeds and for a still better service throughout the entire system after the war. They have also before them the question of transit to and from the districts in regard to which housing and town planning schemes are proposed, and of plans for the extensions which are in contemplation. It is proposed to obtain powers for the construction of a tramway through the Hawksworth Wood Estate and from Dewsbury Road to the new Middleton town planning site. Powers are also to be sought for an omnibus service from Dewsbury Road and Hunslet to the same site. The recently established parcels service is being extended by co-operation with the similar service of some years' standing worked on the Bradford Corporation Tramways.

## NEWCASTLE-ON-TYNE.

MAGNETIC BRAKE NOT APPLIED.

At an inquest at Newcastle-upon-Tyne upon a woman who died from injuries received through being alarmed and jumping from a runaway tramway car, the jury expressed the view that the accident might have been averted had the motorman, instead of allowing the power to remain on, shut it off and applied the magnetic brake.

## PORTSMOUTH.

BARRIERS AND GANGWAYS.

Portsmouth Tramways Committee has approved a scheme, submitted by Mr. W. R. Spaven (general manager), under which barriers and gangways are to be placed at certain centres, with a view to the better regulation of passengers' access to the cars.

## SHEFFIELD.

DAMAGES FOR DAMAGED CAR.

Sheffield Corporation obtained judgment in the County Court for £18 7s. 4d., damages sustained owing to the negligent driving of a steam lorry. It appeared that the driver of the lorry attempted to cross the road in front of a car while the latter was in motion, and as a result of the collision which followed the glass front of the vestibule was smashed.

## ST. HELENS.

EXTENSION OF TRAMWAY LEASE.

St. Helens Town Council have decided to negotiate with the New St. Helens and District Tramways Company for an extension of the lease to the company for a period not exceeding five years. The lease of 21 years expires in October, 1919.

## WIGAN.

FATAL FALL FROM PLATFORM.

While riding on the front platform of an overcrowded tramway car at Wigan, a young woman fell into the roadway, owing to a jerk of the car, and was killed. At the inquest it was stated that there were six passengers on the platform with the driver. The coroner expressed the opinion that people should not be allowed to stand on the front platform of a car.

## WREXHAM.

RIDING ON THE STEPS.

When two cars collided at the join of a loop on a tramway line near Wrexham, two men who had been riding on the steps near the driver of one of the cars were pinned between the two cars. One man had a finger severed and other fingers of the same hand fractured; the other had a foot badly crushed.

**TROLLEY HEAD SLINGS**

Trolley Head Slings 18" long by 3/16" diameter. Best Flexible Steel Wire Rope Galvanised, Loop-spliced in each end to take ½" bolt, and served with Galvanised Wire. Price 12/- per dozen nett (in Gross Lots). Sample on Application.

**C. OSBORNE, 97 South Street, Longsight, MANCHESTER**

ENGINEERING firm with up-to-date plant and special facilities for turning out repetition work, are prepared to consider the manufacturing rights of patented specialities for sale amongst tramway and electrical undertakings.

***** If the inventions have been communicated the names of the communicators are given in italics.**

## APPLICATIONS FOR LETTERS PATENT.

*The number of the patent is given in brackets.*

Apparatus for controlling railway trains or vehicles (15,863)—A. R. Angus.
Railroad tracks, etc. (15,873)—L. Denonvilliers.
Motor omnibus, tramway car, etc. (16,014)—J. Hardy.
Jacking arrangements for automobiles (15,882)—A. H. F. Hern.
Variable speed gear (16,084)—T. J. Heskett.
Mounting for automobile engines (15,974)—A. S. Hordern.
Railway chairs (16,214)—D. John.
Brakes and brake mechanism of power-propelled vehicles (16,082)—F. W. Lanchester.
Speed regulating devices (15,917)—L. M. Robinson.
Gas producers for propelling vehicles (15,900)—D. J. Smith.
Carburettors of internal combustion engines for motor vehicles (16,106)—C. E. Thorne.
Steering wheels of motor cars, etc. (15,925)—W. Waller.
Tramway track (16,490)—T. Bowen and B. Insley.
Trolley guide for electric tramway cars (16,546)—C. E. Brand.
Method of gear changing in motor vehicles (16,274)—H. Dorrington.
Locating device for overhead electrical supply wires for tramway cars or locomotives (16,268)—J. C. M. Madagan.
Lubricant (16,314)—F. L. Schauermann.

Devices for coupling vehicles (16,756)—C. N. Goodall.
Joint sleeper for fastening two rails without fish plates (16,874)—B. N. Jones.
Variable speed gear (16,747)—A. G. McKenzie.
Electric safety signal for motor vehicles (17,084)—S. Springer and F. van den Wyngaert.
Portable turntable for motor vehicles (16,958)—A. H. Steggall.
Bearings or mountings for steering wheels of motor vehicles (17,115)—W. J. Thomas and E. G. Wrigley and Company.
Apparatus for locking and detecting railway switch points, etc. (16,925)—J. P. O'Donnell (*R. J. E. Thurburn*).
Transmission mechanism for motor vehicles (17,116)—F. G. Woollard and E. G. Wrigley and Company.
Steering gauge for automobiles (17,415)—W. Bicknell.
High-speed electric, etc., locomotives (17,316)—British Thomson-Houston Company and F. W. Carter.
Axial flow steam turbines (17,267)—British Westinghouse Electric and Manufacturing Company, and K. Baumann.
Detachable wheels for motor vehicles (17,516)—A. G. Fenn
Differential gear for motor vehicles (17,479)—A. Franks.
Variable speed mechanism (17,480)—H. J. Greaves.
Six-wheeled motor vehicles (17,265)—C. F. Gros.
Variable speed gear (17,285)—T. J. Heskett.
Signalling danger to vehicles at road junctions (17,427)—S. Horton and R. W. Willets.
Life guard (17,487)—S. D. Le Pipre.
Warning device for use with motor vehicles (17,202)—A. C. Robinson.
Steering gauge for automobiles (17,415)—J. Steele.
Cooling arrangements for motor vehicles (17,161)—T. Thornycroft and J. I. Thornycroft and Company.

## SPECIFICATIONS PUBLISHED.

1917.

Points or switches for tramways (5,261—*118,645*)—R. A. Hadfield.
Storage systems for the supply of gas to internal combustion engines (12,542—*118,661*)—G. J. Shave and London General Omnibus Company.
Clutch driving mechanism (12,563—*118,662*)—O. B. Graham and H. Weilding.
Disposition of engine and transmission gear and constructional details in motor vehicles (12,639—*118,670*)—L. S. Girling.
Carburetting apparatus for automobile engines (13,149—*110,542*)—Soc. Lorraine des Anciens Etablissements de Dietrich et Cie de Luneville.
Electrical transmission arrangements for motor vehicles (13,741—*118,699*)—W. A. Stevens and J. Sankey and Sons.
Gas containers for motor vehicles (15,259—*118,723*)—C. O. Uner.
Brake and clutch mechanism of locomotives and railway motor cars (15,500—*118,728*)—Baguley Cars, Limited, and L. Bentall.
Springing of motor vehicles (15,936—*118,731*)—A. W. Smyth.
Elevated railways and tramways (16,184—*118,734*)—S. A. Rogers.
Spring motors for spring starters for automobile engines (18,534—*118,760*)—P. C. Lindgren.
Motor-driven road vehicles (13,489—*118,894*)—London and Westminster Industrial Syndicate and H. B. Molesworth.
Permanent way (13,530—*118,897*)—E. A. W. Phillips.
Brakes for motor road vehicles (14,535—*118,916*)—E. L. Cornell.
Change speed gears (15,232—*118,929*)—G. Von Zweigbergk.
Jacks (18,681—*118,963*)—R. A. Smith and Smith and Sons.
Variable speed gear mechanism (13,838—*119,098*)—T. A. N. Leadbetter, A. L. K. Gilchrist, and W. H. Tate.
Brakes for motor cars (13,689—*109,972*)—C. W. Kuijper.
Spring suspensions for motor vehicles (13,959—*119,285*)—S. L. C. Coleman.
Jacking apparatus for motor vehicles (16,884—*119,335*)—E. Graham and G. Bowman.
Automatic braking device for compensation gears of automobiles (19,255—*119,363*)—H. Bilgram.

1918.

Electric starting apparatus for motor vehicle engines (615—*118,775*)—H. Lucas and C. L. Breeden.
Trolley heads for electric traction (7,905—*118,822*)—J. B. Parker and J. Smith.
Devices for controlling speed of automobile vehicles (6,491—*119,006*)—A. Gaillard.
Fluid pressure operated points and signals (1,246—*112,945*)—McKenzie, Holland and Westinghouse Power Signal Company.
Railway chair keys and wedges (1,771—*119,176*)—E. Gething.
Electrically-propelled road vehicles (4,342—*119,192*)—Edison Accumulators, Limited, and J. F. Monnot.
Apparatus for staff and tablet systems for controlling traffic on railways (10,865—*119,214*)—Tyer and Company and F. W. Leake.
Rail joints (5,553—*119,409*)—J. A. Hyle and C. H. Nelson.
Rail joints (8,836—*119,425*)—H. T. Goddin.
Fluid pressure braking apparatus (12,148—*119,437*)—W. V. Turner.

## "What Lancashire thinks to-day England thinks to-morrow" has a meaning outside the question of politics.

The heavy conditions of service in Lancashire quickly pull to pieces less robust machines than the Daimler Lorry. What satisfies the experienced user in Lancashire should therefore give equal or better service in other parts of the Country, AND IT DOES.

In Lancashire, the Daimler Lorry is proving its superiority. Owners in Liverpool include :—Lever Bros., John Jones & Sons, and W. Hunt & Co. In Manchester :—The Corporation Bus Service employs Daimlers entirely, amongst other users being J. Mandleberg & Co., Galloways Ltd., and E. Marsden & Son. In Burnley :—Lockwood & Buckley, and William Heaton & Sons use Daimlers. At Heywood, Healy Bros. ; at Blackburn, John Fish, Ltd. ; Accrington, Entwistle & Kenyon—mentioning but a few well-known Companies. The majority of these concerns have further Daimler Vehicles on order for after-war delivery.

***Follow their example*** and send your enquiry for particulars, when available, of the models we shall market when our war work is done. In the meantime examine the merits of the Daimler Sleeve-Valve Engine. *Particulars on request.*

### ALCOHOL AS MOTOR FUEL.

The past month has brought us a step nearer to the long-deferred investigation of alcohol as a motor fuel. A Committee, more or less departmental in character, but not lacking in the scientific element, has been formed by Mr. Walter Long, acting through the Petroleum Executive. Sir Boverton Redwood, the Director of Research of that body, will act as chairman of the Committee. Most of the Government departments conceivably concerned in the production or use of alcohol fuel are officially represented on the Committee, but curiously enough the list includes no representative of the Colonial Office. For the rest, the composition of the Committee includes certain distinguished scientific men known to be well informed upon the subject and a recognition of the endeavours of the unofficial Alcohol Fuel Committee, which was formed before the war, but the work of which was necessarily discontinued for lack of funds when the war broke out. We are glad that the Government has gone so far as to sanction the formation of a Committee such as that just described. It remains to be seen, however, what treatment the Committee will receive when it gets to the inevitable point of requiring funds for the purpose of scientific investigations. In certain directions its investigations may be facilitated or assisted by the motor industry, probably acting through the Research Association to which we referred last month. It is not to be expected, however, that the motor industry will go so far afield as to investigate the sources of production of alcohol or the various processes of distillation and denaturing. It will probably show itself willing to conduct experiments as to the design of engines suited to use alcohol alone or as a very high proportion of a mixed fuel. This is the most that can be expected of it. Such experiments are very necessary but are hardly as essential as those which will cover the subjects of distillation and denaturing. Possibly a special grant may be made to the Committee for this side of the work. If not, we are afraid that the whole movement, even though it has the strength of at least a semi-official organisation, must necessarily fail in its main object.

### AUCTIONS OF MOTOR VEHICLES.

Another event of the past month, of minor importance in itself but very significant if it is to be taken as a precedent, was a public auction of a certain number of vehicles rejected from military service. Long ago we expressed the view that great care is needed to frame a satisfactory scheme for disposing of surplus Government vehicles; and it is to be hoped that this auction is not the logical outcome of the very lengthy deliberations of the Surplus Government Property Disposal Board. If so, the Board cannot be congratulated on the originality or efficacy of its solution of an extremely important problem. At the present moment, repairing facilities are very inadequate. Motor manufacturers are definitely disqualified by Government contract work from undertaking the repair of their own vehicles. The motor user who buys an auctioned vehicle, directly or indirectly, therefore takes very considerable risks. These may be unavoidable at the moment, but the taking of such risks will be inexcusable directly a supply of new vehicles becomes available. At that time, the auctioning system, if continued, will, we feel sure, prove a lamentable failure from the point of view of the Government, even if the Government's object is simply and solely to obtain the highest possible prices. Equally, it is not in the interests of the motor user that vehicles should be sold in this way without being previously repaired and overhauled by some responsible person whose guarantee of their condition after overhaul would be of real value. From the standpoint of the motor manufacturer, the auctioning system is entirely vicious. It jeopardises his goodwill by spreading broadcast vehicles originally of his make, but for the condition of which he cannot reasonably be held responsible. Also, it lets the pure speculator in as a motor dealer on a big scale and leaves the manufacturer quite incapable of estimating, however roughly, the probable demand for new vehicles, and therefore the extent to which he can retain labour in employment when the war is over. The auction to which we have referred was a trivial affair. In itself its influence was negligible and, if it only represents a stop-gap method to be applied until the number of vehicles becomes considerable and a better scheme has been perfected, there is nothing very much to be said against it or for it. If it is intended as the precursor of a number of auctions on a far bigger scale, it represents to our mind an example of official stupidity which would be hard to beat.

### ELECTRIC ENGINE STARTERS.

Some doubts have been expressed as to the probability of electric engine starters coming into general use on private motor cars. Our own opinion is that the question is not worth argument. It will be decided

Digitized by Google

# MOTOR TRAFFIC

largely by foreign competition, which will compel the starting motor to be fitted on practically every privately owned motor vehicle. There is a fair likelihood that it will also come to figure as a standard fitting on public service vehicles, or at least on a fair percentage of them. Its disadvantage is, of course, its first cost. Its advantage is that it saves manual labour and time in starting up and discourages drivers from falling back upon extemporised starting devices injurious to their engines or vehicles. It is still more likely that starting motors will be fitted on a fair number of light delivery vans which require to stop very frequently at short intervals in order to effect deliveries. Without a starting motor, the engine is invariably left running and the total amount of fuel wastefully consumed in this way must be very considerable, and in many instances must more than balance the depreciation of a starting motor and the interest on its first cost.

## AMERICA'S WAR VEHICLES.

ORDERS FOR FOUR TRUCK AND THREE PASSENGER MODELS.

At the end of July 75,000 trucks and passenger cars had been ordered for war work by the United States army. The trucks are of classes AA, A, B, and TT. The latter, of which official announcement of adoption was made on July 25, is a four-wheel drive type designed by the Engineering Ordnance Department in reply to a request from General Pershing, who stated that the heavy trucks hitherto used in France were not satisfactory. The TT truck (says the *Commercial Vehicle*, of New York) is especially suitable for hauling large guns over rough country and has the ability of a tank to go over places generally considered impassable to other vehicles.

The AA truck, which is the General Motor Company's ¾-ton model, was decided upon because of its low fuel consumption and light weight. The principal change from the regular model is a superior spring development needed because this model is to be used not only for stores but as a heavy ambulance also. Seven thousand five hundred of these trucks are being ordered from various factories.

The Class A truck, which is the White 1½-ton truck with some changes, was selected after tests of many commercial trucks. It was adopted according to the Motor Transport Service because of lower gasoline and oil consumption, more satisfactory performance both in Mexico and France, high speed work with pneumatic tires and the low cost of spare parts. Class A is to be used for staff observation, reconnaissance and as a high-speed truck.

One of the principal reasons for retaining the Class B 3-ton model originally known as the Liberty truck, says the Motor Transport Service, is its maintenance. Eighteen thousand have been ordered. Its cost is less than that of any other commercial trucks of the same capacity.

The Class B truck has given satisfactory service following a test of 15,000 miles, and was found to have greater strength, more power, and to be better suited to rough roads. This truck will operate in a zone of fire. More than 6,000 of the Class B 3-ton standard army trucks had been delivered at the end of July. They are produced at the rate of 75 a day. The original programme called for the production of 10,000 by August 1, but a delay in the delivery of engines and axles prevented completion of the programme as planned. The delivery of the first 10,000, it is anticipated, will be completed by September 15.

In rejecting many trucks under test the Motor Transport Service states that the rejections were in no way reflections on their commercial value. The majority were made for city work and could not be expected to do the exceptionally heavy rough work required in France.

The Ford passenger chassis, following the request of the American Expeditionary Forces, has been adopted as a standard chassis for use as a passenger car, light ambulance, light truck, and so forth. There are now 3,000 Ford ambulances in use in France, and the number will soon be increased to 8,000. The Ford Motor Company are working on an order for 5,000 light delivery trucks, production of which began July 22 at the rate of 200 per day. The principal reasons for the wider use of the Ford are the ease of repairing, cheapness of operation, large production, and the extremely low initial cost and the fact "that it can be used where many other passenger cars cannot."

The other two types of passenger cars tested and selected are the Dodge and the Cardillac. These are the regular models with additions and deductions, and will be produced in other factories if the needs of the Government require it.

## ITALIAN AUTOCAR SERVICES.

An article on autocar traffic in Italy appears in the *Rivista Technica delle Ferrovie Italiane*. Italy is backward in the matter of general transport but sufficient progress has been made in the adoption of motor transport and in autocar production to enable one to say that the industry is now a great one. The Fiat Company is exceptional in the great production and fine quality of its products. In the year 1900 the Fiat works were turning out three chassis per day. In 1910, when the Lybian war began, the company was producing 12 to 13; and the daily production now is sixty. The Spa Company came into being shortly after the Fiat, and is producing 6,000 chassis per annum. This firm won the trials for the postal services in 1907. There are other good firms, such as Devecchia Bianchi, Isotta, Fraschini, Zust, Lancia, Aquila, Diatto-Clement Fiat-Ansaldo Italia, *Z. Scat*, and Storero. These have all intensified their production. Their great activity has given rise also to a large industry in the manufacture of accessories; and it is estimated that the annual turnover of capital owing to this industry is about a milliard of lire. The article is illustrated with many pictures of cars produced in Italy, including goods cars of 35 H.P. made by the Spa house.

Of war types of cars those of 15–20 H.P. and 25–30 H.P. are much in use, and the Italians have every reason to be proud of the success that has followed their productions. Ammunition supplies from the railways to the front are effected entirely by means of these cars. The 15–20 H.P. machines do 40–60 kilometres per hour. Searchlight projector cars and gun-carrying cars are also produced in the Italian workshops.

Dealing with the question of novelty or invention, the article says that the various houses are approaching each other in the matter of uniformity of type. A recent novelty is the motor plough, which has been rendered necessary by the imperative call of agriculture. One of the most interesting novelties in Italy is the automatic starter, and the tendency has become general to light the cars with auto-generated electricity.

Public motor services have grown considerably. It was only in 1908 that the Post Office began to use autocars. On the other hand the war, whilst stimulating the production of the military car, has greatly curtailed the manufacture of the ordinary car; materials, etc., are very expensive. Still the public services grow in importance and extent; and there are now routes comprising about 16,000 kilometres being served with automobiles. The journal is in favour of a well-considered subsidy scheme for autocar lines, to be modified from year to year if occasion offers. The list of autocar lines in existence in 1917 is given as 421 in number, with others to be added. The list has been difficult to prepare for services are constantly disappearing; and others suddenly come into operation.

## ALCOHOL FOR POWER.

A COMMITTEE APPOINTED BY THE GOVERNMENT.

Mr. Walter Long, who is the chief of H.M. Petroleum Executive, has appointed a committee to investigate the available sources of supply of alcohol, with particular reference to its manufacture from materials other than those which can be used for food purposes, the method and cost of such manufacture, and the manner in which alcohol should be used for power purposes.

The Committee is composed as follows:—

Sir Boverton Redwood, chairman (director of Technical Investigations in H.M. Petroleum Executive); Major Aston Cooper-Key (Home Office); Mr. Philip (Admiralty chemist); Mr. H. F. Carhill (Industrial Power and Transport Department, Board of Trade); Professor C. Crowther (Board of Agriculture and Fisheries); Dr. J. H. Hinchcliff (Irish Department of Agriculture); Colonel Sir F. Nathan (Ministry of Munitions); Mr. H. W. Garrod (Ministry of Reconstruction); Sir H. F. Heath (Scientific and Industrial Research Department); Sir F. W. Black; Professor H. B. Dixon; Brig.-General Sir C. Holden; Dr. W. R. Ormandy; Mr. E. S. Shrapnell-Smith (Deputy Director of Technical Investigations in H.M. Petroleum Executive); and Mr. Horace Wyatt (Imperial Motor Transport Council).

Mr. Shrapnell-Smith will act as secretary, and communications should be addressed to the office of H.M. Petroleum Executive, 12, Berkeley Street, W.1.

## WALSALL OMNIBUS LICENCES.

IMPORTANT DECISION IN THE DIVISIONAL COURT.

The Divisional Court (consisting of Justices Darling, Avory, and Atkin) in April last heard an appeal of the Birmingham and Midland Motor Omnibus Company against convictions by the Walsall magistrates in respect of running omnibuses without a licence. The company contended that, running from a private garage yard, without picking up passengers between the yard and the borough boundary, the vehicles did not require to be licensed. This raised a point of law which had not previously been decided, and after hearing the arguments the Divisional Court, by a majority (Mr. Justice Darling dissenting), decided against the contention, and affirmed the convictions.

Thereupon the Company applied to the Watch Committee for licences, which were refused. They then applied to the High Court for a mandamus calling upon the Corporation to hear and determine the application for licences according to law, alleging that the Corporation in refusing to grant them had been biassed by consideration of the effect of the omnibus traffic on the tramway service, and also that the Watch Committee were not entitled to have regard to such matters as the waste of petrol, labour, etc., involved in the running of the omnibuses side by side with the cars.

When the matter was argued on October 18 and 21, the Divisional Court consisted of Justices Darling, Avory, and Salter. The company was represented by Mr. Tomlin, K.C., and Mr. Bruce Thomas (instructed by Mr. Sidney Morse, of London); and the Corporation by Mr. Barrington Ward (instructed by Mr. H. Lee, town clerk).

The court unanimously dismissed the company's application, with costs.

Mr. Justice Darling, in giving judgment, said:—I think this rule should be discharged. It is not necessary to add anything as to the considerations which actuate this court in coming to a conclusion upon such a matter as this, to what I said in the Blackpool case. We have to see whether upon the evidence we are satisfied that the licensing authority acted for some other reason than that which ought to influence giving a judicial decision; but we must remember that this authority is not in the position of complete independence which Judges of the High Court of Justice occupy. The Legislature has confided to the licensing authority the power of granting or withholding these licences. It has also confided to the Corporation, of which they are a part, the liberty to be the owners of a tramway, and to run cars along it. As the Legislature has done that we cannot suppose that they ever expected that the licensing authority would be as detached as a judicial body entirely unconnected with the Corporation. That does not mean to say that they are entitled to act with bias, but it does mean, I think, that they are entitled to have regard to the whole affairs of the borough, and to see whether it is convenient or proper, or whether it is extravagant and injurious, that there should be not only cars running along the streets, but a number of omnibuses as well. My difficulty is to see in this case what considerations they might act upon if they are not to act upon such a consideration as this—that there is already a tramway along the streets. I should like to treat it as though it were a tramway belonging to some person unconnected with the borough. I think they ought to do that. I do not think they ought to grant or withhold licences upon the consideration whether they would or would not make the tramway a more paying undertaking, but they are entitled to say, "Now we look at this street along which the omnibuses desire to go, and, there being already a tramway there, we must consider whether there is any necessity for this omnibus service, whether, having regard to the traffic of the streets, having regard to the people who wish to pass along there, it is necessary to have omnibuses as well as tramway lines. If they are entitled to do that with regard to a tramway belonging to a third person, I think they are entitled to do it with regard to a tramway belonging to the Corporation so long as they apply their minds fairly to the question whether the omnibuses are needed in addition to the tramway. At the time when the Corporation received from the omnibus company £300 a year for permission to run through the borough, I think they were in a very dangerous position. If the licensing authority had said, "We shall not allow you to run your omnibuses through the borough unless you pay £300 a year upon the terms mentioned in the agreement which was come to on December 23, 1913"—namely, that the company would not oppose the Corporation Bill in any event, that the minimum fare should be 4d., and an hourly service should be provided—and if the state of things had been such as they were in April, 1914, the state of things detailed in paragraph 6 of Mr. Kingsford's affidavit, which really comes to what I have just mentioned, if that had been the state of things to-day, I should have had great difficulty in coming to the conclusion that the licensing authority had really exercised their power judicially. I should rather have come to the conclusion that they would grant the licence if the company paid £300 and entered into an agreement which would not make them competitors of the Corporation's tramway, but that they would not grant the licence unless the company did that. But now I think the whole thing is altered. The letter of April 18, 1917, which the Town Clerk writes, is this:—"The desirability, in view of the imperative necessity at the present time of saving labour, petrol, and other material, of making some arrangement whereby the present duplication of public vehicular traffic on the Birmingham Road, Walsall, may be avoided, has been under the consideration of my Council, and I am desired to approach you with a view to an arrangement between the Corporation and your company whereby your omnibuses will stop at the Bell Inn and run in connection with the Corporation cars. I suggest a conference at an early date." That appears to me to be a reasonable proposal. The people who wanted to come from Birmingham would be brought by the omnibus as far as the confines of the borough, and they would then change into the cars. It is put upon the ground that it would be a good thing to have an arrangement to end the duplication of vehicular traffic. The only thing to be said against it is that people might have to get out at the Bell Inn and wait a little bit, perhaps, to change from the omnibus into the car, but so would anybody have to run that risk who wanted to go to a house a little off the omnibus route. In these circumstances, applying the principle which I applied in the Blackpool case, I am not satisfied that this authority did not exercise their discretion fairly and judicially, although I recognise that they are put in a much more difficult position in exercising their judicial faculties than the judges of this court are ever placed in. If a judge owns a share in a railway company, it is the invariable rule that he does not try a case if it involves liability of the company or any dispute in which the company is involved. He does not try the case unless he mentions to the parties that he holds the share, and they agree that it makes no difference. The Legislature has not put these licensing authorities into the same detached position and they cannot, from the nature of their establishment by Act of Parliament, be expected to be so indifferent to all considerations which may be put forward by one side or the other as a judge of the High Court.

Mr. Justice Avory.—I am of the same opinion, and as I was a member of the Court that granted the rule I should like to add that I felt at the time the application was made that there was sufficient to give rise to a suspicion that the Corporation had been influenced by considerations which ought not to have influenced them in refusing the licences, and it was desirable that the matter should be ventilated. I have come to the conclusion, after hearing the argument, that there is nothing more than suspicion, and it is a suspicion which must inevitably attach to every decision of such a body which refuses to grant a licence, seeing that the Legislature has put them in the position of being owners of tramways, and interested in the profits made. I think it most unfortunate that any person or Corporation should be placed in such a position, but being placed by the Legislature in that position, I think it is the duty of the court to see that there is something more than mere suspicion before they reverse or set aside the decision of the Corporation in refusing to grant a licence. Looking at the affidavits, and having given careful consideration to the arguments of Mr. Tomlin, I have come to the conclusion that although there may be this suspicion in this case there is nothing sufficient to justify the Court in saying that the Corporation were influenced by considerations extraneous to their judicial duty. Therefore the rule should be discharged.

Mr. Justice Salter.—I agree. I have nothing to add.

The rule was discharged, with costs.

## U.S.A. PETROL SUPPLY.

CONSUMPTION IN EXCESS OF THE PRODUCTION

A report recently presented to the United States Senate by the Fuel Administration states that the daily consumption of gasoline is 160,000 bbl. and exportation 34,000 bbl., a total of 194,000 bbl., while the daily production is 191,000 bbl., making a daily deficit of 3,000 bbl. Besides the figures on the daily consumption the report shows that there is only a single month's supply of gasoline in the country according to the present rate of consumption. An announcement has been made by the Fuel Administration to the effect that gasoline will have a fixed price. This is to cover domestic consumption as well as for the Allies and the Government. It is stated that the price will be lower than the present market price.

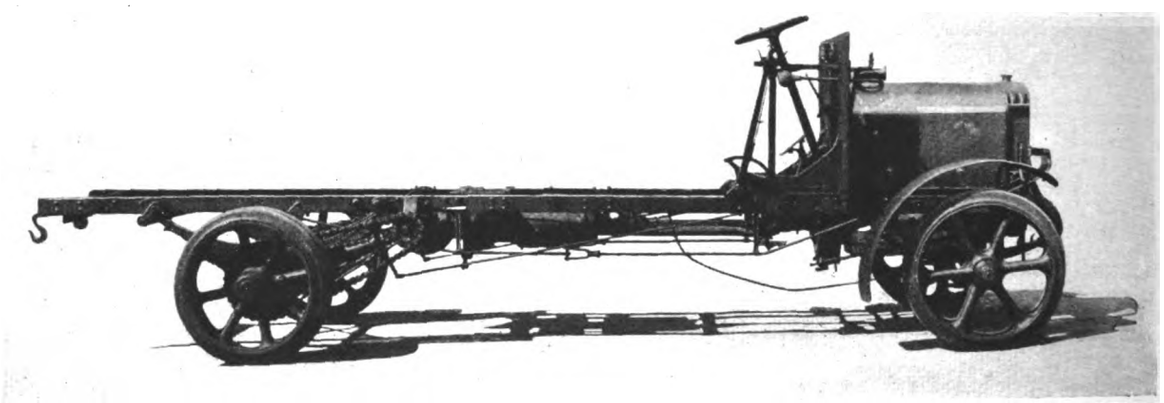
## STEAM WAGON MANUAL.*

This small volume ought to be of great service both to owners and drivers of steam wagons, though it is for the latter that it is specially designed. The great increase in the number of steam wagons, coupled with the fact that so many experienced drivers have been diverted to military work, has led to a scarcity of men skilled in working such vehicles and in carrying out adjustments and minor repairs. The bulk of the present book accordingly is devoted to such matters as how to keep the wagon in good running order with a minimum of expense and trouble, and how to carry out an overhaul. Some very practical information is given at the outset regarding points to bear in mind when choosing a steam wagon, and this is followed by the kind of descriptive matter which fits in with instructions as to attendance, adjustment, and repairs. The latter subject is dealt with at great length, and it is expounded by a large number of clear diagrams. The learners will probably be specially grateful for such chapters as the one headed "Diagnosing and remedying faults."

## THE "COMMER" CAR WAR-TYPE MODEL.

"Commer" cars have proved a great success in war service, and a number of them are doing duty in France and Flanders. The authorities having decided to dispense with the chain cases that hitherto have been part of the standard specification, the chassis is now supplied in the state shown in the accompanying illustration.



**A "Commer" Car War-Type Model.**

## MILITARY PETROL CONVICTION QUASHED.

The Surrey Quarter Sessions Court on October 18 allowed an appeal by Brigadier-General F. W. Hill against a conviction by the Farnham Justices, who imposed a fine of £5, on a charge of using a Government car to attend a private dance at Bourne, contrary to the Petrol Restriction Order. Lieut.-Col. Pickering, Assistant Adjutant General, Aldershot Command, said he authorised proceedings because he did not think that petrol should be used to enable officers to attend dances. At certain assemblies, such as Y.M.C.A. gatherings of a military character, it would be legitimate for officers to use petrol, but dances were not included. The whole question had been considered by the Commander-in-Chief of the Aldershot Command.

Evidence was given by appellant that he went to the dance as part of his duty in a car reserved for his use as general officer commanding the Canadian troops in the Witley area. It had been found advisable as a matter of policy, so that general officers commanding should better appreciate the character of junior officers just arrived from Canada, to have such meeting grounds as this dance afforded. This dance was arranged by the commanding officer for the purpose of seeing and meeting junior officers. The Bench unanimously granted the appeal on the ground that the car was in the exclusive use of a Government department to which the Order did not apply.

* A Manual of the Steam Wagon; maintenance, overhaul, garage and running repairs; how to get the best out of all types of steam road vehicles. London: Temple Press Limited, 1918. 103 pp. 2s. net.

## MOTOR VEHICLES FOR MUNICIPALITIES.

CAMBERWELL GUARDIANS propose to purchase a Ford van.

ROMFORD GUARDIANS are considering the question of obtaining a motor ambulance.

ROTHERHAM CORPORATION propose to obtain a new motor tower wagon for the tramways.

SHEFFIELD CORPORATION are contemplating an expenditure of £2,200 on the purchase of two electric vehicles.

SOUTHEND COUNCIL propose to purchase a 2-ton Edison electric wagon for the tramways department at a cost of £1,242.

GILLINGHAM COUNCIL are making inquiries with a view to the purchase of an electric vehicle for the collection of house refuse.

CHICHESTER CORPORATION has under consideration the purchase of a motor tractor. The engineer has been instructed to inspect one recently offered for sale.

GLASGOW CORPORATION have been recommended to purchase two 2-ton and two 3½-ton electric vehicles from Messrs. Edison Accumulators, Limited, at a total cost of £4,800.

LAMBETH COUNCIL have placed an order with Straker-Squire, Limited, for the supply of one of their vacuum gulley cleaners. The machine will be similar to those supplied to Southwark Corporation.

HALIFAX CORPORATION have accepted the tender of Messrs. Dennis Brothers, Limited, Guildford, for the supply of a Dennis 60-65 B.H.P. 500-gallon turbine motor fire engine, with first-aid outfit, for the approximate sum of £1,300.

MOTOR WAGONS FOR GLASGOW PARKS DEPARTMENT.—At a meeting of the Parks Committee of Glasgow Corporation the Superintendent suggested that in view of the statement issued by the Government as to the disposal of motor vehicles at the end of the war, it might be expedient to obtain one or more motor wagons. He was asked to report generally on the need of motor vehicles for the department.

ROAD TRANSPORT LIMITATIONS.—An order issued by the Road Transport Board, and taking effect on November 18, limits the delivery of goods by a retailer to within a distance of ten miles. The order does not apply to the Metropolitan Police District.

CONTROL OF GOVERNMENT MOTOR CARS.—In reply to a question asked in the House of Commons, the Chancellor of the Exchequer stated that definite machinery had now been devised whereby the use of motor cars by Government departments would be fully controlled with a view to restricting their use.

MOTOR CARS FOR ELECTION PURPOSES.—The President of the Board of Trade announces that arrangements have been made whereby *bona-fide* candidates and their agents can obtain a limited quantity of motor spirit and the permit to use motor cars in connection with the forthcoming Parliamentary election.

ROAD TRANSPORT AT COLCHESTER.—Speaking in reference to the recent railway strike, Mr. Sanders, a member of the Colchester Town Council, stated that so efficient were the arrangements made by the local Road Transport Committee, that even if the strike had continued the food supply of the town would have been maintained.

## NAPIER LORRIES IN WAR SERVICE.

The Napier lorries, manufactured at their works at Acton by D. Napier and Son, Limited, of 14, New Burlington Street, London, W.1, are in the front rank of vehicles of their kind for the uses both of peace and war. One of the latter uses is depicted in the accompanying illustration, which shows a convoy of Napier lorries camouflaged in a wood. Now that the aeroplane plays such an important part in observation, it is necessary that assemblies of transport vehicles shall be carefully hidden from the enemy.

Every road near the front is at times shelled continuously, and it is only by drivers of lorries using by-ways and taking advantage of all cover that our troops are kept fully supplied with food and ammunition. Only vehicles of the utmost reliability can traverse the rough roads and surmount obstacles which are encountered on the way to their objective. That the Napier has lived up to its reputation as a vehicle of the utmost reliability, and one of the most satisfactory for the arduous work that is required of it, will, we believe, be admitted on all hands.

## MOTOR EQUIPMENT OF AN ARMY OF ONE AND A HALF MILLION.

Appended is the approximate motor equipment for the United States first army of 1,500,000 men, as recently published by the motor transport headquarters at Washington :—

| | |
|---|---|
| Army motor trucks... ... ... ... ... | 40,803 |
| Motor cycles ... ... .. ... ... | 24,250 |
| Passenger automobiles ... ... ... ... | 7,905 |
| Ambulances ... ... ... ... ... ... | 6,598 |
| Riders and drivers ... ... ... ... ... | 100,000 |
| Total personnel (men) ... ... ... ... | 154,774 |
| Officers ... ... ... ... ... ... | 42,298 |
| Non-commissioned officers ... . . ... | 30,090 |
| Service parks ... ... ... ... ... | 273 |
| Mechanicians ... ... ... ... ... | 34,319 |

**Napier War Service Lorries Camouflaged in a Wood.**

The total personnel of 154,774 includes officers, non-commissioned officers, men, mechanicians, and everybody connected with the service.

Each additional American army will require a similar motor transport personnel, and it is expected that by the time the United States has 4,000,000 troops in France, 500,000 of them will be engaged in motor transport work. The Motor Transport Corps is operating 1,500 trucks in convoy trains in the United States, exclusive of the trucks used at the various army posts. These 1,500 trucks carry various kinds of merchandise and munitions for the army over an average of 100,000 miles every 24 hours. The Motor Transport Corps is desirous of securing a great number of men and officers, men especially qualified to drive motor vehicles by the thousand, and executives with business experience are wanted for officers. Men in the deferred classes of the first draft are inducted into this service.

## PNEUMATIC-TIRED TOWER WAGON.

A 2-ton Pierce Arrow truck equipped with pneumatic tires and an extension tower has been in use on the undertaking of the Springfield, Mass., Street Railway Company for two years past. Pneumatic tires were adopted instead of solid rubber tires in order to obtain the greatest possible speed, this being necessary in consequence of the large territory over which the lines operate. The truck can maintain a speed of 16 miles per hour. The tower is of the telescoping type, with a platform mounted on a turntable on the upper section, so that it may be swung around to the position most accessible for the work. The platform is sufficiently large to enable two men to work at the same time. The vehicle is much safer than a horse-drawn wagon.

# MOTOR TRAFFIC

## MOTOR TRAFFIC NOTES.

BROMSGROVE'S NEED OF A MOTOR SERVICE.—A conference of local administrative bodies at Bromsgrove has been arranged to consider the question of establishing a municipal motor omnibus service to connect various districts.

CORPORATION WAGON ON HIRE.—Hull City Engineer reports that at the instance of the Local Road Transport Board he has let out a steam wagon at 15s. a day, the hirers to find driver, fuel, and stores, and take all responsibility.

MINISTER TRAVELS BY AEROPLANE.—During October Mr. Bonar Law twice went to Versailles in an aeroplane to attend a meeting of the Allies' War Council. On the first occasion the machine made a quick passage through a storm.

QUEUES SANCTIONED FOR OMNIBUS PASSENGERS.—The new Commissioner of Police has sanctioned queues for omnibus passengers in Kensington High Street, London. The London General Omnibus Company will pay for the indication posts on the footway.

SALVAGE OF TIRES DURING THE WAR.—Under the auspices of twelve manufacturers of tire filling products, an Automobile Tire Economy Conference has been held at Chicago to form a national association of standard tire filler manufacturers, and to submit to the Government bureaux a war-time programme for salvage of tires.

WAR OFFICE ROADS COMMITTEE.—On October 14 it was announced that the Army Council had appointed a committee (to be called the Joint Roads Committee) to carry into effect the powers of control, maintenance, construction, and improvement of public roads vested in the Army Council. Brigadier-General Lord Montagu of Beaulieu has been appointed chairman.

EXCESSIVE WEIGHTS AND SPEEDS.—The Borough Engineer of Bolton has reported upon the considerable damage which is being done to the whole of the main roads in consequence of the excessive weights carried and the excessive speeds of heavy motor lorries. The Town Council have called the attention of the Watch Committee to the matter, with a view to the police taking proceedings against offenders.

ADDITIONAL CLOTHING FOR LONDON FIREMEN.—Woollen jerseys are being provided for the members of the London Fire Brigade, in order to obviate the feeling of coldness when riding to fires on motor vehicles. These articles of clothing can at present be obtained only through the Admiralty. Drivers are already provided with leather jackets. The motorisation of the brigade has now been completed.

AN UNLOADING DEVICE.—The Electricity Committee of Poplar Council have adopted a scheme, submitted by the Electrical Engineer, for providing a revolving bottom and the necessary gear for unloading, to one of the Council's motor wagons. The cost, including the necessary alterations to the body of the wagon, will be £125, and it is expected that the device will enable an additional load of clinker per day to be dealt with.

MOTOR MAINTENANCE.—An indication of the higher cost of motor maintenance is afforded by a letter which Messrs. Leyland Motors, Limited, have sent to the Westminster City Council. They contract for the maintenance of steam motor wagons at £55 per vehicle per annum, but state that when the contract expires the charge on renewal must be £100, in consequence of the increase in the price of materials and in wages.

NATAL ROADS AND MOTOR TRAFFIC.—The fact that an extensive development of the roads of Natal is to take place suggests that there will be a greatly-increased demand for motor vehicles. The decision has been arrived at in consequence of the increasing use of motors for commercial and agricultural purposes. A scheme prepared by the superintendent of roads contemplates an outlay of £1,404,000 upon a main trunk road system.

CASH DEPOSITS FOR DEMONSTRATIONS.—An effort is being made to induce the Boston Automobile Dealers' Association to abolish free demonstrations. It is proposed that the prospective purchaser of a motor truck should deposit £5 when a demonstration is requested, and for this sum the dealer would do a full day's work with a truck and provide driver, fuel, etc. If a purchase is effected the deposit would be credited on the sale. If there is no sale the dealer is to keep the money to cover the cost of the demonstration.

TRADE LORRIES AND ROAD PAYMENTS.—The Cricklade and Wootton Bassett Rural Council have complained to the Rural District Councils' Association that damage is being caused to their roads by motor lorries from a newly-established milk factory. In reply the association directed attention to an arrangement made between Bakewell Council and a condensed milk company, under which the latter have paid £50 for damage caused by their motor lorries, and have also agreed to pay a sum of 1d. per mile for each mile run during the five years from July 1 last.

WORKING COSTS OF STEAM WAGONS.—Mr. J. C. Haller (county surveyor of Notts), in his last annual report, gives the working costs for two steam wagons purchased in November, 1915, and July, 1916, for haulage of road material. It appears that the cost of hauling 15,610 tons of material transported by these vehicles was 5·09d. per ton per mile in the case of a Burrell wagon and 5·76d. with a Clayton wagon. The costs include 12½ per cent. for depreciation. Mr. Haller points out that the costs are very low, and could not be kept at this level except by very careful organisation.

THE METROPOLITAN ASYLUMS BOARD have failed to secure delivery of a steam tractor and trailer which they provisionally agreed to purchase, owing to inability, in spite of repeated applications, to obtain a satisfactory priority certificate. As a consequence the Board have purchased a 5-ton Foden steam wagon, which is between four and five years old, for £1,200. The body has been replaced by one of a more suitable type, and new wheels with rubber tires fitted at an additional cost of £300. The Board have also authorised the purchase of another similar Foden steam wagon at a cost of £1,500.

MOTOR OMNIBUS SERVICE LEVY.—In consenting to the appeal of the National Steam Car Company, Limited, for permission to extend the existing motor omnibus service from Boreham to Witham, the Essex County Council has fixed the following terms:—Payment by the company of the sum of £10 per route mile per annum, payable in advance, quarterly or otherwise, such payment to be deducted from any amount that may be due under the following mileage rate should it exceed the minimum payment—a contribution at the rate of a penny per omnibus mile. These rates are to be subject to revision after twelve months.

OMNIBUS FARES AT BRIGHTON.—Brighton Corporation have had correspondence with Messrs. Tilling on the subject of the revision of omnibus fares, from which it appears that the actual running costs of the omnibuses, owing to increased wages, price of petrol, etc., are at the rate of over £16,000 a year more than they would have been had the conditions prevailed that existed in the first six months of 1917. Acceptance of the revised charges as a "war emergency measure" is contemplated by the Council on condition that the scale of fares in force in November, 1916, shall be reverted to as soon as they are satisfied that the conditions permit.

SURPLUS WAR MOTORS.—The disposal after the war of the vast number of motor vehicles in military service is now under the consideration of one of the Reconstruction Committees, and an early decision of the problem is anticipated. A number of difficult questions have first to be settled. Machines are in all stages of repair or disrepair, and it has to be determined whether the vehicles are to be sold in their present condition or made good before sale. If the latter, it must be decided whether the original manufacturers or the State are to carry out the repairs. Another important question is whether the machines will be sold for private use or retained by the State for road transport purposes to supplement railway services.

A "DEPENDENCE" LAMP SUCCESS.—Messrs. J. & R. Oldfield Limited, of "Dependence" lamp fame, Birmingham, send us an item of interesting news. It appears that General Headquarters of the Army applied recently to the Munitions Inventions Board for a lamp to be used for a certain purpose which necessitated that it should be hurricane proof. The Board approached Messrs. Oldfield, who succeeded in meeting the requirement. The lamp which they have made for the purpose passed through the most rigorous test to which such an article has ever been subjected, but it remained alight. The principles of ventilation adopted in this model are similar to those so successfully employed in "Dependence" lamps generally. This appears to be a great achievement, which foreshadows an even greater lamp efficiency for the car owner.

DUNLOP EXHIBITS IN A WAR PROCESSION.—In the "Win the War Day" procession through Birmingham, the Dunlop Rubber Company exhibited three 5-ton Hallford lorries—one representing Para Mills, showing pneumatic motor covers and tubes; one representing Manor Mills, showing motor cycle and cycle covers and tubes; and one representing Fort Dunlop, showing Dunlop solid rubber tires. There were also numerous rubber articles supplied to the War Office and Admiralty in connection with trench and sea warfare, including gas helmet connections. The lorries were decorated in the colours (yellow and black) which are known throughout the trade, having been standardised as the Dunlop colours in the earliest days of the company. In addition there were flags of all the Allies. Each lorry carried a representative group of women workers, and, at the request of the organising committee, six workers from the Dunlop Mills were presented to the Lord Mayor at Cannon Hill Park.

*Jim is the father of the garage—a man who has been driving motor lorries since motor lorries were. Mike has quite recently graduated from driving a pair of horses to the internal combustion engine.*

"You never ought to 'ave left them 'orses, Mike! You belonged to them, rightly, and they belonged to you; you knew what they said and they knew what you said. If you said to them 'whoa!' they stopped gradual, not all of a second but as nice and steady as you could wish. Them 'orses, Mike, pretty near drove that old two 'oss shay for you.

Now you've got a 3-ton lorry you reckon it's goin' to drive itself, too, and that's where you're wrong. You puts the brake on and—ses 'whoa!' and the lorry stops all of a sudden. The rear wheels lock and the bit of your Dunlop solid tyre that's on the ground gets a 'flat' on it as if you'd shoved a rasp over it. Then you wonders why the lorry bumps and shakes her inside up. It's a case of blame the driver, not the tyres, Mike!"

The Shortage of Skilled Drivers

If you engage an inexperienced driver to run your lorry it is not improbable that he will one day throw in his clutch with all the vigour his inexperience prompts—strain the whole of your chassis—and do damage in your gear box that will take days to repair.

Make it impossible for him to do this by having the clutch lined with Ferodo fabric. It will then engage sweetly however violently applied—transmit maximum power from engine to back axle—never slip or seize. Ferodo fabric lasts much longer than leather or any imitations of Ferodo fabric, and will not burn out. It gives infinitely superior service at less cost.

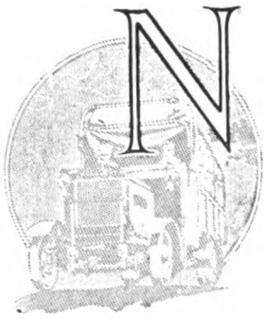
# Long Distance Deliveries



NOW is the time to ask the question—What was your pre-war radius for delivery by road? Whatever the number of miles may have been the figure must have been governed by the limitations of your vehicle.

Transportation by road will play a mighty part in the new industrial era—now so soon to come. The haulage standards of four years ago will have to be forgotten.

The future will call for long distance deliveries, uninterrupted service, certainty of performance and economy of operation.

Have you thought of this? If not, communicate with us. We can lay some facts before you which will be helpful in these days of preparation—some facts about the

# Convoys that pass in the Night

When darkness begins to cover the dread scenes of war, and the lights go up from the trenches, and the order "stand to" has passed along the allied front, forth the convoys go over shell-swept roads, through shattered towns and villages where a few years ago mirth and laughter reigned supreme.

On they go surmounting difficulties almost superhuman in order to deliver the goods to the lads and guns. Theirs is not the glory of actual combat or the thrill of hand to hand encounter, but without their aid the order "carry on" would be uttered in vain. And when the history of the grim struggle comes to be written many goodly pages will be deservedly filled with the glorious deeds and achievements of the Motor Transport Service, a service in which

## THE NEED FOR PETROL FOR PASSENGER TRANSPORT.

THE armistice that was arranged on Monday has come to the nation as a tremendous relief after the prolonged nightmare of the war. The conclusion of an armistice is, of course, not quite the same thing as the establishment of a peace. Nevertheless, in view of the conditions attaching to it, this armistice, following as it does on the collapse of all Germany's allies, may be regarded as practically marking the end of all fighting operations on the various fronts. Having won the war, the nation is now faced with the task, as it has been not inappropriately expressed, of "winning the peace." This task involves reconstruction in its various aspects, one of which is the re-establishment of commerce, which in so many directions has been diminished or suspended during the period of the war. Our rulers and administrators have had much to say of late, and quite rightly, on the duty devolving upon employers and employees in various industries of doing their part by co-operating with one another in promoting the revival of trade. Such co-operation is very necessary. But it requires to be backed up by official action wherever practicable. We believe the Government fully recognise this and wish to do their part in the matter. One of the most vital necessities for the carrying on of business operations is an adequate passenger transport system in the great centres of population in various parts of the country. Such transport has, for a variety of reasons, been necessarily carried on under great difficulties during the past four years. The case of motor omnibus services is a case in point. The demands of petrol for military uses have been enormous and have rightly constituted a first charge on the available supplies. But the exigencies of war are largely at an end, and the needs of peace demand the release at the earliest possible date of some of the large stocks of petrol which it is stated are in the country, in order that the motor omnibus industry may be able to contribute its full share towards the work of reconstruction. There are hundreds more motor omnibuses required in the metropolitan area to meet the needs of the public, and save the loss of time, of money, and of health, involved in the existing conditions, of which want of petrol is a principal factor. The same remark applies to many of the great provincial towns, including several cases where the tramways authority has been asked to institute motor omnibus services but cannot do so for lack of the motive power. We hope the Petrol Control Department will give their best consideration to the subject with a view to securing a large increase in the supply of petrol for purposes of passenger transport in the United Kingdom.

## TRAMWAYS (BOARD OF TRADE) COMMITTEE.

To the Editor of THE TRAMWAY AND RAILWAY WORLD.

Sir,—I have seen the letter signed "Tramway Manager," dated the 4th inst., in your issue of Nov. 9th.

Will you allow me to enquire whether the writer of that letter will permit the revelation of his identity ?

Yours very truly,

STEPHEN SELLON.

*November* 12, 1918.

To the Editor of THE TRAMWAY AND RAILWAY WORLD.

Sir,—The letter from "Tramway Manager" which has appeared in your issue of the 9th inst., gave expression to some misgivings which have been felt by many of those interested in municipal tramway undertakings ever since the setting up of the Tramways (Board of Trade) Committee, some twelve months ago. Just as, in the first instance, we looked with suspicion on the appointment of a company representative to the chairmanship and on the composition of the committee, so now we look with grave disapproval on the appointment of another gentleman representing company interests to an important position under that committee. That representatives of municipal undertakings should vote for such an appointment is simply intolerable ; and I, too, trust that the matter will be taken up by the Municipal Tramways Association.

Another rather interesting incident has taken place with regard to the Local Advisory Committee of No. 1 (London and South-Eastern) Area. At one of its first meetings a strong recommendation was put forward from the main Committee that the Advisory Committee should appoint a small sub-committee to deal with detail and routine work, and thus facilitate the work of the Committee. This was accordingly done. The sub-committee was appointed, with the result that since then the Advisory Committee itself has been utterly ignored, and has practically ceased to exist. The members of the Advisory Committee have never had an opportunity of advising ; and what the sub-committee has done nobody seems to know. I wonder if this state of affairs exists in other areas also ?

I regret to think that some of our representatives on the Executive of the Municipal Tramways Association, and on the Tramways (Board of Trade) Committee, seem to have no mind of their own ; or, if they have, they allow other interests to outweigh the interests of those they were appointed to represent. I am glad that "Tramway Manager" has raised the matter, and trust that it will not be allowed to rest there.

Yours faithfully,

MANAGER, NO. 2.

*November* 12, 1918.

To the Editor of THE TRAMWAY AND RAILWAY WORLD.

SIR,—The letter of "Tramway Manager," appearing in your issue of the 9th instant, relating to an appointment recently made by the above Committee, is certainly interesting, and whilst I think that the writer has exercised considerable restraint in giving expression to his opinions, I cannot help but think that his feelings are those of many others who noted with surprise that any appointment under this Committee was necessary at all, and, further, that it should be accompanied by the payment of a somewhat handsome salary.

It would be interesting to know the reasons of such an appointment and the duties attaching thereto necessitating any payment, bearing in mind that the members of the Committee are undertaking the work voluntarily, and that there are still others equally competent and equally willing to undertake similar duties, if the Committee is to be enlarged ; and it is still more surprising, assuming that such an appointment is necessary, and bearing in mind the salary attaching thereto, that it has not been thrown open to competition. The appointment will undoubtedly create a feeling of dissatisfaction in the minds of managers generally, particularly those representing municipal undertakings.

When this Committee was originally set up by the Board of Trade it was looked upon with a considerable amount of suspicion by the municipal representatives generally, who felt that their undertakings were going to be controlled by company representatives. Strong representations were made to the Board of Trade upon the matter and an influential deputation was appointed to wait upon the Board, in the hope of securing additional representation, par-

Digitized by Google

ticularly for the smaller undertakings, but without any satisfactory result; and, whilst we were prepared to abide by the decision of the Board of Trade, we never anticipated—without at any rate some reference to the municipal representatives that an additional appointment would be made by the Tramways (Board of Trade) Committee and that such an appointment would be secured by a company man.

I think some explanation is due not only from the Tramways (B.O.T.) Committee, but also from the two representatives of the municipal undertakings, members of that Committee, who, according to the letter in the issue of the 9th instant, gave their vote in favour of the gentleman appointed. They were certainly not sent there by the municipal undertakings for this purpose, but to look after the interests of municipal undertakings generally; and they are not doing so by increasing the representation of the company undertakings in the constitution of the Committee.

Whilst it is with a certain amount of hesitation that I send this letter to you, I think, in fairness to the gentleman who has taken the first steps in bringing this matter under the public notice, he is entitled to some support; and I have no doubt you will receive other letters of a similar character. Unless there is an explanation by the Committee as to their action, I hope a question will be asked in Parliament, and, further, that the Executive Council of the Municipal Tramways Association will take some action by demanding an explanation in regard to the action of the two gentlemen referred to.

Yours faithfully,

November 13, 1918. "DISGUSTED."

***We publish this correspondence as it expresses a feeling that is widespread among representatives of municipal tramways. We believe, however, that the Committee in making the appointment in question have acted with a view to the general welfare of the industry, and an explanation of the circumstances that led to the appointment would no doubt allay the dissatisfaction that exists.

## L.C.C. TRAMWAY MATTERS.

At the meeting of the London County Council on Tuesday, the Highways Committee presented reports dealing with the following subjects:—

ORGANISATION OF THE TRAMWAYS DEPARTMENT.—In connection with the reorganisation of the tramways department, the Highways Committee at the suggestion of the general manager, have made the following rule:—

Heads of branches in the tramways department are authorised to dismiss any person (other than a temporary clerical or technical assistant or minor official) in their respective branches, who under regulation No. 680 is subject to appointment or dismissal by the general manager, and to sign discharge notes in their own name, provided ( ) that this authorisation shall not derogate from the power of the general manager himself to dismiss any such person, and (*b*) that any person employed in the department affected by the decision of an officer in that department, other than the general manager, in a matter of discipline, do have the right of appeal to the general manager personally.

DISTRICT FOREMAN IN THE PERMANENT WAY BRANCH.—On June 18, 1907, the Council fixed the rate of pay at from 70s. to 90s. a week for district permanent way foremen in the tramways department. At that time there was only one such official. With the expansion of the tramway service the number of district foremen has increased to ten, including two foremen of point adjusters, and as the extent and nature of their work differ considerably, the Committee proposed that the following classification should be made:—

Class A.—90s. a week, rising by annual increments of 5s. a week to £5 a week. District foreman in charge of the district from the Elephant and Castle to the City of London.

Class B.—70s. a week, rising by annual increments of 5s. a week to 85s. a week. District foremen (other than the foreman in Class A), including foremen of point adjusters.

WAGES OF WOMEN CAR WASHERS, ETC.—The Committee on Production have advised that the women employed in the rolling stock branch of the tramways department as car washers were covered by the award of August 29, 1918. As only a few women are so employed, the additional expenditure is estimated at not more than £100 for the remainder of the current financial year. An application by yard and shop cleaners at the central repair depot was referred to the Rolling Stock Conciliation Board.

TENDERS FOR TRAMWAY FITTINGS, ETC.—The Committee recommended that the invitation of tenders from selected firms for the supply of field coils, double cotton covered copper wire, rolled steel bars for driving, and pony wheel axles and insulated coils for magnetic brakes be approved.

LIEUT.-COL. E. W. MORRISON-BELL has been appointed a member of the Stores and Contracts Committee, in succession to Mr. Harold Parsons, who has resigned his membership on that Committee.

All reports were adopted without discussion.

## REDUCTION OF SERVICES.

Reading Town Council has by a large majority rejected a proposal to discontinue the Sunday tramway service during the winter months.

Aberdeen Town Council are reducing the services after 6.30 p.m. on all routes on weekdays (except Saturday) and arranging that he Sunday service shall cease at 9 p.m., which represents a curailment of one hour.

Dudley, Stourbridge and District Electric Traction Company are being asked by the Dudley Urban Council to modify recent reductions, with a view to the resumption of a ten minutes' service between Smethwick and Oldbury, and extra cars in the evening from Dudley to Oldbury.

The reduction of service on the Dundee, Broughty Ferry and District tramways system has been cancelled and a full service restored. This is a result of the arrangement under which the Dundee Corporation is to supply the company with electricity, thus enabling the closing of one power station and consequent economy in fuel.

## INCREASE OF FARES.

A Board of Trade order in regard to increased fares on the Bath Electric Tramways is expected to be issued at no distant date.

West Hartlepool Town Council have approved a recommendation of the Tramways Committee that the charge for children be half fare, instead of a halfpenny, on every section during the present abnormal conditions.

The Dublin United Tramways Company have given notice of a further revision of fares. It is stated this action has become necessary owing to the recent further increase in wages and the reduced earnings which must result from the greater curtailment of the services in consequences of the coal shortage.

In reply to representations against what are regarded as high fares, the managing director of the Yorkshire (Woollen District) Electric Tramways (Mr. E. A. Paris) has informed the Batley Chamber of Commerce that the Company are paying their employees a war bonus of 25s. per week; that their wages bill is £12,000 more per annum than was the case before the war; and that the expenses are 6d. per mile above pre-war rates.

Brighton Town Council have declined to reduce the length of the penny stages on the tramways and to increase the fare from the pier to the railway station from 1d. to 1½d. The recommendation of the Tramways Committee to this effect was negatived in favour of an amendment to postpone the increase until April, in order that it might be borne by visitors rather than by residents. This amendment was then negatived in favour of an amendment by which the matter was referred back for further consideration, the Committee being instructed to report within three months.

## MISCELLANEOUS NEWS AND NOTES.

**Wigan Extensions.**—The Town Council has applied to the Local Government Board for sanction of a loan of £5,000 for extensions of the electricity undertaking.

**Cost of Energy.**—Walsall Tramways Committee report that the recent increase in the charge for electrical energy will involve an additional cost to the tramways department of £900 per annum

**For Hanging on Tramway Cars,** two boys were fined 5s. each at Perth Police Court. The Bailie remarked that hanging to the cars was a prevalent and dangerous practice among boys, which must be stopped.

**Tramways and Food Kitchens.**—Walsall Corporation have resolved to render the Food Control Committee every assistance in regard to the use of tramway cars, in the event of food kitchens being established in various parts of the borough.

**Huddersfield Managership.**—There are twenty-nine applications for the position of tramways manager to the Huddersfield Corporation, which is vacant, owing to Mr. R. H. Wilkinson having been appointed tramways manager to the Bradford Corporation.

**Institution of Electrical Engineers.**—Mr. J. H. Shaw will read a paper on "The Use of High Pressure and High Temperature Steam at Large Power Stations," at the meeting on Thursday, November 21, to be held at 6 p.m., at the Institution of Civil Engineers, Great George Street, S.W.

**New Car Shed for Blackpool.**—Blackpool Tramways Committee propose to purchase four acres of land in Rigby Road for the erection of a new central car depot, which will be required in connection with the acquisition by the Corporation of the Blackpool, St. Anne's and Lytham tramways system.

**Lancashire and Cheshire Wages Award.**—Workers in the electricity undertakings in a number of towns in Lancashire and Cheshire as a result of arbitration proceedings are to receive, as from August 10 last, an advance of 3s. 6d. per week, with 1s. 9d. per week for youths under 18 years.

**Numbered Routes for Southport.**—Southport Tramways Committee has decided to distinguish the different tramway routes by numbers, the tramway manager (Mr. T. J. Kendrew) being instructed to furnish a scheme showing how he recommends the numbering should be carried out.

**Further Wage Demanded.**—Yesterday the application of the National Transport Workers Federation and other unions for an increase of ten shillings in war wage came before the Committee on Production. The decision the Committee will probably be given during the coming week. Under the award of July 9, the war wage was raised to 25s. a week.

**For Obstructing a Car** on a tramway track at Halifax, a lorry driver was fined £2. It was stated that the lorry kept on the track for 1,600 yards, with the result that the car was a quarter of an hour late. The defendant denied wilful obstruction, urging that owing to the noise of the engine he did not hear the car. The presiding magistrate suggested that steam lorries should be provided with reflectors which would enable the steerer to see the traffic behind him.

Digitized by Google

**Car Lights in London Area.**—The Commissioner of Police for the Metropolis has given instructions that tramway cars and omnibuses may resume normal lighting, except that in the interests of safety the canopy lights and head-lights should not at present be increased.

**Omnibus Service Wanted.**—Application has been made to the Walsall Corporation by the Birmingham Metal and Munition Co., to run a motor bus service between the works and Walsall Wood and Brown ills. The Corporation is applying for the consent of the local and road authorities concerned.

**Tramways and Town Development.**—The Tramways Committee of the Sheffield Corporation have decided that a further grant of £500 be made from the tramway profits for expenditure in connection with the Development Committee, being of opinion that the expenditure is for the public benefit.

**Car Burned by Current.**—By the fall of a tree at Howth, Ireland, the overhead wires were broken just as a tramcar was passing. The car was ignited by the current, and was destroyed before any help could arrive. Fortunately, there were no passengers on the car, and the conductor and motorman escaped unhurt.

**Coal Gas as a Motor Fuel.**—The Automobile Association has received several entries for its competition for a £1,000 prize for the best system for enabling coal gas to be used as fuel for motor vehicles. The closing day for entries is December 31, and others who propose to enter should communicate with the Secretary, Fanum House, Whitcomb Street, London, W.C.2.

**Lighting Restrictions.**—The Home Office on Monday, as soon as the news was received of the signing of the armistice, issued instructions, which applied to Great Britain generally, to the effect that the shading of lights might be withdrawn, except in certain cases where lights are visible from the sea. The normal lighting of the interior of tramways cars was resumed on Tuesday. The regulations as to head lights and rear lights remain for the present unaltered.

**D.O.R.A. and Electricity.**—The Minister of Munitions has issued under the Defence of the Realm Act, the Electricity (Restriction of New Supply) Order, 1918, which prohibits, except by his permission, any new connection, or supply, or use of electricity being made anywhere where electricity was not connected, supplied or used at the date of the order. All applications with reference to this order should be addressed to the Director of Electric Power Supply, Ministry of Munitions, 8, Northumberland Avenue, London, W.C.2. The permission required by the order is in addition to and not in lieu of the usual priority certificates and permit reference number.

**Blackpool's Tramway Purchase.**—In regard to the proposed purchase of the property of the Blackpool and Fleetwood Tramroad Company, Ltd., by the Blackpool Corporation, the Fleetwood Urban Council have expressed a wish to share in the acquisition of the tramway in view of the fact that there is a length of five furlongs of the track along the streets of Fleetwood, and that about two miles of it is within their area, this being practically half the length of the system from Fleetwood to the Gynn, North Shore. The General Purposes Committee of the Blackpool Town Council have declined to agree to the proposal on the terms suggested, but have expressed their willingness to consider other proposals and the matter was referred to the Parliamentary Committee. A special meeting of shareholders in the Blackpool and Fleetwood Tramways Company has approved the purchase.

**Yorkshire Tramway Managers and Goods Traffic.**—A meeting of the Yorkshire Tramway Managers was held at the Leeds Tramway Offices, on Tuesday, November 12th. The following members were present:—Messrs. R. H. Wilkinson (Bradford), H. L. White (Grimsby), J. W. Galloway (Halifax), J. W. Hame (York), H. Webber (Keighley), G. H. Browne (Mexborough and Swinton), W. McGibbon (Ossett), E. Cordukes (Scarborough), E. A. Paris (Yorkshire Woollen District), H. England (Wakefield), W. J. McCombe (Hull), and A. Daggett (Leeds). An interesting discussion took place on goods traffic, and the meeting came to the conclusion that it was quite impossible to make any progress in this direction without general legislation, and the Hon. Secretary was requested to communicate with the Municipal Tramways Association and the Tramways and Light Railways Association, with a view to the introduction of a Bill conferring powers to carry goods on all tramways and light railways. Other matters discussed were the setting up of Works Committees under the Whitley Report, supply of uniform clothing, tolls and charges, etc., etc.

## PERSONAL.

**Presentation to Mr. R. H. Wilkinson.**—Mr. R. H. Wilkinson, the Huddersfield Corporation tramways manager, who is shortly to take up an appointment as manager of the Bradford Corporation Tramways, has been presented with a smoking cabinet from the staff and employees. Mr. Partington (works superintendent) said that the presentation was to express in a tangible form appreciation of Mr. Wilkinson, who, after being general manager of the Huddersfield Corporation tramways for 14 years, was leaving to take up an important position at Bradford. Most of them felt Mr. Wilkinson's departure very much, and he hoped the time was not far distant when Mr. Wilkinson would reach the highest position in the tramway world. Mr. Harry Dyson (chief cashier) made the presentation and asked Mr. Wilkinson to accept, in addition, an umbrella for Mrs. Wilkinson. Mr. Lincoln (foreman coach painter), and Mr. W. Wood (president of the men's union) expressed good wishes to Mr. Wilkinson. Mr. Wilkinson replied thanking them or their kindness.

## CONTRACTS AND ORDERS.

**The Chloride Electrical Storage Company** have an order from Wolverhampton Town Council for a battery for an electric vehicle.

**Electric Vehicles for Willesden.**—The electrical engineer of Willesden Council has been authorised to obtain quotations for three electric two-ton vehicles for the collection of house refuse.

**Salford Town Council** have accepted a tender from E. Bennis and Co., Ltd., for supplying and fitting to six boilers at the electricity station six Bennis patent machine stokers and accessories at £195 each.

**Manchester Corporation** have concluded a contract with Callender's Cable and Construction Co., Ltd., for £394, for the supply and fixing at the electricity station of certain requisites for the bulk supply of electricity.

## FINANCIAL.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Nov. 13 amounted to £72,645, an increase of £17,161 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Nov. 13 (thirty-two and a half weeks) the total receipts were £2,126,343, an increase of £317,431 on the, corresponding period of 1917

**Norwich Electric Tramways Company.**—At the annual meeting the report for the year ended June 30, 1918, was presented. The comparative figures for the years 1917 and 1918 were as follow:—Receipts, £43,712 17s. 7d., £51,220 1s. 4d.; expenditure, £30,827 9s. 4d., £34,857 5s. 7d.; net profit, £12,885,8s. 3d., £16,362 15s. 9d. The amounts for expenditure include debenture interest, donations, and London expenses. To the sum of £16,362 15s. 9d. must be added £33 18s. 6d. brought forward from last year, making a total of £16,396 14s. 3d. to be dealt with. It was decided that this amount should be appropriated as follows: £1000 to writing down cost of turbo-generator; £1000 to writing down cost of 1914 Acts £7000 to reserve fund account; £2000 provision for reconstruction and deferred repairs; £5280 to the payment of 2 per cent. dividend on the shares of the company (subject to income tax) for the year ended June 30t, 1918; and 8116 14s. 3d. for carrying forward. Statistics were supported as to the working during the years ended June 1917, and June 1918 respectively as follow: car miles run, 903,434, 871,449; passengers carried, 10,767,626, 12,095,298 earnings per car mile, 11·61d., 14·11d.; expenses per car mile, 7·49d., 8·86d.; earnings per passenger, 0·97d., 1·02d.

**Dick, Kerr and Co., Ltd.**—In the course of his remarks at the meeting on Thursday, Mr. Claud T. Cayley, the chairman, said that the profit was not much short of that of the previous year, and in view of the fact that the directors' policy had been gradually to prepare for the reconstruction of the business on post-war conditions, he thought they would consider the year's results satisfactory. The total on the asset side of the balance sheet this year was over £2,250,000, which was a record figure for the company. The special reserve for contingencies stood in the balance sheet at £75,000, and to this they were adding a further £25,000, with a view to providing any further sums that might be inecessary in connection with special war taxation. The works continued to be fully employed. The Ministries of Munitions and Reconstruction had given considerable assistance in gradually changing over from certain purely war products. The Management Committee had been strengthened by the appointment of Mr. Davenport, Mr. Bennett, and Mr. Conner, the latter an old and trusted member of their staff. The alliance with Siemens Brothers and Company would, it was thought, secure economy and avoid overlapping. If they wished to retain the position they held at present, it would be necessary to find facilities for the increased output in the production of larger units than their present shops permitted. They had solved the difficulty in a very satisfactory manner. An option agreement had been entered into with the Coventry Ordnance Works, who owned an engineering works of recent design and equipment which could be quickly converted to the production electrical work. Full particulars of the proposal would soon be sent to the shareholders. The retiring directors, Mr. R. H. Prestwich and Mr. John Sampson, were re-elected. On the motion of Mr. Wilkinson, seconded by Mr. J. Barber Glenn, a vote of thanks was passed to the directors, the managing director (Mr. Walter Rutherford), and the Management Committee for their very careful management of the company's affairs.

## TENDERS INVITED.

### CORPORATION OF DUBLIN.

**Electricity Supply Committee.**

**Tenders for Turbo-Alternator, etc.**

The Electricity Supply Committee of the Corporation of Dublin desire to receive Tenders for the supply and installation at their Pigeon House Generating Station of a Complete Generating Set of approximately 3,000 to 5,000 kw. capacity.

This Set to form a complete unit, comprising Steam Turbo-Alternator and Exciter, Condensing Plant, the necessary Steam and Water Piping and Foundations.

As the entire Plant must be completed for beneficial use at the earliest possible date, it is necessary that intending tenderers should at once inspect the site in order that they may be fully informed of the conditions to be complied with as to space and local requirements, and no Tender will be considered which is not based upon such inspection.

General Conditions, Specification and Form of Tender may be obtained from the City Electrical Engineer, Fleet Street, Dublin, on and after Thursday, November 14th, 1918, on payment of Three Guineas, which sum wil be refunded on receipt of a bona-fide Tender.

Tenders, sealed and endorsed "Tender for Complete 3,000-5,000 kw. Steam Turbo Generating Plant," must be addressed to "The Chairman, Electricity Supply Committee, 3, Cork Hill, Dublin," and delivered there not later than 12 o'clock noon, on Wednesday, November 27th, 1918.

The Committee do not bind themselves to accept the lowest or any Tender.

FRED. J. ALLAN, Secretary.

Electricity Supply Committee Offices,
3, Cork Hill, Dublin,
November 11th, 1918.

## POSITIONS VACANT.

### CITY OF MANCHESTER.

**Electricity Department.**

**Shift Engineer.**

The Electricity Committee of the Manchester Corporation invite applications for the position of Shift Engineer at their City Power Stations. Salary £250 per annum; bonus £35 2s. per annum.

Candidates must have had a thorough practical and theoretical training in mechanical and electrical engineering. Previous experience in both direct current and three-phase alternating current stations employing large units is indispensable. The successful candidate will be required to take up his duties as soon after January 1, 1919, as possible.

Applications, stating age, and experience, accompanied by two testimonials, to be addressed to the Chairman of the Electricity Committee, Town Hall, Manchester, endorsed "Shift Engineer," and delivered not later than the 4th proximo.

Town Hall,
Manchester, November 20, 1918.

THOMAS HUDSON,
Town Clerk.

### PERMANENT WAY ASSISTANT.

Wanted (on large Tramway Undertaking) young Engineer with up-to-date experience and Drawing Office training, able to lay out and supervise track reconstruction. Salary according to experience. Box No. 60, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

### Foreman Platelayer.

Working Foreman Platelayer required. Only first-class men with Tramway Maintenance experience need apply, stating wages required and particulars of experience, to Rhondda Tramways Co., Ltd., Rheola Road, Porth, Glam.

## POSITION WANTED.

Position as Traffic Superintendent, Tramways or Motor Bus, practical experience in traffic control, timetables, etc.—Box No. 59, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## THE PRIME MINISTER AND TRACTION.

AFTER many years of neglect the traction industry finds itself made one of the leading items in the reconstruction programme put forward by the Coalition Government for the General Election. Road motor passenger transport, the youngest section of the industry, has latterly been fettered with road maintenance contributions. While little objection can be taken to an impost for new routes during the period of the war, there should be no further perpetuation of such contributions by Parliamentary Committees, either in the case of omnibuses or of railless electric cars. The fuel tax, imposed for the purpose of road maintenance, and the vehicle licence duty constitute a sufficient burden for means of communication that have become indispensable to life and industry. On that account, to say nothing of powerful aid which the self-propelled vehicle has given to the winning of the war, there is sufficient ground for the next Government re-introducing, and improving if need be, the proposal for increased grants towards the upkeep of main roads. That scheme was submitted to the House of Commons in Mr. Lloyd George's Budget of a few years ago, but was withdrawn owing to a legal impediment. The outbreak of the war prevented the ex-Chancellor of the Exchequer submitting amended proposals. As to electric traction, it is notorious that its development has been retarded and curtailed by the Act of the horse tramways era. That and other drawbacks to development were fully set forth in the Report of the Board of Trade Committee on the Electrical Industry, published in our issue of July 11 last. It has been a great satisfaction to note that Mr. Lloyd George in his speeches during the past year, has several times shown that he grasps the importance of improved methods of communication, not only for opening up the countryside, but for the solution of the problem of housing. The same note predominates in the two speeches he has delivered during the past fortnight. In addressing at Downing Street an audience of over 200 Liberals who support the present Government, he foreshadowed large transport developments, and announced that the two thousand miles of railways of various descriptions built in France for the Army will be used to develop communications in England. This proposal should not be lost sight of by electric traction experts. Existing generating stations will probably be utilised for some of these new lines, but a much greater mileage should be made possible in years to come with the opening of the central stations advocated in the Report referred to. This scheme in its broad lines received the benediction of the Prime Minister in his speech on Nov. 16 at the opening of the campaign of the Coalition, when he stated that "electric power is so necessary to industry and comfort that it must be taken in hand." In three brief but pregnant sentences the Prime Minister uttered what may be regarded as the Magna Charta of traction. "There is the problem of transportation," he said, "left very largely to chance—rail, canal, road, tramway—all vital to the life, the industry, the amenities of the people of this country. That problem must be taken in hand under the direct inspiration and control of the State." This declaration betokens an encouragement of the industry which it has not before received from any statesman. It is significant that Sir Albert Stanley is being returned unopposed, and with a continuance of his work as President of the Board of Trade the prospect of bringing the electrical and traction schemes to fruition should be certain. Doubtless there will be occasion to utilise the information gathered by the Tramways (Board of Trade) Committee, and also the experience of Mr. J. B. Hamilton in his present work as director of transport to the Ministry of Food. Now that the Election is at hand, the advocates of progress should secure pledges for the free development of the traction industry from candidates who aspire to enter the Parliament of Reconstruction. Those pledges will constitute an appreciable advance towards the Promised Land.

## TRAMWAYS (BOARD OF TRADE) COMMITTEE.

APPOINTMENT OF A VISITING TECHNICAL OFFICER.

In the House of Commons on Monday, November 18, Mr. GILBERT asked the President of the Board of Trade whether the Tramways Committee set up by his Department has appointed Mr. A. H. Pott to a salaried appointment under the Committee; if he will state what are the duties of the post and the salary attached to it; what are Mr. Pott's qualifications for the position; if he was previously engineer and manager to the London United Tramways Company; and if he was only appointed by the casting vote of the chairman of the Committee, who is also managing director of the tramways company?

Mr. G. J. WARDLE (Parliamentary Secretary to the Board of Trade): I understand that the answers to the first and fourth parts of the hon. member's question are in the affirmative. Mr. Pott's duties are those of a visiting technical officer at a proposed salary of £750 a year. Besides being formerly engineer and manager to the London United Tramways and the Metropolitan Electric Tramways, Mr. Pott is a member of the Institution of Civil Engineers, and a member of the Institution of Electrical Engineers. I have no reason to doubt that Mr. Pott was selected as being fully qualified for the post.

**Tramway Committee Chairmen.**—The following new appointments have been made for the year 1918-19:—Councillor J. Ranson, Chairman, Barking Tramways Committee; Councillor W. E. Lee, Chairman, Birmingham Tramways Committee; Councillor Eaton, Chairman, Derby Tramways Committee; Councillor T. Bramworth, Vice-Chairman, Doncaster Tramway Committee; Councillor W. P. Burton, Vice-Chairman, Ipswich Tramway Committee.

**Stalybridge District Board.**—The annual meeting of the Stalybridge, Hyde, Mossley and Dukinfield Tramways Board, was held at Stalybridge recently, Councillor E. Bury (Hyde) presiding at first. In place of the late chairman, Alderman T. Perrin (Hyde), who had retired from the Board, Alderman H. Sykes (Mossley) was elected to the chair; Councillor C. H. Booth (Dukinfield) being appointed deputy chairman. A vote of thanks was accorded to Alderman Perrin.

## THE ARMISTICE AND TRAMWAY SERVICE SUSPENSION.

Tramway employees in several places in the United Kingdom seem to have been affected by the general spirit of holiday-making aroused by the receipt of the news of the Armistice last week. Cessations of work, extending over a day or more, have been recorded, with the resulting suspension, or at least considerable disorganisation, of the tramway service, and consequent inconvenience to the public. At Swansea, the employees of the Swansea Improvements and Tramways Company brought the cars into the depot on Monday. They declined to resume work on Tuesday or Wednesday and demanded payment for the three days. After a conference on Wednesday, however, work was resumed unconditionally, the employees asking that an apology should be conveyed to the public on their behalf for the inconvenience caused by their action.

At Halifax the Corporation cars were returned to the sheds for the day. At Newcastle the general service on the Corporation tramways was suspended for two days, but about sixty workmen's cars ran. Here, when the question of the stoppage was put to Mr. Earnest Hatton (the tramways manager) he drew attention to the fact that the employees had been subjected to four years' unexampled strain, and that there was a reaction now. The employees of the Tyneside Tramways and Tramroad Company also made holiday. At Stockton and Thornaby the service was suspended on Monday afternoon and evening to allow the tramway workers to take part in the local rejoicings. The Oldham Corporation employees took the Tuesday off, but workmen's cars were voluntarily arranged for. Corporation tramways workers at Birmingham and Leeds remained at their post and it is understood that this action at such a special time will be rewarded with extra payment.

The cessation of work at Newcastle was the subject of discussion at a subsequent meeting of the Newcastle Tramways Committee, Councillor R. Mayne presiding. A resolution was carried placing on record the committee's appreciation of the services of motor men and conductors, and also the maintenance and power staffs during the trying conditions created by the war for the last four years. The Committee regretted that, without agreement with those responsible for the service, the employees left work on Monday, November 11, and did not return on November 12. In view of the special circumstances on the present occasion, however, the committee decided to pay the employees two days' extra pay.

## MISCELLANEOUS NEWS AND NOTES.

**Depot Extension at Ashton.**— The Corporation of Ashton-under-Lyne propose to extend the tramway depot at a cost of £18,309.

**Fog Reduces Revenue.**—It is estimated, says the *Scotsman*, that as the result of the fog last week-end Glasgow Corporation tramways lost about £2,000 in revenue.

**Machine Tools.**—Secondhand but not new, machine tools, woodworking machinery and treadle lathes may now be bought and sold without a permit and at any price.

**Import Prohibitions Removed.**— The *Board of Trade Journal* for November 13th contains a long list of articles for which a general license permitting of importation has been issued.

**Track Renewals at Dover.**— The Dover Tramways Committee proposes to spend £10,000 on the repair of the tramway track. The line to River is to be taken up and re-used, and motor omnibuses will be employed on that route.

**Car Driver Acquitted.**— A verdict of "Not guilty" was returned by the jury at Warwick Assizes, in the case of a tramway driver, who had been committed for trial on a charge of manslaughter in connection with a collision at Coventry.

**Walsall Electricity Expenditure.**—Walsall Electricity Committee propose to obtain another rotary at a cost of £3,370 and to replace switches at a cost of £410, in order to minimise the interruptions of the supply of current which have caused a number of stoppages on the tramways.

**Tramway Street Sweepers.**— Dundee Corporation proposes to adopt tramway traction for street sweeping. Other schemes for mechanical traction and improved methods were submitted to the Cleansing Committee, and it was stated that there was need for a reduction in the costs, as these had gone up £14,000 since 1914.

**Leeds Parcels Service.**—In connection with the parcels service on Leeds Tramways it is intended to arrange for collection and delivery within a limited area. Through service between Leeds and Bradford has recently been commenced. One journey a day is made between the two cities at present, but it is anticipated that later there will be morning and afternoon despatches.

**A Hint for Tramways.**— The London General Omnibus Company is making application for the return of omnibus drivers from the Army in order to increase the travelling facilities of the metropolis. If this application is granted and sufficient petrol is allotted the company hopes to be able to place several hundred additional omnibuses on the streets in the near future.

**Blessington Steam Tramway.**—The Dublin County Council have expressed their thanks to Mr. Clancy, M.P., and Mr. Turtil, M.P., for their efforts to induce the Government to give due consideration to the pressing claims of the Blessington Steam Tramway for financial assistance, so that the small guaranteeing areas in the counties of Wicklow and Dublin might not be liable for further losses in the working of the tramway line, which had for some time past been mainly engaged in Government work. Thanks were also extended to Messrs. Field, M.P., and Hearn, M.P., members of the Council, and to Mr. P. J. Brady, M.P., for attending the deputation to the Board of Trade.

**Lorry should have given way.**—In dismissing a claim against the Glasgow Corporation for damage to a motor lorry, owing to the alleged negligent driving of a tramway car, the Sheriff said the onus of proof was on pursuers, and they had failed to discharge that onus. Their witnesses seemed to be of the opinion that the duty of the tramway car driver was to give way to pursuers' motor lorry, whereas the contrary was his view.

**Release for War Work.**—The Minister of Munitions has made an order permitting the employment on work other than munitions work of workmen who since August 21, 1917, have been employed on the manufacture or repair of arms, ammunition, vessels, vehicles, aircraft, and other articles intended for use in the war, and of metals, machines, tools, or materials required for such manufacture or repair. The order is called the Ex-Munition Workers Employment Order, 1918.

**New Tramways for Leeds.**— Leeds Corporation is promoting a bill in the next session of Parliament, which includes an application for powers including, among other purposes, the construction of tramways, tramroads and street improvements. The tramways proposed to be authorised will be situated in the townships of Leeds, Holbeck, Hunslet and Middleton. It is proposed to run carriages adapted for use on railways on several of the tramways. Certain of the roads proposed will be of unusual width and will provide a special way for tramways.

**Orders for Iron and Steel.**—The Minister of Munitions announces that until further notice iron and steel makers are at liberty to accept and execute orders for iron and steel ranking for priority below Class B, subject only to conditions shortly to be issued as regards prices, and to the Order as to priority, dated March 8, 1917. For this purpose the operation of such clauses of the Control of Steel Supplies Order of November 20, 1916, as amended by the Order of December 14, 1917, as prohibit the manufacture of iron and steel for orders ranking below Class B. is suspended.

**Jubilee of District Railway.**— Of quite historic interest is the fact that this year marks the jubilee of the District Railway. Opened on October 1st, 1868, from High St. Kensington to Glouceter Road, the line on December 24th, 1868, was extended from Gloucester Road to Westminster. The first experiments in the electrification of the system were made in May, 1900, with an electric train which ran between Earl's Court and High Street. On November 5th, 1905, all steam trains were withdrawn and electric working became universal on the District Railway.

**Tramways Drivers Demand Lights.**—The Slaithwaite Urban Council have received a letter from the Huddersfield Branch of the Amalgamated Society of Tramway and Vehicle Workers asking that all lamps on the main tramway route in the Council's area be lighted. If the Council could not see their way to grant the request, the drivers would, it was suggested, refuse to run the cars, after a given date, further than the borough boundary. A general discussion ensued on the lighting question, and in view of the Government relaxation of restrictions it was decided that every alternate lamp, and lamps at street corners, be lit as early as possible.

**Metropolitan Street Accidents.**—A return just issued shows that during the nine months ended 30th September 438 fatal street accidents occurred in the Metropolitan Police Area—77 caused by horse-drawn vehicles, 349 by mechanically propelled vehicles and 12 by pedal cycles. Of those caused by mechanically propelled vehicles, 83 come under the heading of omnibuses and 40 of tramway cars. In the City of London there were 13 fatal accidents in the same period, two caused by horse-driven vehicles, ten by mechanically propelled vehicles and one by a pedal cycle. The non-fatal accidents numbered 11,403 in the Metropolitan Police Area and 479 in the City of London.

**Merthyr Tramway Service.**—The President of the Board of Trade has been asked, in regard to the local tramway service at Merthyr, whether he would take steps to ensure that the Merthyr Electric Traction Company operated the Cefn car service so as to run to the Graham Street terminus, Merthyr, as before, and whether he was aware that the company were bound to provide and maintain a waiting room, and that this had not been done. It was replied that representations had been made to the Board of Trade by the rural district council, and communications had been sent to the council, and the company by the Tramways (Board of Trade) Committee, by whom the question had been investigated.

**Local Authorities and Electric Power Supply.**—A number of local authorities in the North-East Coast area have had under consideration for some time past the reports of the Coal Conservation Sub-Committee and of the Electric Power Supply Committee. The Town Clerk of Newcastle-on-Tyne (Mr. A. M. Oliver) has prepared a statement, which has been settled in consultation with the representatives of other local athorities in the north-east area who are owners of electricity undertakings, and that statement has now been transmitted to Sir Albert Stanley and Dr. Addison, with a request that a deputation may be received upon the subject in the near future. The statement is of much interest and puts the case of the authorities clearly and cogently. The municipalities view with grave misgivings recommendations for the establishment in the north-east coast area of an electric trust exercising with Parliamentary sanction paramount powers in that district with respect to the production and supply in bulk of electricity. They earnestly request that before any proposals are submitted to Parliament, the Government shall institute an exhaustive inquiry by an independent authority, and that no action be taken until an opportunity has been afforded to the municipalities to present their view before an unbiassed and impartial committee of Parliament.

Digitized by Google

**South Shields Electricity Supply.**—South Shields Corporation have declined to acquiesce in a decision of the Director of Electric Power Supply to the effect that they should arrange to obtain a bulk supply of electricity for the Newcastle Electric Supply Company. It appears that the Corporation, wishing to enlarge their generating station, applied for permission to raise a loan for the enlargement. They found that such permission would depend on the approval of the Director of Electric Power Supply, who, on being consulted, expressed the view that the Corporation should endeavour to purchase a supply rather than instal additional plant. Negotiations took place with the Newcastle Electricity Supply Corporation, but the terms suggested were not considered sufficiently acceptable when compared with the results anticipated from the Corporation's own scheme. Further negotiations with the department resulted in the Electrical Services Committee deciding that it would not be desirable for the Corporation's generating station to be further extended at that moment and that the Corporation should arrange for a supply in bulk. The Corporation, as stated, disagree with the department.

**Release from the Forces.**—The department now responsible for dealing with questions as to the priority of release from the colours of officers and men serving with H.M. Forces is the Demobilisation and Resettlement Department of the Ministry of Labour, 6, Whitehall Gardens, S.W.1. Inquiries on the subject should be addressed to that Department. The Admiralty, War Office, and Air Ministry will continue to deal with individual applications for the release of officers or men on compassionate grounds. An employer who wishes to ensure that a man now serving with the Forces shall be earmarked for early release when general demobilisation begins should ascertain his full name, regimental number, and rank, the full name of his unit, and the expeditionary force or command where he is serving, and should then fill up and send to the local employment exchange a specially printed post-card (E.D. 406), copies of which may be obtained from employment exchanges. It should be clearly understood that the general demobilisation of the Forces has not begun. A limited number of pivotal men will be released in advance of general demobilisation. The number is small, and the industries entitled to receive a proportion are being notified of the procedure to be followed.

## NEW MANAGER FOR HUDDERSFIELD TRAMWAYS.

Mr. A. A. Blackburn, chief engineer and assistant to the general manager of the Belfast City tramways, has been appointed engineer and general manager of the Huddersfield Corporation tramways, in succession to Mr. R. H. Wilkinson, who recently accepted the position of general manager of Bradford City tramways. Mr. Blackburn, who went to Belfast fourteen years ago, at the time when the system was being electrified, was previously in the service of the Manchester Corporation tramways. The salary attached to the appointment is £600 per anum. There were twenty-nine applications, and from these the following four candidates were selected to be interviewed by the Committee:—Mr. A. A. Blackburn; Mr. J. F. Cameron, general manager and engineer of Northampton Corporation tramways; Mr. William Marsh, engineer and manager of Brighton Corporation Tramways; and Mr. H. Pilling, general manager and engineer of Accrington Corporation tramways. Mr. Marsh, we understand, withdrew his application before the interview as he was dissatisfied with some of the conditions, especially that in regard to salary.

In alluding to the appointment, the "Northern Whig," of Belfast says that Mr. Blackburn has been an able and painstaking servans of the Corporation. He enjoys the universal esteem of his colleagues and his departure from Belfast will be much regretted.

## FINANCIAL.

**Metropolitan Carriage Wagon and Finance Company.**—Interim dividends at the rate of 5 per cent. and 6 per cent. per annum, less income-tax, on the "A" and "B" preference shares respectively and at the rate of 1s. per share on the ordinary shares for the half-year ended September 30th have been announced.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Nov. 20 amounted to £67,099, an increase of £11,821 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Nov. 20 (thirty-three and a half weeks) the total receipts were £2,193,421, an increase of £329,231 on the corresponding period of 1917.

## PERSONAL.

**Private S. J. Bird,** Machine Gun Corps, a former York Corporation tramway driver, has been awarded the Military Medal.

**Mr. J. S. Killick,** county surveyor of Hertfordshire, has been recommended for an increase of salary to £1,300 per annum.

**Mr. F. W. Ketley** has severed his connection with the Norwich Electric Tramway Company. He has held the post of manager for ten years Users of the cars, says *The Eastern Daily Press*, will be agreed that during all this period they have been well and considerately served; and we know from various sources that Mr. Ketley's control has been greatly valued by the staff, and has been singularly free from internal friction,

**Pte. E. Mercer,** East Yorks Regt., has been awarded the Military Medal. It was presented to him by the Lord Mayor of Hull. Private Mercer was formerly a Hull Corporation tramway driver, and enlisted in 1915, notwithstanding that two sons had joined, and that he was over military age. One of his sons has received a commission.

**Alderman E. Russell Taylor,** who has been re-elected chairman of the Liverpool Corporation Tramways Committee, has foreshadowed schemes of local importance which it is hoped to bring to fruition during the year. One scheme will relate to improved passenger transport facilities, and another plan touched upon will deal with the use of most of the female labour now employed on the cars and in the sheds in a scheme to make parts for the mechanical plant of the tramway undertaking. It is expected that Alderman Taylor will amplify his ideas at the next meeting of the Tramways Committee.

**Mr. William Clough** has resigned his position as general manager and engineer of the Bury Corporation tramways, to take effect at the end of December, in order to accept an important position with a large firm of paper makers, with mills in the neighbourhood of Bury. Mr. Clough entered the service of the Bury Corporation in December, 1892, and was employed in the borough engineer's office for over ten years. He was then appointed general manager of the tramways. At that time the Corporation took over the steam tramways, and these were subsequently converted to electric traction. He was the responsible official at the installation of electric traction, and has since seen the system attain its present successful position. In June, 1915, as organising officer, Mr. Clough was responsible for the equipment of a portion of the tramway depot as a national shell factory, and he carried out the arrangements for the first co-operative contracts for the production of shells approved by the Ministry of Munitions. His munition scheme was very successful, the shells having been produced at a very low comparative cost. In recognition of his work Mr. Clough was recently invested by the King with the medal of a Member of the Order of the British Empire. In April, 1917, at the request of the Admiralty, Mr. Clough was lent by the Corporation to assist in the work of the Shipyard Labour Department, and his services received the warm commendation of the Lords Commissioners of the Admiralty. In May of the present year the Board of Trade requested the Corporation to allow Mr. Clough's services to be transferred to the Tramways (Board of Trade) Committee, and he was placed in charge of the Priority Section, which has dealt with the rationing of materials for tramways. At the end of September Mr. Clough was appointed honorary secretary of the Municipal Tramways Association, in succession to Mr. C. J. Spencer. A large circle of friends will regret Mr. Clough's intention to sever his connection with the tramway industry, but will wish him the greatest success in his new work.

## INCREASE OF FARES.

Chesterfield Corporation are applying to the Board of Trade for sanction to increase tramway fares by a maximum of 50 per cent., in excess of the fares now authorised.

Wallasey Tramways Committee propose to shorten the penny stages on their system, and to introduce halfpenny stages.

A proposal of the Worcester Electric Traction Company to increase the fares on one of the routes from 1d. to 1½d., has been approved by the Worcester Watch Committee. It was stated that this was the first increase made on the system since the outbreak of the war.

The Brierfield Urban Council are dissatisfied with the decision of the Burnley Tramways Committee with regard to the fares between the Burnley and Brierfield centres, and have decided to approach the Burnley Corporation with a view to getting some alterations.

The London United Tramways are applying to the Board of Trade under the Statutory Undertakings (Temporary Increase of Charges) Act, for an order to permit them to increase fares on their system which operates in the western and south western suburbs of London. The order is to be subject to an obligation not to exceed the basis of 1d. per mile for ordinary passengers and ½d. per mile for workmen (with a minimum fare of 1d.) The company state that the average fare per mile under the existing scale of charges is estimated to be slightly under ½d., and will therefore, if the present application is granted, be increased by approximately 100 per cent.

## CONTRACTS AND ORDERS.

**Derby Corporation** have accepted tenders from Babcock & Wilcox, Ltd., for boiler economiser, stokers, etc., for £4,747; and from British Thomson-Houston Company, Ltd., for £948.

**Plymouth Corporation** have accepted tenders for switch parts from Johnson & Phillips, Ltd; and for switch gear from Siemens Bros., Ltd.

**FOR ALL PLACES ABROAD—Thirty Shillings per annum.**

SATURDAY, NOVEMBER 30, 1918.

## TRAMWAY WORKERS' NEW WAGES AWARD.

A further award in regard to the wages claimed on behalf of tramway employees has been made by the Committee on Production. It will be remembered that nearly two months ago municipal and company tramway authorities received a communication from the National Transport Workers' Federation making certain applications on behalf of members of their affiliated unions. The applications affected both wages and working conditions, such as the much discussed point of spread-over times. Eventually, however, after a conference between representatives of the employers and employees, the latter, very wisely, decided not to proceed at present with their application as far as conditions were concerned. The application in regard to wages was referred to the Committee on Production, who have now issued their award. Its terms are reproduced in full elsewhere in this issue. The Committee concede half the principal claim and grant an increase in war wages of five shillings per week to men over 21. Regarding a claim that the same wages be paid to women as to men, the Committee do not consider, in view of the fact that a Committee of Inquiry appointed by the Government is at present considering the question of women's wages, that they should accede to the claim. As to a claim that the position of youths between 18 and 21 years of age shall be maintained in accordance with the award of March 8 of the Committee on Production, which would have the effect of placing men between the ages of 18 and 21 on a level with men over 21 in the matter of war advances, the Committee find that the claim has not been established. There were also claims for the increase of present war wages to adult employees of either sex to 35s. a week war wage; for half the total of such war wage to employees under 18; and for adults' pay to employees under 18 doing adults' work. As regards these items, the Committee award such advances as shall give 30s. a week over the pre-war rates to men of 21 years and over, and to women of 18 and over as to whom there has been an undertaking that they shall be paid the same rates as the grades of men whose places they have filled. To men between 18 and 21 such an advance as will give 25s. war wage is granted. Women aged 18 and over, who do not come within the undertaking just mentioned, are awarded an increased advance of 5s., subject to a 30s. maximum. Employees under 18 are awarded half the additional advances given to men and women. The payments are to be based on a week of six days or six shifts, which was requested on behalf of the employees. The Committee state that the amounts awarded are to be regarded as war advances and are to be recognised as being due to and dependent on the existence of the abnormal conditions prevailing in consequence of the war. In regard to the claim that youths and girls performing adults' work shall receive adults' pay, the Committee state that this claim has not been established. It will be seen that the employees have been accorded a substantial part of their demands, and it is to be hoped that the award will be accepted in a conciliatory spirit. After all, the policy of asking for more may be pushed too far to the detriment of those employed in the industry as well as to the gradual reduction towards vanishing point of the profits of the corporations or companies concerned. In any case, it would appear that increased fares have come to stay in view of the greatly increased cost of working due to the continuance for higher wages for the workers in the tramway services.

## L.C.C. TRAMWAY MATTERS.

AT the meeting of the London County Council on Tuesday, the Highways Committee presented reports dealing with the following subjects :—

MUNICIPAL TRAMWAYS ASSOCIATION.—It has been the practice of the Council each year to appoint representatives to attend the annual meeting of the Muncipal Tramways Association. Developments during the war in connection with the organisation of labour affecting the tramways industry and the means of determining claims regarding conditions of labour have necessitated conferences of municipal tramways authorities. In April, 1918, representatives of the Council were appointed to a conference on the question of the claim for the application to tramways employees of the 12½ per cent. bonus on earnings, and more recently a conference has been convened to consider further demands of labour. In view of the problems confronting municipal tramways authorities the need for conferences of their representatives appears likely to continue; and as experience has shown that the conferences have to be convened sometimes at very short notice, it is desirable that representatives of the Council should be available for attendance, if necessary, at such conferences.

On the recommendation of the Highways Committee, submitted by the General Purposes Committee, it was agreed that on the understanding that the Council would not be committed as to its policy on any matter arising at any such meeting or conference, Mr. G. H. Hume, Mr. A. H. Scott and Mr. W. J. Squires be appointed until December 31, 1918, and Mr. G. H. Hume and Mr. A. H. Scott appointed as from January 1, 1919, until further order, to represent the Council at any special meeting of the Municipal Tramways Association, and, together with the general manager, at any conference of municipal tramways authorities.

ALLOWANCE TO OPERATIVE STAFF.—In view of the exceptional nature of the work of tramway operation under abnormal conditions and the special circumstances attending the conclusion of the armistice, the Highways Committee have granted to each employee on the operative staff in the tramways department an allowance equal to a day's pay, and a supplemental maintenance vote of £5,211 was passed by the Council.

TRAFFIC CONCILIATION BOARD.—During the recent summer vacation the employees' representatives on the Traffic Conciliation Board submitted their resignations. The usual steps were taken under the Conciliation Scheme to secure nominations, but no nomination was received. The Board is therefore for the time being not complete, though it can be fully constituted whenever the employees so desire.

ROLLED STEEL BARS.—Tenders are to be invited from selected firms for the supply of rolled steel bars for driving and pony wheel axles.

**D.O.R.A. and Lights.**—Certain orders made under the Defence of the Realm Act in regard to lights have been cancelled by an Order in Council issued this week, but the Orders relating to lights on vehicles have been retained.

## TRAMWAY AND OMNIBUS WORKERS' CLAIMS.

### FURTHER AWARD BY COMMITTEE ON PRODUCTION.

The award of the Committee on Production in regard to the latest wages demand on behalf of the workers in the tramway and omnibus industry has just been issued. The first clause enumerates the parties to the reference to the Committee on Production, including the Municipal Tramways Conference (representing numerous corporations), the Tramways and Light Railways Conference (representing various companies), and several omnibus undertakings on the one hand, and the National Transport Workers' Federation on the other. The subsequent clauses are appended :—

1. (This clause enumerates the parties to the reference.)

2. The claim submitted was as follows :—

(1) That equal total payments be made to women as to men in the tramway and motor omnibus undertakings in the United Kingdom.

(2) That the position of youths between 18 and 21 years of age shall be maintained in accordance with the award (No. 947) of the Committee on Production of March 8, 1918 (Tramway and Motor Omnibus Workers).

(3) (*a*) That the war wages at present paid to males and females 18 years and over shall be increased by such amounts as shall give 35s. per week war wages, payment to be made on the basis of six days or six shifts.

(*b*) That youths and girls under 18 years of age shall be paid half the total war wage paid to the employees over 18 years of age, except where youths or girls are performing adults' work, when they shall receive adults' pay.

The claim is made on behalf of and is intended to include all employees (other than skilled craftsmen), male and female, whose Unions are affiliated to the National Transport Workers' Federation.

3. The application was referred by the Ministry of Labour to the Committee on Production for decision, and representatives of the parties were heard on November 15, 1918.

4. With regard to item (1), a similar claim was heard by the Committee on August 26 and 29, 1918, and their award (No. 2,200), dated August 29, 1918, contained the following provisions :—

(7) In dealing with the claim that equal total payments be made to women as to men for equal work, it is necessary to distinguish between the elements of which these total payments are composed. The payments made to the men contain the following three elements, viz. : (1) the base rate of wage ; (2) the additions made thereto since the outbreak of war by way of war bonus or war wage advance, with a view to meeting the increased cost of living ; (3) the addition of 5s. per week granted under the award of July 9, 1918, as a war wage advance, to include and to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

(12) As regards the items mentioned in Clause 7 of this award and numbered (1) and (2), the claim submitted covering these items is put forward in such a form as to involve the determination of a general principle applicable, if adopted and established, not only to women employed on tramways and motor omnibuses, but to women employed in many other industries. Such a principle can only be decided on a national basis, after full, comprehensive and detailed investigation, with due regard to the far-reaching financial and economic considerations involved, and after hearing all interests that would be affected, including those women (if any) engaged in other industries whose interests might be considered by them to be affected. The Committee therefore recommend that the whole question of women's wages and advances should be made the subject of a special inquiry, in which women can take part, and at which all the facts and circumstances which must be taken into account before any general guiding principle can be safely or properly formulated may be fully investigated and considered.

5. A Committee of Inquiry such as that referred to in clause 12 of award No. 2200 has since been appointed by the Government, and, having regard to the views expressed by the Committee on Production in that award and to the fact that the Committee of Inquiry has not yet issued its report, the Committee do not consider that the claim that equal total payments shall be made to men and women employed in connection with tramway and motor omnibus undertakings is one that they can now accede to.

6. Item (2) of the claim is made in consequence of the terms of the award (No. 1803) of the Committee of July 9, 1918. The claim dealt with in that award was one for payment of a bonus of 12½ per cent. on earnings, which originated in Orders Nos. 1061 and 1301 (Statutory Rules and Orders, 1917) of the Minister of Munitions. These orders provided that the bonus was to be paid only to men (of certain classes) aged 21 years and over. In their award of July 9, 1918, the Committee granted the men concerned aged 21 years and over an advance of 5s. a week in full settlement of the claim for the 12½-per cent. bonus. No advance was granted to males under 21 years, and the present claim is made in order to restore the pre-award position of males between 18 and 21 years, men 18 years and over having previously been paid the same war advances.

The award of the Committee is as follows :—

7. Item (1) of the claim is not one which can now be conceded.

8. Item (2) of the claim has not been established.

9. To the men concerned aged 21 years and over, and to the grades of women aged 18 and over whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, there shall be paid such advance as shall give 30s. a week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

10. To the men concerned aged 18 years and over, but under 21 years, there shall be paid such advance as will give 25s. a week over pre-war rates, payment to be made on the basis of a week of six days or six shifts.

11. In the case of women aged 18 years and over not covered by clause 9, the advances now being paid shall be increased by 5s. a week, subject to a maximum of 30s. a week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.

12. In the case of girls and boys and youths under 18 years of age the advances now being paid shall be increased by such amount per week as shall give the girls, boys and youths under 18 years of age in the undertaking concerned half the additional advances given by this award to the men or women, as the case may be, in the same undertaking.

13. The amounts hereby awarded are to be taken into account in the calculation of payment for overtime and night duty and for work on Sundays and holidays ; they are to be regarded as war advances and are to be recognised as being due to and dependent on the existence of the abnormal conditions prevailing in consequence of the war.

14. This award shall not apply to classes of employees, such as building trades operatives, whose wages have customarily been regulated by the movements in the wages of the trades in which workmen of the same classes are ordinarily employed.

15. This award shall apply only to women to whom the provisions of the Orders made by the Minister of Munitions under the powers conferred upon him by the Munitions of War (Amendment) Act, 1916, have not been applied.

16. So far as the London General Omnibus Company are concerned this award is applicable only to those grades of employees with respect to whom there are agreements between the Company and the London and Provincial Union of Licenced Vehicle Workers ; but the award does not cover, and is not to be deemed to cover, the grades of employees dealt with in the agreement between the Company and the Union of April 11, 1918.

17. The claim that youths and girls performing adults' work shall receive adults' pay has not been established.

18. This award shall take effect from the beginning of the first full pay in November, 1918.

H. J. Wilson, Secretary,
5, Old Palace Yard, S.W.1.
*November* 21, 1918.

WALWORTH H. ROBERTS.
JOHN M. DENNY.
F. S. BUTTON.

## MISCELLANEOUS NEWS AND NOTES.

**Unusual Cause of Stoppage.**—The London County Council tramway service at Denmark Hill was a few days ago temporarily stopped by a child's hoop dropping into the conduit.

**Collision in a Fog** between a London County Council tramway car and a milk cart at Forest Hill resulted in fatal injuries to the driver of the cart. At the inquest, a verdict of "Accidental death" was returned, the car driver being exonerated.

**Petrol Concession.**—Under date of November 28, the Board of Trade issued a formal announcement of the concession by which motorists may from December 1 use their vehicles of any type for all purposes within a radius of thirty miles of their place of residence or business.

**Collision in Fog.**—On a very foggy morning, a tramway car collided with a stationary car in Clapham Road, London. Immediately afterwards a third car collided with the second. The footboard at both ends of the middle car were smashed, and windows were broken. A few passengers were cut by falling glass.

**Institution of Electrical Engineers.**—At the meeting of the Institution of Electrical Engineers, to be held at the Institution of Civil Engineers, Great George Street, Westminster, S.W., on Thursday, December 5, at 6 p.m., Professor Miles Walker, D.Sc., will read a paper on "The Supply of Single Phase Power from Three Phase Systems."

**Society of Engineers.**—The next meeting of the Society of Engineers will be held on Monday, December 2, at 5.30 p.m. in the rooms of the Geological Society, Burlington House, Piccadilly, W when Mr. H. Kelway Bamber, K.V.O., will read a paper on "Railway High Capacity Wagons' Wheel Axles." The lecture will be illustrated with lantern slides.

**Railway Restrictions.**—The Railway Executive Committee have called for special reports from the railway companies stating what war time restrictions on public travel can now be modified or withdrawn. Special attention, it is understood, is being directed to season ticket restrictions, limitation on passenger luggage, and reservation of compartments.

**The "Handbook on Road Transport"** has just been issued by the Road Transport Board (Board of Trade). It contains information concerning the constitution and functions of the Board, with a couple of illustrative maps, and includes lists of members of divisional boards, advisory committees, and area committees, with particulars of area covered. It is published by H.M. Stationery Office.

**Onerous Rent Sequel.**—In reply to a letter of the town clerk of Morley protesting against 1½d. fares within the borough, and asking for 1d. stages, Mr. J. B. Hamilton (tramways manager) wrote that the Leeds Tramways Committee could not recommend any alteration in the fares now charged. It had been the policy of the Committee to charge the lowest possible fares as an inducement to traffic, but having regard to the onerous rental placed on them by the agreement, with Morley it would be inequitable to charge fares on the same basis as in other parts of the service in Leeds and district. The Committee were willing to consider the granting of these fares to Morley, but the agreement would need alteration

Digitized by Google

**Damages for Injuries** to the extent of £12 12s. in respect of an accident were awarded in the County Court against the Birmingham Corporation. The Judge found that the injuries for which he plaintiff claimed were due to the improper starting of a tramway car while plaintiff was alighting. For the defence, it was denied that plaintiff was on the step of the car when it started.

**Little Child in the Way.**—While absolving the driver from responsibility in regard to the death of a four-year-old child, who was knocked down by a tramway car, the Cardiff Coroner expressed the view that instructions should be given to drivers that, when there was an element of danger such as this—a little child, who did not know what danger was, standing in the road, although apparently safe—it was imperative that they should pull up.

**"Road Reinforcement."**—The interesting occasional journal of the British Reinforced Concrete Engineering Company, Ltd., of Manchester, has just made another appearance. It is most attractively got up, both as regards letterpress and illustrations, and conveys an excellent idea of the qualities and uses of the British Reinforced Concrete fabrics. In addition to the practical information, some topical notes on road-making are included.

**The Institution of Automobile Engineers.**—The third meeting of the session of the Institution of Automobile Engineers will be held on Wednesday, December 4, at the Royal Society of Arts, John Street, Adelphi, W.C.2., when Mr. A. E. Berriman will read a paper on "Analyses of some Engine Tests." Cards of invitation to the meeting may be obtained on application to the Secretary of the Institution of Automobile Engineers, 28, Victoria Street, Westminster, S.W.1.

**Proposed Birmingham Extensions.**—The Birmingham Tramways Committee recently received a deputation which urged the extension of the tramways to Northfield, Longbridge and Rednal. The action of the Committee was sympathetic, but it was explained that the serious difficulties of obtaining material and labour made it impracticable to proceed at present. Sir Herbert Austin, managing director of the Austin Motor Co., Ltd., whose works are at Longbridge, was among the deputation.

**Tramway Committee Chairmen.**—The following new appointments have been made for the year 1918-1919:—Alderman R. J. Smith, vice-chairman, Cardiff Tramways Committee; Councillor Jarmin (deputy mayor), chairman, and Councillor G. F. Wright (mayor), vice-chairman, Colchester Tramways Committee; Councillor Kelly, chairman, and Councillor M'Whirr, vice-chairman, Glasgow Tramways Committee; Councillor Horder, chairman, and Councillor Stevens, vice-chairmar, Swindon Tramways Committee.

**Edinburgh Arbitration.**—It is expected that the arbitration between the Edinburgh Corporation and the Edinburgh and District Tramways Company, which is to determine the price to be given by the Corporation for the rolling stock, etc., will take place about the middle of December. The cable power stations and tho permanent way are the property of the Corporation, but the rolling stock which it is essential the Corporation should take over in order to continue the working of the tramways without intermission, are the property of the Tramways Company, whose lease of the tramways expires on June 30, 1919.

**Manchester Corporation Tramways Posters** are specially commended in a booklet describing a "War collection" at the Clark University Library, Worcester, Mass., U.S.A. The compiler says "They are very attractive, all text, issued to stimulate contributions, for which purpose boxes were placed on the platforms of all the street cars. These Manchester Tramway posters, although devoid of illustration, are a delight to the eye. They would serve as excellent models in any printing establishment on account of the beauty of their composition, type and colour." It is mentioned that the total sum collected in these Manchester tramway car boxes was about £30,000 for nearly seventy different war charities.

**Car Collides with Herd.**—A Leicester tramway car ran into a herd of animals belonging to a local butcher, with the result that one was killed almost instantaneously by the impact and another pinned to the ground by the front of the car, which was raised off the ground. When the car was lifted by a breakdown gang with jacks, the second animal was slaughtered. The accident occurred in moonlight about six o'clock in the evening. It appears that the herd of eight or nine animals were in charge of a driver, with whom was a boy. It is stated that seeing the car approaching the drover sent the boy to the front to warn the driver. This the boy did. The drover also shouted. Apparently the driver of the car did not hear them as there seemed to be no slackening in the speed of the car, which ran into the herd.

**Hospitality for Overseas Troops.**—Mr. Joseph E. Beckett, of Messrs. Beckett, Laycock & Watkinson, Ltd., Willesden, N.W.10, writes to THE TRAMWAY AND RAILWAY WORLD as follows: "At this time of rejoicing every one of us desires to express gratitude to those who have helped to protect our homes. Thousands of overseas troops will be on leave over Christmas, and unable to mingle with their own folk at home. I desire to appeal to your readers on behalf of the Rotary Club of London to open their homes to one, or preferably two, of these boys. All imaginary difficulties are surmounted. The characters of the guests are vouched for, the railway fares are paid, they will have their food ration books, and if the hostess has servant difficulties, nothing gives the guests greater pleasure than to assist, as they were accustomed to do in their own homes. We have to bear in mind that to them even a humble home is as a palace compared with the average hut or canteen. Will those of your readers who can help please communicate with me by return?"

**London Electric Group.**—At the latest of the series of Operatoin Department Efficiency Meetings at which Mr. H. E. Blair (operating manager) presided, the subject of "Bus Maintenance" was dealt with by Mr. W. J. Johnston (chief depot engineer to the L.G.O.C.) The lecturer reviewed the history of motor transport and the development of the motor omnibus and commented on various branches of administrative work. The lecture was illustrated by means of slides and films. A discussion opened by Mr. H. S. F. Lansdown (assistant general superintendent) followed.

**Tramway Fares at Bath.**—At a meeting of the Surveying Committee of Bath Corporation, a letter was read from the manager of the Bath Electric Tramways accepting the terms of the draft agreement between the Corporation and the Company providing for an increase in tramway fares and asking that the period in which the increased fares should be charged might extend beyond the six months named, if the circumstances justified it as long as the Board of Trade might direct. It was to be understood that the agreement did not preclude the company from asking for a further increase in fares if it became necessary.

**Relaxation of Control of Materials.**—Dr. Addison, the Minister of Reconstruction, has announced that the position as regards the supply of materials to manufacturers is such that domestic control can now be considerably relaxed. Among the classes of work in the United Kingdom to which materials and producing capacity set free for war work should, so far as possible, be devoted in the immediate future, are the maintenance and repair of existing machinery and plant, and of railways, tramways and roads and the manufacture of machinery, tools and equipment used in the public services. Applications for priority permits and other facilities should be forwarded to the same department as hitherto and it has been arranged by the standing council on Post War Priority, that such applications shall receive sympathetic consideration as the altered circumstances permit.

## OBITUARY.

We regret to have to announce the death, in his forty-second year, after a short illness, of **Mr. H. Cecil Walker,** the eldest son of Mr. Henry C. Walker, chairman of Waygood-Otis, Ltd., Falmouth Road, London, S.E. Mr. Walker entered the shops of R. Waygood and Company in September, 1893, and in time occupied the position of chief electrical engineer to the company. In November, 1910, he was appointed to a seat on the board of directors, and this he retained after the amalgamation with the Otis Elevator Co., Ltd. He rendered great service in the design of the electric lifts which have gained for the company such a high reputation.

## CONTRACTS AND ORDERS.

**Wolverhampton Town Council** have purchased an electrically propelled lorry from Ransomes, Sims and Jefferies, Ltd.

**Lambeth Borough Council** are purchasing a steam-driven vacuum gulley emptying wagon from Leyland Motors, Ltd., for £675.

**Halifax Corporation** has accepted the tender of Dennis Bros., Ltd., for a "Dennis" 60-65 b.h.-p. 500-gallon turbine motor fire engine, with accessories, for about £1,300.

**Willesden Urban Council** has been recommended to purchase three two-ton electric vehicles, for collecting house refuse, from Ransomes, Sims & Jefferies, for £1,151 each.

**Messrs. Dick, Kerr & Co., Ltd.,** have recently received an order for two 5,000 kw. turbo-alternator sets and condensing plants for the Union Miniere du Haut Katanga, which is one of the largest copper producers in the world, outside the U.S.A., having extensive mining properties in the Belgian Congo. The turbines will be of the Willans-Zoelly type, operating on steam at 145 lb. per sq. in. pressure and exhausting into a vacuum of 28 in. (Bar 30 in.) and will carry an overload of 6,250 kw. for two hours. The condensing plants are each designed to deal with 66,000 lb. of exhaust steam per hour and have 10,000 sq. ft. of cooling surface.

The turbines will be coupled to Siemens alternators designed for a normal output of 5,000 kw. at, 9 power factor (5,560 K.V.A.) when supplying 3-phase current at 50 cycles and 6,600 volts pressure, and will be capable of carrying overloads of 25 per cent. for 2 hours or 50 per cent. momentarily. The ventilating air for these machines will be filtered in dry air filters of the Premier Cooler Co's make. The machines will each be fitted with a direct-coupled 110 volt exciter of the overhung type and will operate in conjunction with an automatic voltage regulator

**BINDING CASES**

For half-yearly volumes of "The Tramway and Railway World" can be obtained from the Publishers, price **3s.**

**READING CASES**

To hold 26 Saturday Issues can be supplied at **3s. 6d.**

These cases are strongly bound and form a convenient means for filing copies for reference until the half-yearly volumes are completed.

Digitized by Google

## FINANCIAL.

**Pease and Partners.**—An interim dividend of 10s. per share, free of income tax, 5 per cent. for the half year, has been paid.

**Chloride Electrical Storage Co., Ltd.**—A dividend of 5 per cent., free of tax, on the ordinary shares—the same as last year—is announced.

**British Electric Traction.**—The directors announce a dividend on the six per cent. cumulative preference stock for the half-year to September 30.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Nov. 27 amounted to £66,179, an increase of £10,793 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Nov. 27 (thirty-four and a half weeks) the total receipts were £2,259,636, an increase of £340,060 on the corresponding period of 1917.

**Croydon Corporation Tramways.**—As will be seen from the appended summary of the accounts for the past four years, the position of this undertaking shows a great improvement. The report of the manager, Mr. T. B. Goodyear, shows that the deficit of 1917 was converted in the year ended March 31, 1918 to a substantial profit. The margin was sufficient to allow of a sum of £11,221 to be carried to the reserve and renewals account. The balance carried to net revenue account was £12,000 greater than in the previous year, while the net profit showed an increase of nearly £12,800, in spite of a large increase in working expenses. War allowances at £5,801 are about the same as in the previous year. The receipts per car mile increased from 10.49d. in 1917 to 11.95d., the expenses per car mile being 8.576d. as compared with 8.259d. The ratio of expenses at 69.71 per cent. was 6.21 per cent. lower.

## POSITIONS VACANT.

### COUNTY BOROUGH OF BELFAST.

### BELFAST CITY TRAMWAYS.

**Rolling Stock and Overhead Equipment Engineer.**

The Tramways Committee invite applications for the above position from fully qualified mechanical and electrical engineers with experience in the maintenance, renewal and construction of tramway rolling stock on the latest and most approved lines, and a thorough knowledge of the management and operation of a modern car works and overhead department.

Salary £450 per annum, increasing by £25 per annum to £500 a year.

Applications on the official forms which may be obtained from Mr. J. S. D. Moffet, general manager, Tramways Office, Sandy Row, Belfast, to be delivered at my office, City Hall, Belfast, not later than 12 noon, Friday, 20th December, 1918.

Canvassing will disqualify.

(Signed) R. MEYER,
Town Clerk.

**Armature Winder.**

Armature Winder wanted, preference given to man with traction experience, full district rate and all awards paid; constant employment, Glasgow district. Reply, stating experience to Box No. 62, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

**Engineer and Sales Manager.**

Wanted, Engineer and Sales Manager for Gun Metal and Overhead Tramway Material, etc.

Apply S. DIXON & SON, LTD., Brass Works, Leeds.

**Engineer.**

Engineer wanted for small Tramway System in the North, as assistant in charge of permanent-way, cables, overhead and Sub-stations. Apply, stating qualifications and salary expected to Box No. 61, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## THE PROPOSED LIVERPOOL MOTOR OMNIBUS SERVICE.

THE decision of the Liverpool Corporation Tramways Committee to supplement the tramway service by means of a service of motor omnibuses is a notable one. Liverpool has found itself faced with a problem which exists in many other great centres of population in the United Kingdom—the problem of how to cope with the greatly increased demands upon its existing facilities for road passenger transport. This demand has made itself specially felt during the last three or four years. It is in a large measure due to the war. Much of it is likely to continue for several years during the reconstruction period, but some of it is due to the perpetual expansion of districts and industries. Municipal motor omnibus services have already proved in several towns, notably in Birmingham and Sheffield, valuable adjuncts to the tramway system. But the scheme proposed for Liverpool will be watched with special attention because of the magnitude of the road passenger transport needs of the second city in England. In such a scheme the motor omnibus finds its proper place in transport enterprise as a supplement to, rather than a competitor with, much less a substitute for, the electric tramway car, where electric traction is already in operation. The decision to run motor omnibuses in Liverpool is not, it should be noted, the outcome of any pessimistic views as to the position and prospects of electric tramways. It is due to the public spirit of the Liverpool Corporation, expressed through its Tramways Committee, in determining to meet the needs of the people in the only way possible in the immediate future. The extension of the tramways that is required will take two or three years to accomplish. No doubt it will be carried out within a very few years; although, perhaps, one advantage of the establishment of the motor omnibus service will be to facilitate an unhurried consideration of the projected tramway extension. The decision of the Liverpool Tramways Committee shows, too, a broad and comprehensive view of the position of the Corporation as caterers for the public needs as regards road passenger transport generally. It is a recognition of the fact that the Corporation must not confine itself to the mere operation of its electric tramway passenger service, but is bound to provide the community with whatever transportation services are found desirable in the public interest.

## REDUCTION OF SERVICES.

The present reduced tramway services would appear to be likely to continue for the present. An application has been made on behalf of municipal tramway undertakings, through the Tramways (Board of Trade) Committee for the release of more fuel with a view to the provision of increased services. The Coal Controller has replied as follows :—

"Concerning my interview with the Tramways Committee of the Board of Trade, I should be glad if you will make it quite clear to the tramway undertakings throughout the country that their efforts to effect economy in the consumption of fuel must be continued without relaxation. No relief from the existing acute shortage can be anticipated for some appreciable time. At the same time, I should certainly take care that the tramway undertakings shall be advised when any amelioration of the general position has been effected. Whilst every effort will be made to maintain fuel supplies to tramway undertakings, in accordance with their present demand for electricity, it must be distinctly understood that no applications for increased supplies can be entertained, and that therefore any attempts to increase tramway services which demand additional supplies of fuel can only be made at the undertaking's own risk.

The general manager of the Manchester Corporation Tramways (Mr. J. M. McElroy) has issued a placard stating the reasons why the tramway service is inadequate. He points out that five million passengers are carried over the lines every week, against four million before the war, and that 3,000 of the experienced employees have joined the forces. Many of the staff have been incapicitated by influenza.

At Barrow-in-Furness an increase in the tramway service is noted. One or two additional cars have been put on. It is stated that there is not now the same difficulty in obtaining men to work the cars, and so with more drivers and more cars further improvements are anticipated.

Brighouse Town Council is complaining to the Halifax Tramways Committee in regard to what is considered the unsatisfactory running of the Halifax tramway cars in conjunction with the Bradford tramway cars.

At Belfast, Councillor W. C. Turner (chairman of the Tramways Committee) told the City Council that it had been necessary to make certain restrictions of the service in deference to the wishes of the Coal Controller.

In regard to complaints which have reached the *Daily Mail* in regard to the tramway service on the Embankment, London, Mr. A. L. C. Fell (general manager of the London County Council tramways), says :—"We cannot run more cars till we get more coal. Fewer cars will soon be needed in munition centres and then more cars will be put on other routes. There is still a shortage of men. The adoption of the queue system at Charing Cross and Westminster shall be considered, but there are difficulties."

Dealing with criticisms on the working of the tramway system at Southport, Councillor Aveling, a member of the Southport Tramways Committee, said that no one had given the Tramways Committee or the manager credit for the fact that it had been impossible to obtain materials for repairs. Southport's tramway system had never been classified as one of first importance from the national standpoint, and as far as the nation was concerned it would not have mattered if the cars never ran at all. A weekly report had to be given to the Board of Trade showing that they were economising. The only thing the Committee could do was to keep on as many cars as the Government would allow, and use them to the best advantage.

**Unions Urged to Unite.**—Speaking at a Labour meeting at the Albert Hall, on Sunday evening, Mr. Robert Williams, secretary of the National Transport Workers' Federation, said that no insurrectionary or revolutionary movement could be conducted successfully by any single section of the working class. If the Electrical Trades Union were prepared "to go over the top" they would require millions of effective reserves. The time might come during the next month, or six months, when some union might be called upon to take considered and determined action in the interests of the working classes, and that union might require the assistance of every other union in London. At the same meeting Mr. Ben Smith (Vehicle Workers' Union) referring to the cutting off of the electric light from the Albert Hall for several hours on account of the cancelling of a Labour meeting by the management, said his Union were ready to back up the Electrical Trades Union. "But, he added, "the E.T.U. were too quick for us, otherwise I can assure you that there would have been no 'Victory Ball.'" Presumably the speaker alluded to the intention which had been expressed of refusing to stop trains or motor omnibuses near the hall.

## MISCELLANEOUS NEWS AND NOTES.

**Tramway Extensions at Hull** are contemplated after the war has been brought to an end. The Tramways Committee have requested a sub-committee to report upon the schemes proposed.

**Railless Traction.**—Reports on railless traction are to be supplied to the members of the Walthamstow Tramways Committee, who are shortly to further consider the subject.

**Application for Service Men.**—The Belfast Tramways Committee have resolved to apply to the military authorities for the release of all employees who are at present serving with the colours.

**Ventilation of Cars.**—Ilford Urban Council have asked the tramways manager (Mr. L. E Harvey) to have the door at the front of the cars open at termini to allow a free current of air through the cars.

**St. Helens Tramways.**—St. Helens Corporation Tramways Committee have declined to extend the tramway lease, which lapses in October next year, and have recommended the Corporation to make arrangements to work the tramways themselves.

**Tramway Extensions at Maidstone** to the length of nearly a mile-and-a-half were anticipated in a speech by Alderman D. T. J. Lyle (chairman of the Maidstone Tramways Committee), at a meeting of the Corporation.

**Companies Provide Shelters.**—The associated companies owning the tramways at Dudley have agreed to provide several shelters on the line of route subject to the Corporation lighting, maintaining and policing them. The Streets Committee of the Dudley Corporation recommend the acceptance of the terms.

**Barrow Tramways Prospects.**—Barrow-in-Furness Corporation are considering the question of taking over the tramways undertaking, which is one of those associated with the British Electric Traction Co., Ltd. A decision will have to be reached within the next six months, or the opportunity of purchase will be gone for another seven years.

**Damages for Losing a Foot.**—A jury in the Edinburgh Court of Session awarded £250 on a claim for £400 damages against the Edinburgh and District Tramways Company in respect of injuries to a three-year-old child. While crossing a street the child was run over by a tramway car, with the result that one of her feet had to be amputated. For the defence it was urged that the accident was due solely to the child running into the car.

**Eight Hour Day for Railway Men.**—On Friday it was announced that, after conversations between the Prime Minister, Sir Albert Stanley, and Mr. J. H. Thomas, the principle of an eight hour day for all members of the wages staff as from February 1, 1919, had been conceded. Existing conditions of service are to remain unaltered pending the decision of the committee to be appointed to review wages and other conditions of service of railway men in the United Kingdom.

**Suggested Christmas Day Holiday.**—A general holiday for tramway employees on Christmas Day has been suggested for the whole country. But no decision has yet been made. At Birmingham the Tramways Committee have decided not to run the cars on Christmas day. At Brighton, the cars will, as at present proposed, run from 9.30 a.m. to 2.30 p.m. only. At Newcastle-on-Tyne the Tramways Committee favour a service at least as on Sundays, but have not come to a decision.

**Vacant Managership at Bury.**—Bury Tramways Committee are to interview four applicants, out of 42, for the position of manager of the Bury Corporation Tramways. The selected candidates are Messrs. Charles J. Baker, traffic manager, Blackpool Corporation Tramways; Harry Beetson, chief clerk, Bury Corporation Tramways Department; Frank Buckley, general manager, Wigan Corporation Tramways; and Albert B. Hayes, depot superintendent, Bury Tramways.

**Institution of Electrical Engineers.**—At the meeting of the Institution of Electrical Engineers, to be held at the Institution of Civil Engineers, Great George Street, S.W., on Thursday, December 12, there will be a discussion on "Electric Welding." Copies of the "Notes on Arc Welding Regulations," by Mr. H. M. Sayers can be obtained on application to the Secretary. It is not, however, intended to limit the discussion to the Regulations, but it will cover electric welding in general.

**Solid Tire Guarantee.**—The Macintosh and Challiner solid tires having established a record for accomplishing a mileage in excess of the guarantee of 10,000 miles, the Shrewsbury S.T. and Challiner Tyre Co., Ltd., have decided to guarantee Macintosh and Challiner solid tires supplied on and after January 1, 1919, for 12,000 miles, subject to the usual tire guarantee conditions. In the case of steam wagons with trailers attached it may be advisable to point out that the existing guarantee conditions allowing for "a limited and reduced guarantee not exceeding 7,000 miles" will still apply.

**Why the Ticket was Used.**—An ex-employee of the Rhondda Tramway Company was summoned on the allegation that she had tried to avoid payment of her fare whilst a passenger on a tramway car. For the Rhondda Tramway Company it was explained that the defendant was formerly employed by the permanent way department of the company. She was dismissed at ten o'clock in the morning and in the afternoon she boarded a car, on which she used an employee's ticket, to which she was not entitled. The defence was that defendant was asked to return for her insurance card, and she thought her employee's ticket was available for the purpose. The Bench cautioned the defendant and allowed the summons to be withdrawn.

**Licence Delays.**—Ilford Tramways Committee have received a letter from the Commissioner of Police for the Metropolis stating in reference to recent summonses for employment of an unlicensed car driver, that, as the case has now been decided in the manner provided by law, the Commissioner is not in a position to further review it; also conveying an assurance that the necessity for the speedy issue of licences is fully appreciated, and that every effort has been made and will continue to be made in the future to avoid unnecessary delay.

**Interesting Judicial Decision.**—A recent decision of Mr. Justice Bailhache at the Manchester Assizes that "a person who gets up in a tramcar before it stops does so at his or her own risk," has caused a great deal of discussion in the city. Councillor Ross Clyne has given notice that at the next meeting of the City Council he will move that a public pronouncement be forthwith made by the Tramways Committee bearing upon the decision. The case was one in which a passenger claimed damages for injuries through being thrown into the roadway when the car went over points.

**Electricity Charges at Peterborough.**—Peterborough Corporation have come to an agreement with the Peterborough Electric Traction Company with respect to increased charges for electricity, according to which the company is to pay a further 12½ per cent., making, with the 15 per cent. hitherto paid, an addition of 27½ per cent. from the period from October 26th to March 31st, 1919, the right of making a further revision after the latter date being reserved. A proposed arrangement by which the Traction Company would supply power to the Great Northern Railway works through the overhead wires is to be considered by the Corporation.

**The Tramways and Light Railways Association Journal** for November contains the text of the awards made by the Committee on Production of November 8th, on the working conditions and wages of the employees in the electricity undertakings in the London district, and of November 21, on the wages of tramway and motor omnibus workers; also suggestions from the Ministry of Labour as to the constitution and functions of the district councils which are being established in connection with the National Joint Industrial Councils and of the works committees in industries in which National Joint Industrial Councils are established.

**An East Ham** Corporation tramway driver, was fined 40s., with three guineas costs, at East Ham Police Court, for endangering the safety of a number of persons by driving in a negligent manner. It was stated that while a group of about thirty people were getting on a car, the defendant, after sounding his gong drove his own car on, dispersing the group, with the result that a woman was knocked down and seriously injured. Defendant said there was a crowd struggling to board a stationary car, and he repeatedly sounded his gong. As he approached the other car he slowed down to a speed of three or four miles per hour. He thought he had a clear way and passed. He then heard shouting and stopped, and found that a woman had been knocked down. The magistrate said he could not acquit defendant of negligence. If defendant had stopped even for a moment the accident would have been avoided.

**Car Collided with Trap.**—Damages to the amount of £280, with costs, were awarded on a claim in the Nisi Prius Court at the West Riding Assizes against the Bradford Corporation for personal injuries alleged to have been sustained through a collision with a tramway. The Judge held that the weight of evidence was in favour of the plaintiff, and said he had arrived at the conclusion that there was a lack of due and proper care on the part of the car driver in regard to speed and the application of the brakes. Plaintiff's case was that he was driving a pony trap, that the pony became restive on the approach of the car, with the result that the trap got on the track and was struck by the car. The driver said that nothing occurred to indicate to him that the pony was restive until he saw it backing the trap into the track. He then applied the brakes and the car stopped in ten yards.

**Edinburgh Tramway Fares.**—Mr. R. S. Pilcher, Edinburgh Corporation tramways manager, has reported on the suggestion of Councillor M'Laren that a universal fare should be introduced in Edinburgh for continuous journeys. He is of opinion that cheap transit facilities to the outskirts of the city can best be obtained by adhering to the zone system of fares rather than by adopting the universal fare system, which in America is being modified on the zone principle. He does not, he says, suggest that the present scheme of stages in use in Edinburgh is suitable to develop long distance traffic. The scheme would require to be simplified by reducing the number of stages and aiming rather at a cheap penny fare radiating from the centre. This would not preclude the provision of facilities to encourage short-distance traffic, which, he believes, the Edinburgh public will require in the near future.

**Position Vacant at Belfast.**—The vacancy caused by the resignation of Mr. A. A. Blackburn (chief engineer), who has been appointed tramways manager at Huddersfield, has been before the Belfast City Council. The general manager recommended that Mr. Blackburn's successor should be styled "Rolling stock superintendent and overhead equipment engineer" and the tramways committee approved of this proposal, and fixed the salary at £450, rising by annual increments of £25 to a maximum of £500. Councillor Alexander said the man who succeeded Mr. Blackburn should have two qualifications—he should be an Irishman, and should have served his country. Councillor Turner (chairman of the Tramways Committee) said the committee would get the best man they could, but he agreed that, other things being equal, the appointment should be given to a local man

Digitized by Google

**Omnibuses in the Metropolitan Area.**—In reference to a recent newspaper announcement that there will be placed within a few weeks on the streets of London 1,000 new omnibuses of an improved and lighter type, the London General Omnibus Company state that they are not responsible for this announcement. The company fully appreciate the inadequacy of the present services, and are making every effort to improve them. One third of the whole fleet of omnibuses was taken over by the Government early in the war, and the company has since been prevented by the war restrictions from replacing them. The company has about 200 spare vehicles, which have not been running owing to the shortage of labour and petrol. If the company's application for the demobilisation of a first instalment of the thousands of their employees with the Colours be successful they will be able to place these omnibuses in traffic by the end of this month. It is expected to supplement them by another new 250 vehicles in the early spring. This programme, however, depends not only on the release of drivers, but also on the freeing of petrol and materials from the existing restrictions. The company have not only every desire but every interest to restore their fleet of omnibuses to its former efficiency as rapidly as possible. Designs have been prepared for a new and improved omnibus.

## MOTOR OMNIBUSES FOR LIVERPOOL.

Liverpool Tramways Committee have sanctioned a scheme for assisting the electric tramway service by means of one hundred motor omnibuses. The scheme has been proposed in view of the very heavy demands for road passenger transport now experienced in the city. It appears that to increase the number of tramway cars is out of the question for a long time, and that the situation can be quickly eased by instituting a service of omnibuses. At the meeting of the Committee, Alderman E. Russell-Taylor said that during the past four and a half years it had been impossible to obtain new rolling-stock or to maintain the old in a thoroughly efficient state of repair, although during the period referred to the city passenger traffic increased by about 65,000,000 per annum as compared with pre-war years. The existing rolling stock had proved altogether inadequate to meet the extraordinary traffic requirements, the cars being over-crowded from time to time, and the main arteries and terminal points being much congested. It is proposed that the omnibuses shall keep as far as possible from the main tramway thoroughfares, so as to avoid congestion. On certain parts of their journeys they will run at high speed, and journeys will, it is stated, be completed in shorter times than by the electric cars. Numerous routes will be covered and the service is expected to be running in a few months' time.

## PERSONAL.

**Councillor Rudd** has been appointed chairman of the new St. Helens Corporation Tramways Committee.

**Mr. H. Pilling,** general manager of the Accrington Corporation Tramways, has been granted an increase of salary from £400 to £500 per annum, subject to his undertaking not to seek another appointment for two years.

**Councillor J. Teago,** of the Newcastle-upon-Tyne Corporation, has been presented with a silver tea service for Mrs. Teago, in recognition of his work as an auxiliary tramway driver during the early days of the war. In making the presentation Councillor R. Mayne (chairman of the Tramways Committee) said that Newcastle was the first town to introduce auxiliary tramway workers, and during 18 months Councillor Teago had turned out at 4 o'clock in the morning to drive the workmen to the shipyards and factories in the city. Councillor Teago suitably replied on behalf of his wife.

**Mr. A. A. Blackburn,** chief engineer to the Belfast Corporation Tramways, has resigned his position on his appointment as general manager of the Huddersfield Tramways. The Belfast Tramways Committee have accepted the resignation with regret, and have expressed their appreciation of the manner in which Mr. Blackburn has discharged his duties since his appointment on the reconstruction of the tramway system in 1905, and their best wishes for his future welfare in his new position. Belfast Tramways Committee have placed on record their appreciation of the efficient and reliable manner in which Mr. Blackburn has discharged his duties during his fourteen years' service in Belfast.

**Mr. R. H. Wilkinson,** the late tramways manager of the Huddersfield Corporation, who has recently been appointed to a similar position at Bradford, has received a presentation from the chief officials of the Corporation as a token of their goodwill and esteem The Town Clerk (Mr. J. H. Field), in making the presentation, which took the form of a handsome silver tray, referred to the cordial relations which had always existed between Mr. Wilkinson and his brother officials, and to the great extension and improvement in the position of the Huddersfield tramways undertaking during the 14 years that Mr. Wilkinson has been manager and engineer. He had no doubt that the same success would attend Mr. Wilkinson's service under the Bradford Corporation. Other principal officials tendered congratulations, and Mr. Wilkinson suitably responded.

The death is recorded of **Mr. H. C. Howse,** for the past fourteen years an inspector for the Worcester Electric Traction Company At the time of the funeral, which was attended by Mr. C. H. Built (engineering manager) and several drivers and conductors, the cars stopped for two minutes and the drivers and conductors stood at attention as a mark of respect.

## FINANCIAL.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Dec. 4 amounted to £67,646, an increase of £11,835 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Dec. 4 (thirty-five and a half weeks) the total receipts were £2,327,348, an increase of £351,972 on the corresponding period of 1917.

**Auckland Electric Tramways Company** in the report for the year ended 30th June last, states that the total revenue was £301,43. Traffic receipts amounted to £294,564, an increase of £11,867. After providing for all expenses there is a surplus on the year's working of £53,430; £5,293 was brought forward, making £58,723. The directors recommend that £10,000 be transferred to reserve account (making £152,500) and that a further dividend be paid on the ordinary shares of 1s. per share, less income-tax, for the half year ended 30th June, making 1s. 6d. per share for the year, and £5,973 be carried forward.

**Newcastle Corporation Tramways.**—At a meeting of the Committee under the presidency of Councillor Richard Mayne, the accounts for the year 1917-18 were submitted for consideration. The traffic receipts, together with revenue from other sources, amounted to £418,028, against £356,534 for the previous twelve months. The gross expenditure was £248,394, as compared with £208,299. The gross profit was £169,634, against £148,235: and the net profit £90,785, against £62,902. After allocating £14,000 in relief of the rates and making provision for the payment of income tax and insurances, £55,000 had been applied to the reserve and renewals fund, bringing that up to £155,251, against £105,894 for the preceding year.

**Cape Electric Tramways.**—Mr. Ludwig Breitmeyer, chairman, presiding at the meeting of the Cape Electric Tramways recently referred to the recovery in the traffic receipts which was steadily continuing and was a most satisfactory feature. During the year under review the number of passengers carried on the Cape Town and Port Elizabeth systems was 25,444,465, an increase of 2,692,449. The traffic receipts were £264,137, an increase of £33,032. Both passengers and receipts constituted a record. The working expenditure was higher than in the preceding year owing to the cost of labour and the prices of supplies and materials. The ratio of expenses to receipts at 61.16 was, however, very little higher than last year. The profits earned showed a surplus of £3,420. Some increases in fares had been put in force toward the end of the past financial year. There was a profit of £88,512 and after deducting interest and sinking fund on debentures, the net profit was £39,800. Including £2,591 brought forward from last year there was an available sum of £42,391. Of this amount £12,000 had been set aside to reserve. A dividend of 5 per cent. would absorb £24,561, leaving a balance of £5,830 to be carried forward.

**Preston Corporation Tramways.**—The annual report for the year ending March 31st, shows a total revenue of £63,497, which, after deducting working expenses and war service allowances, £43,492, gives gross profit of £20,005, which, less chargeable items, leaves a net surplus of £4,158. This amount added to balance from previous year gives £10,069. of which £2,831 is allocated to capital outlay and £5,500 to the relief of the rates, being a balance on revenue account of £1,738. The increase in the revenue was £5,722, and the increase in passengers was from 13,809,189 to 15,455,163. There was an increase in working expenses amounting to £7,599, due principally to war bonuses and the constant advance in price of materials used for repairs. The expenses for the years 1916-17 and 1917-18 respectively were:—Traffic £15,317, £18,232; general £5,429, £7,030; repairs and maintenance £8,345, £11,063; power £5,733, £6,098. The sum of £1,066 has been paid to dependents and employees on war service. Statistics for the years 1916-17, and 1917-18 respectively include: traffic revenue £57,349, £62,783; total revenue £57,775, £63,497; working expenses £34,825, £42,425; sinking fund £5,862, £6,947; contribution to rates £3,750, £5,500; car mileage 1,140,019, 1,113,517; passengers carried 13,809,189, 15,455,163; working expenses per car-mile 7·33d., 9·14d.; power cost per car mile 1·207d., 1·314d. The tramways serve a population estimated at 120,000.

## POSITIONS VACANT.

### COUNTY BOROUGH OF BELFAST.

### BELFAST CITY TRAMWAYS.

**Rolling Stock and Overhead Equipment Engineer.**

The Tramways Committee invite applications for the above position from fully qualified mechanical and electrical engineers with experience in the maintenance, renewal and construction of tramway rolling stock on the latest and most approved lines, and a thorough knowledge of the management and operation of a modern car works and overhead department.

Salary £450 per annum, increasing by £25 per annum to £500 a year.

Applications on the official forms which may be obtained from Mr. J. S. D. Moffet, general manager, Tramways Office, Sandy Row, Belfast, to be delivered at my office, City Hall, Belfast, not later than 12 noon, Friday, 20th December, 1918.

Canvassing will disqualify.

(Signed) R. MEYER,
Town Clerk.

**Armature Winder.**

Armature Winder wanted, preference given to man with traction experience, full district rate and all awards paid; constant employment, Glasgow district. Reply, stating experience to Box No. 62, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

**Engineer and Sales Manager.**

Wanted, Engineer and Sales Manager for Gun Metal and Overhead Tramway Material, etc.

Apply S. DIXON & SON, LTD., Brass Works, Leeds.

**Engineer.**

Engineer wanted for small Tramway System in the North, as assistant in charge of permanent-way, cables, overhead and Sub-stations. Apply, stating qualifications and salary expected to Box No. 61, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

**Electric Tramcar Handbook**

## THE PROPOSED LIVERPOOL MOTOR OMNIBUS SERVICE.

THE decision of the Liverpool Corporation Tramways Committee to supplement the tramway service by means of a service of motor omnibuses is a notable one. Liverpool has found itself faced with a problem which exists in many other great centres of population in the United Kingdom—the problem of how to cope with the greatly increased demands upon its existing facilities for road passenger transport. This demand has made itself specially felt during the last three or four years. It is in a large measure due to the war. Much of it is likely to continue for several years during the reconstruction period, but some of it is due to the perpetual expansion of districts and industries. Municipal motor omnibus services have already proved in several towns, notably in Birmingham and Sheffield, valuable adjuncts to the tramway system. But the scheme proposed for Liverpool will be watched with special attention because of the magnitude of the road passenger transport needs of the second city in England. In such a scheme the motor omnibus finds its proper place in transport enterprise as a supplement to, rather than a competitor with, much less a substitute for, the electric tramway car, where electric traction is already in operation. The decision to run motor omnibuses in Liverpool is not, it should be noted, the outcome of any pessimistic views as to the position and prospects of electric tramways. It is due to the public spirit of the Liverpool Corporation, expressed through its Tramways Committee, in determining to meet the needs of the people in the only way possible in the immediate future. The extension of the tramways that is required will take two or three years to accomplish. No doubt it will be carried out within a very few years; although, perhaps, one advantage of the establishment of the motor omnibus service will be to facilitate an unhurried consideration of the projected tramway extension. The decision of the Liverpool Tramways Committee shows, too, a broad and comprehensive view of the position of the Corporation as caterers for the public needs as regards road passenger transport generally. It is a recognition of the fact that the Corporation must not confine itself to the mere operation of its electric tramway passenger service, but is bound to provide the community with whatever transportation services are found desirable in the public interest.

## REDUCTION OF SERVICES.

The present reduced tramway services would appear to be likely to continue for the present. An application has been made on behalf of municipal tramway undertakings, through the Tramways (Board of Trade) Committee for the release of more fuel with a view to the provision of increased services. The Coal Controller has replied as follows :—

"Concerning my interview with the Tramways Committee of the Board of Trade, I should be glad if you will make it quite clear to the tramway undertakings throughout the country that their efforts to effect economy in the consumption of fuel must be continued without relaxation. No relief from the existing acute shortage can be anticipated for some appreciable time. At the same time, I should certainly take care that the tramway undertakings shall be advised when any amelioration of the general position has been effected. Whilst every effort will be made to maintain fuel supplies to tramway undertakings, in accordance with their present demand for electricity, it must be distinctly understood that no applications for increased supplies can be entertained, and that therefore any attempts to increase tramway services which demand additional supplies of fuel can only be made at the undertaking's own risk.

The general manager of the Manchester Corporation Tramways (Mr. J. M. McElroy) has issued a placard stating the reasons why the tramway service is inadequate. He points out that five million passengers are carried over the lines every week, against four million before the war, and that 3,000 of the experienced employees have joined the forces. Many of the staff have been incapicitated by influenza.

At Barrow-in-Furness an increase in the tramway service is noted. One or two additional cars have been put on. It is stated that there is not now the same difficulty in obtaining men to work the cars, and so with more drivers and more cars further improvements are anticipated.

Brighouse Town Council is complaining to the Halifax Tramways Committee in regard to what is considered the unsatisfactory running of the Halifax tramway cars in conjunction with the Bradford tramway cars.

At Belfast, Councillor W. C. Turner (chairman of the Tramways Committee) told the City Council that it had been necessary to make certain restrictions of the service in deference to the wishes of the Coal Controller.

In regard to complaints which have reached the *Daily Mail* in regard to the tramway service on the Embankment, London, Mr. A. L. C. Fell (general manager of the London County Council tramways), says :—"We cannot run more cars till we get more coal. Fewer cars will soon be needed in munition centres and then more cars will be put on other routes. There is still a shortage of men. The adoption of the queue system at Charing Cross and Westminster shall be considered, but there are difficulties."

Dealing with criticisms on the working of the tramway system at Southport, Councillor Aveling, a member of the Southport Tramways Committee, said that no one had given the Tramways Committee or the manager credit for the fact that it had been impossible to obtain materials for repairs. Southport's tramway system had never been classified as one of first importance from the national standpoint, and as far as the nation was concerned it would not have mattered if the cars never ran at all. A weekly report had to be given to the Board of Trade showing that they were economising. The only thing the Committee could do was to keep on as many cars as the Government would allow, and use them to the best advantage.

**Unions Urged to Unite.**—Speaking at a Labour meeting at the Albert Hall, on Sunday evening, Mr. Robert Williams, secretary of the National Transport Workers' Federation, said that no insurrectionary or revolutionary movement could be conducted successfully by any single section of the working class. If the Electrical Trades Union were prepared "to go over the top" they would require millions of effective reserves. The time might come during the next month, or six months, when some union might be called upon to take considered and determined action in the interests of the working classes, and that union might require the assistance of every other union in London. At the same meeting Mr. Ben Smith (Vehicle Workers' Union) referring to the cutting off of the electric light from the Albert Hall for several hours on account of the cancelling of a Labour meeting by the management, said his Union were ready to back up the Electrical Trades Union. "But, he added, "the E.T.U. were too quick for us, otherwise I can assure you that there would have been no 'Victory Ball.'" Presumably the speaker alluded to the intention which had been expressed of refusing to stop trains or motor omnibuses near the hall.

## MISCELLANEOUS NEWS AND NOTES.

**Tramway Extensions at Hull** are contemplated after the war has been brought to an end. The Tramways Committee have requested a sub-committee to report upon the schemes proposed

**Railless Traction.**—Reports on railless traction are to be supplied to the members of the Walthamstow Tramways Committee, who are shortly to further consider the subject.

**Application for Service Men.**—The Belfast Tramways Committee have resolved to apply to the military authorities for the release of all employees who are at present serving with the colours.

**Ventilation of Cars.**—Ilford Urban Council have asked the tramways manager (Mr. L. E. Harvey) to have the door at the front of the cars open at termini to allow a free current of air through the cars.

**St. Helens Tramways.**—St. Helens Corporation Tramways Committee have declined to extend the tramway lease, which lapses in October next year, and have recommended the Corporation to make arrangements to work the tramways themselves.

**Tramway Extensions at Maidstone** to the length of nearly a mile-and-a-half were anticipated in a speech by Alderman D. T. J. Lyle (chairman of the Maidstone Tramways Committee), at a meeting of the Corporation.

**Companies Provide Shelters.**—The associated companies owning the tramways at Dudley have agreed to provide several shelters on the line of route subject to the Corporation lighting, maintaining and policing them. The Streets Committee of the Dudley Corporation recommend the acceptance of the terms.

**Barrow Tramways Prospects.**—Barrow-in-Furness Corporation are considering the question of taking over the tramways undertaking, which is one of those associated with the British Electric Traction Co., Ltd. A decision will have to be reached within the next six months, or the opportunity of purchase will be gone for another seven years.

**Damages for Losing a Foot.**—A jury in the Edinburgh Court of Session awarded £250 on a claim for £400 damages against the Edinburgh and District Tramways Company in respect of injuries to a three-year-old child. While crossing a street the child was run over by a tramway car, with the result that one of her feet had to be amputated. For the defence it was urged that the accident was due solely to the child running into the car.

**Eight Hour Day for Railway Men.**—On Friday it was announced that, after conversations between the Prime Minister, Sir Albert Stanley, and Mr. J. H. Thomas, the principle of an eight hour day for all members of the wages staff as from February 1, 1919, had been conceded. Existing conditions of service are to remain unaltered pending the decision of the committee to be appointed to review wages and other conditions of service of railway men in the United Kingdom.

**Suggested Christmas Day Holiday.**—A general holiday for tramway employees on Christmas Day has been suggested for the whole country. But no decision has yet been made. At Birmingham the Tramways Committee have decided not to run the cars on Christmas day. At Brighton, the cars will, as at present proposed, run from 9.30 a.m. to 2.30 p.m. only. At Newcastle-on-Tyne the Tramways Committee favour a service at least as on Sundays, but have not come to a decision.

**Vacant Managership at Bury.**—Bury Tramways Committee are to interview four applicants, out of 42, for the position of manager of the Bury Corporation Tramways. The selected candidates are Messrs. Charles J. Baker, traffic manager, Blackpool Corporation Tramways; Harry Beetson, chief clerk, Bury Corporation Tramways Department; Frank Buckley, general manager, Wigan Corporation Tramways; and Albert B. Hayes, depot superintendent, Bury Tramways.

**Institution of Electrical Engineers.**—At the meeting of the Institution of Electrical Engineers, to be held at the Institution of Civil Engineers, Great George Street, S.W., on Thursday, December 12, there will be a discussion on "Electric Welding." Copies of the "Notes on Arc Welding Regulations," by Mr. H. M. Sayers can be obtained on application to the Secretary. It is not, however, intended to limit the discussion to the Regulations, but it will cover electric welding in general.

**Solid Tire Guarantee.**—The Macintosh and Challiner solid tires having established a record for accomplishing a mileage in excess of the guarantee of 10,000 miles, the Shrewsbury S.T. and Challiner Tyre Co., Ltd., have decided to guarantee Macintosh and Challiner solid tires supplied on and after January 1, 1919, for 12,000 miles, subject to the usual tire guarantee conditions. In the case of steam wagons with trailers attached it may be advisable to point out that the existing guarantee conditions allowing for "a limited and reduced guarantee not exceeding 7,000 miles" will still apply.

**Why the Ticket was Used.**—An ex-employee of the Rhondda Tramway Company was summoned on the allegation that she had tried to avoid payment of her fare whilst a passenger on a tramway car. For the Rhondda Tramway Company it was explained that the defendant was formerly employed by the permanent way department of the company. She was dismissed at ten o'clock in the morning and in the afternoon she boarded a car, on which she used an employee's ticket, to which she was not entitled. The defence was that defendant was asked to return for her insurance card, and she thought her employee's ticket was available for the purpose. The Bench cautioned the defendant and allowed the summons to be withdrawn.

**Licence Delays.**—Ilford Tramways Committee have received a letter from the Commissioner of Police for the Metropolis stating in reference to recent summonses for employment of an unlicensed car driver, that, as the case has now been decided in the manner provided by law, the Commissioner is not in a position to further review it; also conveying an assurance that the necessity for the speedy issue of licences is fully appreciated, and that every effort has been made and will continue to be made in the future to avoid unnecessary delay.

**Interesting Judicial Decision.**—A recent decision of Mr. Justice Bailhache at the Manchester Assizes that "a person who gets up in a tramcar before it stops does so at his or her own risk," has caused a great deal of discussion in the city. Councillor Ross Clyne has given notice that at the next meeting of the City Council he will move that a public pronouncement be forthwith made by the Tramways Committee bearing upon the decision. The case was one in which a passenger claimed damages for injuries through being thrown into the roadway when the car went over points.

**Electricity Charges at Peterborough.**—Peterborough Corporation have come to an agreement with the Peterborough Electric Traction Company with respect to increased charges for electricity, according to which the company is to pay a further 12½ per cent., making, with the 15 per cent. hitherto paid, an addition of 27½ per cent. from the period from October 26th to March 31st, 1919, the right of making a further revision after the latter date being reserved. A proposed arrangement by which the Traction Company would supply power to the Great Northern Railway works through the overhead wires is to be considered by the Corporation.

**The Tramways and Light Railways Association Journal** for November contains the text of the awards made by the Committee on Production of November 8th, on the working conditions and wages of the employees in the electricity undertakings in the London district, and of November 21, on the wages of tramway and motor omnibus workers; also suggestions from the Ministry of Labour as to the constitution and functions of the district councils which are being established in connection with the National Joint Industrial Councils and of the works committees in industries in which National Joint Industrial Councils are established.

**An East Ham** Corporation tramway driver, was fined 40s., with three guineas costs, at East Ham Police Court, for endangering the safety of a number of persons by driving in a negligent manner. It was stated that while a group of about thirty people were getting on a car, the defendant, after sounding his gong drove his own car on, dispersing the group, with the result that a woman was knocked down and seriously injured. Defendant said there was a crowd struggling to board a stationary car, and he repeatedly sounded his gong. As he approached the other car he slowed down to a speed of three or four miles per hour. He thought he had a clear way and passed. He then heard shouting and stopped, and found that a woman had been knocked down. The magistrate said he could not acquit defendant of negligence. If defendant had stopped even for a moment the accident would have been avoided.

**Car Collided with Trap.**—Damages to the amount of £280, with costs, were awarded on a claim in the Nisi Prius Court at the West Riding Assizes against the Bradford Corporation for personal injuries alleged to have been sustained through a collision with a tramway. The Judge held that the weight of evidence was in favour of the plaintiff, and said he had arrived at the conclusion that there was a lack of due and proper care on the part of the car driver in regard to speed and the application of the brakes. Plaintiff's case was that he was driving a pony trap, that the pony became restive on the approach of the car, with the result that the trap got on the track and was struck by the car. The driver said that nothing occurred to indicate to him that the pony was restive until he saw it backing the trap into the track. He then applied the brakes and the car stopped in ten yards.

**Edinburgh Tramway Fares.**—Mr. R. S. Pilcher, Edinburgh Corporation tramways manager, has reported on the suggestion of Councillor M'Laren that a universal fare should be introduced in Edinburgh for continuous journeys. He is of opinion that cheap transit facilities to the outskirts of the city can best be obtained by adhering to the zone system of fares rather than by adopting the universal fare system, which in America is being modified on the zone principle. He does not, he says, suggest that the present scheme of stages in use in Edinburgh is suitable to develop long distance traffic. The scheme would require to be simplified by reducing the number of stages and aiming rather at a cheap penny fare radiating from the centre. This would not preclude the provision of facilities to encourage short-distance traffic, which, he believes, the Edinburgh public will require in the near future.

**Position Vacant at Belfast.**—The vacancy caused by the resignation of Mr. A. A. Blackburn (chief engineer), who has been appointed tramways manager at Huddersfield, has been before the Belfast City Council. The general manager recommended that Mr. Blackburn's successor should be styled "Rolling stock superintendent and overhead equipment engineer" and the tramways committee approved of this proposal, and fixed the salary at £450, rising by annual increments of £25 to a maximum of £500. Councillor Alexander said the man who succeeded Mr. Blackburn should have two qualifications—he should be an Irishman, and should have served his country. Councillor Turner (chairman of the Tramways Committee) said the committee would get the best man they could, but he agreed that, other things being equal, the appointment should be given to a local man

Digitized by Google

**Omnibuses in the Metropolitan Area.**—In reference to a recent newspaper announcement that there will be placed within a few weeks on the streets of London 1,000 new omnibuses of an improved and lighter type, the London General Omnibus Company state that they are not responsible for this announcement. The company fully appreciate the inadequacy of the present services, and are making every effort to improve them. One third of the whole fleet of omnibuses was taken over by the Government early in the war, and the company has since been prevented by the war restrictions from replacing them. The company has about 200 spare vehicles, which have not been running owing to the shortage of labour and petrol. If the company's application for the demobilisation of a first instalment of the thousands of their employees with the Colours be successful they will be able to place these omnibuses in traffic by the end of this month. It is expected to supplement them by another new 250 vehicles in the early spring. This programme, however, depends not only on the release of drivers, but also on the freeing of petrol and materials from the existing restrictions. The company have not only every desire but every interest to restore their fleet of omnibuses to its former efficiency as rapidly as possible. Designs have been prepared for a new and improved omnibus.

## MOTOR OMNIBUSES FOR LIVERPOOL.

Liverpool Tramways Committee have sanctioned a scheme for assisting the electric tramway service by means of one hundred motor omnibuses. The scheme has been proposed in view of the very heavy demands for road passenger transport now experienced in the city. It appears that to increase the number of tramway cars is out of the question for a long time, and that the situation can be quickly eased by instituting a service of omnibuses. At the meeting of the Committee, Alderman E. Russell-Taylor said that during the past four and a half years it had been impossible to obtain new rolling-stock or to maintain the old in a thoroughly efficient state of repair, although during the period referred to the city passenger traffic increased by about 65,000,000 per annum as compared with pre-war years. The existing rolling stock had proved altogether inadequate to meet the extraordinary traffic requirements, the cars being over-crowded from time to time, and the main arteries and terminal points being much congested. It is proposed that the omnibuses shall keep as far as possible from the main tramway thoroughfares, so as to avoid congestion. On certain parts of their journeys they will run at high speed, and journeys will, it is stated, be completed in shorter times than by the electric cars. Numerous routes will be covered and the service is expected to be running in a few months' time.

## PERSONAL.

**Councillor Rudd** has been appointed chairman of the new St. Helens Corporation Tramways Committee.

**Mr. H. Pilling,** general manager of the Accrington Corporation Tramways, has been granted an increase of salary from £400 to £500 per annum, subject to his undertaking not to seek another appointment for two years.

**Councillor J. Teago,** of the Newcastle-upon-Tyne Corporation, has been presented with a silver tea service for Mrs. Teago, in recognition of his work as an auxiliary tramway driver during the early days of the war. In making the presentation Councillor R. Mayne (chairman of the Tramways Committee) said that Newcastle was the first town to introduce auxiliary tramway workers, and during 18 months Councillor Teago had turned out at 4 o'clock in the morning to drive the workmen to the shipyards and factories in the city. Councillor Teago suitably replied on behalf of his wife.

**Mr. A. A. Blackburn,** chief engineer to the Belfast Corporation Tramways, has resigned his position on his appointment as general manager of the Huddersfield Tramways. The Belfast Tramways Committee have accepted the resignation with regret, and have expressed their appreciation of the manner in which Mr. Blackburn has discharged his duties since his appointment on the reconstruction of the tramway system in 1905, and their best wishes for his future welfare in his new position. Belfast Tramways Committee have placed on record their appreciation of the efficient and reliable manner in which Mr. Blackburn has discharged his duties during his fourteen years' service in Belfast.

**Mr. R. H. Wilkinson,** the late tramways manager of the Huddersfield Corporation, who has recently been appointed to a similar position at Bradford, has received a presentation from the chief officials of the Corporation as a token of their goodwill and esteem The Town Clerk (Mr. J. H. Field), in making the presentation, which took the form of a handsome silver tray, referred to the cordial relations which had always existed between Mr. Wilkinson and his brother officials, and to the great extension and improvement in the position of the Huddersfield tramways undertaking during the 14 years that Mr. Wilkinson has been manager and engineer. He had no doubt that the same success would attend Mr. Wilkinson's service under the Bradford Corporation. Other principal officials tendered congratulations, and Mr. Wilkinson suitably responded.

The death is recorded of **Mr. H. C. Howse,** for the past fourteen years an inspector for the Worcester Electric Traction Company At the time of the funeral, which was attended by Mr. C. H. Built (engineering manager) and several drivers and conductors, the cars stopped for two minutes and the drivers and conductors stood at attention as a mark of respect.

## FINANCIAL.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Dec. 4 amounted to £67,646, an increase of £11,835 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Dec. 4 (thirty-five and a half weeks) the total receipts were £2,327,348, an increase of £351,972 on the corresponding period of 1917.

**Auckland Electric Tramways Company** in the report for the year ended 30th June last, states that the total revenue was £301,43. Traffic receipts amounted to £294,564, an increase of £11,867. After providing for all expenses there is a surplus on the year's working of £53,430; £5,293 was brought forward, making £58,723. The directors recommend that £10,000 be transferred to reserve account (making £152,500) and that a further dividend be paid on the ordinary shares of 1s. per share, less income-tax, for the half year ended 30th June, making 1s. 6d. per share for the year, and £5,973 be carried forward.

**Newcastle Corporation Tramways.**—At a meeting of the Committee under the presidency of Councillor Richard Mayne, the accounts for the year 1917-18 were submitted for consideration. The traffic receipts, together with revenue from other sources, amounted to £418,028, against £350,534 for the previous twelve months. The gross expenditure was £248,394, as compared with £208,209. The gross profit was £169,634, against £148,235: and the net profit £90,785, against £62,902. After allocating £14,000 in relief of the rates and making provision for the payment of income tax and insurances, £55,000 had been applied to the reserve and renewals fund, bringing that up to £155,251, against £105,894 for the preceding year.

**Cape Electric Tramways.**—Mr. Ludwig Breitmeyer, chairman, presiding at the meeting of the Cape Electric Tramways recently referred to the recovery in the traffic receipts which was steadily continuing and was a most satisfactory feature. During the year under review the number of passengers carried on the Cape Town and Port Elizabeth systems was 25,444,465, an increase of 2,692,449. The traffic receipts were £264,137, an increase of £33,032. Both passengers and receipts constituted a record. The working expenditure was higher than in the preceding year owing to the cost of labour and the prices of supplies and materials. The ratio of expenses to receipts at 61.16 was, however, very little higher than last year. The profits earned showed a surplus of £3,420. Some increases in fares had been put in force toward the end of the past financial year. There was a profit of £88,512 and after deducting interest and sinking fund on debentures, the net profit was £39,800. Including £2,591 brought forward from last year there was an available sum of £42,391. Of this amount £12,000 had been set aside to reserve. A dividend of 5 per cent. would absorb £24,561, leaving a balance of £5,830 to be carried forward.

**Preston Corporation Tramways.**—The annual report for the year ending March 31st, shows a total revenue of £63,497, which, after deducting working expenses and war service allowances, £43,492, gives gross profit of £20,005, which, less chargeable items, leaves a net surplus of £4,158. This amount added to balance from previous year gives £10,069, of which £2,831 is allocated to capital outlay and £5,500 to the relief of the rates, being a balance on revenue account of £1,738. The increase in the revenue was £5,722, and the increase in passengers was from 13,809,189 to 15,455,163. There was an increase in working expenses amounting to £7,509, due principally to war bonuses and the constant advance in price of materials used for repairs. The expenses for the years 1916-17 and 1917-18 respectively were:—Traffic £15,317, £18,232; general £5,429, £7,030; repairs and maintenance £8,345, £11,063; power £5,733, £6,008. The sum of £1,066 has been paid to dependents and employees on war service. Statistics for the years 1916-17, and 1917-18 respectively include: traffic revenue £57,349, £62,783; total revenue £57,775, £63,497; working expenses £34,825, £42,425; sinking fund £5,862, £6,947; contribution to rates £3,750, £5,500; car mileage 1,140,019, 1,113,517; passengers carried 13,809,189, 15,455,163; working expenses per car-mile 7·33d., 9·14d.; power cost per car mile 1·207d., 1·314d. The tramways serve a population estimated at 120,000.

## TENDERS INVITED.

### CITY OF SHEFFIELD.

**Tramways and Motors Department.**

**Tenders for 50 Tramcars.**

The Tramways and Motors Committee is prepared to receive Tenders for the supply and delivery of Fifty-Double-deck Top Covered Vestibule Tramcar Bodies with Trucks.

Form of Tender, General Conditions of Contract, and Specification will be forwarded on application to the undersigned.

Each Tender must be submitted on the Official Form supplied by the Corporation, enclosed in a sealed envelope endorsed "Tender for Tramcars" and delivered to the undersigned on or before January 7th, 1919.

Any person or firm sending in a Tender will be required to comply with the City Council's Form of Clauses respecting wages, hours and conditions of labour, and prohibition against assigning or underletting as set forth in the "Conditions of Contract" above referred to.

The Committee does not bind itself to accept the lowest or any Tender.

Dated this 6th day of December, 1918.

A. R. FEARNLEY.
General Manager.

Division Street,
Sheffield.

### LIVERPOOL CORPORATION TRAMWAYS COMMITTEE.

**Motor Omnibuses.**

The Liverpool Corporation Tramways Committee are prepared to receive tenders for the supply of a number of motor omnibuses.

Tender forms and other particulars can be obtained on application to the General Manager, C. W. Mallins, M.I.A.E., 24, Hatton Garden, Liverpool.

Tenders to be addressed to the Town Clerk at his office, municipal Buildings, Dale Street, Liverpool, and to be received not later than 12 noon on the 31st instant, endorsed "Tender for Motor Omnibuses."

E. R. PICKMERE, M.A.
Town Clerk.

Liverpool,
December 9, 1918.

### CITY OF EDINBURGH.

**To Advertising Contractors.**

Tenders are invited for the advertising rights on the Edinburgh Corporation Tramways. The contract is for a period of three years from July 1st, 1919.

Forms of tender and particulars of the contract may be obtained from the Tramway Manager, City Chambers, Edinburgh.

The Town Council do not bind themselves to accept the highest or any tender.

Tenders must be marked on the outside "Tender for Advertising Contract" and must be lodged not later than twelve o'clock (noon) on Friday, 3rd January, 1919.

A. GRIERSON, S.S.C.
Town Clerk.

City Chambers, Edinburgh.
December 7th, 1918.

## HEADING TOWARDS CHAOS.

At the rate that transport employees have benefited in the past two years there will soon be nothing left to "reconstruct" so far as they are concerned. They have been given concession after concession, and in no instance has one of their officials urged them to give better service in return. Yet it is by that means alone with the aid of improved machinery that the nation can obtain the increased production by which this country will be enabled to hold its own in the coming world-wide rivalry. Now that the railwaymen have obtained their demand for an eight-hour day, other transport workers, we hope only tentatively, are putting forward a programme so audacious that words fail to provide it with a suitable designation. The statement issued on Wednesday, ascribed to the National Transport Workers' Federation, is applicable to all public road passenger transport undertakings whose employees' unions placed themselves under its wing during the present year. The announcement states that the Federation is demanding an increase of ten shillings per week in the war wage at present paid to carters, motormen, and kindred workers ; also an eight-hour day, a five and a half-day week, time and a half for overtime and double time for Sundays. The reference to motormen and also to Sunday work leads to the conclusion that the Federation is in this matter acting not for carters only but for the whole of its constituent bodies. The programme outbids that which railwaymen have put forward for impending consideration of the companies. The demands, too, are advanced before the ink is dry on the award of the Committee on Production on the recent request for a five shilling increase, and while other demands relating to special overtime and other concessions are still under negotiation. The addition of ten shillings would more than double the pre-war wages, while an eight-hour day would give facilities for a large increase of time worked in excess of eight hours. As for the proposal for a five and a half-day week, that evidently is only an outpost not intended to be held. The Federation may be trusted to show some appreciation of the fact that the industry cannot achieve impossibilities. A combination of any two of the concessions suggested would almost put an end to public passenger transport; and it is not too much to say that to grant any one of them would constitute a burden that could not be carried even with double the present scale of fares.

## HEAVY MOTOR VEHICLES.

PROPOSED RULES FOR OMNIBUSES AND COMMERCIAL CARS.

The report of the Local Government Board Committee appointed in 1915 to consider the law and regulations relating to the construction and use of road locomotives and heavy motor cars in Great Britain, which was issued on Friday, makes a number of important recommendations.

As regards heavy motor cars, it is proposed that the maximum unladen weight be raised from five to six tons, and the combined unladen weight of the car and trailer from 6½ to 8 tons, but that the maximum laden weight be not altered. The Committee are not in favour of permitting more than one trailer to be drawn by a heavy motor car; when more than one trailer is hauled the motor tractor should be treated in law as a "locomotive." In the case of heavy motors with iron, steel, or other hard tires, the minimum diameter of the wheels should be increased from 2 ft. to 2 ft. 9 ins., and a scale of minimum diameters should be prescribed, according to the registered axle weight, where that weight exceeds four tons ; the edges of the tires should be rounded, bevelled edges not being permitted. The diameter of wheels fitted with a solid rubber tire or other tire of soft and elastic material, not being pneumatic, should not be less than 2 ft. 6 ins. The maximum over-all length of a heavy motor car should not exceed 26 ft., and the overhang behind the driving axle not exceed seven twenty-fourths of the over-all length ; these requirements should apply also to motor omnibuses.

The present speed limits should be retained, but the maximum speed for vehicles with iron or other hard tires should not exceed five miles an hour, and for vehicles drawing a trailer, if both have rubber tires, eight miles an hour, instead of five, as at present. Heavier penalties should be imposed for a second or subsequent offence against the speed regulations.

Motor-omnibuses and similar passenger vehicles should be brought under special regulations ; the Local Government Board and the road authorities should be given powers to regulate through heavy motor traffic, in order to secure that, as far as practicable, it uses roads that are constructed to carry it; and county councils should be able to regulate traffic on a road under repair or reconstruction, and to divert it to another road.

Among miscellaneous recommendations are that the law relating to heavy motor cars should not be extended so as to authorise the use of road trains thereunder ; that steps should be taken to deal with the question of requiring heavy cars to be fitted with life-guards ; that the law need not be amended to require drivers of road locomotives to be licensed ; that instead of the existing provisions it should be made an offence to cause or permit the emission of smoke or visible vapour from a locomotive or motor car on a public highway in such quantity as to be a nuisance or danger to the public ; and that the by-law requirement as to the provision of means of communication between the rearmost of a train of wagons drawn by a locomotive and the driver should be made a statutory requirement. A heavy motor car should be required to carry a mirror to enable the driver to see overtaking traffic.

## INCREASE IN FARES.

Fares on the York Corporation Tramways are to be increased by 50 per cent. Alderman Meyer, chairman of the Tramways Committee, in moving the adoption of the recommendation by the Town Council at the last meeting, said that last year there was a loss on the tramway undertaking of £5,000 owing to the increase in the prices of materials and wages. In addition, £2,000 or £3,000 should have been put aside for reserves. The increase in the wage bill had been about 100 per cent., and there was a similar increase in the cost of maintenance. The cost of carrying passengers to-day was double what it was in 1914. The effect of the increase in the fares would probably mean a reduction in the number of passengers travelling by about 12½ per cent., but they estimated that the net result would be an increase in net income of about £8,000.

Rawstentall Corporation propose to increase the fares on the Bacup-Rawtenstall lines, which are owned by Bacup and leased to Rawtenstall. The two Corporations have agreed to an alteration of the fares on certain stages, and Rawtenstall Corporation have applied to the Board of Trade for sanction to the proposed increase.

A new minimum fare of 2d. on the Rothesay Port and Bannatyne Tramway is to come into force at the beginning of the new year. It has been arranged, however, that books of tickets may be purchased at the old rate, so that regular travellers will not be effected by the change.

The Musselburgh and District Electric Light and Traction Company have made application to the Board of Trade for power to raise the fares between Musselburgh and Port Seton.

## L.C.C. TRAMWAY MATTERS.

At the meeting of the London County Council on Tuesday, reports on the following tramway topics were submitted by the Highways Committee:—

LEGAL PROCEEDINGS.—It was reported that five persons had been fined for obstructing cars and four for assaulting conductors, and one person was sentenced to six weeks' hard labour for assaulting an inspector and another was fined for assaulting a motorman. In fourteen cases persons were fined for spitting on the cars, and fines for avoiding payment of fares were inflicted in three cases. One passenger was fined for refusing to pay excess fare and another for having travelled beyond the distance for which his ticket was taken. Proceedings were taken in six cases in respect of the breakdown of defective vehicles on the tramway tracks and a fine was imposed in each case.

WAGES OF EMPLOYEES.—The award of the Committee on Production granting an advance of 5s., making 30s. in all to employees in tramway and motor omnibus undertakings, is not mandatory on the Council. The Highways Committee, however, following the action taken in previous similar instances recommended that the award should be applied to the employees concerned, principally employees in the traffic branch. The cost is estimated at £44,000 for the remainder of the current financial year and £110,000 for a full year. These figures include payment to minor officials who would automatically receive an advance under a previous arrangement.

EMPLOYEES IN THE ELECTRICAL BRANCH.—In the award of the Committee on Production of November 8 on the claim of the Electrical Trades Unions for new card rates and altered working conditions for employees in electrical undertakings in the London districts, the Council was named as a party, and an advance of 3s. 6d. a week is to be paid to all their employees engaged in the generation, transmission, and distribution of electrical energy and the maintenance of plant and cables in connection therewith. The award sets out the working conditions, and specifies the basic rates of pay for the various grades. The Committee on Production gave effect to the request of the parties that the award should conform to the decision agreed to by the parties. Its application will require a considerable change in the working conditions, designations and rates of pay of a number of employees in the electrical branch of the tramways department. The extra cost involved is estimated approximately at £2,200 during the remainder of the current financial year, and £6,500 for a full year.

RELEASE OF TRAMWAY MEN FROM THE ARMY.—Mr. G. H. Hume (chairman of the Highways Committee), in reply to a question by Mr. T. G. Gilbert, said that tramway men on military service were being informed that application was being made for their release and the Department was ready to send forward the applications for their release as soon as the Ministry of Labour could arrange to deal with these men centrally. A deputation from the Municipal Tramways and the Unions attended at the Ministry of Labour on December 4 and arrangements were then made to submit a complete list of pivotal men to the Ministry. This list would be sent in on Friday next. As only a limited number of pivotal men would be released before general demobilisation takes place, it was doubtful whether it would be possible to make any appreciable increase in the services for some time, and any increase would be dependent on coal supplies.

All tramway reports were adopted without debate.

## BENZOL FOR MOTOR VEHICLES.

Considerable quantities of benzol are now available as motor fuel, and the ordinary motor spirit licences can be used to buy benzol as well as petrol. After January 1, the Petrol Control Department will issue special supplementary licences available for benzol only. Stocks of petrol are very low, although they are expected to be normal next month. After January 1, if stocks permit, applications for more petrol will be considered from present licence holders, and applications will also be considered from those who do not hold licences. Holders of supplementary licences for benzol will be able to convert the whole of their allowance into benzol; the quantity of benzol allowed is half as much again as petrol.

Further information from the Controller, Petrol Control Department, 19, Berkeley Street, W.1.

## MISCELLANEOUS NEWS AND NOTES.

**New Cars for Doncaster.**—Doncaster Corporation are arranging for the purchase of ten new tramway cars.

**Collision in Bristol.**—Two electric cars collided at Bury Road on December 5, and both cars were thrown from the line. Ten persons were injured.

**Collision on the L.C.C. Tramways.**—On December 8, two London County Council cars collided at the terminus at Abbey Wood. Both cars were badly damaged and a passenger was seriously injured.

**Tramway Extension at Pontypridd.**—The Pontypridd Council has requested the surveyor and the electrical engineer to report upon the proposed extension of the tramways at Treforest. It was decided recently that action should be taken to further the scheme.

**New Cars for Sheffield.**—Sheffield Corporation require fifty new cars, which are to be of the top covered, vestibule type. Further particulars as to the delivery of tenders will be found in our advertisement columns.

**Institution of Electrical Engineers.**—At the meeting to be held on Thursday, December 19, at 6 p.m., at the Institution of Civil Engineers, Great George Street, Westminster, Mr. P. Hunter-Brown will read a paper on "Carbon Brushes Considered in Relation to the Design and Operation of Electrical Machinery."

**Fare Stages at Nottingham.**—Mr. R. H. Swain, chairman of the Nottingham Tramways Committee, in answer to a question at the Council meeting, said that the reduction in the number of stopping places had adversely affected the revenue of the tramway undertaking, but it had effected a saving in electric current.

**Influenza at Belfast.**—Councillor Turner, chairman of the Tramways Committee, recently told the Council that during the past few weeks there has been the greatest difficulty in maintaining the ordinary service. Early in December, there were 127 men down with influenza and there had been several deaths from the disease.

**Motor Omnibuses for Birkenhead.**—Birkenhead Corporation has decided to "experiment" with motor omnibuses. It will be recalled that about ten years ago the Corporation, by an action at law, compelled the Mersey Railway Company to withdraw their omnibuses from the streets. Now it is thought that omnibuses will form a useful adjunct to the tramway system.

**Tramway Purchase by Blackpool Corporation.**—A sub-committee of the Blackpool Corporation has been appointed to discuss the proposed purchase by the former of the Blackpool and Fleetwood tramways undertaking with representatives of the Fleetwood Urban District Council, and to take charge of the Bill that is for the purpose being promoted in Parliament.

**Extensions at Stockton.**—Stockton Corporation have decided to seek Parliamentary powers to construct tramways from the existing lines in the borough to Port Clarence, to purchase the motor-omnibus undertaking of the Imperial Tramways Company, and to run motor omnibuses in the borough and also to Port Clarence and Greatham Creek.

**Return of Burnley Employees from the Army.**—Burnley Tramways Committee propose that their standing sub-committee and representatives of the Amalgamated Association of Tramway and Vehicle Workers should form a joint committee to deal with questions arising out of demobilisation of the employees of the tramways department and their reinstatement.

**Passengers Standing up Before Stops.**—The recent decision of Mr. Justice Bailhache at Manchester Sessions, to the effect that a person who gets up in a tramway car before it stops does so at his own risk, is occasioning some discussion. Mr. Ross Clyne has given notice that at the next meeting of the City Council he will move that a public statement on the matter should be made forthwith.

**Motor Service for Bolton Corporation.**—Having considered the question of provision of a motor for the use of the police department, whenever required, the Fire Brigade Committee of the Bolton Town Council has asked the General Purposes Committee to consider the provision of motor vehicles and the establishment of a municipal garage for the purpose of providing a motor service for the use of the various departments of the Corporation

**Tramway Wages Award Effect.**—The recent award to tramway employees increasing their wages to 30s. above the pre-war rate will entail heavy charges on both Corporation and company-owned tramways. It is estimated that the increase will cost the London County Council tramways department £110,000 per annum. For the Sheffield Corporation tramways the cost will be over £24,000 a year.

**Bournemouth Rail Supply.**—At the last meeting of Bournemouth Town Council it was reported that an urgent request had been made to the Tramways Committee by the Government for an estimate of the quantities of rails and points and crossings likely to be required during the year 1919. The town clerk was instructed to reply that the Tramway Committee did not propose to estimate for rails in 1919, but they might require 1,000 tons in 1920.

**Omnibus Subsidies.**—East Ham Tramways Committee have received from the manager (Mr. W. C. Ullmann), a report, as to the subsidy made by the Government to the London General Omnibus Company. Alderman Anstead has taken part in a conference with Mr. Kellaway, Parliamentary Secretary to the Ministry of Munitions, who has advised that a small committee of tramway managers be formed to discuss the matter with the technical officers of the Ministry. After receiving the report of these officers, Mr. Kellaway will consider what further steps can be taken.

**Car Maintenance at Belfast.**—At a meeting of the Council some weeks ago, Councillor Duff alleged that car repair work at Belfast was twice as costly as at Glasgow. At the last meeting Councillor Turner said that Mr. Duff had quoted wrong figures in regard to the number of cars at Belfast. Instead of 190 they had 290 cars, and considering the number of cars the cost of general maintenance and repairs in Belfast was almost the same as at Glasgow. Before councillors attempt to criticise managers, it would be an advantage, and a saving of time, if they would take the pains to verify their facts.

**Electric Rail Welding at Bradford.**—In the report of the Bradford Corporation Tramways for the year ended March last, it is stated that a contract has been entered into with the Rail Welding Company to repair 200 hammered rail joints as an experiment by the quasi-arc" system of electric welding. A number of joints have been repaired and the contract has been further extended. Fish-plates were welded to the rail and the running surface of the rail,

Digitized by Google

which was hammered out near the joint, was re-treaded. The work was carried out at night after the car service had been discontinued, and it is stated that it has resulted in a great improvement in the permanent way.

**State Railways.**—Mr. Churchill, speaking at Dundee on Tuesday, said that we could not organise the great questions of land settlement, new industries and the extension of production unless the State had control of the means of transportation. He thought it highly improbable that action on this vital matter could be delayed until a Royal Commission had wandered about. A great mass of information was available and already a large portion of the task had automatically accomplished itself.

**Motor Omnibuses for Liverpool.**—Alderman Russell Taylor, chairman of the Tramways Committee, has stated that nothing can be done at present to provide new tramway cars. Neither the men nor the material were available. There was just cause for complaint of the inadequacy of the service but the present state of affairs could not be helped. Prior to the war they had 600 cars and to-day there were only 430. With something like 170 fewer cars they were carrying to-day between 63,000,000 and 67,000,000 passengers per annum. As previously announced, the Tramways Committee have sanctioned a scheme for supplementing the tramway service by means of 100 motor omnibuses, and particulars of tenders invited for the supply of those vehicles will be found in our advertisement columns.

**Trade Union Suggestion at Leyton.**—At the Tramways Committee meeting of Leyton Urban Council, the tramway manager (Mr. F. Schofield,) reported a letter from the London and Provincial Union of Licensed Vehicle Workers requesting permission (1) for the placing of a Union notice board in the tramways depôt; (2) the grant of free passes to tramway employees, to be available at any time on any part of the Council's system; and (3) the provision of seats on the cars for the women conductors.—He reported that he had granted permission for the placing of the notice board, subject to the notices to be exhibited thereon being first submitted to him for approval, and the Committee have confirmed his action. As to passes, the Committee are unable to recommend any extension of the concession by which employees already have free passes to and from their work. As to seats for women conductors, the tramway manager has been instructed to report.

**Tramway Institute at Newport.**—A new Institute for the tramway employees of the Newport Corporation has been opened by the Mayor (Councillor Parfitt). There was a parade of tramway employees, headed by their own band accompanied by contingents of tramway employees from Cardiff and Pontypridd. Among the speakers at the ceremony were Sir John Courtis (Chairman of the Cardiff Tramways Committee) Mr. Arthur Ellis (Tramways manager, Cardiff), and Councillor John Moxon (Chairman of the Newport Tramways Committee.) Mr. A. J. Attwell (Secretary of the Tramways and Vehicle Workers' Union) and Mrs. Attwell were presented, the former with a watch and chain and the latter with an umbrella. Councillor Moxon announced that if the institute was well conducted the Newport Corporation would increase its contribution by £300. Sir John Courtis thanked Newport for giving the lead to Cardiff and other towns in this matter.

## SOME FRONTIER TRAMWAYS IN FRANCE.

"It is surprising," writes a correspondent, "how quickly something like normal conditions are being re-established in some parts of the devastated districts of Northern France. It is not uncommon to find electric tramways in operation in places that only a few weeks ago were withi n the German lines. Between Valenciennes and Mons, a distance of 25 miles, the Hun has however left the lines in such a condition that total reconstruction will be necessary before a through service can be restored. For a considerable distance east of Valenciennes both the rails and overhead equipment have entirely disappeared, but in some of the villages through which the lines pass the rails are still in the paving, only the overhead wires and poles having been taken away.

"Nearer Mons the lines are in better condition. The Bosche had either neglected or failed to destroy the power station, and at the time of my visit shortly after the memorable 11th November cars were running over some sections of the line. It was evident, in fact, that the tramway had in part been in use during the occupation, and it was somewhat astonishing to find that there were long stretches of track that were not much worn, the rails for the most part being in good condition. There were indications that corrugations had been ground out, and in some places the rails had been renewed. Cars circulated in Mons and the city seemed in full activity. As far as material damage is concerned, it is almost without a sign of war; the only strange things were notices in the German language that will no doubt quickly disappear.

"The French evidently mean to lose no time in getting to work, but they will require vast quantities of material that will probably be forthcoming quicker than is generally anticipated. When one recalls the marvellous way in which the French made good their losses in 1870, it needs no prophet to foresee rapid reconstruction after the glorious victory of 1918.

"Perhaps I may add that on Armistice Day I finished up at Mons, about thirty miles from Lille, where in August 1914, by the aid of an electric tramway car I succeeded in catching the last train for Boulogne before the Bosche entered the city. Lille tramways, by the way, continued to work somewhat irregularly throughout the occupation, but the maintenance has perforce been sadly neglected."

## PERSONAL.

**Mr. F. W. Bricknell,** city engineer of Hull, has been granted an increase in salary of £250 to £1,000.

**Mr. George Balfour,** managing director of Messrs. Balfour, Beatty and Co., is the Coalition candidate for Hampstead.

**Mr. Richard Mayne,** chairman of the Newcastle Corporation Tramways Committee, is deputy mayor for the present year. The vice-chairman, Councillor M. Sutherland, is Lord Mayor.

**Sir John Snell** has been appointed by the Board of Trade to act as their adviser on all matters arising out of the Report of the Electrical Power Supply Committee.

**Mr. W. J. Steele,** city engineer of Newcastle, has been granted an increase in salary from £1,000 to £1,200. A recommendation for an increase in his salary was proposed in 1914, but owing to the outbreak of war the city engineer thought the time was not then opportune and at his request the proposal was withdrawn. Mr. Steele has been serving abroad for some time.

We deeply regret to record the death of **Mr. Cecil Bickersteth,** of Messrs. Robert Kearsley and Company, which occurred on December 2, after a short illness, a severe attack of influenza developing into pneumonia. Mr. Bickersteth was greatly esteemed by many friends in the tramway industry, who will regret his early death.

## FINANCIAL.

**Doncaster Corporation Tramways** show a surplus on the working for the last financial year of £3,838, as compared with £2,083 in the previous year.

**Yorkshire (West Riding) Electric Tramways Co.**—A final dividend of 3 per cent., being at the rate of 6 per cent. per annum, on the 6 per cent. cumulative preference shares is announced.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Dec. 11 amounted to £69,769, an increase of £15,528 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Dec. 11 (thirty-six and a half weeks) the total receipts were £2,397,141, an increase of £367,523 on the corresponding period of 1917.

**Nationalisation of Railways.**—Shareholders are exhibiting no alarm at the prospective nationalisation of the railways. The news should in fact be rather comforting than disquieting. It cannot be doubted that the Government will treat the owners with scrupulous fairness, when the details come to be worked out. The Railway Act of 1844 gives the Government power to acquire all railways constructed after that date, but on the basis of twenty-five years' purchase of the annual divisable profits estimated on the average of the three years preceding the date of purchase. The price is to be determined by arbitration and no doubt consideration would be given to cases where the undertaking has not yet fructified.

**Bradford Corporation Tramways.**—The report for the year ended March 31, states that the increase of traffic has been very great. The traffic revenue (excluding railless system) amounted to £366,495, as against £326,406 in the previous year, an increase of £40,089. Notwithstanding a decrease in car mileage of 194,124 or 3·38 per cent., the revenue has increased 12·28 per cent., which has had the effect of raising the receipts per car mile from 13·074d. to 15·892. The expenditure has increased £45,253. Allowances to dependants of employees total £22,231, an increase of £7,880. There have been increases in traffic expenses owing to increases in wages and bonuses and the high cost of material. The cost of labour has risen to 61·75 per cent. of the total expenditure and 48·3 per cent. of the total income. The necessity of building up a reserve fund to meet the position after the war is emphasised. The total revenue (excluding bank interest, rents, etc.) amounted to £402,181, as compared with £356,025. Car mileage (excluding railless) was 5,534,858 as against 5,728,982; but notwithstanding this, there was a large increase in the number of passengers carried, the figures being 84,129,252 as against 77,074,546. The average number of journeys per head of population served was 227 as compared with 208. In connection with the through running between Bradford and Leeds, 662,570 through passengers had been carried in both sets of cars during the year. The income of the parcel traffic department shows a substantial advance, being £13,030 as compared with £11,729.

## SUSPENSION OF CHRISTMAS DAY SERVICES.

Tramway services will be suspended on Christmas Day at Birmingham, Sheffield, and Bournemouth. It is not expected that there will be any tramway service in Manchester on Christmas Day.

Dundee Tramways Committte has refused the application of the employees for a general holiday on Christmas Day. The convener, Mr. G. A. Johnston, said that they could not entertain the proposal until the holiday became general.

At a meeting of the District Council of the Tramway and Vehicle Workers' Association at Wallasey, a decision was reached not to work on Christmas Day. It was stated that the men had come to the conclusion that work on Christmas Day was a thing of the past.

Accrington Corporation tramway employees have asked that the tramway services should be suspended on Christmas Day, and the manager, Mr. H. Pilling, has been authorised to take such steps as he may think proper after consultation with the managers of adjacent undertakings with which there is an interchange of traffic.

It is stated that it will not be determined until next week whether tramway cars are to be run in Lancashire and Cheshire on Christmas Day. Alternatives that have been suggested are that there should be a curtailed service of cars, the staffs to receive double pay, or that volunteers from the employees should run the cars.

At Liverpool the branch secretary of the Tramway and Vehicle Workers' Association has come to an arrangement with the Tramways Committee under which a service will be run by employees working in three shifts of five hours each.

## CONTRACTS AND ORDERS.

**Cumberland Engineering Company** have an order from Walthamstow Council for two sets of apparatus for dealing with tube corrosion.

**East Ham Corporation** have been recommended to accept the tender of the Shrewsbury and Challiner Tyre Co., Ltd., for repairing two wheels of a motor fire engine.

**Walsall Corporation** have accepted a tender for varnishes from Docker Bros., Ltd.

## POSITIONS VACANT.

### COUNTY BOROUGH OF BELFAST.

### BELFAST CITY TRAMWAYS.

#### Rolling Stock and Overhead Equipment Engineer.

The Tramways Committee invite applications for the above position from fully qualified mechanical and electrical engineers with experience in the maintenance, renewal and construction of tramway rolling stock or the latest and most approved lines, and a thorough knowledge of the management and operation of a modern car works and overhead department.

Salary £450 per annum, increasing by £25 per annum to £500 a year.

Applications on the official forms which may be obtained from Mr. J. S. D. Moffet, general manager, Tramways Office, Sandy Row, Belfast, to be delivered at my office, City Hall, Belfast, not later than 12 noon, Friday, 20th December, 1918.

Canvassing will disqualify.

(Signed) R. MEYER,
Town Clerk.

#### Traffic Superintendent.

Wanted immediately active, energetic Traffic Superintendent, with a sound knowledge of tramway work. Apply giving full particulars of experience and enclosing copies of testimonials, stating salary desired, to Musselburgh and District Electric Light and Traction Company, Limited, Musselburgh.

#### Armature Winder.

Armature Winder wanted, preference given to man with traction experience, full district rate and all awards paid; constant employment, Glasgow district. Reply, stating experience to Box No. 62, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

#### Engineer and Sales Manager.

Out!

COPIES of our new catalogue on Coal and Ash Plant are now available for distribution and will be sent to any bona fide enquirer on receipt of a written request. It is a well printed, fully illustrated book, descriptive of the latest and most approved methods of handling coal and ashes rapidly, efficiently and without waste or the use of costly labour.

**COAL & ASH PLANT CATALOGUE**

We are at all times pleased to place our expert advice and assistance at the disposal of prospective customers. Tell us your problem and we will set to work to provide a solution.

THERMIT

REG. TRADE MARK.

*All materials made by British labour at our own Works*

## Important Announcement

The whole of the shares of THERMIT LIMITED are owned by

NOBEL'S EXPLOSIVES CO. LTD.

THERMIT, LIMITED, originally established in 1904, are the owners of the Alumino-Thermic Process Patents, and are in no way connected with any other firm or firms adopting somewhat similar titles.

THERMIT

REG. TRADE MARK.

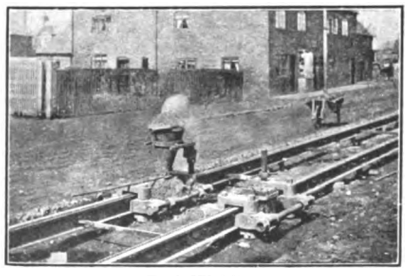
*Entirely British owned and managed*

# We are the Pioneers in THERMIT Welding in the U.K. We guarantee all joints made with our THERMIT by our trained men. We not only

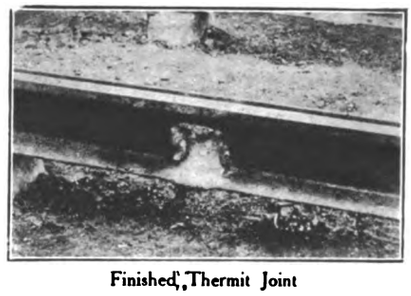
weld new rails on new and reconstruction work, but we are now able to place at your disposal a satisfactory process for welding joints on existing track.

# OUR THERMIT JOINTS

Will reduce your maintenance costs and add years to the life of your rails and track.
Ensure a permanently smooth rolling surface and prevent any knocking noise such as is caused by cars passing over uneven joints.
Give a perfect and permanent electrical conductivity without the use of bonds.



Rail Welding



Finished Thermit Joint

**THERMIT joints have stood the test of many years' traffic on most of the leading tramway systems of the U.K. and the Colonies.**

*Our knowledge and experience are at your disposal*

# TRAMWAY FOUNDATIONS

Tramway, Treherbert, for Rhondda Tramways Co. Ltd. Engineer: H. Holliday, Esq., A.M.I.E.E.
Tramway foundation reinforced with B.R.C. Fabric.

B.R.C. Fabric laid in sheets in the concrete foundation transversely to the rails, so strengthens the foundation that the wheel loads are spread over the full width of ground below the concrete.

The result is a level track.

The British Reinforced Concrete Engineering Co., Ltd.,
Head Office: 1, Dickinson Street, Manchester
Works: Trafford Park, Manchester

THE

# RAIL WELDING COMPANY

119 Victoria Street, Westminster, LONDON S.W.1

## ELECTRIC RAIL WELDING FOR NEW AND EXISTING RAILS

The only process by which the premature renewal of rails owing to defective joints can be avoided, the life of the rails prolonged for several years, and silent running ensured.

(Until recently carried out by The Rail Welding Dept. of the Tudor Accumulator Co. Ltd.)

*THIS PROCESS HAS BEEN CARRIED OUT ON THE FOLLOWING UNDERTAKINGS*

# THE PARAGON EARTH CONE

is the safest, surest and most reliable. Careful tests have proved that its geometrical form provides a good contact. Will carry heavy currents for short periods without overheating. THE PARAGON EARTH CONE is made of pure copper—perforated—and filled with charcoal. This attracts the moisture and ensures a certain contact. Suitable for Electric Railways, Tramways, Telegraph, Telephone, Electric Light, Power, Lightning Conductors, etc.

# Early delivery of ALBIONS!

MANUFACTURERS and merchants can now secure early delivery of ALBIONS, the Commercial Vehicle of proved Reliability, Economy in Up-keep and Length of Life.

**Definite delivery dates can be given for the following models: 30 cwt., 50 cwt., 60 cwt., and 80 cwt. load capacity.**

Since supplies of material are limited, the Albion Company, in spite of its vast resources, will only be able to supply a limited number of Vehicles. Intending purchasers are therefore strongly urged to place their orders without delay, as it will be a case of "first come first served."

**ALBIONS are built by the Largest Manufacturers of Motor Vans in Great Britain**

***Order your Albion now!***

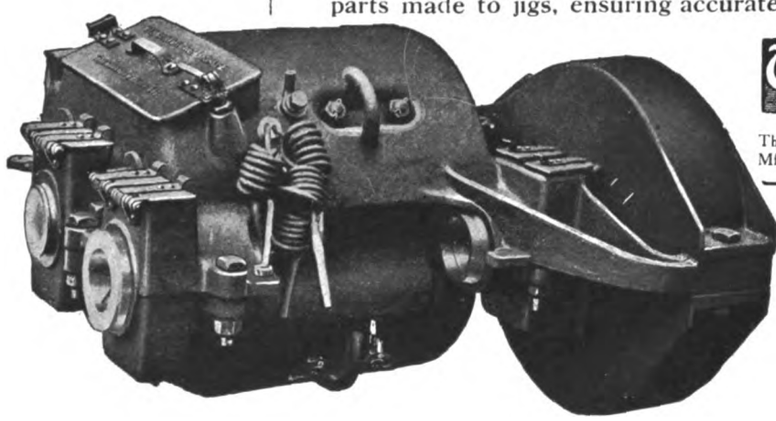
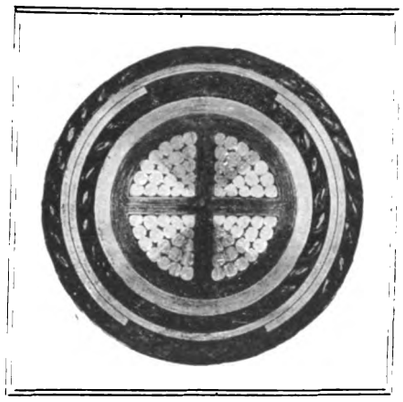
## Over 4500 Westinghouse
# Tramway Motors

have been supplied to the London County Council and the Glasgow Corporation. These motors are famous for their efficiency and low maintenance costs. All renewable parts made to jigs, ensuring accurate fitting of spare parts.



Westinghouse Manchester

The British Westinghouse Electric and Mfg. Co. Ltd., Trafford Park, Manchester



*·075 sq. in. Cable, Class 202, Paper Insulated, Lead Covered, Served, Steel Tape Armoured and Served.*

# HENLEY CABLES

EVERY year we manufacture tens of thousands of miles of small electric wire insulated with Vulcanised India Rubber, in addition to Paper insulated Mains.

WE have separate factories (at North Woolwich and Gravesend, England), each devoting its energies to one type.

YOU should ask us to quote for your requirements in *any* size or type of Electric Cables for use under any working condition.

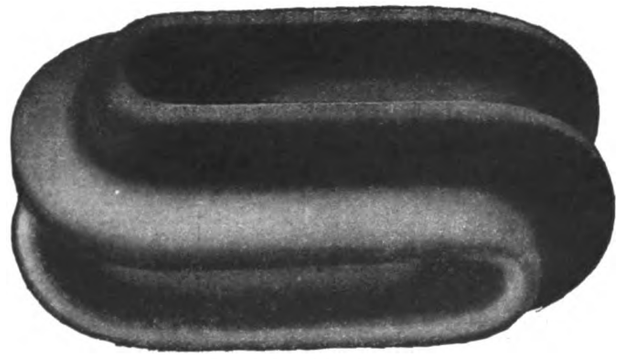
# PRESCOT INSULATORS



Regd. No. 639667/14.

These Insulators are insulators all through and do not depend on the attractive green glaze for their insulating qualities.

They are designed to maintain their alignment when erected, and their mechanical and electrical factors of safety are high.

**The following are particulars of the sizes stocked:**

| | D 4411 | D 4412 |
|---|---|---|
| Working Load ... ... ... | 500 lbs. | 2,500 lbs. |
| Breaking Load ... ... ... | 2,000 lbs. | 10,000 lbs. |
| Flash over Voltage (dry) ... ... | 20,000 A.C. | 30,000 A.C. |
| Flash over Voltage (wet) ... ... | 2,000 A.C. | 10,000 A.C. |

THE STANDARD

Standard insulating specialties are regularly used by the leading electrical manufacturing firms, lighting and power stations, railways, tramways, etc., which constitutes definite proof of their practical utility.

**THE KEY TO THE WHOLE MATTER**

of good insulation is to periodically coat the armatures and windings of your electrical plant with Standard Insulating Varnishes and Compounds and so lock out the possibility of breakdown through the penetration of oils, moisture, acid and dirt. Don't experiment with inferior varnishes. "Just as good" does not spell efficiency. Standard Varnishes and Compounds are unequalled.

Catalogue, and Expert advice where necessary from:—

# Brill "Radiax" Truck.

NO sub-truck. This in itself distinguishes the Brill "Radiax" from other Radial Axle Trucks. At one stroke we dispose of the dead weight and complication of a sub-truck to carry the motor and brake gear. In the Brill "Radiax" the motor casing is utilised to connect the axle to the motor suspension, which is bolted to the transverse member swinging on a king bolt. In this way we secure simplicity and fewer number of working parts. Another outstanding feature of the design is the very simple method in which we attain return of the axles to parallel after leaving a curve. On straight track, the truck frame is resting on the two pins at the base of each swing-link mounted in the yokes. On a curve, the angle of the link causes the frame to bear on one pin. The superimposed car body weight is thus resting on one pin, and an immediate and powerful tendency is set up due to this weight to return the other pin to its groove. Thus the body weight is acting as an automatic factor in securing car stability. This simple, but effective device, permits a free radial movement, and at the same time preventing any cornerwise swinging of the car body. The brake gear has been given special attention, and is operated from the same transverse swinging member, hence the wheels and axles, the motor, and the brake gear swing or radiate as one unit. This "Radiax" Truck is operating in Great Britain with the greatest success. Details gladly sent.

MEMBER INSTITUTION OF CIVIL ENGINEERS, IRELAND;
MEMBER INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS;
MEMBER MUNICIPAL TRAMWAYS ASSOCIATION;
FELLOW PERMANENT WAY INSTITUTION.

## CONTENTS.

FOREWORD.
"What's wrong with the Track?"

CHAPTER I.—CONCRETE FOUNDATIONS.
Defects—Causes of fracture—Method of laying concrete.

CHAPTER II.—CONCRETE MATERIALS.
Road metal—Water gravel—Sand—Clinker sand—Trass.

CHAPTER III.—REPAIRS TO CONCRETE FOUNDATIONS.
Patching—Partial repairs—Complete renewal.

CHAPTER IV.—TRACK DESIGN.
"Follow my leader" policy—Importance of local conditions—Effect on sub-soil—Standard methods—Transverse sleeper tracks—Effect of vehicular traffic and tramway car traffic.

CHAPTER V.—RAIL PACKING.
Pitch and tar packing—Materials—Testing and preparation of materials—Prepared tar—Pitch mixtures—Movement of rails—Packing and floating.

CHAPTER VI.—RAIL LAYING.
Bad rail packing—Rails canted or twisted—Anchoring and padding—Rail expansion and contraction—Curving of rails—Springing of rails—Anchoring new tracks.

CHAPTER VII.—JOINTS, FISH PLATES, BOLTS AND NUTS.
Why joints fail—Dished or hammered joints—Movement at joints.

CHAPTER VIII.—JOINT WELDING.
Methods of welding—Thermit welding—Electric arc welding process—Expansion and contraction—Oxy-acetylene process.

CHAPTER IX.—RAIL WEAR.
At joints—On new tracks—On steep gradients—On wheel tires—Contact of wheel and tire—Leeds special rail section—Railway rails—Depression of check.

CHAPTER X.—COMPOSITION AND MANUFACTURE OF TRAMWAY RAILS AND RAIL WEAR.
Defective rails—Composition of rails—Standard specification—Basic and acid Bessemer process—Sandberg process—Analysis of rails and rail tests—Drop test unnecessary.

CHAPTER XI.—CORROSION OF TRAMWAY RAILS.
Causes of rail corrosion—Exposure to sea water—Effect of corrosive liquid.

CHAPTER XII.—TRACK PAVING.
Effect of vehicular traffic—Cause of loose rails—Importance of quality in sets—Square-dressed setts—Nidged granite setts—Bonawe granite setts—Wood paving—Bedding of setts—Laying and ramming.

CHAPTER XIII.—RECONSTRUCTION.
Removal of tracks—Temporary tracks.

CHAPTER XIV.—SURFACE DRAINAGE AND RAIL MAINTENANCE.
Rail cleaning—Rail grinding—Rail planing.

CHAPTER XV.—SPECIAL TRACK WORK.
Design and standardisation of points—Unbroken main line crossings — Renewable plates — Switches — Mechanism for movable points—Heel pins—Tongue heel adjusters—Guard rails—Spiral tables for curves and junctions—Special track problems.

To all engaged upon track construction, and even to those concerned in road engineering, we can strongly recommend this work.—*The Surveyor.*

This volume is bound to be of the greatest possible value to permanent way engineers.—*The Glasgow Herald.*

It is a thoroughly practical book. Mr. Holt has confined himself to really important matters, and has written on them with the authority that comes of practical scientific experience.—*Yorkshire Post.*

THE Tramway & Railway World
WITH MOTOR TRAFFIC SECTION

Founded 1892. LONDON, DECEMBER 19, 1918. VOL. XLIV.

# STANDARDISATION OF ELECTRIC TRACK EQUIPMEMT.

Work in connection with the electrification of railways is at this moment at a standstill, both at home and abroad ; the large projects for reconstruction and extensions that were in hand had to be summarily stopped owing to the exigencies of war. There is, however, little doubt that all the undertakings proposed will rapidly develop on the conclusion of peace, and open up a large field for the electrical and railway industries. During the present state of inactivity it may be of advantage to review the present chaotic condition regarding the ways and means adopted for the electrical equipment of the track with the necessary conductor for supplying current to the trains.

It is sometimes a difficult matter to explain conscientiously the why and wherefore connected with the adoption of third rail as against the apparent advantage of overhead construction, and *vice-versa*. This peculiarity often strikes the lay mind, and presents itself in the form of a question, " Why is third rail adopted in the North of England, where the climate is the reverse of warm or clear, and the track is heavily congested with traffic, and where embankments, bridges, and generally complicated conditions of track abound, whilst it is still adhered to in a semi-tropical part where the track is practically one level run over flat, open country, with but few bridges and tunnels ? " The use of the third rail under conditions so different would appear to be the outcome of necessity for some sound definite reason. But this is not so, and its justification hardly commends itself to all and every condition of permanent way when overhead construction has so successfully been used. To the practical man familiar with the prevailing conditions of permanent way work at home and abroad an answer as to which system presents the greatest advantage can generally be readily given. There are a few leading points which must naturally be known ; these can best be obtained by a survey of the ground. The electrical equipment of the permanent way has to be dealt with on its own merits, and the question of generation and distribution of power can in this connection be ignored, since the method of obtaining current for third rail or overhead line can make no material difference, whichever system of conductor is used on the permanent way. There are conditions where third rail can be used with advantage, and, on the other hand, there are lines where the conditions are ideal for overhead construction ; hence the strict adherence to either system cannot be advanced as reasonable either on financial or practical grounds.

It will remain a somewhat elusive matter for explanation when plunging from the London, Brighton and South Coast electrification, with its overhead construction, where all obstacles have been overcome on a difficult and complicated track, and then jumping to lines abroad recently electrified under English engineers, where a clear-way for overhead construction presents itself, but where we find the third rail installed. Our system of underground railways is equipped with various types of third rail under climatic conditions not compatible with good insulation, yet on the other side of the equator the most recent electrified underground system is equipped with an overhead conductor of excellent design and simplicity.

The power-house, plant, switchboard, sub-station. equipment, cables, and rolling stock are practically standardised, and can be ordered to suit requirements from a number of reliable leading manufacturers, but no sooner is an attempt made to equip the permanent way with an electrical conductor than a diversion is found with no attempt at standardisation, neither any attempt to improve on the equipment of existing conductors towards that end, and so gain in simplicity with its attendant advantages of manufacture, supply, and erection.

The question of cost is often very misleading. The installation of so many miles of overhead construction or third rail will cost so much per mile of single or double track, but if such a figure is put forward it is as well to know what amount will be involved for modifications, renewals, and disturbances necessary to the existing permanent way, and should this be known, the further and more important item for the maintenance of the respective systems must be ascertained if a true estimate for comparison is to be made.

All this is essential in order to balance the cost fairly for this section of work, and since railways, although run for the public convenience, have yet to consider both investors' and patronisers' interests, and obtain the best return for their respective outlays, the actual merits of the cost, efficiency, and operating ought to bear their full percentage of value.

The track gauges in various parts of the world have been standardised to allow for intercommunication of traffic, and if this were not so, our railway system would lose half its use. The flexibility and advantages derived from interconnection and running of rolling stock from one point to another over different systems was realised in the early stages of railway work, and this facility ought to be extended to the electrified rolling stock. At present the electrified suburban lines are a comparatively small proportion, and it is only the local sections which affect part of the respective railways to which they belong. With the advancement of traffic conditions new extensions will be added, the multiplication of which will rapidly extend, and the demand ultimately arise for interconnection of the electrified systems.

In the light of our practical experience there ought to be no difficulty in arriving at a solution regarding the best standard system for given conditions in this country. The hauling of goods by electric locomotives

Digitized by Google

has been in vogue for some time, and a move towards standardising would be in the right direction. The weight, section, location of the conductors, and method of contact should be the first consideration; the insulation, supports, sectionalising, and bonding would follow. The many points such as anchoring, expansion joints, clearances, protection, etc., could be taken up, but would of necessity have to be adapted to the various locations and conditions to be contended with. The location and clearances of the conductor, whether overhead or third rail, will have to be treated the same way as the track, and that is to be set to a standard gauge for the conductor position relative to the gauge line of track, so that oncoming rolling stock will obtain and work under the identical conditions and range for their contactors.

The leading features to be considered for third rail construction are:—

Dangers to workers on the line and derailments.
Space occupied on track at special work.
Obstruction to re-ballasting and packing sleepers.
Expensive cable work at junctions and crossings.
Complication of continuity bonding, where electric signalling is in operation.
Gaps in conductor rail not spanned by motor coach shoes.
Alterations to station platforms, level crossings.
Installing special sleepers for insulators.

For overhead construction:—

Obstruction to clear view of signals.
Space necessary for erection of columns and bridge hangers.
Head room and insulation in tunnels.
Removal of overhanging telephone wires.
Special supports at bridges and stations.

It can be taken that the cost of third rail work is considerably below that of overhead construction, yet conditions may be such that the advantages of overhead construction are of sufficient importance to more than justify the additional expenditure.

The conditions and permanent way may present ideal conditions for overhead work, and considerably reduce the cost of erection, but at the same time involve expensive alterations for the safe installation of third rail, and so materially minimise the difference in cost and give the advantage in favour of overhead work. Of course the fact of having the track free from a live rail, and the line accessible at all times, is always a great point in favour of overhead work, and one so much appreciated by those whose business it is to maintain the permanent way.

It is readily understood that the actual capital expenditure for overhead work may be considerably in excess of third rail, but the all-important item of maintenance for track will be increased owing to the presence of the third rail. This is obvious, since repairs cannot be carried out with the same facility, therefore the additional cost of upkeep might justly counterbalance the interest on the extra capital expenditure on overhead construction.

Although the cost, maintenance, operation, and efficiency would all bear a part when standardisation was under consideration, these points should present no insurmountable difficulty when endeavouring to arrive at some decision towards conformity, and so get into line with advancements already made in other directions of railway electrification. It is not possible to be emphatic on such a technical subject, but with the aid of men who have actually designed and been through construction and running of electrified lines, a speedy summarisation of facts could be assembled. It is necessary to eliminate personal interests if any value is to be attached to the conclusions arrived at.

There is no doubt of the success derived from the electrification of suburban lines either at home or abroad. We therefore have the gratification of knowing that we are dealing with a subject of the first importance. Its successful working consequently merits every consideration. The traveller or capitalist is perhaps not so inclined to investigate the pros and cons of the various systems employed, since as far as he is concerned the results are good.

In view of the big openings for this work, which there is every reason to believe will form a large branch of engineering in the near future, some review of the many and varied systems in use is essential if any advance is to be made towards standardisation of track equipment. As a step in this direction a comparative study of third rail design and arrangement is presented in the following article.

## THIRD RAIL DESIGN FOR RAILWAY ELECTRIFICATION.

By E. Capone.

In selecting the design of a protected steel rail to act as a conductor and at the same time give a good contact surface for the collection of current by a moving train, several important features have to be considered, and it may be of interest to review some of the designs in use and to compare the advantages of the respective types. A selection of the many sections in use has been made for illustration, and those presenting a large variety in design are shown, so that the contrast may give additional opportunity for comparison. In reviewing the nine designs given in the illustrations, it will be seen that some are for top, some for under, and some for side running contact. The top running system is the one with which we are most familiar, but in the light of recent successful experiences of other types, all are given for analysis.

In dealing with their selection on points of merit, it is advisable to classify the leading features which make for the development of a sound practical design of conductor rail. The points to be chiefly considered are:—

1. Space occupied on permanent way to be as small as possible.
2. Distance from rail to earth to be at least 5 in. for insulation purposes.
3. Protection to be efficient and to prevent possible contact.
4. Section to allow good mechanical attachment for protection, bonds, and anchoring.
5. To present a good wearing and contact surface.

Before subjecting the various designs to an analytical treatment, it might be as well to review the considerations bearing on the practical side, which, all said and done, is the main thing desired.

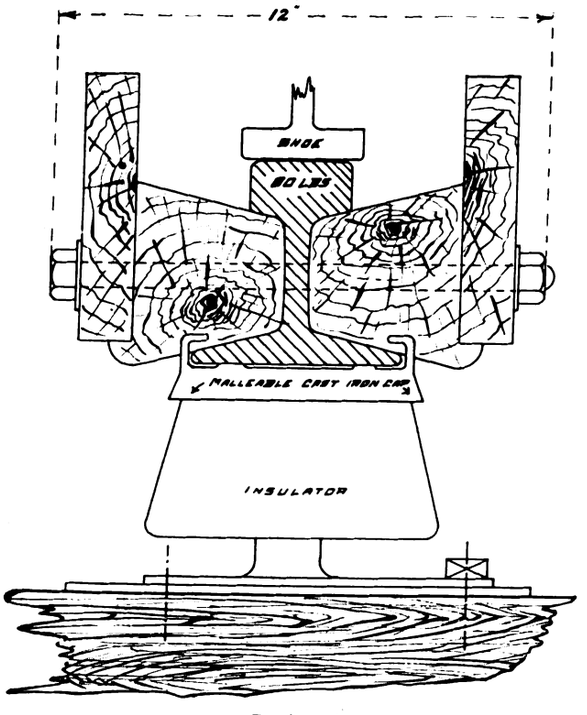
The maintenance of insulation to earth has in working been found to present no formidable obstacle, provided that the insulators are of porcelain and of solid type, provided with one lip or petticoat so as to permit the insulators being washed with the rain, and that all metal parts are reduced to a minimum in order to obtain the maximum creepage surface possible. For instance, it has been found in practice quite unnecessary to have heavy caps and bases cemented on to the insulators; these are so much waste metal, and act as an additional element of danger. Again, the old idea, as shown on Design A, of forming the lugs on the insulator as a means to prevent the conductor rail moving up and down is needless; in fact, it adds to the difficulty of assembly and increases the breakage of insulators. The ears should be vertical with rounded edges, and of such a height that on the depression of

Digitized by Google

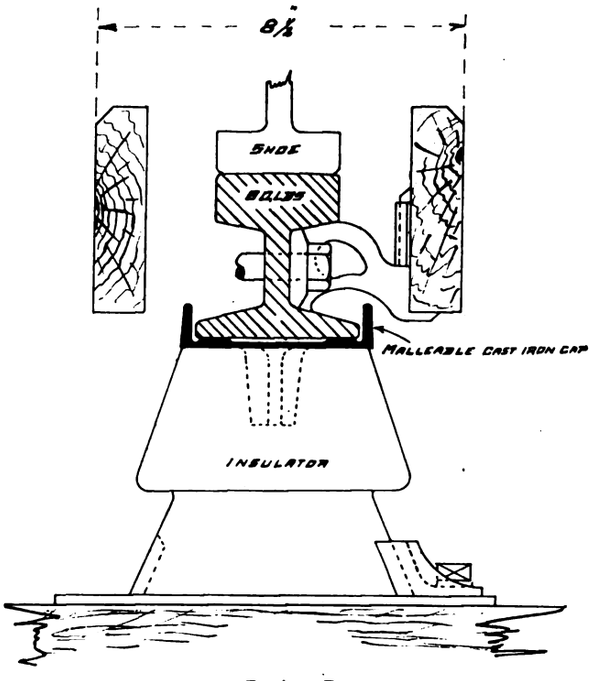
the sleeper with passing traffic, they still leave the lugs high enough to prevent the conductor rail riding on to the top of them.

The effective design of wood protection for affording safety against inadvertent contact and at the same time allowing a liberal clearance for the collector shoe and load gauges involves considerable forethought. The design adopted should be so arranged that the lengths and fittings are interchangeable, to enable repairs and renewals to be rapidly carried out. This point is of importance when considering the rapidity with which such work has usually to be done.

To standardise lengths and make fixed spacing between clamps and brackets is the first point to be aimed at; and whatever work is involved in the preparation of a practical system for interchangeability is amply repaid by the expeditious way in which repairs and renewals can be carried out. Clamping bolts, brackets, and nuts should have no direct contact with the rail and should not protrude. Recesses in which dust or rain can accumulate should be avoided. These many points are of importance if the maintenance work



Design A.



Design B.

is to be kept down. These remarks apply to the special protection for ramps, expansion joints, and terminal covers. On several installations considerable pains were taken in testing and trying various forms of protection, and the work so expended enabled a compact design to be developed with good insulation and standardisation of parts. Various classes of material have been tried for use as a protection, but they either cost too much or the manufacturing difficulties were such as to prohibit their use. To preserve the life of the timber and fittings, they should be thoroughly creosoted before and after assembly in the shops, and each length should be tested to standard templates previous to being sent out.

The question of conductivity depends on the hardness of the rail, and the importance of conductivity varies with individual ideas. Generally speaking, the resistance of conductor rails is 6·5 to 8 times that of copper. This is considerably softer than the track rails, which have a resistance of 11 to 12 times that of copper. The analysis of conductor rails varies almost directly with the number of lines electrified; but it is as well to remember that it is not economy to sacrifice wearing qualities for the sake of a small percentage of gain in conductivity.

From observations of the life and conductivity of existing rails, valuable assistance might be obtained in arriving at a decision as to which gives the best results. Some rails can be observed to flake away in large pieces and bestrew the track with sheets of rust; this is an item that tends to reduce the conductivity and causes shorts on the line. The painting of rails with a preservative compound is not very nice for those who handle them, but it effectively deters corrosion for years.

The punching of holes for bonds and fish-plate bolts is usually done at the works, the bond holes being $\frac{1}{16}$ in. smaller than required, leaving sufficient metal for reamering out on site.

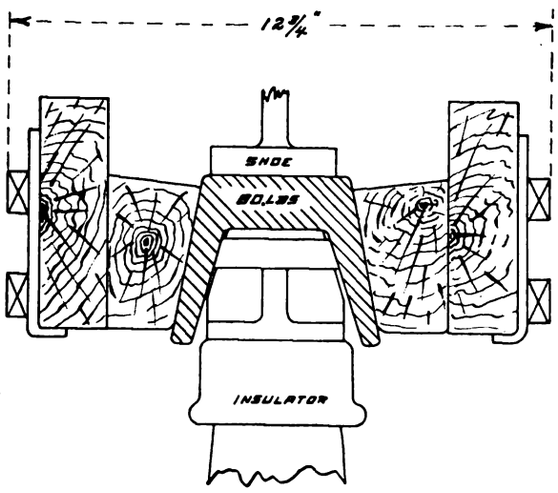
From the illustrations it will be seen that there is a considerable variety in use, but as yet no particular design can be looked upon as a standard. Not until the needs involved in conductor rail construction are taken up as an engineering problem will any advancement be made towards standardisation; the number and importance of the considerations bearing on this matter will vary more or less in accordance with individual ideas. The several designs illustrated enable an interesting comparison to be made. Leaving out the question of cost and maintenance, and confining our attention to the practical advantages which the various designs present, we can formulate some idea of the improvements made and their value in practice.

Design A is the usual Vignole type of rail generally adopted. It has the advantage of being a standard section, admits of easy bonding, fishing up, and gives a good clearance for the insulator. It is also well balanced on insulators and allows for mechanical attachment for anchorage. The drawbacks of this design are obviously the large overall dimensions encumbering the permanent way, and the wide opening exposing the conductor rail. This design can be considered to fail on conditions Nos. 1 and 3.

Design B is a considerable improvement on "A." This design complies in all respects with the conditions

Digitized by Google

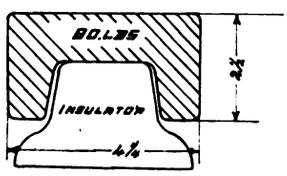
and would appear to be the best for the top-running system; it remains to be seen whether any of the under-running systems are to be preferred. The Design B economises space by 4 in. and at the same time gives a good contact area. It has a greater clearance to earth, and excellent advantages for mechanical attachment, the cap is of light dimensions, and the lugs are of the latest design; the protection is standard and detachable.



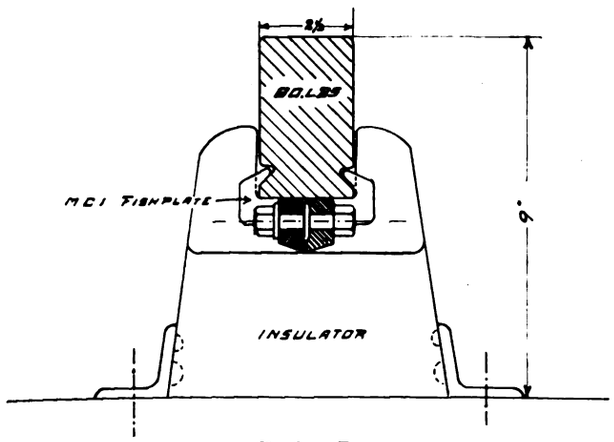
Design C.

Design C is again of large dimensions, and like "A" takes up far too much space. The conductor rail is exposed, and it covers up the insulator, which is most undesirable, as it allows the caking and accumulation of dirt. This design does not comply with conditions Nos. 1, 2, and 3.

Design D is similar to "C," only presenting a wide contact surface, and at the same time exposes a large unprotected surface; it has been used unprotected



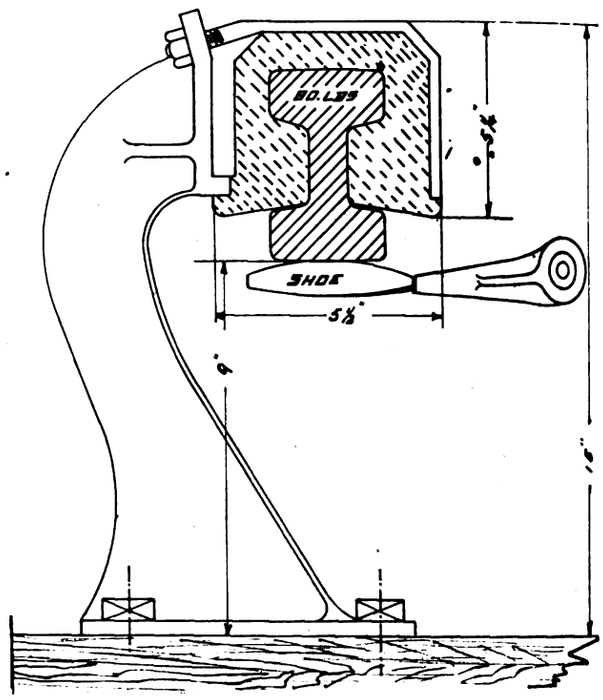
Design D.



Design E.

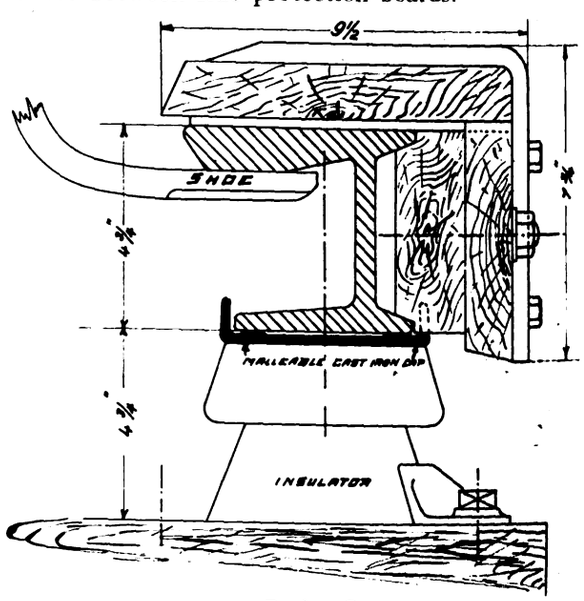
where, owing to special construction of bridges and track, a shallow rail is necessary, in order to obtain sufficient clearance to earth, or to keep within load gauge of coaches, but it cannot be seriously considered for extensive railway electrification in view of the other designs. It fails as to conditions Nos. 1, 2, 3, and 4.

Design E. This is a very compact section, and has many advantages, but the drilling of bond holes through 2½ in. of metal is a great drawback. There is also a tendency for the rail to whip and become top-heavy. The protection would be similar to type "A" or "C," hence the design can claim no special features.



Design F.

All the above designs are for top-running contact, and to obtain the necessary clearance for the shoe the width of rail and shoe combined must not be less than 6 in. This is on account of the many side movements to be allowed for, and the side play or horizontal movement should be at least 4 in., allowing 2 in. contact with rail. This imposes a corresponding distance between side protection boards.



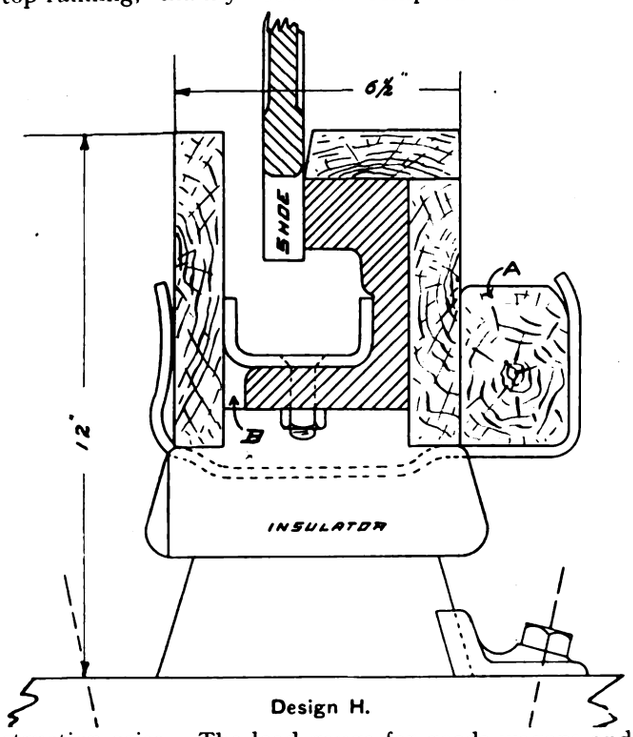
Design G.

The side boards are 1¼ in. to 1½ in. thick, which, added to the 6 in. clearance in between them, means an overall dimension of 8½ in. as in Design B, but this dimension is often exceeded as shown in Designs A and C. The exposed contact surface necessary for top-running is undesirable, as it is a constant element of danger; especially is this so when protection boards are placed so very far apart. To obviate this trouble.

Digitized by Google

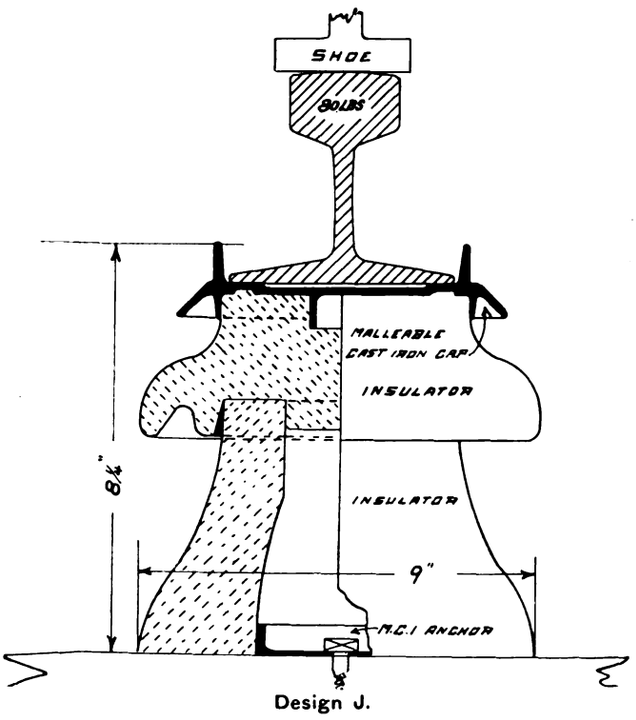
various designs of under and side running contact systems have been used, and it would appear that considerable improvements have been made.

The under-running types are not so numerous as top-running, mainly because complications of con-



Design H.

struction arise. The load gauge for goods wagons and locomotives has to be cleared, and to erect brackets to support a conductor rail is usually impossible under the average conditions prevalent on our permanent ways.



Design J.

Should there be room between tracks at some point to allow brackets to be erected on sleepers or special posts, the projecting shoe would be such as to form a big element of danger. It is obvious that cumbersome supports for a suspended conductor rail at most junctions and stations would hardly appeal to the permanent way engineers.

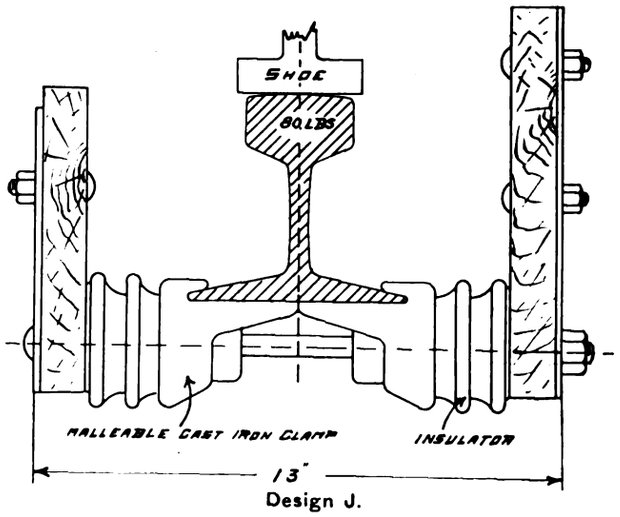
Design F is one form of under-running, and from the illustration one can see that it would be impracticable for use on our railways; it is not feasible, as it necessitates brackets.

Design G is the most recent type of under-running conductor rail and one which has been lately installed on some large suburban railway systems. The drawbacks of the top-running rail have in this design been eliminated, and the advantages which can justly be claimed for it are compactness, protected contact surface, good insulation, and safety. The practical advantages in the use of this rail have been demonstrated under trying conditions, and the fact that the insulation and smooth running have been in no way affected is a most satisfactory testimony on its behalf.

There are many points to be considered besides the actual section of a rail, such as expansion, creepage, anchoring, bonding, ramps, and sectionalising, etc., but given the advantage of experience, there are no difficulties to contend with that cannot be overcome.

Before leaving this question, it is interesting to note Design H, which illustrates a side-contact system successfully used in this country. This rail is electrified at 1,200 volts, and it will be observed that there is complete protection to conductor rail and also that there are no metal parts or attachments to the conductor rail; all supports for protection are by means of clamps. This design has a large range of adaptability and is eminently simple in construction. The wooden key A is used for clamping up the sides of the protection but leaving a space at B for drainage.

Design J may be of interest, as it is used for 2,400 volts, a somewhat different proposition to the usual voltage employed. The conductor rail is carried on



Design J.

a M.C.I. cap, mounted on a double section insulator. The lower section of the insulator drops over a M.C.I anchor bolted to the sleeper. The method of supporting the protection boards is unique and well designed, and might (in a modified form) be applied with advantage to systems employing a similar design of rail and protection. Here again we have a top-running system with a wooden trough 12 in. wide with a live rail exposed in the centre. Of course, the use of a fourth rail as return minimises the danger, but to encumber the track still further is out of the question, especially where pneumatic signalling is in use.

Broadly speaking, it would appear that the choice of design from these illustrations should rest with Design B for top-running and Design G for under-running. These designs best comply with the conditions most desired. Undoubtedly future work will give the opportunity of further improving them.

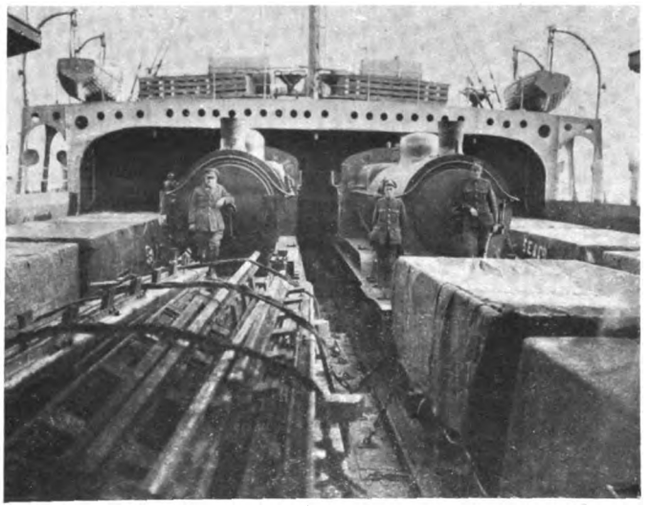
## THE CHANNEL TRAIN FERRY.

The war has brought with it numerous innovations. With many of these the nation will gladly dispense at the earliest possible moment, but there are others which will be welcome to remain. One of these is the cross channel ferry, two of which have been established, one between Southampton and Havre, and the other, with which this notice is chiefly concerned, between Richborough in Kent and Calais and Dunkirk. The scheme for such a ferry was approved by the Government early in 1917. The construction of the necessary port occupied about a year and the ferry has been running for about ten months. It has performed a very valuable war-time service and will continue to play an important part in post-war operations. Nearly 20,000 ten-ton railway wagons or their equivalent and nearly a quarter of a million tons of transport have been carried by the ferry.

The idea of a cross channel ferry is, of course, no novelty to readers of this journal, who are acquainted with the plans that the Channel Ferry Company have for many years endeavoured to carry out. Largely owing to lack of co-operation on the part of the railway



**Trains on a Channel Ferry Boat.**

companies, those plans were still unrealised at the outbreak of war. Soon after, however, the project was taken up by the War Office, and on further investigation the Government, prompted by the stern necessities of the war, ordered the carrying out of the scheme. When peace is declared it is to be hoped that the Channel Ferry Company's plans will at length be realised, and that permanence will be given to the undertaking, which will add to the speed and convenience of the Continental services from London, both for passengers and goods.

The train ferry is in no sense an experiment. It has long been in use with complete success in Canada, the United States, and Scandinavia. It is also proposed to establish a train ferry across the Mediterranean from Marseilles to Algiers, a distance of about 750 miles, and one has been suggested for the sea passage from England to Ireland.

For the cross channel ferry three boats were provided. These are approximately 360 ft. long, with a breadth of 60 ft., and a draught of 10 ft. The speed is 12 knots. Each boat has four lines of track, the total length being sufficient to carry 54 ten-ton wagons or their equivalent of other rolling stock. Communication with the shore is made by means of a bridge, which can be raised or lowered to the level of the train deck, which varies of course with the state of the tides.

Trains run direct from the South Eastern and Chatham Railway system at Minster over the sidings at Richborough right on to the main decks of the ferry steamers. By a simple arrangement of chain locks, the trains are kept securely in position and on arrival at the French port proceed direct to their destination. On the first occasion when the ferry was used, the steamer carried 54 trucks, and in 20 minutes after arrival at Calais the trucks had been marshalled into trains and were *en route*.

The port depot for the train ferry is entirely new, having been commenced at Richborough a little over two years ago. Prior to that, beyond a few shepherds' huts and a disused gravel pit and wharf, the site, which now occupies over 3½ square miles of the marshes between Sandwich and Pegwell Bay, was practically barren. Now it is a buzzing hive, for here the Inland Waterways and Docks Department of the War Office have built an up-to-date military port, replete with wharves and cranes, barge building yards, and a depot capable of accommodating 20,000 men, and with a terminal for the first train ferry ever run from these shores. From this port has radiated traffic to all the battle fronts of the war, and from it have also gone thousands of officers and men to undertake inland water transport in spheres as far afield as Mesopotamia and Salonika, and, most recently, to the Murman coast. From December, 1916, to the end of September of this year, by its barge service alone, it had carried to France 1,136,000 deadweight tons of war material comprising ordnance stores, guns, ammunition, army service stores, royal engineering stores, hay and straw, foodstuffs, hospital stores, aeroplanes, and even such products of modern defensive warfare as "pill boxes." To maintain this service at highest pressure, 232 specially designed barges capable of navigating on French and Belgian canals and waterways have been in commission together with a fleet of 50 tugs and five 1,000-ton steel barges. On one day in August last over 6,000 tons of war material was sent overseas by barge from this port alone, some 32 barges being engaged in the transit.

### What the Train Ferry has Done.

To the credit of the train ferry, which has been in operation for barely ten months, there is a deadweight tonnage of over 160,000, a very creditable performance when an analysis is made of the character of the traffic. By this ferry huge 14-in. guns on railway mountings, some weighing nearly 300 tons each, new locomotives of over 90 tons, 6,200 new war department trucks, 328 brake vans, nearly 700 tanks, 12-in. howitzers, aeroplanes, etc., besides whole train loads of stores, were run directly on to the steamers' decks from the English railway system and off on to the French railway system, thus obviating the loss of time in shunting, unloading from trucks, and reloading and unloading so far as ships are concerned. A second train ferry is run by the I.W. and D. from Southampton to Dieppe, and, although the stretch of sea between the terminals is much greater than that between Richborough and Calais, the traffic figures are very creditable. The combined exports and imports by this means of transport have justified the policy of the War Cabinet in embarking on this venture. The I.W. and D. is particularly and perhaps justifiably proud of the achievements of the system.

When the scheme for establishing a war port at Richborough was first decided upon in the late spring of 1916, there was no provision for this ferry. To transform the stretch of marshes into an up-to-date military port was by no means a small task. In 1915

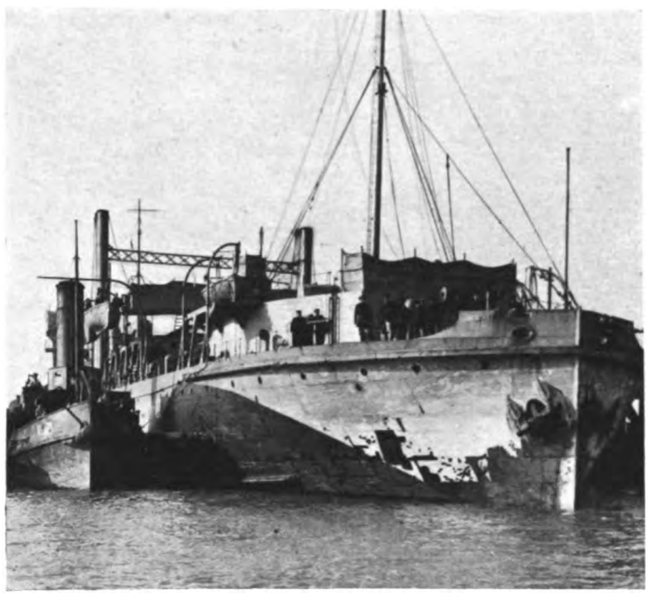
Railway Sidings at Richborough—The Approach to the Ferry is Seen in the Foreground.

Digitized by Google

and the early part of the following year an inland water transport service of barges was in force from Dover to the northern French ports, but owing to restrictions imposed by the fact that it was fast becoming an important naval base, and certain difficulties as to tide and want of store accommodation, it was found imperative to obtain some suitable base upon the south-east coast within easy reach of France, capable of being quickly brought into use in connection with inland water transport operations. The choice fell upon Richborough, the sheltered position of which offered not only protection from the weather but was thought to afford comparative security from enemy attack. That this opinion was well founded is shown by the fact that never once did enemy aeroplanes damage the depot. It may also be mentioned that not one of the 10,000 barges which put out has been lost by enemy action.



**The Bow of a Channel Train Ferry Boat.**

June, 1916, saw a start made on the construction of the port, one of the first steps taken being to dredge the River Stour, widen it, and divert its course by a clean cut through the marshes of nearly a mile. Where it was possible at low tide for an athletic man to jump across it, the river is now 350 ft. wide, opening out to 500 ft. for the train ferry wharf for some distance from its mouth. Mud and gravel excavated from the river bed have been utilised in land reclamation, while the contour of the site has been reduced to a dead level over the whole 3½ square miles. In addition there are 80 miles of sidings, a large wharf nearly a mile in length fitted with electric overhead cranes, three camps, "Kitchener," "Cowan," and "Robertson," composed chiefly of huts built of reinforced concrete with gravel excavated from the site, an up-to-date barge-building yard, from which 132 fabricated barges of special design have been launched and five barges built, with machine shops, forges, compressor houses, etc., traffic sheds, power stations, and many other buildings which make the depot complete. All these works were carried out by I.W. and D. sappers, superintended by skilled civil and mechanical engineering officers with experience in harbour construction, assisted by a competent staff of N.C.O.'s, the whole being brought into a state of efficiency within a short space of 15 months.

For the working of railway and barge traffic, officers and men skilled in that form of transport were enlisted. On the network of railway tracks at the back of the wharf, approximately 540,000 trucks have been run, involving a mileage approaching 65,000. At the wharf tonnage has been handled with surprising celerity. In August last the tonnage handled per man per hour at Richborough averaged ·89, which is probably better than any port in the United Kingdom. Statistics show that this level was maintained, the whole personnel realising to a man the necessity for putting forth every ounce of effort to keep the armies at the front supplied.

Of the many-sided activities at this port it is impossible to deal in detail; suffice it to say that a general air of efficiency pervades the whole organisation. Working with a highly organised staff at the War Office, first controlled by Brigadier-General A. S. Collard, C.B., C.V.O. (now Major-General), and since May, 1917, by Brigadier-General A. S. Cooper, C.M.G., late general manager of the Nigeria Railways, the camp and depot at Richborough have been under the charge, since the construction was commenced, of Brigadier-General A. J. Allen-Williams, C.M.G., chief agent and engineer for the Hong Kong Harbour Works and Construction, and his staff of marine, traffic, and mechanical engineering experts. With this undertaking should also be associated the names of Sir Guy Granet and Sir Sam Fay, successively Director-General of the Movements and Railways Branch of the War Office; also Mr. J. Percy Clarke, late general manager of the Buenos Ayres Great Southern Railway, and latterly Mr. Oliver R. H. Bury, late general manager of the Great Northern Railway, the last two gentlemen having given most valuable assistance as hon. deputy directors of the Inland Waterways and Docks Directorate. To all these and the personnel working under their direction congratulations are due for the success of this remarkable and valuable enterprise.

## AERIAL TRAFFIC.

### Plans for Training Engineers and Mechanicians.

Under the auspices of the Government a project is being planned for the world-wide transport of passengers and mails by an air service. In conjunction with the Aeronautical Institute of Great Britain, the Ministry of Labour has inaugurated plans for preparing ex-officers and men of the service to fill posts in connection therewith.

Mr. Blin Desbleds, the secretary of the institute, has made the following statement regarding the project:—

"Apart from the Royal Air Force, there will be many openings for airmen and mechanics in the new service after the war. It is proposed to establish routes to various parts of the world—even to Australia—and there will be many stations where aeroplanes may be overhauled, refuelled, and changed for a fresh machine. At these stations will be needed men experienced in every branch of aeroplane construction and repair. Specialists, such as are many of those in the Air Force to-day, will not suffice. There will be great scope for aeronautical engineers and mechanics, but they will need to be thoroughly trained. With this object in view, the Ministry of Labour and the institute have arranged for special classes which are already open, so that the men who would adopt the new career may prepare. Aspirants would do well to prepare now, for the aerial service will soon be more than a project.

"The routes will be overland as far as possible, but in some cases this will be impracticable, as in a trans-Atlantic service. Unless aerial science reaches a stage of efficiency such as will obviate the difficulties of long over-seas flights, floating stations may be necessary. They are certainly possible. The advantages of an aerial passenger and mail service may easily be imagined. Consider, for instance, the present postal service to South America, a country that will be still more important in international trade after the peace. At present only about seven exchanges of letters may be made in a year between business men; the aerial post will enable them to make something like twenty-five."

It is reported from Germany that regular air traffic was commenced there on December 7. The machines used have an average speed of 80 miles per hour, and the journey from Berlin to Cologne will take about 4½ hours. The aeroplanes will carry mails and passengers, the rate for the latter being about 4s. per mile. A new large aeroplane is being constructed by the Schutte-Lenz Company which will carry about 40 passengers—more than a top-deck motor omnibus.

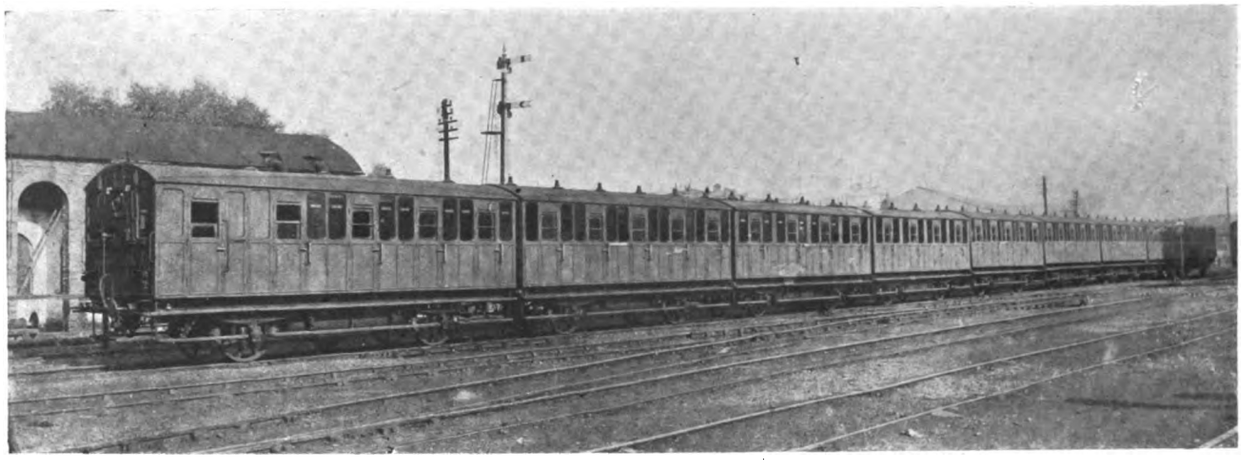
# THE DISTRICT RAILWAY JUBILEE.

(CONTRIBUTED.)

In the stress of war's happenings a matter of railway interest that passed almost unnoticed is the fact that the year 1918 marks the jubilee of the Metropolitan District Railway. Few indeed would recognise in the electrified line of to-day, with its capacious and well-lit stations, the old "steam" District of the past with its smoky tunnels and subterranean vaults. If



A District Railway Steam Train—The Old Order which was Changed in 1905.

testimony is needed to the popularity and appreciation of the present services it is readily obtainable from a study of the daily traffic on the line. Opened on October 1st, 1868, the promoters littled dreamed of the ramifications which would become part of the system. From a small section of track between High Street, Kensington, and Gloucester Road, the District has now extended into a vast network of lines serving the outlying suburbs of the east and west of London, as well as providing interchange facilities for reaching every part of the metropolis. In the maximum train service, too, there has been an increase of from 18 trains an hour in steam days to 43 at the present time, and a corresponding reduction in running time on a typical journey—Ealing to Mansion House—from 50 to 27 minutes.

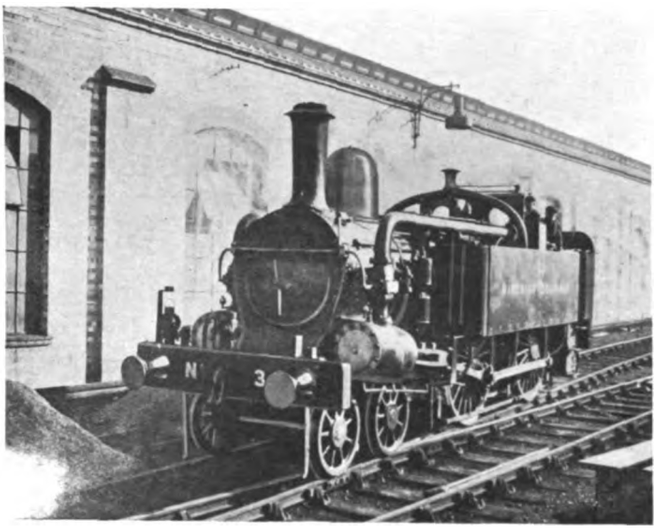
Although the line was opened in 1868, it was worked by the Metropolitan Railway until 1871, when the District took over the line and acquired their own staff. From inspection of the first working time table it would appear that eight locomotives were employed. At the conclusion of steam running there were 54. The service in 1871 was five minutes in each direction, 12 trains per hour, half working between Moorgate and Mansion House, and half between West Brompton and Mansion House. When the London and North Western Railway and Great Western Railway in 1872 began working over the District system, a half-hourly service to and from each system was arranged, but from the time table it would appear that both companies' trains were booked to run at the same minutes after the hour. Although the times were amended at a later date, history does not say how the initial difficulty was overcome.

Ten-Car Electric Train—Metropolitan District Railway.

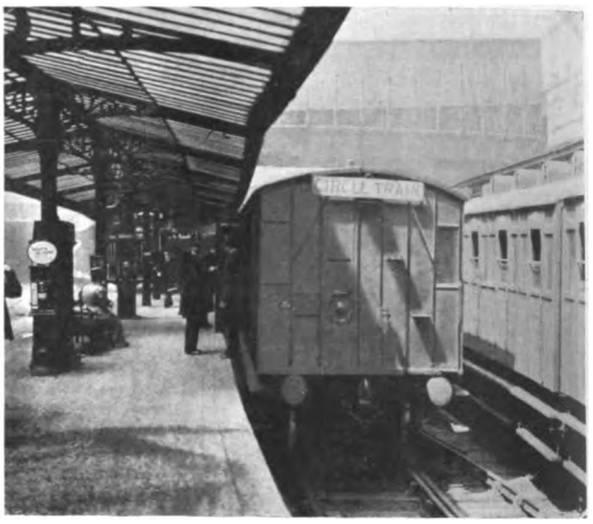
In 1883, there was a service of express trains on the District to Windsor from the Mansion House, the

Digitized by Google

trains running fast between Ealing and Slough, and many incidents are recorded of the District train drivers endeavouring to keep pace—with resultant oscillation of the passengers—with the G.W.R. broad gauge trains on the main line. The Windsor service was discontinued in 1885. If this rather unwise withdrawal had not taken place, there might have been



A District Railway Engine.



Steam Trains in the Old Mansion House Station.

possibilities of great development. In 1902 District engines and trains were also run as far as Upminster on the London, Tilbury, and Southend Railway. Now through corridor trains run direct from Ealing to Southend-on-Sea.

For the District Railway, the traffic-carrying problem is not an altogether new one, as various notable events, such as Queen Victoria's Jubilee in 1887, the omnibus strike in 1891, the wedding of the present King in 1893, the Diamond Jubilee in 1897, and the Coronation celebrations of 1902 and 1911 taxed their resources to the uttermost. The company were even sued at the time of the last Coronation by an ex-police constable who had his watch stolen at Victoria. He claimed for the cost of the watch and made the plea that "insufficient arrangements" were made by the railway company to cope with the traffic. Mr. W. E. Blake, the present superintendent of the line, gave evidence on behalf of the company, with the result that the plaintiff lost his case. The crowds using the line in connection with the Oxford and Cambridge Boat Race and the Wimbledon Camp will also be in the memory of a good many people.

Since the war, in addition to handling unprecedented traffic with a depleted staff, the District and Tube Railways have rendered a great public service in sheltering a large proportion of London's population during air raids.

Mansion House Station of the Electric Traction Era.

The transition stage from steam to electrical working was a time of great anxiety for the officials, as in addition to being somewhat of an experiment, a number of steam trains were interspersed with the electric, and very little time had been available for training the locomotive drivers to handle the electric trains. Neither had there been much opportunity for trial running.

Digitized by Google

The total cessation of steam working on July 1st, 1905, and the introduction of electrical working were marked by a series of mishaps. First of all, the positive rail was torn up on one portion of the line by a passing train, and a controversy arose as to whether this was caused by a Metropolitan or a District train. This accident brought the service to a standstill on certain sections at 8 o'clock in the morning. Later, there was a severe rainstorm which succeeded in totally disabling the whole electric service owing to the floods which arose. Motormen had to be sent back to Lillie Bridge yard to bring out the steam locomotives, and by midday a normal steam service—including some special trains for Lady Jersey's garden party at Osterley—was in full swing. On July 2nd, the electrical service was restarted and, from that day onwards, with the exception of minor mishaps and one rather serious failure of current at Chelsea, there has been no complete cessation of the service.

That it was not altogether easy running for the mechanical staff is evident from many of the peculiarities which had to be dealt with in the early rolling stock. Before electrical running was universal, and while a number of steam trains were still in operation, a great deal of trouble was experienced with the wheels of the steam trains, caused by the rails being cut in an unusual manner by the electric trains. The old steam road was not strong enough for the new stock, and the wear on the track made it an exceedingly difficult task to prevent derailment of the District engines.

Of the original 1871 staff the number still remaining can be counted on one hand. They include three station-masters—at Acton Town, South Harrow, and High Street, Kensington—and two drivers. Of the officers of the steam road the only one remaining in harness is Mr. W. E. Blake, the superintendent, who joined the District Railway staff as a boy in the chief inspector's office in 1887. He subsequently rose to be chief staff and then chief time table clerk. When Mr. John Young was appointed general manager prior to the electrification, Mr. Blake was chosen for special duties in connection with the conclusion of steam working. After the installation of electrical working in 1905, he was appointed operating superintendent; two years later—when Sir Albert Stanley was appointed managing director of the companies—he became superintendent of the line. On the reorganisation of the managerial administration of the London Underground Railways and the London General Omnibus Company in 1915, Mr. Blake's duties were again enlarged and he became superintendent of the Tubes in addition to the District Railway, under the operating managership of Mr. H. E. Blain.

**Development of Transport.**

It is a long lane that has no turning, and at last we seem to be within sight of the end of obstruction and stagnation on the one hand and senseless competition on the other, which have for so many years obstructed transport organisation and development in this country. As regards railways and canals, and with respect also to tramways and the development of electric power supply, projects of innovation have now been set on foot that can hardly fail to result in real progress. The war—that bash on the head, to use the expressive phrase employed by Mr. Lloyd George—has been effective in arousing both the Government and the people generally to the necessity for reform and development. The terrific experience of the war has indeed awakened our statesmen to the urgent necessity of progress. The earliest symptom was the appointment of a number of experts and business men as committees to deal, among other things, with matters relating to transportation and electric power supply. The reports of these bodies issued from time to time during the past year have proposed sweeping changes on lines which have long been advocated by the manufacturing and commercial community. It is apparent from the statements of the Coalition leaders during the General Election campaign that they have given careful consideration to the reports of these committees. Chief credit for bringing to the front a vigorous constructive and development policy is due to Mr. Lloyd George. By his work at the Ministry of Munitions, and by his energy and initiative as Prime Minister, he has shown that not only can he appreciate the necessities of the situation, but that he has the driving force to get things done. Among matters which he has promised shall be taken in hand is the improvement of the whole transport organisation of the country. This is to be developed by State aid and control. The railway system is to be unified under some form of nationalisation, the details of which have probably not yet been fully determined upon. The proposals will have the sympathetic support of Sir Albert Stanley, the first traction expert and business man to preside over the Board of Trade, who thoroughly appreciates the advantages of unified management. Some indication of the advantages that should be derived from the change may be inferred from the results attained under the war emergency management of the Railway Executive Committee. Satisfactory proof of the feasibility of national ownership and operation of railways is to be obtained from a study of experience in Australia and elsewhere, and those who view the coming changes with disfavour and even alarm would do well not to take too insular views. There is no reason why methods that have been found satisfactory elsewhere should prove unsuccessful here.

**Railway Unification.**

There are far too many railway companies with independent control. The whole system requires unification of direction and management. This unified control should be exercised by a body of highly trained experts, whose sole business it is to provide efficient transport at the lowest practicable cost consistent with the payment of proper wages to the staff and employees, and reasonable interest on the capital involved. How this unification may best be accomplished must be left to the decision of Parliament after a thorough investigation of the whole question

Digitized by Google

in all its relations. But it is already clear that in the serious economic condition that will confront the nation after the war the wasteful management of the railway system as a whole that prevailed before the war cannot be allowed to continue. Competitive services, rival organisations for canvassing for goods traffic, and separate elaborate schemes for each company, all doing the same sort of work and often wastefully overlapping, must be superseded by one general organisation. Preferential rates on imported goods must become a thing of the past. In these and other ways enormous economies may be effected which will help the railways to maintain their financial stability. It is clear that out of existing railway revenues the companies cannot afford to pay the high wages now ruling. As soon as Government control and aid which have lasted during the war are removed the companies will find themselves in a most serious position unless something is done. Wages cannot, and, indeed, should not be brought down. The cost of materials is not likely to return to anything like the pre-war level for a long time. The immediate thing to do therefore is to reduce expenditure otherwise, and to foster and develop the railway business by a unified management which would greatly increase facilities and so develop traffic. Passenger fares may not be brought back speedily to the old peace time level, but the present scales are hardly likely to be maintained. There will be great difficulty in securing higher rates for goods and minerals. Accordingly it is to the economies which may be secured from unification that we must look for aid. It is to unification also that the public must look for greater efficiency and convenience. These considerations would apply whether the railways are nationalised or not. Sound finance and scrupulous fairness to existing interests ought to characterise any scheme which the Government may bring forward, and they may be trusted fully to investigate the whole subject before making concrete proposals.

**Tramway Organisation.**

Sweeping reforms, though of a different kind, are called for in connection with tramways and light railways. Mr. Lloyd George has made a strong point of the development of such undertakings for the benefit of agriculture and for housing schemes. It is many years since the development of light railways for the benefit of agriculture was attempted, but the Light Railways Act has been a failure. The causes are well known, and are remediable by an energetic Government. Parliament can remove existing restrictions, a cheaper form of construction can be allowed, objections from locally interested parties should not have undue weight, financial aid can be provided where necessary. As to the great development of housing schemes, this is only an awakening to facts long known. Some of our urban tramway systems have been extended into surrounding semi-rural districts, and workmen's dwellings have been there erected. For the proper extension of such schemes all the difficulties which beset extensions, especially by companies, should be abolished. As is now recommended by one of the Government's Committees, and as has been urged for years by those who knew best, the Tramways Act of 1870 should be repealed or radically altered. Adjacent tramway systems should be linked together and the construction of interurban lines encouraged. The latter would aid agriculture just as much probably as light railways on private land. The vista of possible development appears almost endless. There is, of course, no suggestion that in the case of tramways and light railways there should be, as in the case of the railways, unified control and management. Whatever extensions take place the tramways of the country cannot be worked as one whole. But there could be a general controlling authority which could see to co-ordination where practicable, which could devise schemes for extensions and linking up, and see that they were put into execution. It should have powers to overcome unreasonable obstruction, and in regard to both existing and new lines it should provide that connections are made with railways and with manufacturers' premises. A great deal of track reconstruction will have to be carried out within the next few years. Would it be too much to expect that the new rails should be provided with sufficiently wide grooves to admit the flanges of the wheels of railway wagons ? That has been done already in some places ; why not in all places where desirable ? The parochial idea about tramways,

Digitized by Google

just like the parochial idea about electric power supply, must be swept away. In both these fields of industry the country might well be mapped out into large areas, each under one control, and each co-ordinated where desirable under the general control already mentioned. All the politicians say that this country is to be reconstructed. No more favourable field for that reconstruction exists than the proper systematic development and co-ordination of tramways and light railways.

## IMPROVEMENT OF TRANSPORTATION.

THE PRIME MINISTER'S PROGRAMME: "INSPIRATION AND CONTROL OF THE STATE."

Mr. Lloyd George is the first Prime Minister who has seen clearly the supreme importance of transport to the national life. But he has done more than this. He has had the perspicacity to recognise that improved transportation is essential to the furtherance of all projects for reconstruction and for the development of agriculture and the expansion of trade and industry. In an important speech, in which he outlined some of the reforms he regards as necessary, he said :—"*There is the problem of transportation, left very largely to chance—railways, canals, roads, tramways—all vital to the life, the industries, the amenities of the people of this country. That problem must be taken in hand under the direct inspiration and control of the State. Electric power, so necessary to industry and comfort—that must be taken in hand. All these problems require thorough, sympathetic, courageous working out. All these questions we must face like patriots and not like partisans.*" It is true that this is a very general pronouncement, and it may be said that it is impossible to carry out all the changes implied in it within any readily measurable period of time. On the other hand, the war has taught us many lessons, and one of the things which experience has impressed upon statesmen and people is that it is quite possible rapidly to bring about vast constitutional and social changes that in pre-war days would either have been impossible or could only be effected through years of political struggle. In any case it can only be to the advantage of the nation that the Prime Minister so clearly perceives the necessity for progress in the means of transportation in this country.

With a well-designed scheme of transport, in which the various services are properly co-ordinated, so that all branches of agriculture and manufacture and trade are served in the most direct and economical way, we shall be able to obtain that great development of our resources that alone can enable the community to meet its obligations and secure better conditions of life than have existed hitherto. It is all to the good that the point of view of politicians has been altered; that doctrinaire theories and party shibboleths have been largely abandoned; that practical common sense and a rapid adoption of means to ends are now more dominating features than they were before the old conditions were destroyed. Naturally the proposals foreshadowed by Mr. Lloyd George are vague; and he anticipated criticism of the programme that he put before the country in his speech at Caxton Hall on November 16 (from which the above quotation is taken) by using these words :—

"When you are appealing to the country there is a vast difference between a programme and detailed plans. Take any election you ever had in this country. I will take two different elections, the first when the Unionists had a great victory, and the second when the Liberals had a great victory—1886 and 1906. The Unionist leader in the one case and the Liberal leader in the other simply gave a general indication of the lines on which they were going to call for action in the new Parliament. There was no attempt to put Acts of Parliament and detailed plans before audiences. It is folly to demand it in this case, and it is not really intended."

Speaking a week later, on November 23, at Wolverhampton, the Prime Minister reverted to the subject of transportation. He said :—

"We have never made full use of our rich coalfields, and I am perfectly certain that by combined effort it would be possible to convert a good deal of that coal into electric power, which will assist in our manufactures and will enable us to provide rural industries. . . . . There is the question of improved transportation, one of the most important questions. This is essential to all other projects. Take housing. You cannot approach re-housing inside a town. Your housing schemes have got in the majority of cases to be schemes outside the town. That is your only chance to get land. . . . You must therefore even in such matters as housing have good services of tramways, light railways, lorries, and whatever enable people and goods to pass along great spaces in order to make use of the surface" of the country. . . . "It is not merely a question of carrying goods cheaply—the food and products of the farmer, the small holder, and the allotment holder—to the market. It is a question of carrying to the farmer, to the allotment holder, what he needs to cultivate his land. With a cheap, quick transportation you can regenerate rural England in such a way that you cannot do by any other means, and I consider therefore that to be one of the most important matters."

In the joint manifesto to the people of the country issued by Mr. Lloyd George and Mr. Bonar Law on November 22 the following passages occur :—

"A systematic improvement in the transport facilities of the agricultural areas must form an essential part of every scheme for the development of the resources of the soil, and the Government are preparing plans with a view to increasing these facilities on a large scale. . . . By the development and control in the best interests of the State of the economical production of power and light, of the railways and the means of communication . . . output will be increased, new markets opened out, and great economies effected in industrial production."

### A "BASH ON THE HEAD."

From these and passages in other speeches it is plain that the members of the late Government have awakened to a number of facts which in peace times were urged on politicians in vain. Mr. Lloyd George, indeed, admitted it when at Wolverhampton he said :—"We got this bash on the head, and it really woke us up at last." No doubt Mr. Lloyd George was thinking of the stories which have gone round of soldiers who were incapacitated in some way—say by deafness or blindness—suddenly recovering their full faculties on accidentally receiving a severe shock.

The bash on the head, namely, the war, has led to many resultant awakenings which the late Government experienced, and which it may be hoped will have had a permanent effect in stimulating reform. Within the last few months there have been issued a series of

THE RT. HON. LLOYD GEORGE

Digitized by Google

Digitized by Google

reports by expert Committees appointed by the Government which were calculated to illumine the most perverse darkness of politicians. These reports (abstracts of which have appeared in our pages) deal with such subjects as electric power supply, railway electrification, and the obstacles (legislative and other) which have prevented the development of tramways and light railways in this country. The last to be issued was a report (summarised on another page) of a Committee appointed to deal with the whole subject of inland transportation. The time left before the dissolution of Parliament was too short to enable the Committee to cover anything like the whole ground involved in its reference; in particular it was quite unable to tackle the subject of tramways, and it recommended that a new Committee should be appointed after the general election. The necessity for the repeal or drastic amendment of the Tramways Act of 1870 had, however, already been pointed out by a previous Committee. The Committee on Transportation were able to put forward some views on the subject of the control and working of the whole railway system of the country, and their remarks on this vastly important subject (which will be found elsewhere in this issue) ought to be carefully studied.

### Railway Unification.

Many authorities in the past have advocated a system of unified control and working of the railways of Great Britain. The advantages, in fact, are admitted everywhere, and they have in the past been brought a little nearer by the amalgamation of a number of railway companies. That great economies and efficiency are possible under a unified system is agreed. It is also admitted that under post-war conditions of high wages and expensive materials there is little prospect of the railway companies working on the old methods being able to pay reasonable dividends to shareholders. The question which has always divided reformers into opposing camps is whether the unified system should be in the hands of the State or in so-called private hands. The socialistic and the individualistic arguments on the one hand and the other still wage war, and the experience which the country has had of a developed bureaucracy is by no means favourable to the railways being owned and worked by the State. There are, however, several alternatives to the project of national operation. There are two methods of unification, one being under private ownership and commercial management, and the other under nationalisation. If the latter were adopted three different methods of working are possible. One is to allow a Government department to manage the railways; a second is to constitute a board of management not directly represented in Parliament; the third is to lease the system to one or more commercial companies.

The Committee on Transport without further evidence were not in a position to recommend which method should be adopted, and they had not time before the dissolution of Parliament to take further evidence. It may be hoped that their labours will be resumed next year. The matter is a crucial one, and there should be no undue haste in coming to conclusions. The Committee should certainly hear evidence as fully as possible, not only from the advocates of nationalisation but from the railway companies and from the traders who are not doctrinaires, but who regard the matter from the business and economic point of view. The case of railway shareholders must also be fully put forward in any further investigation. They are a numerous and important body; it would be interesting to know among other things what percentage of the total adult population of the country are railway shareholders.

In regard to the possibility of unification accompanied by private ownership and commercial management, however desirable that might be from the point of view of maximum efficiency and economy, it is not probable that in these days we shall ever see one gigantic railway company owning and working the whole of the railways of the country. The cry about monopoly, oppression, and so forth would be ceaseless, no matter how well the work was done, unless there was a very full measure of State control. If a section of the public were placated by means of State ownership, then probably the best method would be to lease the system to a company, giving the State such control as might be necessary. One drawback to this arrangement, which applies also to the case of one owning company working under State control, is that there would probably be a frequent clashing of interests and policy as between the State and the company, which would not conduce to efficiency or economy. This, however, might be avoided by a careful definition of respective spheres of authority. The plan would in any case be better than a nationalised system under the dead hand of a Government department, and probably better also than nationalisation under a board of management not represented in Parliament. The latter, however, would be preferable to the former, which would be open to continual pressure in the shape of impossible demands either as to wages or as to rates for goods.

The Labour Party have no fear of a scheme of this kind. In their manifesto "to the people," issued on November 28, they demanded the immediate nationalisation and democratic control of vital public services, such as mines, railways, shipping, armaments, and electric power.

So, at the time of writing, the position stands. In these notes no attempt has been made to argue in detail on the merits or demerits of different schemes; the object has rather been to indicate the present position of matters.

The full consideration by the Government of these methods does not seem to be precluded by the statement made by Mr. Winston Churchill at Dundee on December 4 that the Government had decided on a policy of railway nationalisation. Such a policy may mean much or comparatively little; everything depends on the scheme adopted and on the methods of carrying it out. At the moment the country knows nothing of the details, and if the Government are wise these details will not be determined upon until a thorough inquiry has been made and the whole question in all its relations has been carefully explored.

## RELAXATION OF CONTROL OF MATERIALS.

Dr. Addison, the Minister of Reconstruction, has announced that the position as regards the supply of materials to manufacturers is such that domestic control can now be considerably relaxed. Among the classes of work in the United Kingdom to which materials and producing capacity set free for war work should, so far as possible, be devoted in the immediate future, are the maintenance and repair of existing machinery and plant, and of railways, tramways, and roads, and the manufacture of machinery, tools, and equipment used in the public services. Applications for priority permits and other facilities should be forwarded to the same department as hitherto, and it has been arranged by the Standing Council on Post-war Priority that such applications shall receive sympathetic consideration as the altered circumstances permit.

# FINAL REPORT OF THE SELECT COMMITTEE ON TRANSPORT.

In the latter part of November the House of Commons Select Committee on Transport issued two reports which are of great interest, and which should be read in the light of the recent declaration by Mr. Lloyd George that the State must take a prominent part in the development and organisation of all means of inland transport. The Committee were appointed on August 5 last for the purpose of considering what steps, if any, it is desirable to take to develop and improve the internal facilities for transport within the United Kingdom, to secure effective supervision and co-ordination, and to ensure that such developments and improvements shall be adequate and suitable to meet the national requirements, and of making recommendations.

It may be noted that on August 8 the Committee appointed a Sub-Committee to investigate and report on the facilities for transport offered by the ports and canals of Ireland. The first report of the Committee deals only with the results of this investigation in Ireland.

In their second report the Committee open by referring to the exceptionally wide scope of the reference under which they work, and to the mass of information at their disposal which is contained in existing reports of Commissions and Committees on transport questions.

The report proceeds to deal with the organisation of internal transport agencies under pre-war and war conditions.

## RAILWAYS.

Under this heading the report points out that the railway system of the United Kingdom is the main branch of its internal transport agencies, because it combines the power of dealing economically with heavy traffics over long distances with flexibility of service and speed, to an extent which is not approached by any other system of transport. In this country it is unquestionable that all other forms of internal transport are subordinate and ancillary to the railway system.

The importance of the railway system is shown by the following facts. The mileage of first track open for traffic in 1913 was 23,911 miles. The total mileage of single track, including sidings, was 55,930 miles. In the same year the paid-up capital of the system was £1,334,011,000, the tonnage of goods and mineral traffic originating on the systems of the respective companies was 372,037,000 tons, and on the same basis the number of single journeys by passengers (excluding season ticket holders, who numbered 596,814) was 1,233,057,000.

The history of the main railway system of the United Kingdom has been described as one of amalgamations. It has been one of continuous absorption of smaller units by larger organisations. The recent tendency has been for the larger units in their turn to combine. The tendency has been due to a desire to promote economy of administration. The tendency in favour of combination, presumably up to the point where a single system will have been established, springs from the natural desire of the men who control the railways of the country to carry on the business of railway management in the most efficient and economical manner. This desire is one with which it is impossible not to sympathise. It appears to be inherent in the conditions in which all large-scale modern businesses are conducted, and it is extremely doubtful whether it can or should be resisted. It is obvious that the extent of co-operation at any given moment is only one of degree, and that unification is merely the final stage.

The war has considerably modified the position and methods of working of the railway companies. The changes which have been introduced and the high efficiency which has been witnessed in the working of the traffic by the railways during the war, have been due far more to a patriotic determination on the part of all concerned to do their utmost to assist the country in a time of national emergency, regardless of corporate or personal interests, than to the direct imposition by the Government of its will upon the railway companies. The success that has attended the operation of the railways throughout the war, which has been superior to that witnessed in any other of the belligerent countries, affords conclusive proof both of the adequacy of the arrangements which had been made in advance, and of the capacity of those who have been concerned with their execution.

The management of the railways taken over has been entrusted to a Railway Executive Committee composed in the first instance of nine, and subsequently of twelve general managers who were invited by the Government to serve upon it. The President of the Board of Trade is *ex officio* chairman of the Committee, but the work of the chair is in practice carried out by the acting chairman, who is one of the general managers serving upon the Committee. During the war unification of management of the railways has thus been in operation, but it has not been accompanied by unification of the ownership of the assets of the railway companies concerned.

Evidence has been given by members of the Railway Executive Committee to the effect that if a policy of unification of management, combined with a pooling of assets of the railway companies, were adopted, it should be possible to give the public better service and facilities at less cost to the railway system.

From a purely technical point of view it appears therefore to be desirable that there should be a unification of ownership, not merely unification of management, of the main railway systems, because while unification of management would undoubtedly be a great improvement upon pre-war conditions, and would assist materially to secure more efficient organisation and management, it would not, without unification of ownership, permit of the use of the assets of the combined system to the best advantage, nor allow of the provision of new and costly equipment without constantly giving rise to undesirable financial negotiations and difficulties. Whether the State, or one large joint stock concern, owned the railways would be immaterial from this point of view; the essential conditions are that there should be single ownership and single management.

The position of railway shareholders when the present arrangements with the Government terminate, under which their pre-war earnings on the basis of the year 1913 are assured to them, will obviously be one of great uncertainty. Dividends on the old scale, assuming that wages remain at a level comparable with that now existing, and the volume of traffic returns to its pre-war dimensions, cannot be earned unless either rates are raised considerably or large economies are effected in working. The former course, notwithstanding that the raising of rates might be fully justified in the circumstances, would certainly be bitterly opposed, and be detrimental to the general interests of the community. Large economies, on the other hand, can only be brought about by means of greatly improved methods of administration, and the introduction of labour-saving appliances on a considerable scale. So long as the railway companies remain as separate corporations it will be difficult to apply either method of securing economies to the fullest possible extent.

There are also other circumstances which will make it difficult from the point of view of shareholders to return to the pre-war situation. War conditions of working, and the complete elimination of competition in the public interest, have in many cases revolutionised old-established practices and habits. Traffic has been encouraged to follow unaccustomed routes, the clienteles of individual companies have been disturbed, their ideas have been changed, and the respective goodwills of the various companies have consequently been altered. Difficulties such as these seem to require solution by some process of continued unification.

The above considerations lead to the conclusion that the main railway systems of the United Kingdom should be brought under a unified ownership, and managed as one system, if the question of the improvement and development of the internal transport facilities is to be considered from the standpoint of efficiency and economy, and with due regard to the interests of the proprietors, the railway staffs, and the general community.

## CANALS.

The Committee deal briefly with the subject of canals, and say that in the absence of further evidence which they desired to take had not been able to come to any conclusion in regard to the most advantageous organisation, except that further amalgamation would be advantageous.

## ROAD TRANSPORT.

On this matter the Committee note that no general organisation of road vehicular transport existed in pre-war days. The railway companies are the largest individual owners of road transport vehicles. From a purely transport point of view the conditions which existed before the war were not such as to lead to economical user. The State was not directly concerned, and made no attempt by educational or other methods to influence private owners or users of road transport to combine for the purpose of introducing less extravagant methods. Little was done in this direction except by the large railway and other corporations concerned until the exigencies of the war.

In January, 1918, a Road Transport Board was appointed by the President of the Board of Trade to co-ordinate the work of existing Government departments in connection with road transport; to determine what further measures are necessary to ensure the most economic use of road transport vehicles, and their efficient allocation; and, subject to the direction of the Board of Trade, to give executive effect thereto.

The activities of the Road Transport Board are limited by the duration of the war. Up to the present it has never had occasion to make use of its powers of compulsion. It has established an efficient organisation throughout the country which includes a large number of advisory committees representative of local interests. Its primary object has been to obtain the utmost efficiency of road transport from the existing means available, and its organisation and work have been effective in attaining this object to a very considerable extent. Competition between road, rail, canal, and other forms of transport has been reduced so far as possible where such competition has led to wasteful methods; while the voluntary co-operation of traders and owners and users of transport has been sought for schemes devised in the interests of economy. It has been the aim of the Road Transport Board to increase the efficiency of

Digitized by Google

existing transport facilities without increasing the number of vehicles on the roads.

An important feature of the work of the Board has been the initiation and institution of schemes for the co-ordination of collections and deliveries of goods, and for the provision of return loads where conditions are suitable for such arrangements. It is stated that in all these cases it has been possible to work on purely voluntary lines, and that although the economy effected in each district may appear to be slight, the saving in the aggregate is considerable.

The Committee have obtained evidence from the members of the Railway Executive in regard to the work which certain of the railway companies have carried out by means of road transport, for the purpose of providing facilities for passengers and goods in districts served by their lines. The Committee are of opinion that this work should be encouraged, and, if possible, extended, especially in agricultural districts. The Committee regret that they have been unable to pursue this important matter further. They recommend that endeavour should be made by the Government, when peace is restored, to reap for the community some of the fruits of the educational work of the Road Transport Committee by promoting voluntary co-operation between owners and users of road transport.

### HARBOURS AND DOCKS.

The Committee have not been able to prosecute any detailed inquiries into the state and local conditions of the harbours and docks of Great Britain, and are accordingly unable to make any recommendations in regard to them.

### TUBE RAILWAYS AND TRAMWAYS.

The Committee have not been able to study the special problems of urban and suburban traffic in London and other areas, nor to consider the parts which should be played in relation to them by tube railways, tramways, and other road vehicles.

### ORGANISATION AND MANAGEMENT.

The Committee proceed to show by extracts from reports by various Commissions from 1905 to 1911 how unanimous has been the opinion in favour of unification or amalgamation. They offer some observations on the general question of unification, with a view to distinguishing clearly the various methods by which, if decided upon, a policy of unification might be brought about.

(1) Unification of the management of two or more independent systems, of which the ownership remains in different hands.
(2) Unification both of management and of ownership.
(3) Unification of ownership without unification of management.

It may be observed that (2), viz., unification both of management and of ownership of railways may be established with or without "nationalisation" of the railway system, which the Committee understand to mean acquisition by the State of the ownership of railways. As applied to the railway system of this country, the term "unification" is used in this report to denote the fusion of all the important railway undertakings of the country into one ownership, either by a private corporation or the State.

In regard to management the Committee consider that it is important to bear in mind that the management of a railway company is divided into two branches, one subordinate to the other.

(1) *The Board of Directors*, which is directly responsible to the shareholders for the custody, care, and use of their property; for the initiation and executive control of the general policy of the Company; for the finances and financial policy of the company; and for the selection, appointment, control, and dismissal of the company's staff, from its highest technical officers downward. Its members are appointed by, are responsible to, and can be dismissed by the shareholders as owners of the undertaking.
(2) *The Technical Managers*, who are responsible to the board of directors for the due execution of the policy laid down by the board; for advising the board to the best of their ability in all matters falling within their respective spheres; and for carrying out such work in relation to the selection and control of subordinate members of the staff as may be entrusted to them.

If the ownership of the railways were transferred to the State by nationalisation, some new organisation would have to be established to carry out the work hitherto performed by boards of directors. It is necessary to remember that the Railway Executive Committee are not to-day doing any of this work. The boards of directors of the railways are still discharging their duties.

### CONCLUSIONS.

The Committee at this stage of its inquiry are unable to make recommendations as to the manner in which the railway system can be organised most advantageously from the point of view of the general interests of the community, or to advise as to the status and management of other transport agencies. Their conclusions upon the second of these questions must necessarily depend upon the view that may be taken as to the future position of the railways to which all the other transport agencies must be looked upon as ancillary.

The Committee are, however, in a position to state the following preliminary conclusions. The Committee consider:—

(1) That the organisation of the transport agencies of the country—and particularly of the railways—cannot be allowed to return to its pre-war position.
(2) That the temporary arrangements for the control of railways and canals during the war would not be satisfactory as a permanent settlement.
(3) That unification of the railway system is desirable under suitable safeguards, whether the ownership be in public or private hands.

Any one of the following courses would be consistent with the conclusions stated in the preceding paragraph, but without further evidence the Committee are not in a position to recommend which of these methods should be adopted in the first instance:—

(1) Further amalgamations of railway companies as a step towards unification.
(2) Unification accompanied by private ownership and commercial management.
(3) Unification by means of nationalisation followed by:—
  (*a*) Establishment of a Government department to manage the railways.
  (*b*) Constitution of a Board of Management not directly represented in Parliament.
  (*c*) Leasing of the system to one or more commercial companies.

### GOVERNMENT SUPERVISION AND REGULATION OF THE TRANSPORT SYSTEM.

The means by which efficient supervision and regulation of transport agencies by the Government can be best secured will become a matter of extreme importance. The question is one that presents many and great difficulties. A large number of differences which arise between railway companies and the public are not administrative in character. They concern policy, and are usually business, not legal questions. They have to do largely with the application of judgment to matters of fact, and no fixed standards exist which can be applied to their solution. The questions whether the increases of rates charged for the carriage of particular commodities are reasonable, or whether reasonable facilities are being provided, are of this nature. Such differences were referred in the first instance to the courts of law, which were obviously not well suited to decide matters of a business character. When that remedy failed other tribunals were constituted.

Under proposals based on the recommendations of Mr. Russell Rea's Committee of 1911, customers of the railway companies would be assured of the maintenance of rates, fares, and facilities at their pre-war levels and standards, except in cases where the management might be successful in establishing before the Railway and Canal Commissioners that any proposed change was reasonable.

The Committee regret that they have not been able, for want of time, to study these questions in detail. In particular they desired to inquire in what directions and to what extent the interests of the public might be better protected.

### IMPROVEMENTS OF TRANSPORT SYSTEM.—THE GATTIE SYSTEM.

The Committee devoted some time to an examination of Mr. A. W. Gattie's proposals for improving the methods of handling goods and traffic by the use of his system and inventions. The proposals are certainly attractive, and the inventions are highly ingenious, but the Committee find it impossible, on the evidence which has been presented, to come to any conclusion in regard to the practical value of the proposals, or to make any recommendation in regard to their adoption. Before any such steps could be taken it would be necessary in the first place to obtain expert tests of the working results of the various items of the apparatus, and of the operation of the sorting appliances as a whole on a practical scale.

The Committee have been informed by Mr. Gattie that his company desire to erect at their own cost an experimental plant, but that the request of his company for permission to issue for this purpose new capital to an amount of not less than £100,000 has not yet been acceded to by the Treasury New Issues Committee. While the Committee recognise that capital so employed would be devoted to a highly speculative use, they nevertheless recommend that permission to raise the funds required be given, and that such priorities be granted as may be necessary to allow the machinery and appliances to be obtained as soon as possible. They recommend that this matter should be further considered by the Select Committee which they suggest in the concluding paragraph of this report should be set up in the next session of Parliament.

### CANALS.

Extensive and very costly proposals for the improvement of the canal system were made by the Royal Commission on Canals. It is clear to the Committee that proposals which would involve the expenditure of £38,000,000 for the improvement of property which is at present valued at £6,000,000 would have to be supported by most convincing evidence as to the benefits that might be reasonably expected to follow from their adoption, as to the character and extent of the traffic to be carried, and as to the financial returns which might be anticipated.

Digitized by Google

The necessity for searching inquiry upon these points is the more necessary because nearly half of the traffic carried on the canals in the Midlands in pre-war days consisted of coal. In dealing therefore with suggestions for improvement of the canal system regard will require to be had to the profound alterations in the conditions affecting the internal coal traffic of the country which will take place if effect be given to the proposals now under consideration for an immense extension of the electrical power supply system of the United Kingdom, which will involve the concentration of the generating plant at about 16 centres. The new super-stations will have to be erected at places where large supplies of water are available, generally in the vicinity of large estuaries, and in the majority of cases it may safely be assumed that their coal supplies will reach them by river transport. The necessity therefore for canal transport for the coal supplies now required for power production at inland centres like Birmingham may largely disappear.

On the other hand the Committee are justified in concluding that the canals will continue to play a useful part in the transport system of the country, and that expenditure upon a more modest scale for the purpose of maintaining them in an efficient state, and of effecting certain local improvements, will probably be found to be justified.

### OTHER TRANSPORT FACILITIES.

The Committee regret that they have only been able to commence inquiries into the very important questions which are concerned with the provision of transport facilities for agricultural and rural development.

In conclusion, the Committee recommend that the inquiry into the whole subject of transport should be resumed by a Select Committee at the earliest possible date in next session of Parliament.

## TRAMWAY AND OMNIBUS WORKERS' CLAIMS.

FURTHER AWARD BY COMMITTEE ON PRODUCTION.

The award of the Committee on Production in regard to the latest wages demand on behalf of the workers in the tramway and omnibus industry has just been issued. The first clause enumerates the parties to the reference to the Committee on Production, including the Municipal Tramways Conference (representing numerous corporations), the Tramways and Light Railways Conference (representing various companies), and several omnibus undertakings on the one hand, and the National Transport Workers' Federation on the other. The subsequent clauses are appended :—

1. (This clause enumerates the parties to the reference.)
2. The claim submitted was as follows :—
   (1) That equal total payments be made to women as to men in the tramway and motor omnibus undertakings in the United Kingdom.
   (2) That the position of youths between 18 and 21 years of age shall be maintained in accordance with the award (No. 947) of the Committee on Production of March 8, 1918 (Tramway and Motor Omnibus Workers).
   (3) (*a*) That the war wages at present paid to males and females 18 years and over shall be increased by such amounts as shall give 35s. per week war wages, payment to be made on the basis of six days or six shifts.
   (*b*) That youths and girls under 18 years of age shall be paid half the total war wage paid to the employees over 18 years of age, except where youths or girls are performing adults' work, when they shall receive adults' pay.

   The claim is made on behalf of and is intended to include all employees (other than skilled craftsmen), male and female, whose Unions are affiliated to the National Transport Workers' Federation.
3. The application was referred by the Ministry of Labour to the Committee on Production for decision, and representatives of the parties were heard on November 15, 1918.
4. With regard to item (1), a similar claim was heard by the Committee on August 26 and 29, 1918, and their award (No. 2200), dated August 29, 1918, contained the following provisions :—

(7) In dealing with the claim that equal total payments be made to women as to men for equal work, it is necessary to distinguish between the elements of which these total payments are composed. The payments made to the men contain the following three elements, viz.: (1) the base rate of wage; (2) the additions made thereto since the outbreak of war by way of war bonus or war wage advance, with a view to meeting the increased cost of living; (3) the addition of 5s. per week granted under the award of July 9, 1918, as a war wage advance, to include and to be deemed to be in full settlement of any claim with respect to the bonus of 12½ per cent.

(12) As regards the items mentioned in Clause 7 of this award and numbered (1) and (2), the claim submitted covering these items is put forward in such a form as to involve the determination of a general principle applicable, if adopted and established, not only to women employed on tramways and motor omnibuses, but to women employed in many other industries. Such a principle can only be decided on a national basis, after full, comprehensive and detailed investigation, with due regard to the far-reaching financial and economic considerations involved, and after hearing all interests that would be affected, including those women (if any) engaged in other industries whose interests might be considered by them to be affected. The Committee therefore recommend that the whole question of women's wages and advances should be made the subject of a special inquiry, in which women can take part, and at which all the facts and circumstances which must be taken into account before any general guiding principle can be safely or properly formulated may be fully investigated and considered.

5. A Committee of Inquiry such as that referred to in clause 12 of award No. 2200 has since been appointed by the Government, and, having regard to the views expressed by the Committee on Production in that award and to the fact that the Committee of Inquiry has not yet issued its report, the Committee do not consider that the claim that equal total payments shall be made to men and women employed in connection with tramway and motor omnibus undertakings is one that they can now accede to.
6. Item (2) of the claim is made in consequence of the terms of the award (No. 1803) of the Committee of July 9, 1918. The claim dealt with in that award was one for payment of a bonus of 12½ per cent. on earnings, which originated in Orders Nos. 1061 and 1301 (Statutory Rules and Orders, 1917) of the Minister of Munitions. These orders provided that the bonus was to be paid only to men (of certain classes) aged 21 years and over. In their award of July 9, 1918, the Committee granted the men concerned aged 21 years and over an advance of 5s. a week in full settlement of the claim for the 12½ per cent. bonus. No advance was granted to males under 21 years, and the present claim is made in order to restore the pre-award position of males between 18 and 21 years, men 18 years and over having previously been paid the same war advances.

The award of the Committee is as follows :—

7. Item (1) of the claim is not one which can be now be conceded.
8. Item (2) of the claim has not been established.
9. To the men concerned aged 21 years and over, and to the grades of women aged 18 and over whose terms of employment include an undertaking that they shall be paid the same rates as the grades of men whose places they have filled, there shall be paid such advance as shall give 30s. a week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.
10. To the men concerned aged 18 years and over, but under 21 years, there shall be paid such advance as will give 25s. a week over pre-war rates, payment to be made on the basis of a week of six days or six shifts.
11. In the case of women aged 18 years and over not covered by clause 9, the advances now being paid shall be increased by 5s. a week, subject to a maximum of 30s. a week over the pre-war rates of the grades concerned, payment to be made on the basis of a week of six days or six shifts.
12. In the case of girls and boys and youths under 18 years of age the advances now being paid shall be increased by such amount per week as shall give the girls, boys, and youths under 18 years of age in the undertaking concerned half the additional advances given by this award to the men or women, as the case may be, in the same undertaking.
13. The amounts hereby awarded are to be taken into account in the calculation of payment for overtime and night duty and for work on Sundays and holidays; they are to be regarded as war advances and are to be recognised as being due to and dependent on the existence of the abnormal conditions prevailing in consequence of the war.
14. This award shall not apply to classes of employees, such as building trades operatives, whose wages have customarily been regulated by the movements in the wages of the trades in which workmen of the same classes are ordinarily employed.
15. This award shall apply only to women to whom the provisions of the Orders made by the Minister of Munitions under the powers conferred upon him by the Munitions of War (Amendment) Act, 1916, have not been applied.
16. So far as the London General Omnibus Company are concerned this award is applicable only to those grades of employees with respect to whom there are agreements between the Company and the London and Provincial Union of Licensed Vehicle Workers; but the award does not cover, and is not to be deemed to cover, the grades of employees dealt with in the agreement between the Company and the Union of April 11, 1918.
17. The claim that youths and girls performing adults' work shall receive adults' pay has not been established.
18. This award shall take effect from the beginning of the first full pay in November, 1918.

WALWORTH H. ROBERTS.
JOHN M. DENNY.
F. S. BUTTON.

H. J. WILSON, Secretary,
5, Old Palace Yard, S.W.1.
*November* 21, 1918.

**Triplex Safety Glass** is commended to the motoring trade and public as an unsplinterable glass, the particular merit claimed being that of unsplinterableness. It is excellently adapted for windows and wind screens of motor cars. It consists of two thicknesses of glass with a layer of xylonite between. Glass and xylonite are united by a secret cement and hydraulic pressures. The resulting substance is safe and as transparent as ordinary glass. It is stated that the War Office and the Admiralty are commandeering all the available output of the Triplex works, but requisitions for peace time can be received by the Triplex Safety Glass Company, Limited, 1, Albemarle Street, London, W.1.

## TRAMWAY CHAIRMEN FOR 1918-19.

Municipal Tramways Committees have now been constituted for the ensuing year, and we append a list of the chairmen and vice-chairmen. In all but a very few cases those who held office last year have been re-elected. New appointments are indicated in the list by an asterisk.

| Town. | Chairman. | Vice-chairman. |
|---|---|---|
| Aberdare ... ... | Coun. E. Stonelake ... | |
| Aberdeen ... ... | *Dean of Guild Meff. ... | |
| Accrington ... | Ald. T. E. Higham ... | Coun. T. Morley. |
| Ayr ... ... ... | Coun. J. R. Learmont | Bailie T. Murray. |
| Bacup ... ... | Ald. Sir J. H. Maden... | Coun. J. H. Lord. |
| Barking ... ... | *Coun. J. Ranson ... | |
| Batley ... ... | Coun. F. W. H. Auty | Coun. J. E. Oldroyd. |
| Belfast ... ... | Coun. W. G. Turner ... | Coun. Jas. McDonald. |
| Birkenhead ... | Coun. H. Halsall ... | Coun. R. Frame |
| Birmingham ... | *Coun. Lee ... ... | |
| Blackburn ... ... | Ald. W. Thompson ... | Coun. C. Higham. |
| Blackpool ... ... | Coun. R. Holt ... ... | Coun. H. Brooks. |
| Bolton ... ... | Coun. P. Higson ... | Coun. J. R. Horrocks. |
| Bootle... ... ... | Ald. Booth ... ... | Coun. E. Pennington. |
| Bournemouth ... | Coun. F. J. Bell... ... | Coun. W. J. McCabe. |
| Brighton ... ... | Coun. T. J. Braybon... | |
| Burnley ... ... | Coun. E. Heap ... ... | Coun. D. D. Irving. |
| Burton-on-Trent | Ald. Rowland ... ... | Ald. Lowe |
| Bury ... ... ... | Ald. Collinge ... ... | Coun. Hargreaves. |
| Cardiff ... ... | Ald. Sir J. W. Courtis | *Ald. R. J. Smith. |
| Chester ... ... | Ald. J. Jones ... ... | Coun. A. S. Dutton. |
| Chesterfield ... | Ald. Shentall (Mayor) | Coun. Woodhead. |
| Colchester ... ... | Coun. Jarmin (Deputy Mayor) | Coun. G. F. Wright (Mayor). |

## EIGHT-HOUR DAY FOR RAILWAYMEN.

THE FINANCIAL EFFECT ON WAGES.

Signs became apparent during the first week in December that the extremists amongst the railway workers were intent upon forcing a decision upon the main items of the railway unions' national programme, notably the claim for an eight-hour day. This claim was practically conceded by Sir Albert Stanley, President of the Board of Trade, in making the settlement with the Unions on the occasion of the trouble in August last.

The feature of the present settlement was the prompt measures taken for preventing a recourse to a strike, which would have been a national danger and might have had a serious effect upon the position. Mr. J. H. Thomas, P.C., secretary to the National Union of Railwaymen, issued an appeal to the men not to endanger the negotiations which were about to be entered upon now that the war had been concluded, and Sir Albert Stanley arranged to meet the delegates from the two unions at midday on Friday, December 6. Earlier in the day, however, Sir Albert was sent for by the Prime Minister, who had been considering the question with the members of the War Cabinet.

Sir Albert's arrival at the Board of Trade was delayed until 12.20, when he first received Mr. Bromley, the secretary of the Associated Society of Locomotives, and afterwards he was waited upon by Mr. Thomas and the delegates of the National Union. Mr. Bromley stated to the reporters :—

Sir Albert Stanley has announced that the Government have conceded the principle of an eight-hour day, to take effect from February 1 next. In the interim a committee is to be set up, consisting of representatives of the Board of Trade, the railway companies, and the railway unions, which, it is hoped, will arrive at an agreement on the question of wages and the general conditions of work. I am satisfied that, in the circumstances, the Government have done all they can to satisfy the men. It is to apply to the electric motormen as well.

Mr. J. H. Thomas said that he considered the settlement extremely satisfactory, reflecting credit upon the Government, and especially on Sir Albert Stanley, who showed a generous desire to get over a real difficulty as promptly as possible.

The following official statement was made by Sir Albert Stanley :—

(1) The principle of an eight-hour day for all members of the wages staff has been conceded, and is to come into operation on February 1 next.

(2) All existing conditions of service are to remain unaltered pending the decision of a committee to be set up as soon as possible, to review wages and other conditions of service of railwaymen in Great Britain and Ireland.

To the representatives of the newspapers Sir Albert Stanley said :—

"The negotiations have been carried on in a very friendly spirit. This decision of the Government, so warmly supported by the Prime Minister and myself, is in fulfilment of a pledge which I gave to the railwaymen's unions on August 21, 1917. That pledge was to the effect that sympathetic consideration would be given to the introduction of a shorter working day for the railwaymen at the earliest possible moment. I am very glad to have had the privilege of redeeming this pledge, and I hope, and am confident, that it will be recognised by the railwaymen as some reward for the magnificent services which they have rendered during the war."

The decision means (says *The Times*), not that the railwaymen will always work only eight hours a day, but that when work beyond that limit is necessary it will be paid for as overtime. The men expect the overtime rate to be time and a quarter. The financial effect of the change on the railway wages bill is estimated to be as follows :—

| | |
|---|---|
| Pre-war wages ... ... ... ... ... | £47,000,000 |
| War Bonuses ... ... ... ... ... | 55,000,000 |
| Cost of eight-hour day ... ... ... | 25,000,000 |
| Year's total ... ... ... ... | £127,000,000 |

The Railway Executive Committee, which took no part in the negotiations with the men, met later to consider the measures to be taken to give effect to the Government decision.

**D.O.R.A. and Lights.**—Certain orders made under the Defence of the Realm Act in regard to lights were cancelled by an Order in Council issued in the first week of December, but the Orders relating to lights on vehicles were retained for the time being.

## DICK, KERR & COMPANY, LIMITED.

ANNUAL MEETING—A PROSPEROUS YEAR AND ENCOURAGING PROSPECTS.

The ordinary general meeting of the shareholders of Dick, Kerr and Company, Limited, was held at the Cannon Street Hotel, Cannon Street, London, E.C., on Thursday, November 14, 1918.

The chairman, Mr. Claud T. Cayley, presided, and was supported by the following directors:—Messrs. R. H. Prestwich (deputy chairman), David C. Ellis, Bernard A. Firth, John Sampson, C.B.E., Thos. D. Lingard, G. Mure Ritchie, and Walter Rutherford (managing director).

The secretary (E. D. Johnson) having read the notice convening the meeting and the report of the auditors, Messrs. Gane, Jackson, Jefferys & Freeman,

The CHAIRMAN said: You have all had the balance sheet and directors' report in your hands for some days. I will ask you if you will take it as read and will proceed immediately to my speech. You will have already seen that the profit for the year under review is not much short of that for the previous year, and in view of the fact that your directors' policy has been gradually to prepare, where possible, for the reconstruction of the business on post-war conditions, no doubt you will consider the year's result satisfactory. The total on the asset side of the balance sheet is this year over two and a quarter million pounds, which is a record figure so far as this company is concerned. The individual items which make up this total are in the main not widely different to those of last year, with the exception of the asset "contracts, due for work, stock of materials, etc.," which is roughly £100,000 more than it was in 1917. Without going into details I might explain that this item covers the sums due to the company in respect of our various contracts, together with the stock of material carried in respect of them and so forth, and is naturally bound to fluctuate from year to year. You will notice that the asset "capital expenditure" is some £20,000 less than last year, and we do not doubt that you will fully endorse the conservative policy of which this writing down is evidence. Investments stand at £338,000 odd, as against £341,000 odd in 1917. This decrease, however, is the net result of two larger transactions. You will remember that last year I reported on the acquisition of the bulk of the "B" preference stock of Willans and Robinson, Limited, partly by cash and partly by exchange of shares, which, as you will see by referring to the share capital on the other side of the balance sheet we issued for this purpose. This transaction occurred after the close of our financial year, and was therefore not reflected in the 1917 accounts. On the other hand, since our last meeting, the whole of our holding of the preference shares of the United Electric Car Company, Limited, has been disposed of, so that the latter transaction largely offsets the former. On the liability side of the balance sheet the chief variation (other than the issue of shares indicated) is that the item "creditors and estimated liabilities" shows a decrease of approximately £90,000. The special reserve for contingencies stands in the balance sheet at £75,000, and to this your directors propose to add a further £25,000, making a total of £100,000. This reserve has been made with a view to providing any further sums which may be necessary in connection with special war taxation, or, of course, to meet any other contingencies which may occur, such as the reorganisation for peace conditions.

The works have continued to be fully employed, and I am glad to say that during the past few months the demand for certain purely war products having become less urgent, opportunity has been taken to establish a process of gradually changing over, and in this connection it is pleasing to note that the Ministries of Munitions and Reconstruction, remembering perhaps the way in which we threw ourselves wholeheartedly into the production of war material in the early days, have given considerable assistance. While, therefore, there must inevitably be a hiatus of disorganisation, we hope to be able to retain the continuous services of a considerable portion of our workpeople, first of all in the operations necessary to rearrange the factories, and later in standard production, provided raw material is available. In this connection I would like to emphasise that the raw material required for the class of machinery in which we specialise is very different from raw material as understood generally by the public. Material such as steel forgings and castings, copper wire, and many other things which are the basis of our manufacture, are the finished article with many other producers, upon which months of work must already have been expended before they arrive at our stores.

During the year the work of consolidating into our own organisation those of Willans and Robinson, Limited, and the United Electric Car Company, Limited, referred to in my speech last year, has been completed, and your management committee has been strengthened and made still more representative by the appointment of Mr. Davenport and Mr. Bennett, from Rugby, and Mr. Conner, whom many of you know well as an old and trusted member of our staff. An alliance has also been made with Siemens Brothers and Company, Limited, by which it is thought that much economy can be attained through the amalgamation of selling organisations and co-ordination of designs and products so as to avoid over-lapping. Siemens and ourselves are not competitors in manufacture. They, as is well known, are long established as makers of all kinds of cables, from submarine telegraph to power transmission, dynamo machinery, telephones, instruments, and so on, while we have specialised in apparatus for railways and tramways, steam turbines, and the larger classes of electrical machinery. The two manufacturing organisations dovetail into each other perfectly, and only small adjustment is required to bring the commercial sides together with material benefit to both. This arrangement was referred to by Mr. Mure Ritchie, the chairman of Siemens Brothers, Limited, in his speech to the shareholders of that company in June last, and it has now been consummated by an exchange of directors, Mr. Mure Ritchie having taken a seat on this board, and I having joined that of Messrs. Siemens.

An interesting development which has taken place since our last meeting is the establishment in France and in Japan of companies to exploit our manufacturing rights in connection with apparatus for railways and tramways. It must be gratifying to you to know that Dick-Kerr machinery ranks so highly in these important countries that representative technical and business men are willing to provide the considerable capital required for such undertakings. These companies will also act as our agents in their respective countries, thereby contributing important outlets for the products of our own factories, should there be a surplus available. It is obviously inadvisable to make public the details of our arrangements with these companies, but the terms are considered by your board to be satisfactory. I referred last year to the conviction on the part of those studying the position on your behalf that the after-war demand for our products will be very great. The correctness of this opinion is proved by the demand which already exists for all classes of electrical machinery, and especially large sized steam-turbine generating plant, upon which we have specialised for some years.

It has further been brought home to your management that the manufacturing capacity of the country for heavy electrical machinery is much below the demand, and that in our own case we must, if we wish to retain the position we hold at present, find facilities not only for increased output but also for the production of individual units larger than our present shops admit of. Having reached this conclusion, we were faced with the difficulty, if not the impossibility, at all events for a long time to come, of extending the works, obtaining the necessary machinery, and building up a strong organisation. It is therefore with pleasure that I have to inform you that we have solved the difficulty in a very satisfactory manner. We were in hopes that we would be in a position to give you full details at this meeting, and indeed the date was postponed with this in view. The arrangements which are involved, however, require much careful adjustment, together with Treasury sanction, which has not yet been received. Suffice it to say, therefore, that an option agreement has been entered into with the Coventry Ordnance Works, Limited, who own an engineering works of modern design and equipment which, although not at present occupied upon electrical work, can very quickly be converted to that purpose. You will in due course receive full particulars of the proposal, and you will be asked to consent to an exchange of your shares for those of a new company, which, in the event of the offer being accepted, will control both concerns. The Coventry Ordnance Works, Limited, which is not a public company, has an issued capital of £800,000 and debentures of £600,000. Its proprietors are Messrs. John Brown and Company, Limited, Messrs. Cammell, Laird and Company, Limited, and Messrs. Fairfield Shipbuilding and Engineering Company, Limited. The shops which were laid down for the purpose of making heavy armament, are modern both in respect of design and equipment, and, as I have already said, can be easily altered for the production of heavy electrical machinery. In addition to the armament business done by the company, they have also a considerable output of non-war material, which it is expected can be materially increased. Full particulars will be sent you in due course, and I will therefore ask you now to be good enough to await these particulars, as I am not at the moment in a position to give any details.

I shall now put the resolution in regard to the report and the balance sheet as follows:—"Resolved that the audited accounts for the year ended June 30, 1918, together with the report of the directors thereon, be and they are hereby adopted, that the payment of dividend on the ordinary shares for the same period of 10 per cent. is hereby sanctioned, and that the payments made on the dividends of the preference shares are hereby confirmed."

The motion was seconded by Mr. R. H. PRESTWICH, and carried unanimously.

The CHAIRMAN: The next item on the agenda is to re-elect two retiring directors, Mr. R. H. Prestwich and Mr. John Sampson. Mr. Prestwich has been a director of the company for many years and is, I think, one of our largest shareholders. Mr. Sampson has also been on the board for some years and I cannot say too much as to the valuable services he has rendered as a practical engineer. I beg to propose the re-election of Mr. Prestwich and Mr. Sampson, and I will call upon Mr. T. D. Lingard to second that.

Digitized by Google

Mr. LINGARD: I have great pleasure in seconding the resolution.

The resolution was put and carried unanimously.

Mr. PRESTWICH: I beg to thank you, gentlemen, on behalf of my colleague and myself, for your renewal of confidence. I can only assure you that it is always a pleasure to us to do whatever we can for the firm with which we have been so long associated, and we shall promise to do that in the future.

The CHAIRMAN: The next item is the confirmation of two directors elected during the year. Mr. Bernard A. Firth, of Messrs. Thomas Firth and Sons, of Sheffield, and Mr. Muir Ritchie, chairman of Messrs. Siemens Brothers, Limited. I ask you to confirm what the directors have done during the year in electing these gentlemen on the board. I have very much pleasure myself in submitting it. I do not think I need propose it, and beg to put it to the meeting if you approve of their election being confirmed.

Mr. PRESTWICH: I have great pleasure, gentlemen, in asking you to confirm what we have done in the election of these two gentlemen on the board. I am sure you will feel that the list of directors is very greatly strengthened by their coming on. Therefore I have much pleasure in seconding the resolution.

The Chairman then put the motion to the meeting, and it was carried unanimously.

The CHAIRMAN: The only other motion comes from the other side of the table, and that is the election of Messrs. Gane, Jackson Jefferys, and Freeman.

Mr. T. BARBER GLENN: I have very great pleasure in moving that Messrs. Gane, Jackson Jefferys, and Freeman be re-elected auditors of the company. They have been our auditors I think since the start of the company. They are well known in the City of London and to me, and I am sure we cannot be in better hands.

Mr. DAVIDSON seconded the resolution, which was carried unanimously.

Mr. FREEMAN: I am much obliged to you for associating my name with a firm which has done such excellent service during the war and in other ways during the last few years, and which I am sure you will recognise from a speech of the chairman is going to do equally good work in the reconstruction of the business now before us.

Mr. WILKINSON: I do not think we ought to conclude the meeting without a vote of thanks to the board, who not only have done very assiduous and complicated work, but exceedingly difficult work this year under the circumstances in which business has been carried on. I hope that the meeting will agree that we ought to express our great gratitude for all the work which has been put into the operations on land or elsewhere by the board and those who have been working under the board.

Mr. T. BARBER GLENN: I should like to second the vote of thanks. We are all very grateful to you for the very careful management of the company, and I think that our thanks are due to the directors, to the management committee, and to Mr. Walter Rutherford, the managing director.

The motion was put to the meeting and carried unanimously.

The CHAIRMAN: I wish to thank you all, the proposer and the seconder of the resolution, for the kind remarks made in reference to the board and the staff. We much appreciate the fact that you have appreciated our efforts.

---

The report for the twelve months ended June 30, 1918, shows that the company has again had a prosperous year. The dividend of 10 per cent. is maintained on the ordinary shares, and a balance of £37,860 is carried forward, which is somewhat larger than the amount brought forward last year. As in each of the previous three years, a sum of £25,000 has been set aside to supplement the special reserve for contingencies. The net profit at £87,916 is lower than in the previous year, but the difference may be accounted for by the higher allowance made for excess profit tax. The total sum available is £123,989, which has been allocated as set out in the table below, in which a comparison is given with the results of the four preceding years:—

| | 1918. | 1917. | 1916. | 1915. | 1914. |
|---|---|---|---|---|---|
| | £ | £ | £ | £ | £ |

# FINANCIAL REPORTS AND MEETINGS.

### DIVIDENDS.

CAPE ELECTRIC TRAMWAYS.—5 per cent. for year ended June 30.

VERA CRUZ ELECTRIC LIGHT, POWER AND TRACTION.—5 per cent. for 1917.

UNITED ELECTRIC TRAMWAYS COMPANY OF CARACAS.—7 per cent. less tax for the year ended June 30.

SIEMENS BROTHERS AND CO. LIMITED.—Interim at the rate of 10 per cent. per annum, free of tax, is announced.

CALCUTTA TRAMWAYS COMPANY.—Interim on the ordinary shares at the rate of 2½ per cent. (2s. 6d. per share), free of tax.

BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY, LIMITED.—5 per cent. on the cumulative perpetual preference stock.

PEASE AND PARTNERS.—An interim dividend of 10s. per share, free of income tax, 5 per cent. for the half year, has been paid.

BABCOCK AND WILCOX, LIMITED.—Interim on the ordinary shares for the half year at the rate of 12 per cent. per annum, free of tax.

CITY OF BUENOS AYRES TRAMWAYS COMPANY.—5 per cent. per annum (1s. 3d. per share) less tax for three months to September 30.

INDIAN ELECTRIC SUPPLY AND TRACTION COMPANY.—2½ per cent. interim, being at the rate of 5 per cent. per annum, the same as a year ago.

BRITISH ELECTRIC TRACTION.—The directors announce a dividend on the 6 per cent. cumulative preference stock for the half year to September 30.

CHLORIDE ELECTRICAL STORAGE COMPANY, LIMITED.—A dividend of 5 per cent., free of tax, on the ordinary shares—the same as last year—is announced.

CAPE ELECTRIC TRAMWAYS, LIMITED.—A dividend of 5 per cent. on the share capital has been declared, £12,000 has been placed to reserve, and £5,830 carried forward.

BRUCE, PEEBLES AND CO. LIMITED.—At the rate of 7½ per cent. per annum, less income tax, on the cumulative participating preference shares, for the half year ended June 30.

CITY OF BUENOS AYRES TRAMWAYS.—1s. 3d. per share (being at the rate of 5 per cent. per annum), less tax, for the three months ended September 30, the same as a year ago.

THE A.E.G. OF BERLIN.—The directors estimate that the profits for the year 1917-18 will be sufficient to enable the company to pay a dividend of 14 per cent. For the previous year 12 per cent. was paid.

---

STIRLING AND BRIDGE OF ALLAN HORSE TRAMWAY COMPANY.—The annual report of this, the only remaining horse tramway company in the kingdom, shows that last year the revenue amounted to £5,838 15s. 10d., and the expenditure to £5,363 4s. 2d. The income is £430 better than the previous year, and the expenditure £172 12s. less, but no dividend is declared.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS.—The annual report for the year ended June 30 includes statistics as to tramways as follows:—Earnings £1,992,641, decrease £15,898; working expenses £1,603,260, decrease £88,107; interest on capital cost £348,546, increase £13,185; passengers 255,740,808, decrease 39,562,902; car mileage 21,762,244, decrease 3,599,748; mileage of lines open 225½, increase 1¼; percentage of working expenses to earnings, 80·46, decrease 3·75.

HURST, NELSON AND COMPANY, LIMITED.—The report for the year to July 31 states that there was a net profit of £56,763. A dividend of 10 per cent. on the ordinary shares, or a bonus of 5 per cent., free of tax, is recommended, with the placing of £20,000 to general reserve (making £90,000 in all), and the reserving of £12,000 for payment of half-yearly dividend on preference shares in May, and an interim dividend at the rate of 5 per cent., free of tax, on the ordinary shares, and the carrying forward of £20,843.

YORK CORPORATION TRAMWAYS.—The accounts for the year ended March 31 show that the tramways income (apart from omnibuses) amounted to £42,041, or 11·7d. per car mile, as against £37,636, or 10·91d. per car mile in the preceding year. The revenue from omnibuses also showed an increase, being £3,180, or 9·32d. per car mile, compared with £2,560, or 7·98d. per car mile. The following is a comparison of the car mileage in the two years 1916-17 and 1917-18:—Omnibuses, 76,993, 81,843; cars, 826,283, 862,530. The revenue showed an increase of just over £5,000 on the preceding year. There was an increase in the expenditure which amounted to £38,449, as against £30,938, chief items being wages of motormen and conductors, £2,342; general repairs and maintenance, £2,000; and electrical power, £1,394.

WALLASEY CORPORATION TRAMWAYS.—The accounts for the year ended March 31 show a traffic revenue of £82,024, which, with £450 received from advertisements and sundry small sources of income, gave a total revenue of £82,562. Traffic accounts amounted to £20,697, including £15,240 for wages. General expenses totalled £6,625 and repairs and maintenance £7,664. The cost of current at 1s. 4d. per B.T. unit was £11,935. War service allowances

Digitized by Google

accounted for £2,040, and war bonuses to employees for £4,830. The total of working expenses was £54,397. There was a balance carried to net revenue account of £28,164, out of which contributions were made to interest on loans and sinking and reserve funds, and £11,000 was allocated to the borough fund in aid of the rates, being the largest amount yet available for that purpose, as compared with any previous year.

BRADFORD CORPORATION TRAMWAYS.—A statement has been submitted to the Bradford Tramways Committee as to the six months from April 1 to September 30, in comparison with the results of the corresponding period of the year preceding. The receipts were £243,280, as compared with £203,592, an increase of £39,688, which is largely accounted for by the fact that during four months increased fares have been charged. Owing to various circumstances the number of car miles run has fallen from 2,858,344 to 2,573,434, a decrease of 284,910. The number of passengers carried has also dropped from 42,893,176 to 40,136,206, a decrease of 2,756,970. The receipts per car mile have risen from 16d. to 21·18d. Wages have risen to £114,072, as compared with £90,695. The allowances paid to dependents of sailors and soldiers, which are included in the wage totals, were £15,218, as against £9,943.

CHRIST CHURCH (NEW ZEALAND) TRAMWAY BOARD.—The report for the year ended March 31 shows a record revenue, £160,682, an increase of £10,186 on the previous year. As compared with the last pre-war year, 1913-14, the earnings increased by £19,503. The surplus last year amounted to £5,685, as against £5,191. The increase of £10,186 in earnings was nearly all swallowed up in increased operating expenses, which were £8,571 more than in the previous year. Traffic expenses, due to increased mileage and increased wages, were £5,267 more. Repairs and maintenance account was £4,334 higher, chiefly owing to increased cost of materials although the increasing age of the cars contributes. On the question of advertising, the report says :—" Opinions may differ as to whether tramcars should be used for advertising purposes, but the net receipts from this source (£1,716) are substantial and cannot be ignored."

CROYDON CORPORATION TRAMWAYS.—As will be seen from the appended summary of the accounts for the past four years, the position of this undertaking shows a great improvement. The report of the manager, Mr. T. B. Goodyer, shows that the deficit of 1917 was converted in the year ended March 31, 1918, to a substantial profit. The margin was sufficient to allow of a sum of £11,221 to be carried to the reserve and renewals account. The balance carried to net revenue account was £12,000 greater than in the previous year, while the net profit showed an increase of nearly £12,800 in spite of a large increase in working expenses. War allowances at £5,801 are about the same as in the previous year. The receipts per car mile increased from 10·49d. in 1917 to 11·95d., the expenses per car mile being 8·576d. as compared with 8·259d. The ratio of expenses at 69·71 per cent. was 6·21 per cent. lower.

NORWICH ELECTRIC TRAMWAYS COMPANY.—At the annual meeting the report for the year ended June 30 was presented. The comparative figures for the years 1917 and 1918 were as follow :—Receipts, £43,712, £51,220; expenditure, £30,827, £34,857; net profit, £12,885, £16,362. The amounts for expenditure include debenture interest, donations, and London expenses. To the sum of £16,362 must be added £33 brought forward from last year, making a total of £16,396 to be dealt with. It was decided that this amount should be appropriated as follows :—£1,000 to writing down cost of turbo-generator ; £1,000 to writing down cost of 1914 Acts ; £7,000 to reserve fund account ; £2,000 provision for reconstruction and deferred repairs ; £5,280 to the payment of 2 per cent. dividend on the shares of the company (subject to income tax) for the year ended June 30 ; and £8,116 for carrying forward. Statistics were supported as to the working during the years ended June 1917, and, June, 1918 respectively, as follow :—Car miles run, 903,434, 871,449 ; passengers carried, 10,767,626, 12,095,298 ; earnings per car mile, 11·61d., 14·11d. ; expenses per car mile, 7·49d., 8·86d. ; earnings per passenger, 0·97d., 1·02d.

BLACKPOOL CORPORATION TRAMWAYS.—The annual report of the general manager, Mr. Charles Furness, who is also the borough electrical engineer, for the year ended March 31, 1918, shows that the total income amounted to £119,339 and the working expenses to £68,456, leaving a gross profit of £50,883. After allocations for interest and sinking fund charges, reserve fund, etc., as stated in the table below, there was a surplus of £15,000 for the relief of the rates. This sum is equivalent, approximately, to 10 per cent. on the capital outlay. During the past year the total receipts increased by 24 per cent., and the working expenses by 24·3 per cent., while the increase in the net surplus was 43·7 per cent. The financial results for the year constituted a record in every way, and reference to the statistics given below will show that very remarkable progress has been made, which is partly due to the fact that an additional length of route has been operated during a part of the year. The lease of the Blackpool, St. Annes and Lytham Tramways Company, Limited, over the line from Squires Gate to Station Road expired on July 26, 1917, and since that time a through service has been run to North Shore. No further rolling stock could be obtained and consequently the traffic had to be provided for at the expense of other routes. Had it been possible to augment the service, a considerable amount of additional traffic could have been dealt with. Notwithstanding the increase in operating costs, the percentage of working expenses to total income was 57·36 per cent., or less than 1 per cent. more than in the previous year. In the appended table a comparison is given for the past four years :—

| Year ended March 31. | 1918. | 1917. | 1916. | 1915. |
|---|---|---|---|---|
| Income— | £ | £ | £ | £ |
| Traffic revenue ... ... ... | 112,777 | 92,077 | 78,824 | 75,344 |
| Sundry receipts... ... ... | 6,562 | 4,147 | 1,242 | 761 |
| Total revenue ... ... ... | 119,339 | 96,224 | 80,066 | 76,105 |
| Expenditure— | | | | |
| Traffic expenses ... ... ... | 22,209 | 16,728 | 14,243 | 15,502 |
| General expenses ... ... ... | 12,399 | 10,647 | 7,657 | 7,432 |
| Repairs and maintenance ... ... | 12,261 | 10,499 | 8,191 | 8,238 |
| Power expenses... ... ... ... | 14,852 | 11,849 | 10,665 | 10,225 |
| War allowances... ... ... ... | 2,446 | 2,231 | 1,559 | 323 |
| Through running ... ... ... | 4,289 | 3,131 | 2,715 | 2,130 |
| Total working expenses ... | 68,456 | 55,085 | 45,030 | 44,850 |
| Gross profit ... ... ... ... | 50,883 | 41,139 | 35,036 | 31,255 |
| Interest ... ... ... ... ... | 12,640 | 12,056 | 10,901 | 9,878 |
| Sinking fund ... ... ... ... | 7,936 | 7,900 | 7,860 | 7,641 |
| Reserve fund ... ... ... ... | 3,307 | 2,183 | 3,275 | 1,736 |
| Renewal fund ... ... ... ... | 12,000 | 9,000 | 8,000 | — |
| Relief of Rates ... ... ... ... | 15,000 | 10,000 | 5,000 | 12,000 |
| Mileage of track ... ... ... ... | 21·70 | 21·70 | 21·70 | 21·70 |

| Passengers carried ... ... ... | 22,251,567 | 17,810,538 | 14,585,851 | 13,624,514 |
| Units per car-mile ... ... ... | 1·64 | 1·60 | 1·55 | 1·43 |
| Ratio of expenses ... ... ... | 57·36 | 56·40 | 56·24 | 58·93 |
| Traffic receipts per car-mile ... ... | 21·60d. | 19·53d. | 17·69d. | 16·65d. |
| Traffic revenue per mile of single track | £5,696 | £5,417 | £4,504 | £4,370 |
| Total revenue per car-mile ... ... | 22·86d. | 20·01d. | 17·96d. | 16·82d. |
| Expenses per car-mile (excluding power cost) ... ... ... ... ... | 10·27d. | 8·78d. | 7·71d. | 7·65d. |
| Expenses per car-mile (including power cost) ... ... ... ... ... | 13·11d. | 11·29d. | 10·10d. | 9·91d. |
| Fare per passenger ... ... ... | 1·21d. | 1·24d. | 1·30d. | 1·32d. |
| Number of cars in stock ... ... | 84 | 84 | 84 | 84 |

Repairs to the permanent way have suffered on account of the shortage of labour, and a good deal of renewal work will have to be done as soon as circumstances permit. The reserve fund for the purpose now amounts to £41,934. The maintenance of rolling stock has been particularly difficult, owing to the restrictions on materials. Only small supplies were obtained, after much pressure for priority certificates. In many instances the price for components and supplies show a rise of 250 per cent. over pre-war cost. Increasing traffic demands involve overloading, and additional cars are urgently required to relieve the present congestion before a thorough overhaul of the rolling stock can be effected. At the date of the report over 100 employees were on war service, while ten had received their discharge from military duties and had re-entered the department. Mr. Furness records his appreciation of the able manner in which the department has been served by the staff during the year. The pressure has severely taxed their energies and made many demands upon their time and abilities. Many important developments affecting the administration and policy of the department are anticipated in the near future.

## CONTRACTS AND ORDERS.

**Plymouth Corporation** have accepted tenders for switch parts from Johnson and Phillips, Limited; and for switch gear from Siemens Brothers, Limited.

**Bradford Electricity Committee** has accepted the tender of the British Westinghouse Electric and Manufacturing Company, Limited, for two 1,500-K.W. rotary converters.

**Derby Corporation** have accepted tenders from Babcock and Wilcox, Limited, for boiler economiser, stokers, etc., for £4,747; and from British Thomson-Houston Company, Limited, for £948.

**Salford Town Council** have accepted a tender from E. Bennis and Company, Limited, for supplying and fitting to six boilers at the electricity station six Bennis patent machine stokers and accessories at £195 each.

**Manchester Corporation** have concluded a contract with Callender's Cable and Construction Company, Limited, for £394, for the supply and fixing at the electricity station of certain requisites for the bulk supply of electricity.

**London County Council** has arranged with Babcock and Wilcox, Limited, for the supply, delivery, and maintenance at £1,296 (after deduction of £136 for 15-in. diameter pipes, to be supplied by the Council), of the material required for alterations to coal shoots for eight boilers in connection with the burning of coke at the power station, and for dismantling existing material and erecting new material on a time basis of net flat cost plus 25 per cent.

**Dick, Kerr and Company, Limited,** have recently received an order for two 5,000 KW. turbo-alternator sets and condensing plants for the Union Miniere du Haut Katanga, which is one of the largest copper producers in the world, outside the U.S.A., having extensive mining properties in the Belgian Congo. The turbines will be of the Willans-Zoelly type, operating on steam at 145 lb. per sq. in. pressure and exhausting into a vacuum of 28 in. (Bar 30 in.), and will carry an overload of 6,250 KW. for two hours. The condensing plants are each designed to deal with 66,000 lb. of exhaust steam per hour and have 10,000 sq. ft. of cooling surface. The turbines will be coupled to Siemens' alternators designed for a normal output of 5,000 KW. at 9-power factor (5,560 K.V.A.) when supplying 3-phase current at 50 cycles and 6,600 volts pressure, and will be capable of carrying overloads of 25 per cent. for two hours or 50 per cent. momentarily. The ventilating air for these machines will be filtered in dry air filters of the Premier Cooler Company's make. The machines will each be fitted with a direct-coupled 110 volt exciter of the overhung type, and will operate in conjunction with an automatic voltage regulator.

## PERSONAL.

**Mr. C. Tomlinson** has been added to the directorate of the Norwich Electric Tramways Company.

**Mr. W. B. Smith,** of Greenock, has been appointed manager of the Paisley Corporation electricity department.

**Mr. W. Y. Anderson** has been appointed commercial engineer of the City of Birmingham electric supply department.

**Pte. S. J. Bird,** Machine Gun Corps, a former York Corporation tramway driver, has been awarded the Military Medal.

**Mr. J. S. Killick,** county surveyor of Hertfordshire, has been recommended for an increase of salary to £1,300 per annum.

**Mr. F. W. Ketley** has severed his connection with the Norwich Electric Tramway Company. He has held the post of manager for ten years.

**Mr. T. R. Whitehead,** general manager and engineer of the Coventry Corporation Tramways, has been granted an increase of salary from £700 to £800 per annum.

**Mr. W. H. Ellis,** manager of Chester Corporation Tramways, has been granted an increase of £50 per annum in salary from October 25, with a further increase of £50 on October 25, 1919, in addition to war bonus.

**Mr. H. Ingham,** assistant engineer to the Mexborough and Swinton Tramways Company, has received a presentation from the staff and employees on leaving to take up an appointment with the Rotherham Corporation.

**Alderman J. R. Wilson,** who was recently invited to become Lord Mayor of Manchester, but declined, has been entertained at dinner by the Manchester Tramways Committee. He is chairman of the Traffic Congestion and Improvements Committee, and is also a director of the Manchester Ship Canal.

**Mr. H. Cassell,** a discharged soldier, now employed as a driver on the Sheffield Corporation Tramways, has been awarded the Royal Humane Society's certificate. On August 20 he dived into the canal at Rotherham and rescued a boy, restoring him to consciousness by means of artificial respiration.

**Sergt. Defer,** a conductor attached to the New Cross depot of the London County Council Tramways, has received the D.C.M. The distinction was presented to him by the Mayor of Deptford at a concert, organised by the London County Council Tramways (Employees) Old Comrades' Association.

**Pte. E. Mercer,** East Yorkshire Regiment, has been awarded the Military Medal. It was presented to him by the Lord Mayor of Hull. Private Mercer was formerly a Hull Corporation tramway driver, and enlisted in 1915, notwithstanding that two sons had joined, and that he was over military age. One of his sons has received a commission.

**Mr. E. H. Bond** has been confirmed in his appointment as general manager of the Dover Corporation Tramways. The chairman of the tramways committee (Councillor Barwick) said that Mr. Bond's services had been found very satisfactory. The committee accordingly made Mr. Bond's appointment permanent, at a salary of £300 per annum.

**Lance-Corporal Ernest Lapidge,** West Yorkshire Regiment, has saved a comrade's life by volunteering for a blood transfusion operation, in which a pint of blood was taken out of his right arm. He was formerly a tramway driver employed by the Sheffield Corporation. He has been in hospital for six months, and it was whilst a patient there that he volunteered for this operation.

**Mr. A. A. Blackburn,** chief engineer and assistant to the general manager of the Belfast City Tramways, has been appointed engineer and general manager of the Huddersfield Corporation Tramways, in succession to Mr. R. H. Wilkinson, who recently accepted the position of general manager of Bradford City Tramways. Mr. Blackburn, who went to Belfast 14 years ago, at the time when the system was being electrified, was previously in the service of the Manchester Corporation Tramways. The salary attached to the appointment is £600 per annum.

**Mr. R. H. Wilkinson,** late tramways manager for Huddersfield, who has been appointed manager of the Bradford Corporation Tramways, has been presented with a smoking cabinet from the staff and employees at Huddersfield. Mr. Partington (works superintendent) said that the presentation was to express in a tangible form appreciation of Mr. Wilkinson. Mr. Harry Dyson (chief cashier) made the presentation which was accompanied with an umbrella for Mrs. Wilkinson. Mr. Lincoln (foreman coach painter) and Mr. W. Wood (president of the men's union) expressed good wishes to Mr. Wilkinson.

**Mr. C. J. Spencer,** late tramways manager for Bradford, received a farewell presentation from the employees of the Corporation tramways department, at a gathering at the depot, presided over by Mr. J. W. Dawson (assistant electrical engineer). The gifts, which included a clock, bronzes, and an illuminated address, were handed to the recipient by Mr. T. Stirk (traffic superintendent). Speeches expressing high appreciation for Mr. Spencer were made by Alderman E. Priestley (chairman of the tramways committee), Councillor I. F. Akeroyd (deputy-chairman), Mr. H. Kershaw (Tramway and Vehicle Workers' Association), and Mr. W. Wood (engineering shop steward).

**Mr. William Clough** has resigned his position as general manager and engineer of the Bury Corporation Tramways, to take effect at the end of December, in order to accept an important position with a large firm of paper makers, with mills in the neighbourhood of Bury. Mr. Clough entered the service of the Bury Corporation in December, 1892, and was employed in the borough engineer's office for over ten years. He was then appointed general manager of the tramways. At that time the Corporation took over the steam tramways, and these were subsequently converted to electric traction. He was the responsible official at the installation of electric traction, and has since seen the system attain its present successful position. In June, 1915, as organising officer, Mr. Clough was responsible for the equipment of a portion of the tramway depot as a national shell factory, and he carried out the arrangements for the first co-operative contracts for the production of shells approved by the Ministry of Munitions. His munition scheme was very successful, the shells having been produced at a very low comparative cost. In recognition of his work Mr. Clough was recently invested by the King with the medal of a Member of the Order of the British Empire. In April, 1917, at the request of the Admiralty, Mr. Clough was lent by the Corporation to assist in the work of the Shipyard Labour Department, and his services received the warm commendation of the Lords Commissioners of the Admiralty. In May of the present year the Board of Trade requested the Corporation to allow Mr. Clough's services to be transferred to the Tramways (Board of Trade) Committee, and he was placed in charge of the Priority Section, which has dealt with the rationing of materials for tramways. At the end of September Mr. Clough was appointed honorary secretary of the Municipal Tramways Association, in succession to Mr. C. J. Spencer. A large circle of friends will regret Mr. Clough's intention to sever his connection with the tramway industry, but will wish him the greatest success in his new work.

We regret to have to announce the death, in his forty-second year, after a short illness, of **Mr. H. Cecil Walker,** the eldest son of

Digitized by Google

Mr. Henry C. Walker, chairman of Waygood-Otis, Limited, Falmouth Road, London, S.E. Mr. Walker entered the shops of R. Waygood and Company in September, 1893, and in time occupied the position of chief electrical engineer to the company. In November, 1910, he was appointed to a seat on the board of directors, and this he retained after the amalgamation with the Otis Elevator Company, Limited. He rendered great service in the design of the electric lifts which have gained for the company such a high reputation.

# TRAMWAY AND LIGHT RAILWAY NOTES.

## BIRMINGHAM.

SUBURBAN EXTENSION DESIRED—NO CHRISTMAS DAY CARS.

The Birmingham Tramways Committee, having been asked to extend the tramways from Selly Oak to Northfield and beyond, have replied that they recognise the importance of a tramway being laid to the districts mentioned at the earliest possible moment, but that there is difficulty in obtaining the necessary materials. The matter is, however, to be considered.—At a meeting of the Birmingham Tramways Committee, it has been decided not to run the tramway service on Christmas Day. The committee considered that that day, this year, was of special social interest, and that the tramway employees needed rest from duty.

## BURNLEY.

COLLISION IN FOG.

Two tramway cars collided at Burnley about six o'clock on a foggy morning, with the result that several passengers were injured, though not seriously. It appears that it is usual for the outward bound car to wait at a certain loop until the other car has passed, but for some unexplained reason this practice does not seem to have been followed on the occasion of the collision. One car left the loop and proceeded along the single line for 30 or 40 yards, when the other car approached. The cars not being visible, owing to the fog, until they were almost in contact, it was impossible to pull up, and there was a head-on collision. The frost on the wires would, it is surmised, have the effect of diminishing the headlights on the cars. Neither car was going at a very high speed at the time, but the passengers inside and on the upper decks were pitched violently from their seats, and great confusion prevailed. The people who were on the upper deck of the outward bound car seem to have felt the collision most, and several of them sustained injuries from the broken glass and from contact with the seats and sides of the car. Both drivers had remarkable escapes, though they suffered from shock. The cars kept the rails, but were badly damaged. The fronts were stoved in, the glass screens shattered, and the windows were smashed.

## DUBLIN.

INCREASED FARES.

Further increases in tramway fares have recently come into operation in Dublin. Six months ago they were advanced by about 50 per cent., following the award of better wages to the employees of the Dublin United Tramways Company. A concession to the workers has also preceded the present step, which generally adds about another 20 per cent. to the fares. The statutory fare of one penny within certain areas of the city is untouched, but, outside of these, numerous changes have been made by setting up intermediate stages, for which threehalfpenny fares have been instituted, and by the raising of some threehalfpenny fares to twopence. In certain cases the increase represents over 100 per cent. on pre-war fares.

## DUNDEE.

CORPORATION AND COMPANY CO-OPERATION.

As a result of the arrangement under which the Dundee Corporation is to supply the company with electricity, thus enabling the closing of one power station and consequent economy in fuel, the reduction of service on the Dundee, Broughty Ferry and District tramways system has been cancelled and a full service restored.

## FALKIRK.

ACTION AGAINST TRAMWAY COMPANY.

Judgment has been given in an action in Falkirk Sheriff Court involving the question of whether a tramway company was responsible for injuries sustained by a passenger as the result of the disorderly behaviour of another passenger. The pursuer sued the company and another defender jointly and severally for £50. Pursuer averred that while she was a passenger in an overcrowded motor omnibus running between Falkirk and Grangemouth, defender, who was also a passenger, struck another passenger with a bottle, fragments of which struck pursuer, who had to have her wounds dressed. The tramway company denied fault, and the Sheriff sustained this contention, and dismissed the action as against the tramway company, with expenses. The defender, he said, had now disappeared, and any further proceedings against him were in the hands of the pursuer.

## GLASGOW.

PARCELS CARRYING.

An experiment in the carrying of parcels is to be made on one of the routes of the Glasgow Corporation Tramways.

## LEEDS.

PUBLIC SHOULD LOOK OUT.

An action was brought in the Leeds County Court recently against the Leeds Corporation for damages for personal injuries received at the tramway barriers in Briggate. A passenger, who did not understand the queue system, had attempted to board a car in the usual way by the rear platform, and had been told to enter the barrier and board the car by the front platform. In making her way back she was struck a heavy blow by an approaching car. The judge found for the defendants with costs, remarking that the arrangement of barriers in a most important and crowded street was reasonable, and that in busy centres there was a reasonable obligation on the part of the public to look out, especially in or near tramway lines.

## MANCHESTER.

CORPORATION TRAMWAYS POSTERS.

In a booklet dealing with the posters in a "war collection" at the Clark University Library, Worcester, Mass., U.S.A., the posters issued in connection with the Manchester Corporation Tramways are specially commended as follows:—"They are very attractive, all text, issued to stimulate contributions, for which purpose boxes were placed on the platforms of all the street cars. These Manchester tramway posters, although devoid of illustration, are a delight to the eye. They would serve as excellent models in any printing establishment on account of the beauty of their composition, type, and colour." It is mentioned that the total sum collected in these car boxes in Manchester was about £30,000 for nearly seventy different war charities.

## SOUTH SHIELDS.

The motor omnibuses run by the South Shields Tramways Committee are found exceedingly useful as feeders to the tramway system, and as they practically provide an extension of the tramway service they are a great public convenience.

## YORK.

SEQUEL TO INCREASED FARES—SUNDAY RUNNING.

A report presented to the York Tramways Committee by Mr. J. W. Hame (tramways manager), in regard to a proposal to increase the fares on the tramways, contains some interesting details as to the sequel to increases in other districts in Yorkshire. The tramways where the penny fare has been discontinued, and the 1½d. fare is the lowest, are at Wakefield, Bradford, Huddersfield, Mexborough, Swinton, and Scarborough. At Wakefield the falling off in passengers has been only 2·28 per cent., whilst the increase in the receipts has amounted to 20·67 per cent. At Huddersfield the falling off in passengers in the week immediately following the advance in fares was 13·2 per cent., but this figure is understood to be rapidly

## CITY OF SHEFFIELD.

### TRAMWAYS AND MOTORS DEPARTMENT.

**Tenders for 50 Tramcars.**

The Tramways and Motors Committee is prepared to receive tenders for the supply and delivery of 50 double-deck top-covered vistibule tramcar bodies with trucks.

Form of tender, general conditions of contract, and specification will be forwarded on application to the undersigned.

Each tender must be submitted on the official form supplied by the Corporation, enclosed in a sealed envelope endorsed "Tender for Tramcars," and delivered to the undersigned on or before January 7, 1919.

Any person or firm sending in a tender will be required to comply with the City Council's form of clauses respecting wages, hours, and conditions of labour, and prohibition against assigning or underletting as set forth in the "Conditions of Contract" above referred to.

The committee does not bind itself to accept the lowest or any tender.

Dated this 6th day of December, 1918.

A. R. FEARNLEY,
General Manager.

Division Street, Sheffield.

## TROLLEY HEAD SLINGS

Trolley Head Slings 18" long by 3/16" diameter. Best Flexible Steel Wire Rope Galvanised, Loop-spliced in each end to take ½" bolt, and served with Galvanised Wire. Price 12/- per dozen nett (in Gross Lots). Sample on Application.

**C. OSBORNE, 97 South Street, Longsight, MANCHESTER**

Digitized by Google

diminishing. At Bradford the receipts per car mile have risen from 16·87d. during the week immediately preceding the advance in the fares to 21·85d. per car mile at the present time. York City Council Tramways Committee report that they have reconsidered the question of the Sunday running of cars, with the view of the cars running on the Sunday mornings to enable people to proceed to places of worship. Inasmuch as the committee have not yet effected a reduction of 15 per cent. in running mileage, as required by the Board of Trade, they are not able to entertain the suggestion.

## PATENT LIST.

### Abstracted for "The Tramway and Railway World" from the Official Journal of Patents.

***** If the inventions have been communicated the names of the communicators are given in italics.**

### Applications for Letters Patent.

*The number of the patent is given in brackets.*

Automobiles using producer gas as fuel for internal combustion engine (17,646)—E. Goldsmid-Abrahams and J. W. Parker.
Construction of generators for production of gas from solid fuel for automobile internal combustion engines, etc. (17,647)—E. Goldsmid-Abrahams and J. W. Parker.
Spring shackle bolts, etc., for motor vehicles (17,643)—W. J. Bithell and A. J. Cremer.
Variable speed device (17,723)—S. Bobrovsky.
Fluid pressure braking apparatus (17,598)—J. W. Cross.
Rail joints (17,957)—L. Denonvilliers.
Vehicle brakes (17,558)—H. Fairbrother (*Morton Brake Company*).
Axle drive equipment for motor vehicles (17,719)—R. E. Fielder.
Variable speed gear (17,522)—T. J. Heskett.
Trolley wheels for tramway cars, etc. (17,858)—W. J. Hunter.
Springing motor vehicles, etc. (17,712)—A. W. Smyth.
Hubs for motor vehicles (17,618)—R. J. Treen.

1 ALBEMARLE ST. LONDON W.1
Write for Catalogue No. 43c.

Switch control for automobile electric tail lights (17,575)—D. G. Zalocostas.
Railway sleepers (18,166)—C. H. Adkins.
Mounting recording instruments and engine-control devices on motor vehicles (18,014)—Arrol-Johnston, Limited, and G. W. A. Brown.
Springing or anti-vibratory device for road vehicles (18,217)—E. D. Burley and H. B. R. Clarke.
Variable speed gear (18,175)—Crossley Motors, Limited, T. N. Harrop, and T. D. Wishart.
Speed change gearing (18,334)—J. M. Gloppe.
Tramway point and switch operating devices (17,986)—G. Hendriks.
Collection of electric current by electrically propelled vehicles from overhead conductors (18,353)—E. M. Munro.
Electrical signalling for motor vehicles (18,088)—Naillik Motor Signal Company and J. P. Ogden.
Brake shoes (18,181)—D. G. Pennington and F. P. Wilson.
Insulated rail joints (18,243)—R. S. Proud.
Continuous automatic fluid-pressure brakes for railway vehicles (18,257)—J. C. Taite (*A. M. Bell*).
Fluid-pressure braking apparatus (18,244)—W. V. Turner.
Shackles for motor vehicles (18,605)—M. L. Glover and Company and H. W. Allingham.
Trolley heads for electrically-propelled vehicles (18,424)—J. P. Baker and C. W. Mallins.
Electrically-operated signalling devices (18,745)—C. B. Harlow.
Radiator for motor cars (18,633)—W. C. Hill.
Contact shoes for train controlling systems (18,543)—W. J. Mellersh-Jackson (*E. P. Waterhouse*).
Railway sleepers and chairs (18,548)—S. P. Keates.
Trolley pole controller (18,797)—W. R. Strettle.
Mechanically-controlled feed system for petrol engines (18,687)—R. J. C. Tampier.
Variable speed gear (19,274)—H. P. H. Anderson and J. McCallum.
Friction change speed gearing (19,329)—G. M. Barbier.
Electrically-propelled vehicles (19,247)—F. V. Bornand and J. P. Kemp.
Motor vehicles (18,855)—G. E. Bradshaw and A.B.C. Motors, Limited.
Speed indicators (19,158)—A. E. Brewerton.
Air-brake systems (19,052)—British Thomson-Houston Company, Limited (*General Electric Company*).
Suspension devices for automobile vehicles (19,072)—M. A. Delque and C. M. Motte.
Variable speed gear (19,061)—E. L. Firth.
Speed gears (19,103)—Horstmann Cars, Limited, and S. A. Horstmann.
Fluid-pressure braking apparatus (19,142)—A. W. Rendell.
Bed plate for friction driving gear for motor vehicles (19,029)—F. Sirett.
Apparatus for operating tramway points from vehicles (19,046)—C. E. Whyatt.
Emergency axle for self-propelled vehicles (19,002)—E. O. Wiggins.

### Specifications Published.

1917.

Junction box coupling for electric conduits (12,284—*119,491*)—J. N. Scism.
Brakes (13,960—*119,499*)—S. L. C. Coleman.
Differential gearing for steering motor vehicles (15,303—*119,563* and 17,592—*119,945*)—G. M. Blackstone, F. Carter, E. Carter, and R. E. Watts.
Recording instruments for vehicles (18,528—*119,583*)—W. E. Kemp.
Means for securing wheels on motor vehicles (15,341—*119,719*)—F. L. Rapson.
Apparatus for operating railway switch points (15,907—*119,731*)—J. P. O'Donnell.
Chair keys for railways (13,506—*119,884*)—S. G. Hobbs.
Means for operating tramway points (14,779—*119,890*)—G. Hendriks.
Electro-magnetic friction brakes for the driving and change speed gear of motor vehicles (14,908—*119,897*)—G. Pollard and Menco-Elma Syndicate.
Radiators for motor vehicles (17,851—*119,948*)—J. C. B. Craddock.
Springs used in connection with the spring suspension of motor road vehicles (15,647—*120,093*)—T. A. Tisdell.
Railway points or switches (15,760—*120,099*)—B. B. Betts.
Controlling mechanism for mechanically-propelled rail vehicles (17,519—*120,130*)—Daimler Company, H. J. Balcombe, and T. Dawson.
Automobile fenders (17,907—*120,131*)—E. G. Budd and J. Ledwinka.

1918.

Differential gear for motor vehicles (4,313—*110,811*)—A. Franks.
Driving gear for motor vehicles (5,274—*119,820*)—A. T. Nogrady.
Arrangement for securing electric contact in overhead trollies for tramway cars and other electrically-driven vehicles (79—*119,958*)—A. C. Franklin.
Trolley heads for electric traction (11,779—*120,187*)—W. Pickersgill, J. H. Pitt, and F. Haigh.

Daimler

# The Daimler Two-Ton Lorry

ONE thing demonstrated during the past four years is the outstanding efficiency of the Daimler Two-Ton Lorry. In all climes, under all conditions, Daimlers have maintained their reputation for reliability, power, simplicity, and economy.

ANOTHER thing demonstrated is the fact that there is no lorry TOO GOOD for a job that must be done regularly, with absolute certainty, and with despatch.

DURING the next few years there will be demonstrated in no uncertain degree the wisdom of regarding Prime Cost as only one factor, and a minor one too, in the estimation of the cost of motor lorry service. The prime cost of a Daimler Lorry covers more than a mere vehicle, it is absolute insurance of maximum efficiency over many years.

**POST-WAR IMPROVEMENTS.**

After an interval of nearly four and a half years there now faces us the prospect of very rapid developments in the civilian use of motor vehicles and in the design of vehicles for other than military service. As regards design, and dealing particularly with the commercial and public service vehicle, it would be unreasonable to expect any very revolutionary novelties to be put forward at an early date by responsible manufacturers. The commercial motor industry has been concentrated throughout the war upon the production of two or three broad types of military lorries. The experience gained has been such as to lead to the elimination of features found to be incapable of standing continuous service under extraordinarily arduous conditions. Changes have not been embodied unless essential or comparatively easy to incorporate without complicating the spare part problem and that of maintenance. The first post-war products of commercial vehicle manufacturers available for civilian use will be the military type of chassis fitted with bodies to suit various customers. At the earliest possible moment manufacturers will also fill in the evident gaps in their present programme, and produce as many as they can of models having road-carrying capacity different from that required by the War Department. The necessity for working along the line of the least resistance points to the probability that these types will not differ very greatly in important features from their predecessors. The difference will lie rather in a general tendency towards simplification, the elimination of unnecessary weight, and a greater ability to use inferior fuels with good economy. This last is a point of great importance. The quality of fuel has been steadily depreciating, and manufacturers have had to reckon with this fact. Since they last supplied the general public, they have learned a great deal as to the means of utilising the heavier fractions of somewhat crude spirits and the avoidance of detrimental effects due to the tendency of such fuel to neutralise the qualities of lubricating oil and to cause corrosion and other troubles. During the war the embodiment of improvements has, of course, been hindered by the crying need for simplification in maintenance by means of complete standardisation. Thus even the earliest post-war models incorporating the manufacturer's experience are likely to possess marked advantages in details rather than in general design when compared with the war-time output of the same firms.

**VEHICLES FOR CIVILIAN WORK.**

As to the availability of new or second-hand machines for civilian work, the position is changing rapidly, so that any statement made may well be out of date before it catches the eye of the reader. At the moment of writing a number of leading firms are able to supply a moderate percentage of their output of heavy vehicles to civilian buyers. These vehicles are of military type. The remainder of the output still goes to the Ministry of Munitions, and the percentage taken by the Ministry may vary in accordance with the development of events. For some time to come the civilian demand is likely to be in excess of available supply, and those who require vehicles urgently should therefore make up their minds at once and get into touch with the manufacturers. We cannot advise waiting with a view to picking up second-hand machines at low cost. The fact that the Government is still taking large numbers of new chassis is safe proof in itself that surplus vehicles in sound condition are not likely to be thrown upon the market for some time to come. A few duds and obsolete types may find their way into the auction rooms. Even when good vehicles begin to figure among the War Department's surplus stock it is probable that all the first batches will be absorbed by other Government departments in connection with various schemes of reconstruction, such as those concerned with the improvement of roads and with big housing schemes. Many vehicles will doubtless be required for service throughout their lives in the rebuilding of devastated areas. Many others will be kept in commission in connection with armies of occupation, and will work out their term of existence in military service. Later on we anticipate that plenty of surplus machines will come steadily on to the market. By that time they will not represent the most modern types, but they will probably be sound investments for general civilian use, appealing particularly to those that cannot afford the cost of new machines.

**DISPOSAL OF SURPLUS VEHICLES.**

These considerations bring us to the general question of the disposal of surplus vehicles. As regards this, we anticipate rapid developments. The whole matter has been hanging fire for years in a most aggravating way. No complete settlement has yet been reached, but the trend of events is in the right direction. It now seems practically certain that all the surplus machines which the Government desires to place upon the market will pass through the hands of their own

# MOTOR TRAFFIC

manufacturers for repair and overhaul, following upon which they will carry their manufacturer's guarantee of condition, and their selling value will be materially increased thereby. They will then be disposed of by their manufacturers and agents, acting on behalf of the Government. In general principle this is the scheme that we have always advocated, and we believe that it is now practically certain that it will be adopted, though the details have not yet been completely worked out and agreed. It is, however, a subject for congratulation, assuming that our information is correct, that the system of auctioning large batches will not be adopted. Such a system would have led to very widespread dissatisfaction among people seeking extraordinary bargains, and frequently getting the worst of the deal. It would also have had a most damaging effect upon the goodwill of the industry, and we are convinced that the price realised over a complete series of auctions would have been very poor.

### THE UNNECESSARY SLOUGH DEPOT.

Various interesting developments of the past weeks include a re-opening of the whole question of the Slough depot. The Financial Committee has taken more evidence on this subject, chiefly, no doubt, as the result of a large number of questions asked in the House of Commons, the replies to which were by no means convincing. The Committee now expresses considerable surprise that the estimate of expenditure by the War Department has quietly risen from a million to a million and three-quarter pounds. In consequence of this, and of the radical change in circumstances since the Committee first approved the scheme with reservations, it is now urged that the whole matter should go before an independent tribunal. This is obviously necessary. The original claim that the depot was needed as an emergency war measure ceases to carry any weight, and before all this money has been irrevocably spent, and probably wasted, it is only right that the country should know what are the real purposes which the promoters of the depot have in view. Nothing on this scale is required in connection with the repair or housing of Government vehicles. There are plenty of munition works now available for such purposes, in so far as the original manufacturers themselves may not be able to fulfil all requirements. A great national manufacturing concern is certainly not needed in this industry. The system of individual enterprise has proved highly successful, and the immense difference in the demand in times of peace and in times of war would make any large factory a most uneconomical investment.

### ROAD IMPROVEMENT AND TAXATION.

Up to the time of writing no definite information has been obtainable as to the Government's intentions in the matter of road reconstruction. This subject is very important to all motor users, since it will inevitably be found to be bound up with the question of motor taxation. It is clear that a clear understanding must be reached as to whether the proceeds of such taxation are to be regarded as contributions to local or to national funds. A combination of the two systems is almost inevitably unfair. Thus the local authority will argue that taxation in favour of a national fund does not pay for any damage that may be done to the local road, and therefore need not be taken into account in the local authorities' proposals for taxation. A similar argument applies the other way round. What motor owners ought really to fight for is the principle that decent roads are necessary to the entire community, and not to motorists only, and that road upkeep should therefore be a national charge, and should not be defrayed out of motor taxation. On the other hand, definite road improvement required in the interests of motor vehicles, but not otherwise necessary, has the effect of decreasing the cost of operation of vehicles, and is therefore worth paying for. We thus arrive at the principle that the whole of the profits of motor taxation should go to road improvement as distinct from road maintenance. The question is complicated by the diversity of authorities responsible for our roads. There are strong arguments in favour of the nationalisation of main roads, but it is very questionable whether these will prevail.

## ROAD TRANSPORT BOARD.

HANDBOOK CONCERNING ITS CONSTITUTION AND FUNCTIONS.

The Road Transport Board (Board of Trade) have issued a "Handbook on Road Transport," containing information concerning the constitution and functions of the Board, with two maps of England, Wales, and Scotland. It is published by H.M. Stationery Office and may be obtained at 2s. per copy. The date of issue from the Board's office at Berkeley Street, W.1, is October, 1918.

At first sight the reader may be inclined to doubt the utility of such a publication now that peace is assured. It is therefore advisable to recall that the Board was not appointed by the President of the Board of Trade, with the concurrence of the War Cabinet, until February 18 last, and that although their activities were to be limited to the duration of the war, power is given for the continuance of the Board's operations with the concurrence of the Minister of Reconstruction.

As a considerable period is likely to elapse before the petrol and forage supplies become normal for civil use, no surprise will be created if the existence of the Board is extended until well into the year 1919. Apart from its usefulness as a record of the work which the Board have performed during their short existence, it is to be hoped that the volume may serve a useful purpose after the dissolution of the central authority and of the divisional board, advisory committee, and area committee, which were appointed in each of the thirteen divisions into which England, Wales, and Scotland have been formed for carrying out the functions of the Board. Information as to the constitution of the central and provincial bodies and of the work to be carried out has been given from time to time in this journal. The board's terms of reference could, in a large measure, be adapted to the time of peace in a wisely governed country, without encroaching on individual freedom. Of the foundation existing for this expression of opinion, the reader may judge from the appended quotation of the terms of reference:—

"To co-ordinate the work of existing Government departments in connection with road transport; to determine what further measures are necessary to ensure the most economic use of road transport vehicles, and their efficient allocation for meeting such requirements as may arise from time to time for the transport of food, munitions, and other war material, and for the essential needs of the trade and industry of the country; and, subject to the direction of the Board of Trade, to give executive effect thereto."

The Road Transport Board are an inter-departmental body attached to the Board of Trade, and consisting of representatives of the following departments:—Board of Trade (Petrol Control Department), Board of Trade (Horse Transport Department), Ministry of Munitions, Ministry of Food, War Office (Transport), War Office (Upkeep of Roads), Post Office, and the Road Board.

With the exception of compulsory registration of road transport vehicles, the measures of the Board have been based upon the voluntary co-operation of traders and owners and users of transport, and the nature of the schemes of co-ordination have been relegated mainly to the discretion of the Divisional Transport Boards. Whatever may be the ultimate fate of the Road Transport Board itself, it is to be hoped that the Area Transport Committees may be continued to develop the return loads movement.

# MOTOR TRAFFIC

## PETROL RESTRICTIONS RELAXED.

The Board of Trade announced on December 6 that during the Christmas holidays the restrictions on the use of petrol would be suspended to the extent of allowing motor vehicles to be used between December 16 and January 10 for any purpose without limitation of distance. No additional petrol will be provided. An increased allowance of spirit for cabs is promised.

After consultation with H.M. Petroleum Executive, the Board of Trade has announced that it will not be possible for some time to withdraw entirely the restrictions on the use of petrol for driving motor vehicles. H.M. Petroleum Executive are making arrangements to provide as quickly as possible increased supplies of petrol to be distributed by the Petrol Control Department for civilian purposes. The conditions resulting from the Armistice have already involved a material increase in the consumption of petrol in connection with the army in France, and the increased heavy demand in this respect will continue for some little time.

Arrangements are being made at once for the transfer of ships which have been carrying fuel oil to the purpose of carrying petrol, but on account of the necessity for cleaning the ships it will be several months before they will all be ready. In the meantime, having in view the greater facilities which will be available for increasing the petrol stocks later on, the Board of Trade will be able to some extent to relax the restrictions at an early date. It is therefore proposed that :—

(1) The Motor Spirit Consolidation and Gas Restriction Order, 1918, shall be modified so as to permit, on and after December 1, 1918, the use of motor spirit by licence holders for driving motor vehicles of any type for all purposes within a radius of thirty miles of the place of residence or business of the licence holder. So far as journeys beyond this radius are concerned, the restrictions will for the present remain in force, but will be removed entirely as soon as possible.

(2) After January 1, 1919, if the conditions of the stocks of motor spirit at that time permit, the Petrol Control Department will be prepared to consider applications from owners of commercial and public utility vehicles for an increase in their present allotments. Applications for licences will also be considered from owners of vehicles of this type who do not at present hold licences.

It is also anticipated that shortly afterwards the department will be able to consider applications for licences from private vehicle owners who do not at present hold licences, and for increased allotments in the cases of existing licences. For some time to come motor spirit will only be obtainable under licence as hitherto.

### The New Order.

On November 28 the Board of Trade issued a new Order providing that nothing in paragraphs 2, 3, 4, 5, or 9 of the Motor Spirit (Consolidation) and Gas Restriction Order, 1918, shall prevent the use of petrol or petrol substitute, obtained under the provisions of a motor spirit licence, or of gas by the holder of a gas permit, for the purpose of driving any motor vehicle or motor boat within a radius of 30 miles from the place where such vehicle or boat is usually kept. The new Order has effect from December 1.

The President of the Board of Trade having considered the representations made by the Commercial Motor Users' Association, the London and Provincial Omnibus Owners' Association, and other bodies, the Petrol Controller has arranged "to consider on its merits any individual application for an increased allotment, in view of the additional quantity of foodstuffs to be delivered during December." Mr. F. G. Bristow, general secretary of the C.M.U.A., will be glad to assist traders using motor vehicles for the distribution of food, who desire to make special claims.

### Expected Reduction of Prices.

The Standing Joint Committee of Mechanical Road Transport Associations, which committee has been urging on the Government the national necessity for the earliest possible reduction in the prices of petrol and paraffin, has been informed by the Director of the Petroleum Executive, Sir John Cadman, that "there is good ground to hope that unless there is an unexpected change for the worse in the position, some reduction in these prices will be possible either at the beginning of December or January next."

On December 1 a reduction of 2d. per gallon in petrol and petroleum was announced.

### Retail Petrol Delivery Order.

The President of the Board of Trade has ordered the withdrawal until further notice of the instruction issued by the Road Transport Board restricting deliveries by retail traders in petrol to a radius of ten miles.

### Petrol for the General Election.

Before the prorogation of Parliament, Sir A. Stanley, President of the Board of Trade, stated that for the purpose of the General Election it had been decided to make some increase in the allowance of petrol, both for candidates and their agents. The allowance will be increased by 10 gallons in each instance. That would increase the amount from 20 to 30 gallons according to the size of the constituency.

Replying to an appeal from Colonel Lowther for a larger supply to members who represented very large constituencies, Sir Albert Stanley said that the question of the allowance of petrol was very carefully considered by representatives of all departments, and the matter was under discussion for several weeks. The decision was the result of a carefully prepared plan. He had gone into the matter since, and although he did not pretend to be a proper authority to determine what could be done, he felt that the decision come to by those competent to advise the Government was the best in the circumstances. The special permits and licences which would be issued to Parliamentary candidates and their election agents would be valid during the seven days preceding the issue of the writ as well as during the period between the issue of the writ and the day following the close of the poll.

### Transit of Election Machinery.

As the result of representations made by returning officers in respect to the conveyance of the voting compartments, ballot boxes, stamping instruments, etc., to the polling stations, the Road Transport Board has instructed each of its divisional road transport officers to take immediate steps to assist in the provision of transport on the receipt of a request from the acting returning officer or deputy acting returning officer. The Local Government Board, in making the foregoing announcement, has also stated that in any case in which difficulty is anticipated the returning officers should communicate with the transport officer of their particular area.

## THE CIPPENHAM MOTOR DEPOT SCHEME.

### Makers' Offer to Undertake Repairs of Discarded Vehicles.

Three questions relative to the War Office project for the erection of a huge depot at Cippenham, Bucks, for the repair of motor vehicles brought over from France were put to the Under Secretary of State for War before the prorogation of Parliament.

Captain Carr-Gomm asked if any experts other than the expert officers of the directorate of supplies and transport at the War Office and the Mechanical Transport Board were members of the conference which considered the offer of motor firms to undertake the repair of a large number of motors at a quarter of the cost of the Government scheme at Cippenham; and, if so, would he say whether these were civilian experts?

Mr. Macpherson said the answer to the first part of the question was in the negative. Several of the officers who were consulted were, however, expert engineers in civil life.

Captain Carr-Gomm asked if it was not a fact that the only people who decided upon this scheme were those interested in the promotion of it?

Mr. Macpherson gave a negative reply.

Mr. Grant asked if, in view of the present military situation, any diminution of expenditure was contemplated in regard to the Cippenham works?

Mr. Macpherson: The authorities are in close touch with the Select Committee on National Expenditure regarding these works in view of the military situation. Pending a decision, the expenditure is being curtailed as much as possible.

At a later sitting Mr. Grant asked the Under Secretary whether he was aware that, owing to the shortage of houses in the neighbourhood, at least 1,000 new cottages would be required for the permanent staff of workmen to be employed at the depot when in full working order; whether the estimated expenditure of £1,750,000 on this depot included any sum for the provision of workmen's dwellings apart from the temporary huts now in use; and, if not, by whom and when and at what cost were these dwellings to be provided?

Mr. Macpherson said he was not aware of any shortage of houses in the neighbourhood to meet the probable requirements of the permanent staff. In any case it should be possible for the employees to reach the works by using the Great Western Railway. The estimated expenditure included the provision of housing for the military personnel that would be employed at the depot, but it was not proposed to provide any other dwellings.

A correspondent of a daily newspaper reports that motor lorries are being shipped back from France in hundreds, and that he has

Digitized by Google

# MOTOR TRAFFIC

heard a story of one, with a few easily remediable defects, being purchased for the ridiculous sum of £15.

RECOMMENDATIONS BY A SELECT COMMITTEE.

The necessity for immediate action by the Government in reference to the motor depot scheme is emphasised by the fact that under the "power to break" clause of the contracts, the Ministry of Munitions have given manufacturers notice that contracts for motor vehicles are to be terminated. It is also made clear by the Select Committee on National Expenditure, in their final report issued in November, that the War Office intend to use the depot for the repair of war worn vehicles.

The Committee state that the number of motor vehicles at home and in foreign theatres of war which need attention is 52,130 lorries, 28,590 cars, and 33,880 cycles. An output of repaired vehicles of 100 lorries, 100 cars, and 200 cycles per week for three years is contemplated, and a War Office estimate shows that, after writing down the capital expenditure to about 25 per cent. of its original sum, their experts anticipate a net profit on the undertaking of £1,233,772.

No opinion is expressed by the Committee as to whether the estimate is likely to be realised, and they recommend that the estimate should be subject at once to independent expert examination. They also recommend that an immediate reply from the Ministry of Munitions as to the availability of alternative premises should be obtained, and that the Government should review the question of proceeding with the work until the reply of the Ministry of Munitions is obtained. It is further advised that the proposals with regard to housing of personnel should be re-examined.

Reporting on the depot scheme as a whole the Select Committee state that the progress of the work has been inspected and fresh evidence has been obtained. The estimated expenditure has increased from a sum slightly exceeding £1,000,000 to £1,750,000. The increase is due partly to the rise in the cost of construction and partly to the unreliability of the first rough estimates. They express surprise that an estimate should have been found incorrect by so large a percentage. In view of the early termination of the war, the Committee advise that the Ministry of Munitons should release some of their premises for the storage of vehicles and their repairs.

In an apparently inspired statement published in a daily newspaper at the end of November, the following statement was made in reference to the motor depot project at Slough :—"The scheme has been seriously retarded owing to trade opposition. All similar opposition from manufacturers must be set aside, as in time they will learn that trade developments, such as should now take place, will more than absorb their output."

## MOTOR OMNIBUS MAINTENANCE.

The second meeting of the fourth series of Operating Department efficiency meetings in connection with the London Underground Railways and London General Omnibus Company Group was held recently at the London General Omnibus Company's Training School, Mr. H. E. Blain (operating manager) presiding over an attendance of over 200 members of the administrative and control staffs. An exceedingly interesting lecture on "Omnibus Maintenance" was delivered by Mr. W. I. Johnston (chief depot engineer, L.G.O.C.), who, in addition to giving an historical *resume* of motor transport from its inception, and the gradual development of the motor omnibus chassis and body, reviewed the garage personnel and methods necessary for an efficient maintenance. He described the various forms and records kept, and the system of overhaul so largely responsible for the excellent condition in normal times of the London public service omnibuses. The methods adopted to secure economy in petrol consumption and to ensure both garage and independent tests of important parts of the chassis were described, whilst an interesting series of charts illustrated the manner of keeping records in connection with lost mileage and involuntary stops due to engineering defects, the cost per mile for important items, and the running of each individual omnibus. The special depot for dealing with tires and welding, and the oil reclaiming and rag washing depot were described, as well as the company's lorry systems of distribution of parts and stores. The lecture was illustrated by a number of slides and two very excellent films, showing the activity of the omnibus engineering staff in connection with maintenance and output. The discussion was opened by Mr. H. S. F. Lansdown (assistant general superintendent), and continued by Messrs. Soutter, Symes, Smith, Beech, Rozier, Clarke, Eden, Clent, Heath, Shave, Blake, and Thomas. The next efficiency meeting will deal with a number of papers by members of different grades of the control staff on "Problems in My Official Life."

## STEAM WAGONS AND FUEL ECONOMY.

It is estimated that there are in operation 12,000 steam motor road vehicles, consuming an aggregate of over 750,000 tons of fuel per annum, and that this may soon exceed 1,000,000 tons per annum. The present efficiency of these units is about 50 per cent., so that an increase to 60 per cent., thereby saving 10 per cent., or 100,000 tons of fuel, is well worth aiming at, remarks a fuel specialist in a recent issue of *Motor Traction*. If in addition this economy can be effected by the substitution of coke as a fuel in place of coal, further gains occur in the form of coal gas and the tar residuals and distillates. Normally, however, the grates are designed for the combustion of Welsh coal. Many, however, doubtless operate in localities in which difficulty may be experienced in procuring this type of fuel. Each different type of fuel necessitates differences in the construction of grates, and the arrangement of draughts for combustion. Thus, Welsh coal may contain about 15 per cent. of volatile matter, which is immediately distilled when the fuel is fired, and demands a large proportion of air for its complete or nearly complete combustion. Coke, on the other hand, contains only about 2 per cent. of volatile constituents. Again, for equal thermal value coke occupies nearly twice the bulk of the coal, and thus on the same grate the same rate of combustion would necessitate a depth of coke practically twice that of coal. For effective draught through such a coke fire increased draught pressure is necessary in addition to freer access provided by increased air spaces in the fire grate. By this means grates ordinarily designed for coal may be adapted for coke, the use of which offers advantages in its greater accessibility, in addition to those already mentioned. Recent tests are quoted showing an increase in thermal efficiency of from 50 per cent. in the case of eight different kinds of coal to 64 per cent. in the case of coke, the sample of the latter being of an inferior quality of about 10,000 B.Th.U.'s, whereas ordinarily the thermal value of coke is of the order of 12,000 B.Th.U.'s. Modification of design of fire grate to permit of the use of coke thus adds to the advantages of the steam wagon, in addition to effecting smokeless combustion.

## STANDARDISATION OF RUBBER TIRES.

At the request of the British Rubber Tire Manufacturers' Association, Mr. W. H. Paull, development superintendent of the Dunlop Rubber Company, has prepared a draft scheme for the consideration of the committees who are taking steps to standardise motor tires. It is proposed to deal with a limited number of tire and rim sizes capable of meeting the requirements of present and future types of vehicles, including cars of all kinds, heavy commercial vehicles, motor cycles and pedal cycles.

As regards solid tires it is proposed to have four British standard diameters, viz., 670, 720, 771, and 850 mm. respectively, with tire sections shown in the appended table :—

MILLIMETRE SIZES.

| Wheel Rim Diameters. | Tire Sections. |
|---|---|
| 670 mm. ... ... ... | 160, 180 mm. |
| 720 mm. ... ... ... | 90, 100, 120, 140, 160, 180 mm. |
| 771 mm. ... ... ... | 100, 120, 140, 160, 180 mm. |
| 850 mm. ... ... ... | 100, 120, 140, 160, 180 mm. |

Sections larger than 180 mm. to be made to 850 mm. diameter only. Taking 881 mm. and 850 mm. diameter wheels together, the sizes shown cover nearly 80 per cent. of the present demand for solid tires.

INCH SIZES.

As adopted by the War Service Committee, U.S.A. (division solid tires), July, 1918.

| Overall Tire Diameters. | Tire Sections. |
|---|---|
| 32 in. ... ... ... | 3, 3½, 4 inch. |
| 36 in. ... ... ... | 4, 5, 6, 7, 8, 10 inch. |
| 40 in. ... ... ... | 5, 6, 10, 12, 14 inch. |

In the inch sizes the American standard range is adopted of 32, 36, and 40 inch overall tire diameters; the first ranges in section from 3 in. to 4 in., the 36 from 4 in. to 10 in., and the 40 from 5 in. to 14 in.

In his report Mr. Paull refers to the waste caused by the production of types of tires that are nearly the same, and states that the adoption of the scheme would not necessitate the laying down of new models. All that is proposed is that fewer types should be made with the result that stocking would be simplified, and that a user requiring a new tire would be practically certain of finding his standard tire at any depot.

For the present it is proposed that the manufacture of non-standard tires should be continued, but as existing non-standard rims pass out of use the production of these tires will cease.

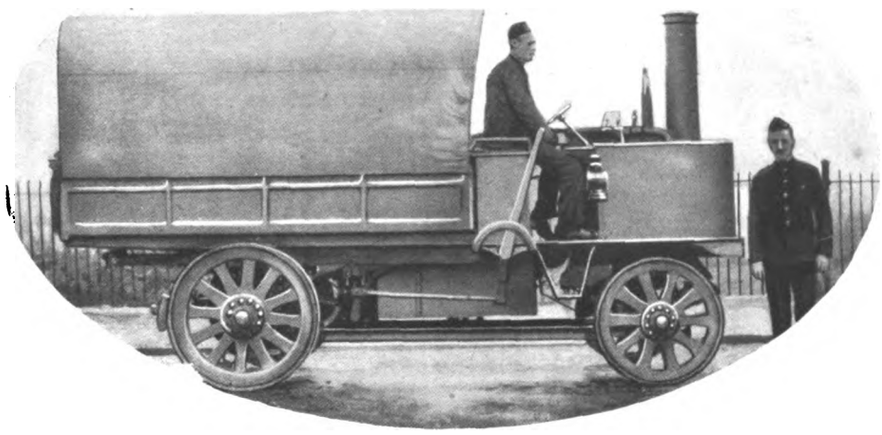
## THORNYCROFT VEHICLES IN WAR SERVICE.

In view of the important part mechanical transport has played in the great war now happily ended, John I. Thorneycroft and Company, Limited, are of the opinion that some particulars of the work done by them from the inception of mechanical transport in the army up to the present time will be of interest to all users of motor vehicles, and have therefore published a booklet giving some details of the various machines supplied for army use since 1899.



**Thornycroft Steam Wagon Supplied to the Royal Engineers in 1899.**

From the particulars given it would appear that for some time previous to the South African War the Royal Engineers used a few steam traction engines for special traction purposes, but it was not until the autumn manœuvres of 1899 that mechanical transport was tested with a view to its adoption as a regular unit of the service. The first machine purchased by the Royal Engineers was a steam wagon built by Messrs. Thornycroft. As a result of the experimental work done by this vehicle, an application was made by the Army Service Corps to Messrs. Thornycroft for the loan of a number of steam lorries for trial in connection with the 1899 manœuvres, all of which did extremely well. In the following year Messrs. Thornycroft were again asked to loan a number of vehicles, the results being also considered highly satisfactory, so much so that shortly afterwards ten 3-ton wagons were ordered by the Government and handed over to the Army Service Corps.

In 1901 the War Office had become so impressed with the possibilities of the steam motor wagon that they instituted a competition for the best type of motor vehicle for military purposes, offering a prize of £500 and orders for the winners for a certain number of vehicles. This competition was won by the Thornycroft lorry, which was purchased by the Mechanical Transport Committee, and orders were placed for others by the War Office and Indian Government.

Excellent illustrations are given of these early machines, together with those of the various types supplied from time to time, up to the latest petrol war model, upon which the whole resources of the firm has for many months been concentrated, and which can now be delivered to the public. Illustrations are also given of the special Indian standard lorry and mobile workshop, each being mounted upon the firm's 40 H.P. "X" type, of which over 100 have been supplied to the order of the India Office.

MOTOR EXHIBITIONS.—The Society of Motor Manufacturers and Traders has decided to organise a series of exhibitions. The annual touring car exhibition will be held at Olympia in November, 1919. This, as usual, will include a full display of tires, and accessories and components. The international aero exhibitions, begun by the society in 1909, will be resumed. The pioneer work of the society in this respect proved of great national value in 1914. There is likely to be combined with this exhibition a display of motor tractors.

**A 40-h.p. Type "J" Thornycroft 3-Ton Lorry as Supplied to the War Department.**

# MOTOR TRAFFIC

## MOTOR TRAFFIC NOTES.

MUNICIPAL MOTOR WORKS.—Gloucester City Council have arranged to convert an old smithy into a workshop where repairs to motors can be carried out for the fire brigade.

SHEFFIELD'S SUSPENDED SERVICES.—At a meeting of the Sheffield Corporation it was stated that a suspended motor omnibus service could be resumed if the services of two motor omnibus mechanics and certain spare parts could be obtained.

TREES AND TRAFFIC.—Barnes Urban Council had to pay £16 9s. 6d. damages in respect of a pantechnicon damaged whilst passing along a thoroughfare in which are several trees. The Council has since lopped some of the trees and removed others.

A MOTOR FIRE ENGINE PRESENTED TO NORWICH CITY COUNCIL.—The machine has been purchased by subscription, coming chiefly from local firms. It is of 70 H.P., with a capacity of 500 gallons, and having a sliding carriage telescopic fire escape with a 55 ft. reach.

SPEED INDICATORS FOR FIRE ENGINES.—With a view to checking the consumption of petrol and to the durability of various parts of the machines, Willesden Urban Council propose that the four motor vehicles of the Fire Brigade shall be fitted with speed indicators at a cost not exceeding £45.

OMNIBUS SERVICE WANTED.—Application has been made to the Walsall Corporation by the Birmingham Metal and Munition Company for the running of a motor omnibus service between their works and Walsall Wood and Brownhills. The Corporation is applying for the consent of the local and road authorities concerned.

COAL GAS AS A MOTOR FUEL.—The Automobile Association has received several entries for its competition for a £1,000 prize for the best system for enabling coal gas to be used as fuel for motor vehicles. The closing day for entries is December 31, and all who propose to enter should communicate with the Secretary, Fanum House, Whitcomb Street, London, W.C.2.

ASKING FOR A MOTOR OMNIBUS SERVICE.—A deputation from Ecclesfield Parish Council waited upon the Sheffield Tramway Committee to ask for a motor omnibus service to Grenoside. The deputation was assured that such a service would be run at the earliest possible date, but that, in view of the shortage of men and material, it was impossible to do so at once.

DRIVERS WANTED AGAIN.—The London General Omnibus Company are making application for the return of omnibus drivers from the Army in order to increase the travelling facilities of the metropolis. If this application is granted and sufficient petrol is allotted, the company hope to be able to place several hundred additional omnibuses on the streets in the near future.

ELECTRIC TRUCKS FOR REFUSE COLLECTION.—Hull City Engineer has suggested employing electric warehouse trucks for the collection of street sweepings, and thereby release horses for heavier work. He has been asked by the Cleansing Committee to report further as to the idea and empowered, if necessary, to visit the Chloride Electrical Storage Company's Works, near Manchester.

ELECTRICS AND THE AMERICAN WAR TAX.—At the Health Committee of Sheffield Corporation there was reported an application from the Edison Accumulators, Limited, for an extra allowance in respect of two electric vehicles on order on account of the American war tax and increases of wages authorised by the Ministry of Munitions. The committee recommends that an allowance of £50 per vehicle be granted—from £1,110 to £1,100.

OVERCROWDED OMNIBUSES.—Replying to a question in the House of Commons, Mr. Wardle (Parliamentary Secretary to the Board of Trade) said neither the omnibuses nor the tube railways in the London area were under Government control, but he was confident that the companies concerned were aware of the desirability of improving their transit facilities so far as might be possible in existing circumstances. He was, however, bringing to their notice the point raised in regard to overcrowding.

STOCKTON CORPORATION OMNIBUS SERVICE.—Stockton Corporation have asked the Durham County Council for permission to run a motor omnibus service over a new route from Stockton to Port Clarence. The County Council had already decided that in the case of new services, so far as county roads are concerned, the charges shall be from 1d. to 1½d. per car-mile, and the Highways Committee report in favour of sanctioning the new route on these terms. The 1d. a mile is for vehicles carrying 12 passengers and 1½d. for those carrying 34.

DUNLOP RUBBER COMPANY, LIMITED.—A circular issued by the Secretary of the Dunlop Rubber Company, Limited, states that the issue of the report and balance sheet for the year ended August 31 must be considerably delayed, owing to the continued depletion of the staff and the great increase in business (amounting practically to 50 per cent.). The directors, being of opinion that a further distribution to the ordinary shareholders should be made, have declared an interim dividend for the half year ended August 31 of 1s. 6d. per share on the ordinary shares.

A MAGNETO POINT.—Westminster City Council have had an offer from Messrs. John I. Thornycroft and Company, Limited, to continue the maintenance contract in respect of a motor wagon at the old price of £88 per annum, providing the existing low-tension magneto be replaced by a high-tension magneto, as the former gives a great deal of trouble and expense which could be avoided. As the firm offer to provide the new magneto for £16 10s. and to make no charge for fitting or wiring necessitated by the new installation, the Highways Committee report their acquiescence in the proposal.

PETROL FOR FOOD DELIVERY.—At a meeting of Plymouth Food Committee a letter was received from the Divisional Food Commissioner enclosing a communication from the local traders' organisation with reference to the restriction proposed to be placed on the supply of petrol for road transport for the distribution of foodstuffs and asking for the observation of the committee. It having been reported that, since the letter was written, the Road Transport Committee had recommended that the radius within which it was intended to confine the delivery of foodstuffs should be enlarged from seven to ten miles of large towns, the committee decided to inform the Divisional Commissioner that probably this concession would go far to meet the views of local traders.

## MOTOR VEHICLES FOR MUNICIPALITIES.

BEDFORD CORPORATION are considering the equipment of their fire brigade with motor engines.

GLOUCESTER CITY COUNCIL have under consideration the equipment of a fire float with a motor engine.

HALIFAX CORPORATION are obtaining a motor fire engine with accessories at a cost of about £1,300.

GILLINGHAM TOWN COUNCIL have decided to secure two electric vehicles for the collection of house refuse.

LOFTUS URBAN COUNCIL are considering a proposal to provide a motor ambulance at a cost of about £1,000.

TAUNTON HEALTH, STREETS, AND HIGHWAYS COMMITTEE are considering the purchase of an electric vehicle.

HAMPSHIRE COUNTY COUNCIL are to purchase a small two-seater motor car for the use of the assistant county architect.

WOLVERHAMPTON TOWN COUNCIL have purchased an electrically-propelled lorry from Ransomes, Sims and Jefferies, Limited.

WILLESDEN URBAN COUNCIL are contemplating the purchase of three electric 2-ton vehicles for the collection of house refuse.

WOLVERHAMPTON TOWN COUNCIL have ordered a battery for an electric vehicle from the Chloride Electrical Storage Company, Limited.

LAMBETH BOROUGH COUNCIL are purchasing a steam-driven vacuum gulley emptying wagon from Leyland Motors, Limited, for £675.

ROTHERHAM CORPORATION have been inquiring as to the price of a new motor tower wagon and as to the cost of repairing the present one.

BRAINTREE URBAN COUNCIL are considering the acquisition of a motor to draw the fire engine, owing to difficulty recently experienced in getting horses.

SOUTHEND CORPORATION TRAMWAYS COMMITTEE propose to apply a balance of £1,255 to the credit of the motor omnibus account to the purchase of an electric wagon.

WILLESDEN URBAN COUNCIL have been recommended to purchase three 2-ton vehicles for the collection of house refuse, at £415 each, from Ransomes, Sims, and Jeffries, Limited.

### LIVERPOOL CORPORATION TRAMWAYS COMMITTEE.

#### MOTOR OMNIBUSES.

The Liverpool Corporation Tramways Committee are prepared to receive tenders for the supply of a number of Motor Omnibuses.

Tender forms and other particulars can be obtained on application to the General Manager, C. W. Mallins, M.I.A.E., 24, Hatton Garden, Liverpool.

Tenders to be addressed to the Town Clerk at his Office, Municipal Buildings, Dale Street, Liverpool, and to be received not later than 12 noon on the 31st instant, endorsed "Tender for Motor Omnibuses."

E. R. PICKMERE, M.A.,
Town Clerk

Liverpool, 9th December, 1918.

## WORM DBS DRIVE

### The Drive of Dependable Service

The success of the D.B.S. worm drive has not come about by chance—it has been a steady development, the outcome of painstaking engineering research and manufacturing methods that will only accept one result — QUALITY

Actual experience under the most strenuous conditions on thousands of cars and commercial vehicles of all types has proved beyond dispute the reliability, noiseless operation, and superior efficiency of the D.B.S. worm drive type of power transmission.

The new patent form of tooth and thread of the D.B.S. worm drive gives the maximum amount of rolling contact and reduces the sliding element to the minimum. Equip your cars or heavy vehicles with the D.B.S. worm drive and you assure constant dependability and performance. May we send you full details? Write to Dept. M.

It is a sufficiently striking testimony to the reliability of the electric vehicle that by far the greatest number of those in use are employed in just those particular classes of work in which it is essential that there shall be no failure in continuity of service.

INSTAL "THE COVENTRY" CHAIN DRIVES AS AN INVESTMENT

The longer life, increased efficiency—a continuous 98%—and improved quality of product, ensure a handsome return for the slight extra initial cost.

Why not consult us on any transmission problems? The solving of these would be a mere matter of routine to our technical staff. Blueprints, estimates, and advice generally given freely and without obligation.

The Shortage of Skilled Drivers

If you engage an inexperienced driver to run your lorry it is not improbable that he will one day throw in his clutch with all the vigour his inexperience prompts—strain the whole of your chassis—and do damage in your gear box that will take days to repair.

Make it impossible for him to do this by having the clutch lined with Ferodo fabric. It will then engage sweetly however violently applied—transmit maximum power from engine to back axle—never slip or seize. Ferodo fabric lasts much longer than leather or any imitations of Ferodo fabric, and will not burn out. It gives infinitely superior service at less cost.

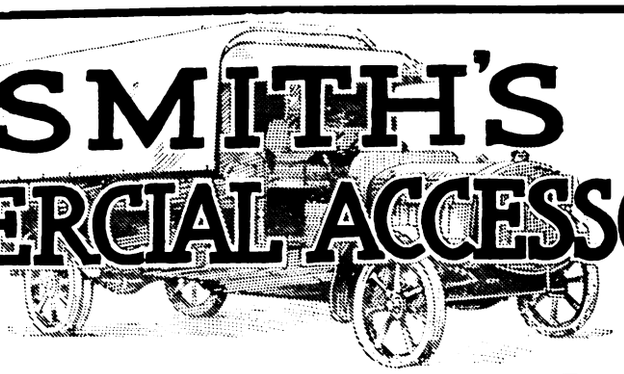
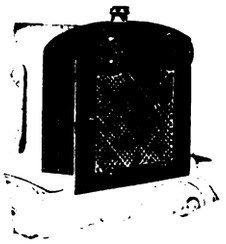
# SMITH'S COMMERCIAL ACCESSORIES



## Smith's Radiator Cosy



Made of heavy tarpaulin, lined with felt, this is an ideal Cosy for Commercial Vehicles. The front of the Cosy is made to roll up, thereby allowing the Cosy to remain undisturbed on the radiator during the entire winter. When ordering please send pattern and breadth of radiator.

No. **K2** ..... Price **50/-** each.

## Smith's Mileage Recorders

Strongly constructed of brass, with internal fittings on the Smith scientific principle this instrument is made to record season mileage of vehicles up to 10,000 miles. **Adds** mileage for all reversings and automatically resets itself to zero.

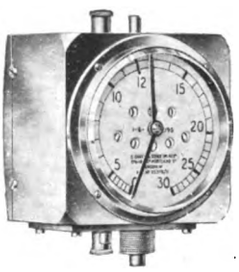
No. **C1.** Price (complete with drive for any make of chassis)..... **£5 5s.**

## Smith's Bulb Horn

A very serviceable Horn, suitable for all vehicles—of superior make and finish, and fitted with a specially selected reed—can be supplied in either black, service green or brass.

No. **G5301** ..... Price **25/-** each.

## Smith's Combined Speedometer and Mileage Recorder



This is the finest possible Recording Instrument made for Commercial Vehicles, and will stand up to its work under any conditions. It makes every conceivable record required for Costing, Checking Petrol Consumption and Tyre Mileage, *viz.*, speed up to 30 miles per hour, maximum speed on any journey, season mileage and daily mileage, and it records accurately whether the vehicle is going backward or forward.

No. **F6.** Price (complete with drive for any make of chassis) **£8 8s.**

## Sheppee Non-Skids for Twin Solid Tyres

Messrs. Smiths are Sole London Agents for the Sheppee Non-Skids, which have already achieved a phenomenal success. These Non-Skids consist of strong chains fitted with cross stakes of special type, and are fastened by a patented fastener. Made of extra tough steel, they are indestructible, they never go wrong or get out of order, and they are equally effective on hard ground or soft ground. There is no fear of any damage resulting to the tyres by using Sheppee Non-Skids. Made in three distinct sizes.

**Light Type** (for tyres up to 1010 m/m) ..... **£8 10s.**
**Medium Type** ( ,, ,, ,, 1050 m/m) ..... **£9 5s.**
**Heavy Type** ( ,, ,, ,, 1070 m/m) ..... **£11 0s.**

## Smith's Badger Truck Jack

This is the most effective Truck Jack on the market. It is made of the very best materials throughout, and acts on the quick-life principle. The lifting pawls are of carbon drop forged steel, and the reversing mechanism of pressed steel. This Badger Truck Jack is listed to lift three tons weight, but every Jack is actually tested to lift twice its actually listed weight. They are practically unbreakable and give the greatest leverage with the least effort.

List No. **H400.** Price **£3 3s.**

## Acetylene Head Lamps

These are **undoubtedly** the most suitable type of Lamp for commercial use. They are **extremely strong**, reasonably light, **and practically unbreakable. These Lamps are cast in aluminium in one piece. Every detail** of their construction **has been arranged to withstand the roughest** vibration **and shocks. Fitted with** genuine Mangin mirrors **and standard** lug centres, 8½ inches.

No. **1300** ..... Size 8 inches.
Price **£2 15s. each.**

## Acetylene Generators

This is a most serviceable Generator, very much in demand. The container is of cast aluminium and the case of galvanised iron. Like the lamp it is of specially strong construction, designed to withstand heavy vibration.

Type No. **1268.** Price **£3 1s. 6d.** each

## Ebonite Garage Hand Lamp

Made throughout of ebonite, this Lamp complies with the Board of Trade regulations. It is absolutely fool-proof, of sound, workmanlike construction, and designed specially for the purpose for which it is required. All who have once used it highly recommend it, and no efficient garage should be without it. It has many distinctive features not possessed by the ordinary garage lamps. Full particulars will be sent to anyone interested on request.

No. **F203** ..... Price **9/6** each.

# CO-ORDINATION

WITH "Unity of Command" has come the great and glorious success on all our Allied fronts, and this co-ordination of the many simultaneous offensives has been vitally essential to victory.

FOR Home, Passenger, or Goods Transport it is almost as important that arrangements should synchronise in like fashion.

THE motor-'bus or lorry scheduled to run in conjunction with tram or train services depends largely on the tyres for its time-keeping, and it is only necessary to state that the leading users have proved that

**Beauty with Utility.** The Cole Four-seated Coupé Cabriolet has been aptly described as "A tangible expression of a rarely-found ideal—Beauty with Utility." Beauty in the sweeping and graceful lines of design—giving handsome appearance from stem to stern. Utility in being an all-purpose carriage—providing interior drive limousine or open touring car as desired.

**Appearance.** The design of the Cole is a development of the two-seater coupé principle, but retains the latter's compact appearance and light weight.

**The Cole Patent Hood.** An important and exclusive feature is the Cole Patent Quick-acting Hood. The success of the carriage centred around the problem of an effective method of raising and lowering the hood. Experiments resulted in perfecting the Cole Patent Self-acting Hood. By simple spring action the hood instantly and mechanically lifts or lowers itself into position. The ease of action is such that a child can operate it.

**Seating Capacity.** Provision is made for the comfortable and easy seating of four passengers (including driver ; two in the rear cushioned seat and two in the front "Pullman type" chairs.

**Adaptability.** All seating is detachable. This convenience makes luggage-carrying space as occasion requires. Footboards are also removable, allowing full and free inspection of chassis.

**For Owner-Drivers and Lady-Drivers.** The Cole Coupé is the greatest success ever attained in the motor carriage for owner-drivers and lady-drivers, in that the interior drive affords complete protection to the driver and enables all the passengers to ordinarily participate in conversation. This dual advantage is particularly appreciated when milady takes the wheel.

**Upholstery and Appointments.** The interior of the car is luxuriously upholstered and cushioned—giving easiest riding comfort and delicious restfulness. General convenience is provided in refined and useful appointments.

**The Finished Production.** The complete carriage is an incomparable example of the coachbuilder's art in beauty of design, in excellence of construction, in refinement of appearance, in perfection of finish, and in utility of purpose.

**Mounts all makes of Chassis.** The body mounts all makes and types of European and American chassis, from 12 h.p. to the highest-powered cars.

# Observation

The great Wellington on a certain famous occasion would have given much to know what was taking place on the other side of the hill. Since then observation has become a highly developed branch of military science, and to-day tactics and strategy depend entirely on it. As in warfare so also in the realms of industry, observation is of vital importance. Industry has its objectives in their own way almost as difficult to capture as any pill boxes or machine gun nests. In the case of the

**ALL BRITISH**

## WOOD-MILNE

**SOLID BAND TYRES**

all objectives are reported gained, an achievement due solely to an efficient observation service, which simply means a close attention to details, the latest developments of scientific research and to modern conditions and requirements. The magnificent manner in which they have stood up to the abnormal demands of to-day has stamped them "The Sturdy Tyres" for strenuous Service.

## SUSPENSION OF CHRISTMAS SERVICES.

The arrangements in regard to tramway services on Christmas Day will differ considerably throughout the country. In Leeds, cars will be run throughout the day, and the public will be able to travel without inconvenience. In Manchester, Birmingham, and a number of other towns, the services will be entirely suspended. In London, the public will have to do without tramway facilities after 4 p.m., but there will be a curtailed omnibus service throughout the day. The whole position is confused and very unsatisfactory. Committees and managers have done their utmost to carry out their responsibility towards the public, but they have found themselves entirely in the hands of the employees, who have issued their decisions, and in most cases have declined to make any compromise. The arrangement in London is an exception, for the original demand required that the services should be entirely suspended; but ultimately, the employees agreed to work part of the day. Further than this, they declined to go. In some towns, an offer of double pay was made for the day's work, together with relief on another day, so anxious were the committees to secure the convenience of the public. But all these efforts proved vain. In some towns where holidays are given with pay, it is one of the conditions of service that work should be performed on Christmas Day. Yet even in these cases the employees have overlooked their obligation and taken arbitrary action. The loss of the service will hit the poorer class hardest, and those who wish to visit friends at a distance, as well as those whose duties require them to move from place to place, will have to walk. No blame can attach to the committees or managers for this unfortunate state of things. They are simply helpless. Easy success in certain questionable demands have encouraged various trade unions to disregard the legitimate claims of the public and high-handed action has become dangerously frequent. Only recently an electrical trade union cut off the supply of current from the Albert Hall, because of certain action of the proprietors of which they did not approve. The Government supported the Union, and the decision of the proprietors was rescinded. Official action of this kind has the worst possible influence, and it is no doubt having an indirect effect upon tramway employees.

## BILLS FOR THE NEXT PARLIAMENT.

Middlesbrough Town Council has decided to promote a Bill in the ensuing session of Parliament to secure powers for the acquisition, construction and working of tramways, trolley vehicles and motor omnibuses, etc.

Stockton Corporation will promote a Bill in the next session of Parliament to empower the Corporation to construct tramways from the existing terminus to Port Clarence, Billingham and Greatham ; to purchase the motor omnibus undertaking of the Imperial Tramways Company ; to run motor omnibuses within the borough and to places mentioned ; and to enable the Corporation to borrow part of the sum required for the purchase of the tramways in the borough of Thornaby. Stockton Council will oppose the Bill of the Middlesbrough Town Council.

Blackpool Town Council is promoting a Bill in the next session of Parliament giving them power to purchase the undertaking of the Blackpool and Fleetwood Tramroad Company, to construct additional tramways, and to authorise the widening of the promenade carriage drive. The township of Bispham on the north side, was recently acquired, and a provisional agreement for the amalgamation of the residential district of St. Annes-on-Sea with Blackpool was concluded. It is the desire of the Council to have control of the whole of the Fylde coast from Rossall Point to Lytham, a distance of about twelve miles. The Fleetwood tramroad extends north from Blackpool, and on the south there are the Lytham tramways, which have not yet been acquired.

The Lord Chairman of Committees of the House of Lords and the Chairman of Ways and Means of the House of Commons considered the Edinburgh Tramways Provisional Order on December 13, and heard petitioners against the scheme, who contended that the measure should be proceeded with as a Private Bill. On behalf of the North British and the Caledonian Railway Companies, it was argued that it was inopportune that the Order should be allowed to proceed at the present time, while on behalf of the Cockburn Association representations were made in the interests of two motor car companies who lodged petitions against the Order. On behalf of the Corporation of Edinburgh, it was pointed out that several of the petitioners could not be heard on the ground that they had no *locus standi* under the Parliamentary procedure. The questions raised by other petitioners would be met by a protective clause. The Order involved no question of serious importance and followed the precedent of the Edinburgh Tramway Order, 1916. It was submitted that the Order ought to be allowed to proceed as a Provisional Order under the provisions of the Private Bill Procedure (Scotland) Act. The Lord Chairman intimated that the Committee would give their decision later.

## INCREASED TRAMWAY FARES.

The following letter has been received by Ealing Town Council from the Board of Trade :—"With reference to the application of the London United Tramways, Ltd., for an order under the Statutory Undertakings (Temporary Increase of Charges) Act, 1918, I am directed by the Board of Trade to state that, after careful consideration, they have decided to authorise the company to increase their ordinary fares by charging a penny for each two of the existing consecutive stages, leaving workmen's fares as at present. The Board further propose to review the matter at the end of two months, when the effect on the company's revenue could be examined. In the Board's view, the Order would not of itself release the company from obligations other than those imposed by statute."

Musselburgh and District Electric Light and Traction Company have intimated to the Musselburgh Town Council that they propose to apply to the Board of Trade for permission to increase their fares by 50 per cent. The Council have assented to the application, but objected to certain points, but it is hoped that an arrangement can be made with the Company which will be satisfactory.

## MUNICIPAL TRAMWAYS ASSOCIATION.

APPOINTMENT OF HONORARY SECRETARY.

Mr. G. W. Holford, general manager of Salford Corporation Tramways, has, with the consent of the Salford Tramways, Committee, accepted the appointment of honorary secretary of the Municipal Tramways Association, in succession to Mr. W. Clough, whose resignation was recently announced. Mr. Holford is well known in the tramway industry. He has been general manager of the Salford tramways since 1902 and has been a member of the Executive Council of the Municipal Tramways Association for many years. He has also acted as honorary secretary of the Lancashire and Cheshire Tramways Managers' Association for the last eight years.

## L.C.C. TRAMWAY MATTERS.

At the meeting of the London County Council on Tuesday, reports on the following tramway matters were submitted by the Highways Committee :—

CHRISTMAS DAY SERVICES.—The Highways Committee reported that they had given instructions for all services on the London County Council tramways to be suspended on Christmas Day after 4 o'clock p.m. They had received letters from the general secretary and the London district secretary of the Amalgamated Association of Tramway and Vehicle Workers asking that Christmas Day might be a general holiday for all the employees. In reply, the Committee, as in previous years, stated that in order to meet to the fullest extent which circumstances permitted the interests of the operative staff, the work on Christmas Day was arranged so as to allow as many as possible to be off duty for a portion or the whole of the day. The Committee felt sure that the association would appreciate that it would be impracticable to suspend the Council's tramway service on Christmas Day without causing great inconvenience to the travelling public, and that in all the circumstances they regretted they could not accede to the request. In view of further representations made by the association and of information as to the course likely to be adopted in the matter by other tramway authorities in the Metropolitan area, the Committee had given instructions for all services on the London County Council tramways to be suspended on Christmas Day as from 4 p.m.

MANUFACTURE OF MUNITIONS.—A resolution was passed conveying the thanks of the Council to members of the staff in the tramways department engaged during the war on work in connection with the manufacture of munitions. A report of the Highways Committee gave some particulars of the work done during the past three and a half years in the tramways department in the manufacture of munitions. In June, 1915, the Council placed its resources at the service of the Ministry of Munitions and the Metropolitan Munitions Committee, but certain assistance had been given by the tramways department since the early part of 1915. The services rendered consisted of the loan of technical officers and the manufacture and examination of munitions, etc. The work performed was of a very varied character, but the efforts of the department were mainly concentrated on the manufacture of gauges of all sizes for field guns, howitzers, naval guns, tanks, munitions, etc. About 18,300 gauges were delivered and passed, and in addition 506 gauges in course of manufacture on the conclusion of the armistice have been taken over by the Government. Steps had also been taken to render assistance in the manufacture of screw gauges, but the work was suspended on the cessation of hostilities. Other classes of work executed included the manufacture of 7,725 high explosive shells, the banding of 36,039 shells, the manufacture of 214 height measuring apparatus for aircraft work, 30,300 steel rings for adapters, shell forging callipers, rumbling drum machines, trucks for carrying fulminate, light trolleys and test pieces. The whole of the necessary alterations to existing plant and the new boring bars and other tools necessary to undertake the manufacture of shells was entirely carried out by the department. From time to time expressions of appreciation have been received both orally and in writing, with regard to the assistance rendered to the Government by the prompt and efficient manner in which urgent and intricate work has been carried out ,concluding with a letter from the director of munition gauges, expressing the appreciation of his department for the perseverance shown in surmounting the great difficulties which had to be overcome in connection with the work.

GOVERNMENT SUBSIDIES FOR OMNIBUS SERVICES.—A lengthy report on this question was presented by the Highways Committee. It was stated that the conference of municipal tramway undertakings still has under consideration questions arising in respect of the matter, and that a further report would doubtless be submitted later. The present report consists largely of correspondence between Mr. T. B. Goodyer, who acted as secretary of the conference, and the Ministry of Munitions.

SPECIAL ALLOWANCE TO TECHNICAL OFFICERS.—Special temporary allowances will be continued up to May 31, 1919, at the rate of £50 a year to each of five charge-shift engineers, two sub-station superintendents, two sub-station repair inspectors, and two main inspectors in the electrical branch of the tramways department.

EMPLOYEES IN THE ROLLING STOCK BRANCH.—An agreement of the Rolling Stock Conciliation Board was reported in which it was provided, to meet the high cost of living, that the war wages of 13s. a week of yard and shop cleaners in the central repair depot should be increased to 18s. a week as from October 31, 1918; that the war bonus (10s. a week) of gate and patrol constables in the rolling stock and general branches should be increased to 14s. a week, and that the war wages (20s. a week) of advertisement labourers be increased to 28s. 6d. a week as from December 5, 1918.

OPENING OF TENDERS DURING THE RECESS.—The Highways Committee were authorised during the Christmas recess to open any tenders which might be received for the supply to the tramways department of field coils, copper wire, rolled steel bars and steel bars for magnetic brake shoes.

WOMEN IN INDUSTRY.—The Clerk to the Council, the Education Officer and the General Manager to the Tramways Department were deputed to give evidence before the War Cabinet Committee in regard to women in industry.

## MISCELLANEOUS NEWS AND NOTES.

**Use of Pleasure Omnibuses.**—The Horsing Order No. 2, 1916, prohibiting the use of omnibuses and char-a-bancs for pleasure purposes, was withdrawn on December 16.

**Leeds Traffic Delayed by a Snowfall.**—Snow fell heavily for several hours at Leeds on Thursday night. Traffic was much interfered with and the tramway service was disorganised, especially in outlying districts.

**Gas Traction Prize.**—The closing date for receiving entries for the Automobile Association £1,000 competition for the best method of using coal gas for propelling motor cars has been postponed, at the special desire of the Gas Traction Committee, until January 31.

**Extensions at Oldham.**—Oldham Corporation intend to promote a bill in the next session of Parliament seeking powers to construct a tramway in the Butler Green district, with the object of reaching a large population and bringing people to Oldham for business purposes.

**Stoppage on the L.C.C. Tramways.**—A stoppage on the London County Council tramways in Peckham Road and at the Elephant and Castle on the morning of December 17 caused considerable delay during the rush hours. The delayed passengers anxious to reach the City, crowded the omnibuses and trains to their fullest extent.

**Reconstruction of the London United Tramways.**—The borough surveyor of Ealing reported at a recent meeting of the Town Council that the London United Tramways Company hope to relay its track next spring, and he was authorised to negotiate for the removal of all centre posts and for the relaying of the sides of the road at the same time.

**New Char-a-bancs at Bournemouth.**—The Hackney Carriage Committee of Bournemouth have recommended the granting of a license for a new chars-a-banc service which it is proposed to establish after the war, subject to the cars being satisfactory. In order to avoid any question as to the design of the cars, they advise that drawings should be submitted for the Committee's approval without delay.

**Sunday Services at Bournemouth.**—A deputation from the Poole Tramways Committee have requested the Bournemouth Town Council to make arrangements, if possible, for at least a limited service of cars on Sunday, and an inquiry has been made of the Board of Trade whether the restrictions in regard to the consumption of coal, etc. could now be so far relaxed as to allow of a Sunday service.

**Fewer Cars in Glasgow.**—In spite of the restricted car service the tramway receipts are being well maintained, the income for the week ended December 7, being £28,343 against £27,627 for the previous week, and £26,644 for the corresponding week a year ago. Mr. Dalrymple, the general manager, stated that there is little hope of an immediate return to the normal service. With the coal supplies slowly diminishing, there is indeed a prospect of further curtailment.

**Coal Saving at Dundee.**—The Corporation some time ago came to an agreement with the Dundee, Broughty Ferry and District Tramways Company with a view to securing economy in coal consumption. Under the arrangement they agreed to supply power for working the Monifieth tramways of the company. The arrangements were completed on December 6, and it is anticipated that they will render unnecessary the reduction in the service that would otherwise have been required.

**Tramways and Light Railways Association.**—The Journal of this Association for December contains a complete list of the members, who now number 413, including 284 tramway companies and a number of corporations. The notice of members is called to the Wages (Temporary Regulations) Act, 1918, which prescribes the minimum rate of wages during the six months from November 21, 1918. (Copies of the Act can be obtained from H.M. Stationery Office, at 1d.) Reference is made to the death of Mr. Cecil Bickersteth, of Messrs. Robert Kearsley and Co., Ltd., "one of the most esteemed and popular members of the Association, whose loss has been deeply felt by all who knew him."

**First Invitations for Tenders since the War.**—The advertisements for tenders for tramway cars from Sheffield Corporation and for motor omnibuses from Liverpool Corporation published in our last issue have occasioned much interest. The "Times" said "these are the first announcements of the kind issued by Corporations since the outbreak of war." The "Sheffield Telegraph" remarked that "there is scarcely a tramway undertaking in the country which is not in need of new cars, while hundreds of miles of track require reconstruction." The "Morning Post" observed that "the publication of these announcements in THE TRAMWAY AND RAILWAY WORLD is an indication of the early revival of business."

**Conditions of American Tramways.**—On its physical side the average electric street railway in the United States is in the same condition as the average tramway in Great Britain; that is, it very much run down. Commenting on the situation, the "Electric Railway Journal" of New York remarks that even before the United States went into the war prices generally were so high, and money, labour and materials were so scarce, that comparatively little maintenance work had been done for a long time. The end of the war, however, will put new hope into the engineers, for they know that in due time they will be able to get the track, rolling stock and power plant into "85 per cent. new condition," which valuation experts consider as excellent maintenance. "We do not delude ourselves," adds our contemporary, "into the belief that this is going to be done all at once; it will take years to get back into normal shape."

**The Institution of Automobile Engineers.**—The fourth meeting of the session of the Institution of Automobile Engineers will be held on Wednesday, January 8, 1919, at the Royal Society of Arts, John Street, Adelphi, W.C.2., at 8 o'clock, when Mr. L. H. Pomeroy will read a Paper on "Influence of Valve Lift and Combustion Chamber Design on Consumption." Cards of invitation to the meeting may be obtained on application to the Secretary of Automobile Engineers, 28, Victoria Street, Westminster, S.W.1.

**United States Electric Railway War Board.**—In a recent report of the War Board a list of thirty-eight bulletins, which were issued for the information of electric railway companies throughout the United States, is included. The bulletins deal with a great variety of subjects, such as coal conservation, skip-stops, electric railway war utilities, return load bureaus, etc. Street railway companies throughout the country have been very active in assisting the Government in every possible way.

**Joint Industrial Council for the Transport Industry.**—The Motor Transport Employers' Federation is interesting itself in the establishment of a Joint Industrial Council of the Transport Industry. Any owner of a goods carrying commercial motor vehicle is eligible. A copy of the prospectus can be obtained from Captain F. J. Bristow, general manager of the Association, 83, Pall Mall, London, S.W.1. Major-General S. S. Long, C.B., of Lever Brothers, Ltd., is chairman of the Committee.

**Parcel Traffic in Bradford.**—The income for the last financial year from parcel traffic on Bradford Corporation Tramways showed a substantial advance, due largely to increased rates and munitions traffic; but owing to increased expenditure the surplus was only £718. The total number of parcels carried was 598,902, compared with 644,064 the previous year. The department is divided into two sections, viz., parcels and motor haulage. The earnings per parcel averaged 3.804d., and the cost 3.721d., leaving a profit of .083d. per parcel.

**Runaway Motor Car Wheel.**—As a heavy motor car was travelling down Archway Road, Highgate, a wheel became detached, and, mounting the pathway, ran away, until it collided with the base of the Highgate Archway. People walking along the path managed to avoid it and no one was injured. The motor car itself, after travelling some distance without the missing wheel, came to a standstill within a few yards of a tramway car, and the tramway traffic was obstructed until the motor car could be removed. Passengers alighted and walked to the tube station at Highgate Hill.

**Sheffield Tramways Committee Matters.**—The Tramway Committee are proceeding with the erection of a new car depot at Crookes. A tramway shelter is to be erected at the junction of Town Lane and Fulwell Road, Sunday morning munition workers' cars are to be withdrawn and free passes are to be issued to blind persons. A grant of £20 has been made to Sheffield Military Hospital fund, and £200 to the West Riding and Sheffield District Rifle Association. Double pay is to be given to the traffic employees for time worked on Armistice Day.

## PERSONAL.

**Sir Auckland Geddes,** President of the Local Government Board, has become a Vice-President of the London Safety First Council.

**Mr. Clifford C. Paterson** joins the General Electric Company, Ltd. as Director of Research Laboratories, as from January next.

**Mr. A. E. McKenzie,** Deputy Chief Engineer of the Manchester Corporation Electricity Department, has resigned his position, and will join the staff of Messrs. C. P. Sparks, consulting engineers, of London.

**Mr. Evan Parry,** Chief Government Electrician of New Zealand, is reported by the local press to have resigned his position. An offer of double remuneration was made to him, but he declined to withdraw his resignation.

## BUSINESS NOTICES.

**George Spencer, Moulton and Company, Ltd.,** have issued a new list (No. 103) dealing with solid rubber tires. The contents include not only the current prices, which are subject to discounts that can be obtained on request by commercial vehicle owners, but also full details of the guarantee for a period of twelve months of 10,000 miles' service. A useful schedule is also given of the maximum loads permissible on tires of sections of 75 mm. to 144 mm., which are used on 3-ton vehicles, 160 mm. and 180 mm. for 5-ton and 6-ton vehicles and the 7 in. American tires for big motors generally. Spencer, Moulton and Company are making a feature of solid rubber tires for trailers. Trolley tires for the small electric trucks used in large works, factories and yards, and on railway platforms are included in this useful list.

**"Speedily Jacks"** are described and illustrated in a price list issued by the Wolseley Sheep Shearing Machine Co., Ltd., of Alma Street, Birmingham. This jack has been designed for motor cars weighing up to 50 cwt. It can be quickly raised to the axle of the car and is automatic in action either in lowering or raising. The handle and lever are made in three pieces for convenience in packing in the tool box. The jacks are made in four sizes, the highest and lowest position ranging from 7½ in. to 11½ in., and they are suitable for loads from 7 cwts. to 150 cwts. Three of the sizes are fitted with hinged heads.

## FINANCIAL.

**British Westinghouse Electric and Manufacturing Co., Ltd.**—At an extraordinary meetng held in London on December 12, the resolutions passed on November 25, were confirmed

**Leyland Motors Ltd.**—A dividend is announced at the rate of 6 per cent. (7·2d. per share) for the half year ending December 31st. on the preference shares, less income tax of 6s. in the £.

**Sheffield Corporation Tramways.**—The estimate for the tramways and motor service for the year ending March 25 next has been revised. The total receipts returned at £630,410, and the total expenditure at £635,893, leaving an estimated net deficit of £5,483.

**Sheffield Municipal Omnibuses.**—The Tramways and Motor Committee of the Sheffield Corporation have submitted revised estimates for the year ending March 31, 1919, which show a prospective loss of £5,545 on the motor omnibuses. The estimated expenses amount to £49,551 and the estimated receipts to £44,006.

**Lincoln Corporation Tramways.**—The accounts for the year ended March 31 show that the electricity undertaking made a net profit of £658, or £2,471 less than in 1916-17, due to the greatly reduced quantity sold. The tramways' net profit was £1,858, an increase of £1,826. In spite of a somewhat reduced service, 2,209,286 passengers had been carried, an increase of 96,992 on the previous year, which was then the highest recorded.

**L.C.C. Traffic Receipts.**—The traffic receipts for the week ended Dec. 18 amounted to £71,492, an increase of £16,921 as compared with the corresponding period last year. The route mileage was 141·67, the same as a year ago. From April 1 (the commencement of the financial year) to Dec. 18 (thirty-seven and a half weeks) the total receipts were £2,468,634, an increase of £384,446 on the corresponding period of 1917.

**Provincial Tramways Co., Ltd.**—The report for the year ended September 30, 1918, which is signed by Mr. J. Barber Glenn, managing director and secretary, states that the net revenue received from the local companies amounted to £59,054, compared with £49,720 last year and £52,288 in 1916. After carrying to reserve and depreciation account £12,000, adding to the reserve account for third party insurance, excess profit duty, etc., the sum of £5,000, and carrying £15,000 to the reserve account for deferred repairs there is a balance of £16,108. A dividend is to be paid on the ordinary shares of 10d. per share and a bonus of 6d., equal to 1s. 4d. per share, making, with 8d. per share paid in June last, 2s. per share, a dividend at the rate of 10 per cent. for the year ending September 30. The balance dividend and the bonus on the ordinary shares will absorb £8,304, leaving £7,804 to be carried forward. The excess profit duty for 1917 and 1918 will be adjusted during the current year.

**The English Electric Company, Ltd.,** with office at 3, Abchurch Yard, E.C., has just been registered at Somerset House, with a nominal capital of £5,000,000, in £1 shares (1,500,000 Preference and 3,500,000 Ordinary). The objects of the company are:—To carry on the business of electrical, mechanical, hydraulic and general engineers and contractors, manufacturers of and dealers in electric, galvanic and magnetic apparatus and appliances, suppliers of light, heat, sound and power, manufacturers and repairers of and dealers in vehicles, cycles, engines, chassis, bodies, airships, aeroplanes, armour plates, gun mountings, explosives, dealers in petrol and other volatile oils and spirits, lubricants, metallic compounds and chemicals, etc. The first directors are:—

C. T. Cayley, 5, Portland Place, W. (Chairman of Dick, Kerr & Co.).
B. A. Firth, Norfolk Works, Sheffield (Chairman of Thomas Firth & Sons).
W. Rutherford, 3, Abchurch Yard, E.C. (managing director Dick Kerr & Co.).
J. Sampson, 8, The Sanctuary, Westminster, S.W. (director of John Brown & Co.).
P. J. Pybus, Thornbury, Bradford (managing director of Phœnix Dynamo Company).
Colonel J. H. Mansell, The Chace, near Coventry (managing director Coventry Ordnance Works).
A Gracie, Fairfield Works, Glasgow, engineer.
W. L. Hitchens, 3, Central Buildings, Westminster, S.W. (Chairman of Cammell Laird & Co.).
C. E. Ellis, Rampton Manor, Notts, manufacturer.

The minimum cash subscription is seven shares and the director's qualification £1,000. The formation of the new company was referred to by the chairman of Dick, Kerr Co., Ltd., in his speech at the annual meeting which was reported in full in our issue of December 19.

## DISABLED MEN AS DRIVERS.

An unprecedented course has been taken by the Home Secretary in reappointing a Committee to consider recommendations which they arrived at unanimously so short a time ago as July, 1916. The question upon which the Committee spent five months' investigation was whether having regard to the normal conditions of traffic in the Metropolis, licences to drive motor cabs, motor omnibuses, or tramway cars should be granted to men who suffer from some partial physical disability by loss of a limb or other similar cause, and, if so, within what limitations. Apparently three reasons may be assigned for Sir George Cave's action. One is that he was not Home Secretary at the time when the Committee first deliberated. The second is to be found in the Home Office statement which announced the Committee's reappointment—namely, that "many applications are likely to be received from partially-disabled men for licences." It is only to be expected that a member of the Government would show great solicitude for the future of the heroic men of the Army and Navy whose self-sacrifice has saved Europe from enslavement and restored a war-sodden world to peace. Sir George Cave's anxiety for the welfare of these men is as keenly shared by all the public passenger services not only of the Metropolis, but of the provinces. The report of the Committee furnishes the third reason. It is that "the evidence is in part contradictory." Although the inquiry relates to the issue of licences in the police area of the capital, the conclusions arrived at will influence the action of the provincial authorities. As a set off to the sympathetic side of the question, apart from the capability or disability of men who have lost a limb or eye, two considerations present themselves. In the first place it is improbable that any disabled man, unless he has been previously employed as a driver of a public service vehicle, is likely to desire to undertake so hazardous an occupation. Secondly, there will be thousands of men who entered the Army from the ranks of licensed vehicle employees, anxious to return to their former employment. The Committee remark that the great majority of omnibus and tramcar drivers who enlisted became drivers of mechanical transport vehicles ; and it is assumed that the loss among drivers of this class will not be abnormally heavy. In their recommendations the Committee dealt thoroughly with the main categories of physical disability from which men presenting themselves for licences might be expected to suffer. The report assumes in each case that the lost limb has been replaced by a suitable artificial one, but it is pointed out that even the most perfectly adapted artificial limb is liable to fracture, and this, if happening at a moment of emergency, might produce serious results. From this brief statement of facts, it is not difficult to discern the final conclusion arrived at. Reluctantly the Committee recommended that men suffering from the loss of an eye, a hand, an arm, a foot, or a leg should not receive licenses. Apart from the risks attaching to such disabilities, the Committee were influenced by the all important considerations that although every licensed driver has to pass a strict medical examination, the number of deaths caused by vehicles in London has continued to rise, and they held that the logical outcome of lowering the physical standard for drivers would be an increase of street casualties. With this statement the public, who are most interested in the matter, will not quarrel, and the same conclusion may be advanced for the owners of public vehicles, who have to pay compensation in many of the accident cases. No doubt the Committee, in following the Home Secretary's request to review their conclusions, will have before them any evidence that may exist of disabled men having become drivers, but there is no likelihood of such cases forthcoming from among motor omnibus drivers, for the evidence at the first inquiry was unanimously against the possibility on omnibuses as at present constructed. As to tramway cars, there was a difference of opinion only as regards the case of a man with an artificial foot. As regards this problem it may be asked whether a man with an artificial foot would be able to work both the gong and the sander, a dual operation that is not infrequently required in an emergency.

## UNDERGROUND OPERATING EFFICIENCY MEETINGS.

The third meeting of the fourth year of Operating Department Efficiency Meetings was held on December 10, at the L.G.O.C. Training School, Milman's Street, Chelsea, Mr. H. E. Blain, Operating Manager, presiding over an attendance of over 350 members of the Administrative and Control staffs of the allied companies.

Papers on "Problems of my Official Life" were read by Mr. W. H. Parsons, Chief Clerk, Season Ticket Office, District Railway ; Miss B. S. Thomas, Chief Woman Supervisor, Underground Railways and L.G.O.C. ; Mr. W. Patient, Station Inspector, Victoria, District Railway ; Mr. J. E. Wilkinson, Travelling Ticket Inspector, London Electric Railway ; Mr. A. J. Littlewood, Beat Inspector, L.G.O.C. ; Mr. M. J. Embray, Operating Foreman, Leyton Garage, L.G.O.C. ; and Mr. D. G. Squirrel, 'Bus Mess Room Steward, Hendon Garage.

The evening proved one of the most interesting of the whole series, owing to the varied character of the papers. The underlying note of personal interest in the work of transportation and the supreme desire to solve, in the most satisfactory manner, the daily problems it presented, was an evidence of the spirit in which the efficiency of the whole organisation has been built up.

A brisk discussion was opened by Mr. G. C. Ravening, Chief Divisional Inspector, Central London Railway, and Mr. A. Robbshaw, Chief 'Bus Operating Foreman, Willesden Garage, and continued by Messrs. Bird, Newman, Savidge, and Cromack, considerations of time alone preventing many others from taking part.

A vote of thanks was accorded to the readers of the papers on the motion of Mr. C. J. Spencer, the newly appointed Manager of the Allied Tramways Companies, seconded by Mr. Murray Griffiths, Director of the District Railway.

The next paper of the series will be "A Day in a Controller's Office"—(a) District Railway, (b) Tubes, and (c) L.G.O.C.

## TENDERS INVITED.

### PORTSMOUTH CORPORATION TRAMWAYS.

**Contract.**

The Tramways Committee invite Tenders for the supply and delivery of:—

Uniform Clothing for Inspectors, Motormen and Conductors.
Uniform cloth and straw caps for Inspectors, Motormen and Conductors.
Uniform Mackintoshes for Inspectors

for one year.

Specifications and conditions, and Form of Tender may be obtained, and samples may be seen, on application to the General Manager, Town Hall, Portsmouth.

Sealed Tenders, endorsed "Tenders for Uniforms, etc," to be delivered to the Town Clerk, Town Hall, Portsmouth, not later than 12 noon on Monday, 20th January, 1919.

The Committee do not undertake to accept the lowest or any tender and reserve the right to accept the whole or any portion of any tender.

W. R. SPAVEN,
General Manager.

Town Hall, Portsmouth.
December, 1918.

### BURGH OF LEITH.

**Tramway Car Advertising Contract.**

The Provost, Magistrates and Councillors invite alternative Tenders for Advertising on their Tramway Cars for a period of five or seven years, as may be fixed. The number of cars is 37.

Forms of Tender and Conditions of Contract and any further information desired may be obtained on application to the Tramway Manager, 145, Leith Walk.

Tenders sealed and endorsed "Car Advertising" must be lodged with me not later than 14th January next.

The highest or any Tender may not necessarily be accepted.

J. A. GREIG, Town Clerk.

Town Clerk's Office, Leith.
December 24th, 1918.

## POSITIONS VACANT.

**Telephone Electrician.**

Wanted, a Telephone Electrician for the maintenance of a large Tramways Telephone system. Must be able to test and do own repairs.—Apply, stating age, experience and salary required to the General Manager of the Birmingham Corporation Tramways.

**Draughtsmen.**

First-class Draughtsmen required, with experience in tramcar, motor-bus and char-a-banc work. State age, experience and salary required, and when disengaged.

Box No. 63, THE TRAMWAY AND RAILWAY WORLD, Amberley House, Norfolk Street, London, W.C.2.

## FOR SALE.

### TRAMCAR CONTROLLERS FOR DISPOSAL.

The Sheffield Tramways have for disposal a number of Dick, Kerr D.B.1. Tramcar Controllers.

Particulars on application to

A. R. FEARNLEY,
General Manager.

Division Street,
Sheffield.

One Shilling per Single Copy.

**FOR ALL PLACES ABROAD—Thirty Shillings per annum.**

SATURDAY, DECEMBER 28, 1918.

## DISABLED MEN AS DRIVERS.

An unprecedented course has been taken by the Home Secretary in reappointing a Committee to consider recommendations which they arrived at unanimously so short a time ago as July, 1916. The question upon which the Committee spent five months' investigation was whether having regard to the normal conditions of traffic in the Metropolis, licences to drive motor cabs, motor omnibuses, or tramway cars should be granted to men who suffer from some partial physical disability by loss of a limb or other similar cause, and, if so, within what limitations. Apparently three reasons may be assigned for Sir George Cave's action. One is that he was not Home Secretary at the time when the Committee first deliberated. The second is to be found in the Home Office statement which announced the Committee's reappointment—namely, that "many applications are likely to be received from partially-disabled men for licences." It is only to be expected that a member of the Government would show great solicitude for the future of the heroic men of the Army and Navy whose self-sacrifice has saved Europe from enslavement and restored a war-sodden world to peace. Sir George Cave's anxiety for the welfare of these men is as keenly shared by all the public passenger services not only of the Metropolis, but of the provinces. The report of the Committee furnishes the third reason. It is that "the evidence is in part contradictory." Although the inquiry relates to the issue of licences in the police area of the capital, the conclusions arrived at will influence the action of the provincial authorities. As a set off to the sympathetic side of the question, apart from the capability or disability of men who have lost a limb or eye, two considerations present themselves. In the first place it is improbable that any disabled man, unless he has been previously employed as a driver of a public service vehicle, is likely to desire to undertake so hazardous an occupation. Secondly, there will be thousands of men who entered the Army from the ranks of licensed vehicle employees, anxious to return to their former employment. The Committee remark that the great majority of omnibus and tramcar drivers who enlisted became drivers of mechanical transport vehicles; and it is assumed that the loss among drivers of this class will not be abnormally heavy. In their recommendations the Committee dealt thoroughly with the main categories of physical disability from which men presenting themselves for licences might be expected to suffer. The report assumes in each case that the lost limb has been replaced by a suitable artificial one, but it is pointed out that even the most perfectly adapted artificial limb is liable to fracture, and this, if happening at a moment of emergency, might produce serious results. From this brief statement of facts, it is not difficult to discern the final conclusion arrived at. Reluctantly the Committee recommended that men suffering from the loss of an eye, a hand, an arm, a foot, or a leg should not receive licenses. Apart from the risks attaching to such disabilities, the Committee were influenced by the all important considerations that although every licensed driver has to pass a strict medical examination, the number of deaths caused by vehicles in London has continued to rise, and they held that the logical outcome of lowering the physical standard for drivers would be an increase of street casualties. With this statement the public, who are most interested in the matter, will not quarrel, and the same conclusion may be advanced for the owners of public vehicles, who have to pay compensation in many of the accident cases. No doubt the Committee, in following the Home Secretary's request to review their conclusions, will have before them any evidence that may exist of disabled men having become drivers, but there is no likelihood of such cases forthcoming from among motor omnibus drivers, for the evidence at the first inquiry was unanimously against the possibility on omnibuses as at present constructed. As to tramway cars, there was a difference of opinion only as regards the case of a man with an artificial foot. As regards this problem it may be asked whether a man with an artificial foot would be able to work both the gong and the sander, a dual operation that is not infrequently required in an emergency.

## UNDERGROUND OPERATING EFFICIENCY MEETINGS.

The third meeting of the fourth year of Operating Department Efficiency Meetings was held on December 10, at the L.G.O.C. Training School, Milman's Street, Chelsea, Mr. H. E. Blain, Operating Manager, presiding over an attendance of over 350 members of the Administrative and Control staffs of the allied companies.

Papers on "Problems of my Official Life" were read by Mr. W. H. Parsons, Chief Clerk, Season Ticket Office, District Railway; Miss B. S. Thomas, Chief Woman Supervisor, Underground Railways and L.G.O.C.; Mr. W. Patient, Station Inspector, Victoria, District Railway; Mr. J. E. Wilkinson, Travelling Ticket Inspector, London Electric Railway; Mr. A. J. Littlewood, Beat Inspector, L.G.O.C.; Mr. M. J. Embray, Operating Foreman, Leyton Garage, L.G.O.C.; and Mr. D. G. Squirrel, 'Bus Mess Room Steward, Hendon Garage.

The evening proved one of the most interesting of the whole series, owing to the varied character of the papers. The underlying note of personal interest in the work of transportation and the supreme desire to solve, in the most satisfactory manner, the daily problems it presented, was an evidence of the spirit in which the efficiency of the whole organisation has been built up.

A brisk discussion was opened by Mr. G. C. Ravening, Chief Divisional Inspector, Central London Railway, and Mr. A. Robbshaw, Chief 'Bus Operating Foreman, Willesden Garage, and continued by Messrs. Bird, Newman, Savidge, and Cromack, considerations of time alone preventing many others from taking part.

A vote of thanks was accorded to the readers of the papers on the motion of Mr. C. J. Spencer, the newly appointed Manager of the Allied Tramways Companies, seconded by Mr. Murray Griffiths, Director of the District Railway.

The next paper of the series will be "A Day in a Controller's Office"—(a) District Railway, (b) Tubes, and (c) L.G.O.C.

Digitized by Google

## CHRISTMAS DAY SERVICES.

In many towns tramway employees declined to work on Christmas Day, and the services were entirely suspended with great inconvenience to public and loss to the undertakings. Among the places where no service was given were the following :— Belfast, Blackpool, Burnley, Carlisle, Leicester, Manchester, Salford, Sheffield, Wallasey, etc. In a number of cases generous offers of extra pay and other holidays were made to the men if they would give the public the convenience of a restricted service, but in most instances the offers were met with a flat refusal.

The Lancashire and Cheshire Tramway Authorities Council carefully considered the question of traffic on Christmas Day. In the course of correspondence with the Amalgamated Association of Tramway and Vehicle Workers, Mr. J. Barnard, honorary secretary of the Lancashire and Cheshire Tramway Authorities' Council, pointed out that the employees had already been granted a holiday and extra pay in consideration of being called upon to work on Christmas Day and other public holidays, and by refusing to work they were breaking faith with the public and also with the tramways departments. The following terms were offered to the Union if the men would work on Christmas Day :—

1.—That all time worked be paid for at the rate of double time.

2.—That the following alternatives of working such service be submitted for the consideration of your members :

(*a*) That the usual Christmas Day service should be run ;

(*b*) That a modified service should be run in the afternoon and evening, commencing about, say, 2 p.m., and finishing as on Sundays ;

(*c*) That with the approval of your Union we should invite volunteers from the staff and run the best service we can with such volunteers.

In reply to the offer, the district secretary of the Amalgamated Association of Tramway and Vehicle Workers wrote to the Council that it was not a matter of money with the members, but the privilege of having one day in the year that they might call their own. They proposed to adhere to their resolve not to work on that day, and they had resolved that they would not work on Boxing Day should anyone attempt to take out a car on Christmas Day.

At Blackpool the employees threatened that if any attempt were made to run the cars on Christmas Day they would decline to work on Boxing Day as well. Mr. Charles Furness, the tramways general manager, issued a statement that there was "no justification whatever for the employees to take up the position of absolutism and deprive the public of needed tramway facilities." The Tramway Committee strongly condemned the action of the workers, and refused to recognise the assumed authority of their association "to dictate when and how the public service should be withdrawn or curtailed." They complained that the men had treated their contracts as a scrap of paper, and described their action as a gross abuse of trade unionism. They strongly deprecated the action of the employees in threatening to take Boxing Day as well as Christmas Day if any employees chose to assist the tramways department to run cars.

At Newcastle the Tramways Committee proposed to arrange for the restricted service usual on Sunday to be given on Christmas Day. The same plan had been adopted for New Year's Day. An extra day's pay would be given to all employees performing their duties between December 23 and January 3. The Committee stated that the whole of their employees had two days' holiday with 'pay on the signing of the armistice conditions, and pointed out that the employees could not reasonably expect the public to accept the position of the employees acting in the capacity of employer and employed. The men, however, declined to work on Christmas.

At Carlisle, where no service was run on Christmas Day, the drivers and conductors demanded double pay and a bonus for working on that day, but the company were unable to agree to the demands

At West Ham, after the men had refused to work on Christmas Day, the secretary of the Amalgamated Society of Tramway and Vehicle Workers wrote to the Town Council withdrawing the decision, but requesting that all cars should be returned to the depot at 4 p.m., which was done.

At Leeds and Liverpool a restricted service was run as on Sundays. In Scotland services were run as usual. In London a restricted service was given until 4 p.m., when all cars were returned to the depots. The Highways Committee did their best to induce the employees to arrange for some later cars to be run, but without success. At one time it appeared likely that the men might refuse to work at all.

The employers of the Edinburgh and District Tramway Company have decided not to work on New Year's day. The Scottish Motor Traction Company's employees are taking similar action, so that Edinburgh will be without cars or omnibuses on New Year's Day.

For the third year in succession the Bournemouth Tramway employees were granted a holiday on Christmas Day by the Tramways Committee. An augmented service was run up to Christmas Eve to the full extent of the restricted resources of the undertaking, and on Boxing Day running did not start until 8 a.m.

---

**Fine for Riding on Back of Tramway Car.**—At Jarrow recently a youth was fined 10s. for offending against a tramway by-law by riding on the back of a tramway car. A police inspector said that much trouble had been occasioned by this practice, and there had been many complaints.

## MISCELLANEOUS NEWS AND NOTES.

**Glasgow Tramway Men.**—The Glasgow Tramways Committee propose to grant a special badge to all employees who have continued in the service of the department for twenty-five years.

**Western Outlet from London.**—In view of the cessation of hostilities the Middlesex County Council are taking preliminary steps in connection with the construction of the Great West Road, which will provide a western outlet for traffic from London.

**Omnibuses for Portsmouth Tramways.**—It is proposed to run motor omnibuses from certain termini or deadends of the tramway system through various parts of the town and districts not served by the tramways.

**Later Cars at Blackburn.**—The Tramways Committee have extended the running of the cars from 10 p.m. till 10.30 p.m. For some months the service has been stopped at 10 o'clock, and there have been recently strong protests at the cars leaving the centre of the town so early.

**London Passenger Fined.**—For travelling on a London County Council tramway car beyond the distance for which he had paid his fare, and for assaulting the conductor, George Bagnell, of Clapham Road, was ordered to pay fines and costs amounting to £7 4s. at Bow Street Police Court.

**Fined for Travelling without Payment of Fare.**—The Grimsby Stipendiary imposed a fine of 10s. on a passenger for travelling without paying his fare. The passenger ignored repeated requests for payment from the woman conductor and then alighted without paying. When the conductor went after him he slapped her face.

**London and Brighton Electrification.**—The General Purposes Committee of the Brighton Corporation have sent a resolution to the general manager of the London, Brighton and South Coast Railway, strongly expressing the opinion that the main line between London and Brighton should be electrified at the earliest possible moment.

**Chesterfield Collision.**—Two cars in charge of ex-soldiers came into collision in West Bars. One of the drivers jumped off just before the accident. A woman driver riding on the other car took control and by applying the magnetic brake reduced the shock. Three people were slightly injured, and damage estimated at £100 was done to the cars. The woman was awarded £2 for her prompt action.

**British Magnetos.**—As a proof of the great stride British manufacturers are making in the production of magnetos, we note with satisfaction that Messrs. C. A. Vandervell & Co.'s output for October alone was no less than 3,500. The C.A.V. magneto figured largely on the motor cycles of our despatch riders on all fronts during the war and met with their highest commendation.

**A Courageous Birmingham Motorman.**—At a recent meeting of the Birmingham Tramways Committee, the Lord Mayor (Alderman Sir David Brooks) presented motorman Jesse Robinson with a guinea, awarded him by the Committee for specially courageous conduct in stopping a runaway horse in Aston Road. About two years ago Robinson received similar recognition for his prompt action in stopping his car, and thereby saving the life of a child.

**Objection to Women Checkers at Plymouth.**—The tramway members of the Dockers' Union at Plymouth have protested against "the arbitrary and super-officious attitude adopted by the lady checkers now employed by the Corporation." They have, moreover, resolved to ignore any interference on the part of the lady checkers, "seeing that they have no knowledge of the duties of a motorman, and such interference being detrimental to the comfort and safety of the travelling public."

**Expert Committee on London Traffic.**—At a meeting of the Tramway managers of the Greater London area, held on December 20 at the invitation of Mr. A. L. C. Fell, general manager of the London County Council Tramways, it was decided to form an expert committee with a view to the better development of traffic and inter-communication over the various tramway undertakings. The Committee will place their services at the disposal of the various municipal and company authorities.

**Liverpool Tramways General Offices.**—Liverpool Tramways and Electric Power and Lighting Committee met on December 13, at the well-appointed head offices, Hatton Garden, where a spacious room has been provided for the meetings of the Committee, which will in future regularly take place there. The change has the advantage of concentrating everything relating to the undertaking under one roof where all the records will be kept. The whole scheme includes a reference library, which when completed will afford each member of the Committee an opportunity of posting himself on matters relating to the undertaking. Cordial recognition was given to the general manager, Mr. C. W. Mallins, for his efforts in making arrangements for the excellent accommodation.

**"Public Servants have Duties."**—The refusal of tramway employees to carry out their obligations as public servants to provide tramway services on Christmas day has proved too much even for *Reynolds Newspaper*, which says : We realise to the full that workers on trams and buses also want to spend Christmas evening away from work, and that travelling should be cut down to a minimum. But public servants have some duties to the public, and less than 20 vehicles for the whole of London seems a good deal below the minimum. The *Saturday Review* succumbed to the temptation of a malicious chuckle over the news that there were to be no trams or motor 'buses running in London on Christmas Day after 4 p.m. The citizens, it remarked, will thus get an agreeable foretaste of the Labour tyranny under which Australians and New Zealanders have been groaning for the last twenty years.

Digitized by Google

**New Rails for Leeds Tramways.**—Mr. J. B. Hamilton, general manager of the Leeds City Tramways, recently reported to the Tramways Committee that there were approximately 10 miles of permanent-way requiring immediate renewal, for which purpose a sanction for 2,000 tons of rails had been obtained from the Board of Trade. There were at present in stock about 130 tons of rails, sufficient to make a start on a length of three-quarters of a mile, which would tax the capacities of the present staff, assisted by contractors, for a period of two months.

**Brighter Lights for Vehicles.**—The restriction on lights for vehicles have been considerably relaxed by the new Lights (Vehicles) Order made by the Home Secretary on December 16. Electric and acetylene lamps, whether side lamps or head lamps, may now be used unobstructed if the front glass does not exceed 5 inches in diameter and the bulb or burner is within the limits of 12 candle power for electric lamps and half a cubic foot for acetylene burners. No change is made with regard to the carrying of two front lights and a red rear light. Copies of the Order (price 1d.) may be obtained from H.M. Stationery Office.

**District Railway Christmas Traffic.**—The superintendent of the line has stated that the "Underground" are keeping trains up to the full schedule at what are the normal slack hours, and at the busy hours every car is in service. Some congestion is caused, as the railway is carrying about twice as many passengers as before the war, while it has been impossible to obtain additional cars or to re-model the rolling stock. On some of the tube stations the queue system which has been adopted is proving a decided help. Apart from the civilian traffic, the company is carrying to and from Victoria alone about 7,000 soldiers daily, many of them travelling to and from the demobilisation camp at Wimbledon.

**Portsmouth Tramway Reconstruction.**—At a meeting of the Portsmouth Tramways Committee, the chairman presented a report by the general manager, Mr. W. R. Spaven, dealing with the reconstruction of the tramways generally and the manner in which it was proposed to carry out the repairs which had fallen greatly into arrear. The report was drawn up with the object of providing immediate employment for men returning from H.M. Forces. The new work includes the construction of a tramway from Milton to Hilsea via Copnor and an extension linking up the London Road with the new line. Plans were submitted for the construction of queue gangways to be erected at Town Hall Square and other points.

## UNRESTRICTED USE OF MOTOR CARS.

INCREASED PETROL SUPPLY.

The Board of Trade announce that the Motor Spirit Restriction Orders, the operation of which has been suspended until January 10, will be revoked entirely as from that date.

Licences to obtain motor spirit are issued under the Finance Act, 1916, and the licence system must therefore remain in force. As previously announced, however, the Petrol Control Department is prepared to issue licences to new applicants, and to increase the quantities allocated to existing licence holders, and will endeavour as far as possible to meet all reasonable requirements.

Motor vehicles may therefore again be used for any purpose without restriction of distance.

## DEMANDS FOR SHORTER WORKING HOURS.

TRAMWAY MEN'S 44 HOUR WEEK.

The National Transport Workers' Federation have forwarded to the Municipal Tramways Association and the Tramways and Light Railways Association, covering respectively the municipally and privately owned tramways in the United Kingdom, the following list of demands :—

(1) That the working week shall consist of 44 hours, inclusive of signing on and signing off.

(2) That every employee shall be guaranteed a working week of 44 hours or payment equivalent thereto.

(3) No day's work shall be in excess of 8 hours.

(4) In no circumstances shall a reduction in the working day entail a reduction in existing wages.

(5) No spread-over duty shall exceed 9 hours, inclusive of meal times or relief.

(6) All national holidays, Sunday, and over-time labour to be paid for at the rate of time and a half.

(7) All employees shall be granted 14 days' holiday annually with pay.

ENGINEERS' 47-HOUR WEEK.

The final figures in the ballot which has been taking place in the engineering and shipbuilding industry on the question of a 47-hour week, to begin on January 1, have been given as follows :—For, 286,545 ; against, 148,526. The ballot was the outcome of a meeting between representatives of the Federation of Engineering and Shipbuilding Trades and representatives of employers' organisations, at which it was decided that a 47-hour week, without any reduction in existing weekly time rates, constituted a reasonable attempt to readjust working conditions.

**Reduction of Current at Liverpool.**—For eleven months, ending with November there was a decrease in the consumption of energy by the Liverpool tramways of 4,085 units. The saving is attributed mainly to the diminution in the number of stopping places.

## DISABLED SERVICE MEN AS DRIVERS.

The Home Secretary announced on December 22 that as many applications are likely to be received from partially disabled sailors and soldiers for licences to drive public motor vehicles, he has decided to reappoint the Committee which considered the subject in 1916. The Committee have been asked to review the conclusions then arrived at, and to report whether they should be reaffirmed or modfied.

The members of the Committee are ; Mr. F. L. D. Elliott, Assistant-Commissioner of Police (chairman) ; Mr. H. E. Blain, representing the London General Omnibus Company ; Mr. C. W. Bowerman ; Major A. Tudor Craig, C.B.E., secretary, Soldiers' and Sailors' Help Society ; Mr. J. W. Orde, secretary, Royal Automobile Club ; Mr. R. J. Simpson, Local Government Board ; Mr. A. Smith, of the London and Provincial Union of Licensed Vehicle Workers ; and Col. H. J. Waring, M.S., President of the Royal College of Surgeons.

There are two alterations in the composition of the Committee. Mr. Blain, operating superintendent of the London General Omnibus Company and Underground Railways, takes the place of Sir Albert Stanley, the late managing director of those undertakings, and now President of the Board of Trade, and Colonel Waring is serving instead of Sir Frederick Eve, F.R.C.S.

The secretary of the Committee is Mr. H. A. Tripp, and any communications should be addressed to him at the Metropolitan Police Office, New Scotland Yard, London, S.W.1.

## PERSONAL.

**Sir John A. F. Aspinall,** who has been general manager of the Lancashire and Yorkshire Railway Company for the past twenty years, is retiring at the end of the year, and will be appointed a director of the company.

**Mr. William Clough** was entertained to dinner by the Executive Council of the Municipal Tramways Association at the Municipal Club on December 19. Mr. T. B. Goodyer, president of the Municipal Tramways Association, presided, and Sir J. W. Courtis, vice-president of the Association, and Mr. J. B. Hamilton, chairman of the Executive Council, were among those present. Mr. Clough recently resigned the positions of general manager of the Bury Corporation tramways and honorary secretary of the Municipal Tramways Association in order to accept an appointment with an important paper manufacturing syndicate. Eloquent testimony was given by the chairman and others of the high regard and esteem which Mr. Clough has won from his colleagues, and the thanks of the council were expressed for his services to the Association, together with cordial good wishes for success in his new position.

## CONTRACTS AND ORDERS.

**Salford Tramways Committee** have accepted a tender for 54 British steel tyres from Cammell, Laird and Co., Ltd., at £339 12s.

**Electric Vehicles for Taunton.**—The Town Council propose to apply to the Local Government Board for sanction to a loan of £4,500 for the purchase of three electric vehicles.

**The British Electric Vehicles, Ltd.,** are supplying a 20-cwt. electric truck fitted with ironclad exide battery to Hull Corporation for the collection of street sweepings.

## FINANCIAL.

**Brighton Tramway Estimates.**—The profits of the Brighton Corporation tramways for the current financial year are estimated at less than £10,000 as compared with £15,428 last year. The profits from the electricity undertaking are also expected to show a decline.

**Luton Tramways.**—The revenue accounts of the tramways' lessees from April 1, 1913, to January 31, 1918, have been submitted to the Luton Corporation, who have requested the Town Clerk to inform Messrs. Balfour, Beatty and Co., Limited, the lessees, that the council have for a long time been dissatisfied with the condition and working of the undertaking, especially (*a*) the track (which in many places is in a dangerous state) ; (*b*) the overhead equipment ; (*c*) the cars and their mechanism ; (*d*) the inefficient and unpunctual services on some routes ; (*e*) the inattention of the drivers and conductors to passengers and wouldb-e passengers. The lessees were given notice to promptly provide and maintain an efficient service, and to execute by not later than June 30, 1919, all such works, repairs and renewals as are necessary to comply with the terms of the lease as to maintenance and repair.
